CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents per copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Interstate Commerce Commission has been asked by Secretary Cortelyou for a list of such railroad stocks and bonds as could be used by currency associations under the Aldrich law as security for circulation. He was led to make the request because certain New York bankers wrote him to find out what railroad securities would be acceptable. The chairman of the Commission replied that it is utterly without means of listing the sixteen billions of railroad securities of the country, but that it would undertake to investigate the standing of any railroad securities that might be presented to the Treasury Department. The Commission is expected to remind Congress that legislation is needed that will make it practicable to undertake valuation of the roads and give it the force needed to list the securities.

Plans for the forest service field headquarters, which are soon to be established in the West, are being worked out in detail. Each headquarters will be modeled after the Washington office. In all there will be six district headquarters, located probably at Portland, San Francisco, Albuquerque, Salt Lake, Denver, and Missoula, Montana. At the head of each office there will be a district forester and an assistant district forester. Under these will be experts in charge of the various lines of work. A chief of grazing will have charge of range matters; a chief of products, of the preservative treatment of timber and strength tests and the study of market conditions; a chief of lands will look after such matters as land examinations.

The Government's petition for a rehearing by the United States Court of Appeals of the case against the Standard Oil Company of Indiana has been filed. "On but a single point involved in the trial up to the return of the verdict of guilty," says the petition, "are the rulings of the trial court criticized by the Court of Appeals. In all other particulars his rulings are sustained. The point on which the trial judge is reversed by the Court of Appeals relates to his ruling on evidence and his charge to the jury with reference to ignorance on the part of the Standard Oil Company of the lawful rate as a defense. The Court of Appeals in its opinion has not correctly stated how the judge ruled on this subject."

President Roosevelt has sent to Washington a long list of letters he has received from parties throughout the country with reference to his farm commission. They are from farmers, educators in agricultural colleges, agricultural writers, and the like. The letters as a whole view improvement of the country schools as of first importance, then good roads, betterment of conditions for women on the farm, improvement of sanitation, extension of opportunities for reading, and improvement of moral conditions in the country, in the order named as essentials.

The members of the sub-committee of the American National Monetary Commission, appointed by the last Congress, have finished their investigations and hearings in London regarding the British monetary system. They have discussed many financial questions, and have had the benefit of the experience of the great English bankers.

The President has issued a proclamation for the opening to settlement of the surplus lands of the Rosebud Indian Reservation in South Dakota. The area covered comprises about eight hundred thousand acres. The lands will be selected by the lottery process and the drawing will take place at Dallas, S. D., Oct. 18.

The movement to curb the operations of the middleman on the wool market by restoring to the sheep men of the West absolute control of the product, came up for consideration before the executive committee of the Wool Growers' Association at its recent meeting in Salt Lake City.

From reports recently received from the various local land offices, including those in Alaska, the general land office reports an area of the public domain remaining undisposed of on July 1, 1908, as 754,895,296 acres of surveyed and unsurveyed public lands.

International.

Under the terms of the recent annexation treaty the Congo revenues are charged with the following annual allowances: $24,000 to Prince Albert, son of the Count of Flanders, brother of King Leopold; $15,000 to the king's third daughter, and to the king the sum of $10,000,000 in fifteen annual instalments for his use in constructing hospitals and schools and forwarding scientific work in Africa. Furthermore, Belgium must expend the sum of $9,000,000 in work for which contracts already have been made. In addition, King Leopold retains in fee simple forty thousand hectares of land at Mayumbe for coffee and cocoa growing experiments, and during his lifetime he is to enjoy his interests in the Congo concessory companies and the properties in Belgium and France which he purchased out of the funds of the Congo Foundation. All this property will eventually revert to Belgium.

The application of the Mexican Southern Railroad Company to the government for the abolition of its third-class passenger service has been granted, and this privilege has now been extended to nearly all the railroads in Mexico, including the government merger system. The rate of fare for first-class passengers is 2 2-5 cents gold per mile and that of second-class passengers 1 1-5 cents gold per mile. The figures show that those who formerly rode second-class have been forced into the first class, while the third-class passengers now ride second-class. It is asserted that the passenger earnings of the railroads have materially increased under the new arrangement.

As a result of the reform movement in Turkey the staff of the Sultan's military household has been greatly cut down, the number of his aides-de-camp being reduced from two hundred to thirty. An irade has been issued ordering the imperial princes to restore to the government all the crown properties they obtained gratuitously through the Sultan's favor. Arrears in salaries in the military and civil administrations will be steadily taken over by the government. Indications favor in a measure the emancipation of women, who will obtain greater freedom in the matter of dress, appearance in public, and travel at home and abroad.

The Venezuelan Civil Court of First Instance has handed down a judgment declaring the French Cable Company guilty of complicity in the Matos revolution against President Castro and condemning it to pay damages to the amount of nearly $5,000,000. In addition the company must pay a further amount to be assessed later by experts. It is practically a duplication of the decision handed down against the New York and Bermudez Asphalt Company.

A member of the Young Turks Committee is authority for saying that they are ready to go some way in the direction of administrative autonomy for Macedonia. The committee desires to make education compulsory, leaving the question of language to be settled by the inhabitants of each locality, but making the study of the Turkish language, as the official language, obligatory.

The postponement of the Tokio International Exposition, which is now scheduled for 1912, is being agitated in government circles on the ground that the appropriation set aside for this purpose is inadequate and that the time intervening is insufficient for preliminary work.

The British armored cruiser Indomitable, on her recent run from Quebec to England, made an average speed for the whole course of 25.13 knots, and for four hours in the early part of the voyage, 26.4 knots. This exceeds the record of the Lusitania of the Cunard Line.

The French Minister of Commerce has officially inaugurated in the city of Havre a school which is the first of its kind in France, its main object being to give a practical training to young men seeking employment on colonial cotton plantations.

Largely owing to the action of the British Cotton Growing Association in affording facilities, and that of the government of India in starting experimental work in cotton cultivation, an extra million acres of land were brought under cotton cultivation last year.

The Esperantists' Congress just held at Dresden passed a resolution to found a teachers' federation and also an international Esperanto institute which shall draw up rules by which the new artificial language may be kept pure.

Mulai Hafid has been proclaimed Sultan of Morocco at El-Araiah, as well as at Rabat and Salee, in place of his brother, Abdul Aziz, who suffered defeat last week near Morocco City.

Industrial and Commercial.

A summary of vessels lost and condemned published by Lloyd's Register shows that in 1907 the gross reduction in the effective mercantile marine of the world amounted to 808 vessels of 851,224 tons. Of this total 356 vessels were steamers and 512 sailing vessels. The merchant navies which exceed a total of one million tons are those of the United Kingdom, the British colonies, the United States of America, France, Germany, Italy, Norway, and Japan.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE NEW COMMANDMENT.

PROF. JOEL RUFUS MOSLEY.

BEFORE the human sense of love is made perfect, it has a marvelous capacity for detecting the claims of evil; but Science separates these claims from the facts of good and never sees evil as a person. Love never fights evil as a real entity; it never tries to overcome evil with evil; it never hates or injures the seeming servants and victims of evil, but loves and does good to them and thereby separates and saves them from their sins. Love detects and uncovers sin, "not in order to injure, but in order to bless" (Science and Health, p. 453) the servants and slaves thereof. It does not see the claims of evil in order to make a reality and a stumbling-block of them; but to prove them unreal, and to make their seeming reality incentives to overcoming and to the realization of that perfect love which thinks no evil, which has no sense of reality but that of good. Science does not uncover the claims of evil through personal knowledge of or sympathy with evil, but through its knowledge of good.

The belief in the unreal does not, and cannot know the unreal as an unreality; it is only as we emerge from the belief of unity with and dependence upon evil, that we really know and prove the unreality of evil and the vital and all-sufficient reality of the good. Darkness does not see darkness as the absence of light; only the light and those who have the light can see and realize this. Hate does not see hate as impersonal, as a false claim, as an illusion, as an unreality; love, and only love, does this. In like manner, it is seen that no negation, no error, no sin has true perception either of any evil or of any good. Only the all-good, only Love, sees and knows anything aright. It is the knowledge of the true, the real, and the good which enables us to destroy the seeming reality of the false, the evil, and the unreal. While evil seems to be self-destroyed, —and in one sense is so destroyed, in that it suffers the very doom it wills for the good, and has nothing to blame but itself,—its destruction in a still higher sense comes through the appearing, the perception, the recognition, the love, and the reflection of good; and this is the coming or the appearing of Christ, whether so recognized and named or not.

So long as we yield to the temptation to meet hate with hate, evil with evil, wrong with wrong, injury with injury, we do not handle evil, but evil handles us; we do not overcome evil, but evil (in belief) overcomes us. When we meet all hate with love, as well as all love with love; when we bless them that curse us, as well as them who bless us; when we do good and only good to our seeming enemies as well as to our real friends,—then we not only successfully handle and overcome evil, but evil also becomes unreal to us as an intelligence, entity, or person; it even disappears as a false claim. All that evil ever seemed to have done against the good is seen to have worked for the good of the good and for its own undoing. In a word, it is seen that God is and always has been All-in-all, and that there is, therefore, no real evil.

The seeming reality of evil to material sense and its actual unreality to Love,—even the unreality of hell itself, as well as the all-inclusive reality of heaven, to Love,—is finely set forth in Sidney Lanier's poem, "How Love Looked for Hell," from which the following stanza is quoted:—

> "I saw true hell with mine own eye,
> True hell, or light hath told a lie,
> True, verily," quoth stout Sense.
> Then Love rode round and searched the ground,
> The caves below, the hills above;
> "But I cannot find where thou hast found
> Hell," quoth Love.

In like manner the unredeemed human mind and the guilty conscience argue for the reality of evil and for the actual presence of hell; but all of the arguments for the reality of evil or the presence of hell are silenced by the recognition of divine Love, which makes and sees heaven, and only heaven, wherever it appears. "I cannot find where thou hast found hell," is Love's victory over, as well as argument against, every claim of evil.

Perfect Love thinks no evil, because God and His perfect government, laws, revelations, creations, or expressions of Himself are the only facts of being. Love thinks no evil, because it destroys rather than gives reality to seeming evil. Love thinks no evil, because evil flees before perfect Love as darkness flees before the light. Love thinks no evil, because to perfect and ever-present Love there is no evil. Love casts out all fear, because to the perfect vision of perfect Love there is nothing to fear.

The awakening sense of perfect Love heals the sick and lifts up the dying, as well as forgives the sinner and destroys the love and sense of sin. Man is no longer seen as sick, sinning, and dying; but as the blessed, harmonious, and immortal child of God. It is seen that God is the only Father, Mind, and Principle of the real man; and that "whosoever is born of God doth not commit sin; . . . because he is born of God. It is also seen that God's man cannot die or be sick and discordant here, or anywhere. And it is seen, as Mrs. Eddy says, that "you would be none other than this man, if you would subordinate the fleshly perceptions to the spiritual sense and source of being" (Unity of Good, p. 58). She also says, "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick" (Science and Health, p. 476).

As we have seen, the recognition of perfect Love not only gives the vision of the real man, the real universe, and the only true God; but it also brings the health, harmony, joy, freedom, and dominion of the real man to light in demonstration as well as in perception. It not only gives the perception and hope of life, harmony, freedom, dominion, and immortality; but it is our true life, harmony, free-

Copyright, 1908, by Mary Baker G. Eddy.

Digitized by Google

dom, dominion, and immortality. Perfect Love gives perfect knowledge or consciousness of God and the things of God, and this knowledge "is life eternal."

The highest mission in the universe, as it would seem, is this, to awaken men to the recognition of perfect Love; for with this awakening they are enabled to see man and the universe as they are,—as God sees them. Hence the highest purpose of God seems to be to educate us to love as He loves, which in turn will enable us to see as He sees. Indeed, we have the highest authority for believing that when we love as God loves, we shall see man as His image and likeness, the universe as His reflection, and all things as "good and very good,"—beautiful, harmonious, and eternal.

"WHENCE CAME THEY?"

MARY I. MESECHRE.

ONE of the many wonderful revelations to the student in Christian Science is the unfolding of the numerous parallels to our past and present experiences with which the Scriptures abound. We are all familiar to a degree with that marvelous parable of the prodigal, found in the 15th chapter of Luke's Gospel, and have drawn the parallel between his wandering in the far country and our own fruitless groping in the pathless wilderness of materiality; between his piteous degradation and hunger, not to be appeased by the husks, and our own insatiable longing for an unknown something, so elusive and so distant that unutterable desire gave way to uttered despair; between the returning memory of his sonship, so exquisitely expressed in the simple statement, "he came to himself," and our own ofttimes troubled and prolonged awakening to a recognition of the same enlightening and uplifting truth; between his active resolve and our own to arise and go to the Father.

We note with awe that even as with the prodigal, while yet a great way off divine Love reached us, and our faltering steps have since been taken beneath the banner of His sheltering love, and the everlasting arms have upheld us through all our upward stumbling toward our Father's house. There is a parallel, too, between the prodigal's broken, unfinished confession of unworthiness and our own—in neither case acceptable to our Father, because showing a false concept of man's relationship to Him, and giving place speedily, in His infinite love, to the threefold symbol of sonship,—the royal robe of righteousness taking the place of the suppliant's rags, the ring of dominion superseding the chains of slavery, the shoes of "the preparation of the gospel of peace" marking the final transformation from the troubled wanderer to the resident prince, conscious of the loving favor of his kingly Father; and in unspeakable gratitude we begin to realize that our long period of famine in the far country has dissipated nothing of man's royal heritage, but that innumerable blessings await us in our Father's house, where we may indeed "eat, and be merry." For we, too, have added somewhat to that wondrous "joy in the presence of the angels," for we, too, were dead, and are alive again; we, too, were lost, and are found!

Grateful indeed may we be if our experience does not at some point and in some degree parallel that of the elder son in the same matchless parable, who, noting the effect which succeeded the return of his prodigal brother, but in ignorance of its cause, "called one of the servants."—took the testimony of an inferior, instead of seeking his father for the desired knowledge,—and by this one false step descended to anger, to sullen disregard of his father's entreaty that he should participate in the rejoicing, to a refusal to recognize his brother's right to share in their father's love, to expressions of envy, self-righteousness, reproach of his father, and harsh condemnation of his brother,—thus drawing upon himself a merited rebuke in the gentle reminder that nothing, even to the continual presence of the father, had ever been withheld from him, and a dignified explanation for the manifest joy and thanksgiving in which it was his privilege to share.

Every Christian Scientist has wandered, a some-time prodigal, in a far country, and as one by one each has come to himself, and returned to the Father, changing the tatters of the swineherd for the royal garments of sonship, the question recurs, "What are these which are arrayed in white robes? and whence came they?" and the reply, "These are they which came out of great tribulation." And to each comes the constant admonition: "Let the redeemed of the Lord say so, whom he hath redeemed from the hand of the enemy; and gathered them out of the lands, from the east, and from the west, from the north, and from the south." "Whence came they?" In what far countries have they wandered? From the hand of what enemy have they been redeemed? Out of what lands have they been gathered?

"From the east," where poverty and luxury were found in company with the false and enervating content of effete philosophies; where idle longings, barren of other result, brought bitter disappointment, and finally hopeless discouragement; where ill-spent days were ushered in by weary sighs of "Would God it were evening!" and restless nights dragged out their interminable length to the measure of "Would God it were morning!"—until, torn by doubt and racked by superstition, forsaken by the last fading phantom of hope, nothing but the wail of the winds among the leafless boughs above us, or the beat of the surf against the sea-swept rocks about us, echoed the despairing cry, "How long, O Lord, how long?" "From the west," where, all eager with desire, aflame with ambition, we rushed hither and thither in search of material good, seeking for wealth, for fame, for happiness; self-willed, impatient of restraint, rebellious alike against the laws of God and man, heedless of the pitfalls of passion and the snares of appetite which threatened our unwary feet, chasing each shadowy will-'o-the-wisp until the coveted prize was gained and fell to dust at a touch, and the fruit so eagerly grasped, so pleasant to our sight, crumbled to ashes on our lips and we threw it aside in disgust, only to rush on headlong in our mad pursuit of that elusive thing which was needed to complete our earthly bliss—till we grew, oh, so weary, so utterly weary, of our husks.

"From the north," where, wrapped in the mantle of self-righteousness, surrounded by the icy atmosphere of pride and false belief, and ruled by prejudice, we looked out arrogantly upon the world through the narrow windows of our meager sense, regarding God with ingratitude and our brother-man with hatred, intolerant of his mistakes, blind to our own greater shortcomings, pharisaically giving God thanks for our unlikeness to other men, never omitting the personal application "or even as this publican," all the while oblivious to the fact that our own unjust attitude toward him was responsible for many of the missteps of our brother, and that our self-engrossment was separating us farther and farther from the possibility of truly reflecting Him of whom the penitent was accepted, while the Pharisee stood proudly by, unloved and unloving, entering not, and hindering those who fain would enter, into knowledge of the love of God. "From the south," where, in the self-satisfaction of indifferentism, too indolent for effort, careless alike of present and future good, we spent our days beneath the upas-tree of apathy, while about us the groveling swine fed lazily, their fleshly torpidity in no wise exceeding our own.

Truly, out of all these lands have we been gathered, "redeemed from the hand of the enemy" by the power of God as revealed in Christian Science. "Let the redeemed of the Lord say so." And as we praise our God for His unspeakable gift which has thus wrought for us this great

Digitized by Google

deliverance, and as we render homage to Jesus the Christ for his wondrous life as the Wayshower, which has exemplified for us the way to our Father's house and has inspired us with the desire to walk therein, we cannot fail in gratitude to the Leader who has so lovingly interpreted the words of our Master, who has so faithfully and courageously reflected the Love that is God, that one by one we have ceased our wandering amid the husks, and have turned to our Father. And in the midst of our own rejoicing, let us be mindful, not as those who sorrow without hope, but lovingly, knowing that each one whose prodigal feet still stray in the far country will one day come "to himself," and remembering, will be guided home.

THE HARMONIOUS EDUCATION OF CHILDREN.

ERNESTINE HADKINSON.

THERE is a much-vexed question among Scientists, as well as among non-Scientists, who have had to deal intimately with the education of children, as to the best way of reaching harmonious results. Many of us who have been led to see the beauty and truth of Christian Science through the study of our text-book, find that, after working for some time quite honestly to overcome wrong thoughts, we are still being confronted with difficulties which we did not expect to meet any more after we had gladly admitted that God, good, fills all space and that man is His image and likeness. We hear some one say, "I have worked so much, but my child keeps on being very disobedient;" or, "My work for my children does not seem to have the desired effect."

The greatest lesson mankind in general and parents and children in particular have to learn is certainly the lesson of obedience. But what is obedience? Obedience is honesty! We read in our text-book (Science and Health, p. 183), "Obedience to Truth gives man power and strength;" and again (p. 587), God is defined as "Principle; . . . Life; Truth; Love;" therefore it follows plainly that if we want to have power and strength we must obey God, Truth. "And the Lord God commanded the man, saying, Of every tree of the garden thou mayest freely eat: but of the tree of the knowledge of good and evil, thou shalt not eat of it." It was the serpent, which Jesus called a liar, that said unto the woman, "God doth know that in the day ye eat thereof, then your eyes shall be opened, and ye shall be as gods, knowing good and evil."

We all know by experience what it means to believe in "good and evil," and some of us are so tired of it that on bended knees we are coming home to the Father, the eternal Elohim who created man in His own image and blessed them and gave them dominion, and "behold, it was very good." It is on the way there that we as mortals meet with the old errors, and until they are overcome we cannot see the kingdom. In Science and Health (p. 582) Mrs. Eddy speaks of children as the "spiritual thoughts and representatives of Life, Truth, and Love;" the child, therefore, is the spiritual idea unfolding to us. Continuing, she says: "Sensual and mortal beliefs; counterfeits of creation, whose better originals are God's thoughts, not in embryo, but in maturity; material suppositions of life, substance, and intelligence, opposed to the Science of being." What, then, are we doing when we look into the false, the opposite, the sham,—are we reflecting God, obeying Principle,—Truth, Life, and Love? or are we listening to the serpent and thereby being driven out of Paradise?

One of the greatest difficulties the writer had at first, was to see the perfect harmony of the first clause of the statement regarding children, as given by our beloved Leader. The last part was easy to admit. A good deal of effort in the wrong direction was spent in trying to get at the truth, but it was not until self was silenced, rebellion had ceased, and a condition of absolute willingness was reached which enabled her to see that disobedience in the children was only the reflection of her own mental attitude, that any harmonious results were obtained. If we consider how contradictory our old beliefs were, how far removed from any knowledge of spiritual causation, how persistently error tries to make us take material sense testimony for truth, so long as we are unacquainted with Christian Science we find an explanation of the tendency to work for a while from a bad belief up to a better one instead of turning entirely away from false beliefs and placing ourselves unreservedly and irrevocably on the side of Truth,—"infinite Mind and its infinite manifestation."

As one writer has phrased it, instead of seeing "my brother the ass," Jesus taught us to see "the stranger within thy [our] gates." Instead of seeing our disobedient children, we would do well to look at the material belief of a material parent, and eliminate this mistaken thought from our own consciousness before we try to correct outward manifestations of error presented by others, which, in fact, flow from our own material illusions. Admitting an evil creation, taking sense testimony instead of knowing that God alone can see aright and that we can only reflect that seeing, and that He sees nothing outside of His own perfect spiritual creation,—this is being foolish and disobedient. It needs our obedience first—the coming into line with Principle, the breaking up of human pride—to see that the mistakes expressed by others are not infrequently to be found in us. It is our foolish declaration for the evidence of what we want to get rid of which ofttimes baffles our demonstrations.

But how shall we eliminate the difficulties coming in our way? We should be clear first as to our own mental attitude, and become fit channels for reflecting Truth. We can dismiss at once the vain belief that we own anything or any one. All we have to do is honestly to get into the attitude where we can best reflect the fatherhood and motherhood of God, the needed wisdom, love, patience, order, humility, compassion, etc. Then we can know that the spiritual idea, the real child (and there is no other), gladly responds to these qualities.

As human beings we have to teach our children obedience, and we thereby acknowledge the rightful demands of God's law. We should remember that our children are to be either a blessing or a curse to society. Such passages as are to be found on pages 236 and 237 of our text-book corroborate the Scriptural command, "Honor thy father and mother;" also Paul's words to the Ephesians, "Children obey your parents in the Lord: for this is right. . . . And ye fathers, provoke not your children to wrath: but bring them up in the nurture and admonition of the Lord." There seems to be a tendency among parents to forget this admonition addressed to themselves, and to read and quote the duty owed by children. When we see them as God's children we shall reverence them and share with them our holiest treasures.

An earthly father and mother may be mistaken. The child must be taught to obey God, good,—divine Love only,—and in so doing it will find that it is also obeying those in authority. If we teach a child to obey us or the schoolmaster, we shall find rebellion, because the child soon detects error on account of his greater purity. If we teach the child to obey divine Principle he will begin to grasp the true meaning of obedience.

It takes parents a good while sometimes to learn this, but children understand it more readily, for "theirs is the kingdom of heaven." Let us, then, watch and pray, that we gain the blessing promised to the children of Israel in these words: "O that there were such an heart in them, that they would fear me, and keep all my commandments always, that it might be well with them, and with their children for ever!"

ARTISTIC TOUCHES OF CHRISTIAN SCIENCE.

H. M. SPENCER.

LATELY, when listening to lovers of art discussing the relative values of certain paintings representing tired humanity, the thought came to me that if this same appreciation could be demonstrated in meeting the human and spiritual needs of those living subjects, there need be no heavy hearts and tired faces. A loving touch here and there, a little lightening of the shades, a different point of view, an artistic finishing: these would transform the model's expression of despair to one of hope and peace.—one that would be forever pictured upon the watch-tower of the heart of him who had learned the true art of loving, living, and giving from the great artist.

In Christian Science one learns not to trifle in coldly asserting that divine Love always has met and always will meet any human need (Science and Health, p. 494), unless willing and ready to be the avenue through which divine Love can work, for the committee work usually has to be promoted by the one who dares to make the motion. If the glaring head-lines in our daily papers could only be those making for peace and purity, the pictures would encourage the artistic journalist and reader to work out that expression in the hearts and lives of those who have never been touched by this hopeful side of life, thereby lessening the picturing and copying of crime and immorality and increasing the momentum of good.

Surely it is high time to awake out of sleep, for God is speaking peace to His people so clearly that now there seems to be almost a millennial wave, and sentiment so strong that even "the very stones" cry out for its perpetuation, and proving, as my father once said in a sermon preached many years ago, that "there is a spiritual, a divine Science, as far superior to the higher human intelligence as the most profound works of modern science are superior to the intelligence of an infant school."

"LAUNCH OUT."

F. MAUD TURNER.

IN all the comfort and encouragement which we get from the study of the Gospels nothing perhaps brings to us a greater sense of buoyant hope than does the story of the miraculous draught of fishes recorded by St. Luke. Jesus, after having taught the multitude from the ship belonging to Simon, turned to him and said, "Launch out into the deep, and let down your nets for a draught." To a fisherman such a command in the daytime must have sounded strange, and Simon answered, "Master, we have toiled all the night, and have taken nothing." Then quickly he added, "Nevertheless at thy word I will let down the net." The Master's command was obeyed, and the result was so great that the net brake, and help had to be obtained from another ship in order to handle the multitude of fish that had been caught.

In reading this narrative we too may perhaps remember a command to "launch out into the deep," when fear combined with lack of trust to prevent us from obeying, when we felt more like hugging the shore. We had been toiling all night; we had been working hard and with no success. Would it, then, be wise to act contrary to human reason, contrary to prescribed laws? Perhaps under different circumstances and with different surroundings it might be safe to obey, but ——. Let us turn again to the narrative. We find there the same men, the same ship, the same net, and the same place—but a vastly different result. What then was the difference? It was surely the ready obedience to the voice of the Master, who knew that asserted material laws and conditions had in themselves no power whatsoever. Jesus knew man's God-given dominion, and he exercised that dominion. And what about past failures in that very same place, could they prevent success? Surely not. Work undertaken with an enlightened understanding would quickly bring the results of that enlightenment, even in the very same place where, toiling all night under a belief in material law, only failure had been the result.

Had our revered Leader allowed herself to be controlled by the evidence of the senses she would have been utterly discouraged. Many had been toiling for centuries, teaching mankind to pray that God's will be done on earth, when this apparently included much sickness, poverty, and misery, but she obeyed the command to "launch out into the deep," and now many thousands, with grateful thanks, are learning through her teachings that obedience to the divine law is the only way to obtain blessings—overflowing blessings, such as resulted from obedience to Jesus' command, when the Galilean fisherman proved that neither past failures, circumstances, place, nor human laws have power over the one who launches out into the deep and lets down the net. These have all realized that willing obedience to God's law brings good results, and that quickly. Ready obedience will overcome the fear that often causes mortals to "hug the shore." We sometimes hear it said, "If I can only get well, then it will be so much easier to trust God, and I am trying so hard." Had Simon stopped with his answer to Jesus, "Master, we have toiled all the night, and have taken nothing,"—would he have reaped any reward? No; but he obeyed the command—he launched out into the deep and let down the net.

How appropriately do the following words from Science and Health (p. 167) substantiate the lessons we learn from this Gospel story: "It is not wise to take a halting and half-way position or to expect to work equally with Spirit and matter, Truth and error. . . . Only through radical reliance on Truth can scientific healing power be realized."

[Written for the *Sentinel*.]

MY SHIP.

MARY EMILY MUIR.

MIDNIGHT, and the angry, storm-rocked sea;
The mad, wild pageantry of dashing waves.
The torrent pours,—from mighty clouds let free;
The swift wind raves.

And roll on roll the ceaseless thunder booms;
The lurid lightning gleams in vivid flame;
O'er sky and sea a seeming terror looms,
A poignant claim.

Ride on, my ship, o'er billow, foam, and spray;
Our compass marks the course and cannot err.
Though doubts would lure us, from our chosen way
We will not stir.

Ride on, my ship; the glory is at hand.
For Love hath seen the fearless, faithful will.
E'en now I hear the sweet, distinct command
Of "Peace, be still."

And lo, the morning dawns in floods of gold!
The calm blue waters gleam with points of light.
The glories of triumphant Truth unfold
To waking sight.

Ah, child of God, the blackness and the storm—
The tyrant claims of erring mortal mind—
In Truth's fair dawn shall lose the power to harm,
To fright, or blind.

[Rev. E. J. Craft, as reported in *The Standard*, Bridgeport, Conn.]

In an address made at the meeting of the Bridgeport assembly of the Brotherhood of St. Andrew, held in the parish hall of St. Luke's church last night [Aug. 3], the Rev. E. J. Craft, rector of Christ church, made some very startling comments regarding the power of mind over body, and of the workings of the Christian Scientists.

He also said that there was one body of Christians who acted as if they could place their hand on God at any time they wanted Him, and who actually lived in personal intercourse with Him. These people were the Christian Scientists, and they really effected the most wonderful cures. He related several instances of their powers at healing of which he had been a witness. He said that while he was not altogether in accord with some of their doctrines, he was a believer in their power, and that he wished every member of the Episcopal Church was as good a Christian man and woman as the members of this body. He further said that the teachings of the Christian Scientists were and always had been the teachings of the Bible; that he had been taught the same doctrines since his boyhood, but never until the advent of the Christian Scientists had he seen those teachings put to practical use. He had read and studied at length into the teachings of the Christian Scientists, and had come to the conclusion that as a rule they were better Christians, and were living closer to the teachings of the Saviour, and closer to the presence of their creator, than the average Episcopalian, Methodist, Baptist, or any other body of Christians.

He then mentioned several cases of bodily disease which had been cured by the power of faith, through the teachings of the Christian Scientists, and predicted that the day was coming when all the different religious bodies would take up the same line of work. He said that the Saviour cured by faith; therefore why should not man, his chosen instrument for the furtherance of the work of Christianity, do likewise; that there was a great lack of faith in every religion, except with the Christian Scientists. He had never known a follower of this religion to worry, he had never heard a member of this faith say a mean thing about another person. In fact, the whole of Mr. Craft's speech could be summed up something like this: The Christian Scientists are good, and they are good because of their great faith. They live close to God, and are in daily personal contact with Him. They are simply following out the teachings of Christ Jesus, and the day is not far hence when all religious organizations are bound to see that they are in the right and try to follow in their footsteps.

[From the *Los Angeles* (Cal.) *Herald*.]

At the Memorial Baptist church yesterday [July 19], Rev. C. C. Pierce, the pastor, preached on "The Gospel for the Age," taking for his text the words of Matthew, 4 : 33: "And Jesus went about all Galilee, teaching in their synagogues, and preaching the gospel of the kingdom." He said in part,—

"Some of my friends are very much afraid of what Christian Science is doing in the world. The favorite charge is that it is 'neither scientific nor Christian.' Perhaps this is so, but it is winning people of all grades of thought and culture, simply because it enforces the neglected gospel of health. It believes that it is right to be well. It believes that God can heal. All I have to say is, that if Christian Science has something better than we people of the orthodox church have, we have to get it or see our friends go to join them. Tell the sick man how he can get well, and he will try the experiment, no matter how rank some may believe the heresy to be. Bring men a gospel that will enable them to live good, clean, natural lives, free from excitement, worry, and disappointment; give men and women sufficient time to spend with their families, and enough intelligence to make the best use of their time; teach mankind to get right in their hearts, to think right and be right, show them the effect of the spirit and the mind upon the body, make them familiar with the great laws of psychology, and inspire them to make the highest use of all the powers of body, mind, and soul, and what we call sickness and disease will speedily disappear from the earth, and forever."

[George Shaw Cook in the *Morning Star*, Rockford, Ill.]

The Principle of Christian Science healing is God, and its law is "the law of the Spirit of life in Christ Jesus," which Paul declared "hath made me free from the law of sin and death." The foregoing may be classed as mere assertion, even though made by one who claims to have some practical knowledge of the subject. However, it will be generally conceded, I suppose, that Mrs. Eddy, as the Discoverer of Christian Science and its most successful demonstrator in this age, ought to know something of the basis upon which it rests. She says, on page 126 of "Science and Health with Key to the Scriptures," the text-book of Christian Science, "I have found nothing in ancient or in modern systems on which to found my own, except the teachings and demonstrations of our great Master and the lives of prophets and apostles." Doing Mrs. Eddy the justice of assuming that the foregoing statement is honestly made, the question of paramount interest becomes, "How did Jesus and the apostles heal the sick?"

Perhaps our critic would answer that their cures were effected by means of mental suggestion, but if so I hardly think there would be many who would be prepared to agree with him. I suppose it would be fair and reasonable to let Jesus answer the question in his own words as recorded in the Gospels. Jesus said of his works: "I can of mine own self do nothing. . . . The Father that dwelleth in me, he doeth the works." The Father referred to by Jesus as being the Principle of his works, was, according to Christian Science, the divine Mind. Jesus further said to his followers, "He that believeth on me, the works that I do shall he do also; and greater works." Christian Scientists believe that as followers of Christ Jesus they have a right to take him at his word. They believe that the healing which he did was lawful and was done according to a Principle which he understood. They believe that this Principle is God, divine intelligence. They believe that divine intelligence is as available to man now as it was at the time of Jesus. They believe that God and His eternal Christ should be and are entirely adequate to save under all circumstances and conditions. Christian Scientists are, however, sensible of the fact that they have only begun to understand and apply the Christ-method of healing, and do not pretend that they never fail in its application; yet they do know that Christian Science has proved efficacious in the healing of thousands upon thousands of cases of acute and chronic disease, mental and physical, functional and organic. This is not mere assertion; it is recorded fact, and should silence the claims often made that Christian Science is good only for nervousness and hysteria, a claim which is also made the basis for the statement that the cures wrought by Christian Science can all be explained as resulting from blind faith, will-power, or mental suggestion.

Christian Science shows that one phase of error will not destroy another phase of error. It shows that the human mind cannot destroy the evil conditions which that mind produces. Nothing but truth can destroy error, for the

ARTISTIC TOUCHES OF CHRISTIAN SCIENCE.

H. M. SPENCER.

LATELY, when listening to lovers of art discussing the relative values of certain paintings representing tired humanity, the thought came to me that if this same appreciation could be demonstrated in meeting the human and spiritual needs of those living subjects, there need be no heavy hearts and tired faces. A loving touch here and there, a little lightening of the shades, a different point of view, an artistic finishing: these would transform the model's expression of despair to one of hope and peace.—one that would be forever pictured upon the watch-tower of the heart of him who had learned the true art of loving, living, and giving from the great artist.

In Christian Science one learns not to trifle in coldly asserting that divine Love always has met and always will meet any human need (Science and Health, p. 494), unless willing and ready to be the avenue through which divine Love can work, for the committee work usually has to be promoted by the one who dares to make the motion. If the glaring head-lines in our daily papers could only be those making for peace and purity, the pictures would encourage the artistic journalist and reader to work out that expression in the hearts and lives of those who have never been touched by this hopeful side of life, thereby lessening the picturing and copying of crime and immorality and increasing the momentum of good.

Surely it is high time to awake out of sleep, for God is speaking peace to His people so clearly that now there seems to be almost a millennial wave, and sentiment so strong that even "the very stones" cry out for its perpetuation, and proving, as my father once said in a sermon preached many years ago, that "there is a spiritual, a divine Science, as far superior to the higher human intelligence as the most profound works of modern science are superior to the intelligence of an infant school."

"LAUNCH OUT."

F. MAUD TURNER.

IN all the comfort and encouragement which we get from the study of the Gospels nothing perhaps brings to us a greater sense of buoyant hope than does the story of the miraculous draught of fishes recorded by St. Luke. Jesus, after having taught the multitude from the ship belonging to Simon, turned to him and said, "Launch out into the deep, and let down your nets for a draught." To a fisherman such a command in the daytime must have sounded strange, and Simon answered, "Master, we have toiled all the night, and have taken nothing." Then quickly he added, "Nevertheless at thy word I will let down the net." The Master's command was obeyed, and the result was so great that the net brake, and help had to be obtained from another ship in order to handle the multitude of fish that had been caught.

In reading this narrative we too may perhaps remember a command to "launch out into the deep," when fear combined with lack of trust to prevent us from obeying, when we felt more like hugging the shore. We had been toiling all night; we had been working hard and with no success. Would it, then, be wise to act contrary to human reason, contrary to prescribed laws? Perhaps under different circumstances and with different surroundings it might be safe to obey, but ——. Let us turn again to the narrative. We find there the same men, the same ship, the same net, and the same place—but a vastly different result. What then was the difference? It was surely the ready obedience to the voice of the Master, who knew that asserted material laws and conditions had in themselves no power whatsoever. Jesus knew man's God-given dominion, and he exercised that dominion. And what about past failures in that very same place, could they prevent success? Surely not. Work undertaken with an enlightened understanding would quickly bring the results of that enlightenment, even in the very same place where, toiling all night under a belief in material law, only failure had been the result.

Had our revered Leader allowed herself to be controlled by the evidence of the senses she would have been utterly discouraged. Many had been toiling for centuries, teaching mankind to pray that God's will be done on earth, when this apparently included much sickness, poverty, and misery, but she obeyed the command to "launch out into the deep," and now many thousands, with grateful thanks, are learning through her teachings that obedience to the divine law is the only way to obtain blessings—overflowing blessings, such as resulted from obedience to Jesus' command, when the Galilean fisherman proved that neither past failures, circumstances, place, nor human laws have power over the one who launches out into the deep and lets down the net. These have all realized that willing obedience to God's law brings good results, and that quickly. Ready obedience will overcome the fear that often causes mortals to "hug the shore." We sometimes hear it said, "If I can only get well, then it will be so much easier to trust God, and I am trying so hard." Had Simon stopped with his answer to Jesus, "Master, we have toiled all the night, and have taken nothing,"—would he have reaped any reward? No; but he obeyed the command—he launched out into the deep and let down the net.

How appropriately do the following words from Science and Health (p. 167) substantiate the lessons we learn from this Gospel story: "It is not wise to take a halting and half-way position or to expect to work equally with Spirit and matter, Truth and error. . . . Only through radical reliance on Truth can scientific healing power be realized."

[Rev. E. J. Craft, as reported in *The Standard*, Bridgeport, Conn.]

In an address made at the meeting of the Bridgeport assembly of the Brotherhood of St. Andrew, held in the parish hall of St. Luke's church last night [Aug. 3], the Rev. E. J. Craft, rector of Christ church, made some very startling comments regarding the power of mind over body, and of the workings of the Christian Scientists.

He also said that there was one body of Christians who acted as if they could place their hand on God at any time they wanted Him, and who actually lived in personal intercourse with Him. These people were the Christian Scientists, and they really effected the most wonderful cures. He related several instances of their powers at healing of which he had been a witness. He said that while he was not altogether in accord with some of their doctrines, he was a believer in their power, and that he wished every member of the Episcopal Church was as good a Christian man and woman as the members of this body. He further said that the teachings of the Christian Scientists were and always had been the teachings of the Bible; that he had been taught the same doctrines since his boyhood, but never until the advent of the Christian Scientists had he seen those teachings put to practical use. He had read and studied at length into the teachings of the Christian Scientists, and had come to the conclusion that as a rule they were better Christians, and were living closer to the teachings of the Saviour, and closer to the presence of their creator, than the average Episcopalian, Methodist, Baptist, or any other body of Christians.

He then mentioned several cases of bodily disease which had been cured by the power of faith, through the teachings of the Christian Scientists, and predicted that the day was coming when all the different religious bodies would take up the same line of work. He said that the Saviour cured by faith; therefore why should not man, his chosen instrument for the furtherance of the work of Christianity, do likewise; that there was a great lack of faith in every religion, except with the Christian Scientists. He had never known a follower of this religion to worry, he had never heard a member of this faith say a mean thing about another person. In fact, the whole of Mr. Craft's speech could be summed up something like this: The Christian Scientists are good, and they are good because of their great faith. They live close to God, and are in daily personal contact with Him. They are simply following out the teachings of Christ Jesus, and the day is not far hence when all religious organizations are bound to see that they are in the right and try to follow in their footsteps.

[From the *Los Angeles* (Cal.) *Herald.*]

At the Memorial Baptist church yesterday [July 19], Rev. C. C. Pierce, the pastor, preached on "The Gospel for the Age," taking for his text the words of Matthew, 4 : 33: "And Jesus went about all Galilee, teaching in their synagogues, and preaching the gospel of the kingdom." He said in part,—

"Some of my friends are very much afraid of what Christian Science is doing in the world. The favorite charge is that it is 'neither scientific nor Christian.' Perhaps this is so, but it is winning people of all grades of thought and culture, simply because it enforces the neglected gospel of health. It believes that it is right to be well. It believes that God can heal. All I have to say is, that if Christian Science has something better than we people of the orthodox church have, we have to get it or see our friends go to join them. Tell the sick man how he can get well, and he will try the experiment, no matter how rank some may believe the heresy to be. Bring men a gospel that will enable them to live good, clean, natural lives, free from excitement, worry, and disappointment; give men and women sufficient time to spend with their families, and enough intelligence to make the best use of their time; teach mankind to get right in their hearts, to think right and be right, show them the effect of the spirit and the mind upon the body, make them familiar with the great laws of psychology, and inspire them to make the highest use of all the powers of body, mind, and soul, and what we call sickness and disease will speedily disappear from the earth, and forever."

[George Shaw Cook in the *Morning Star*, Rockford, Ill.]

The Principle of Christian Science healing is God, and its law is "the law of the Spirit of life in Christ Jesus," which Paul declared "hath made me free from the law of sin and death." The foregoing may be classed as mere assertion, even though made by one who claims to have some practical knowledge of the subject. However, it will be generally conceded, I suppose, that Mrs. Eddy, as the Discoverer of Christian Science and its most successful demonstrator in this age, ought to know something of the basis upon which it rests. She says, on page 126 of "Science and Health with Key to the Scriptures," the text-book of Christian Science, "I have found nothing in ancient or in modern systems on which to found my own, except the teachings and demonstrations of our great Master and the lives of prophets and apostles." Doing Mrs. Eddy the justice of assuming that the foregoing statement is honestly made, the question of paramount interest becomes, "How did Jesus and the apostles heal the sick?"

Perhaps our critic would answer that their cures were effected by means of mental suggestion, but if so I hardly think there would be many who would be prepared to agree with him. I suppose it would be fair and reasonable to let Jesus answer the question in his own words as recorded in the Gospels. Jesus said of his works: "I can of mine own self do nothing. . . . The Father that dwelleth in me, he doeth the works." The Father referred to by Jesus as being the Principle of his works, was, according to Christian Science, the divine Mind. Jesus further said to his followers, "He that believeth on me, the works that I do shall he do also; and greater works." Christian Scientists believe that as followers of Christ Jesus they have a right to take him at his word. They believe that the healing which he did was lawful and was done according to a Principle which he understood. They believe that this Principle is God, divine intelligence. They believe that divine intelligence is as available to man now as it was at the time of Jesus. They believe that God and His eternal Christ should be and are entirely adequate to save under all circumstances and conditions. Christian Scientists are, however, sensible of the fact that they have only begun to understand and apply the Christ-method of healing, and do not pretend that they never fail in its application; yet they do know that Christian Science has proved efficacious in the healing of thousands upon thousands of cases of acute and chronic disease, mental and physical, functional and organic. This is not mere assertion; it is recorded fact, and should silence the claims often made that Christian Science is good only for nervousness and hysteria, a claim which is also made the basis for the statement that the cures wrought by Christian Science can all be explained as resulting from blind faith, will-power, or mental suggestion.

Christian Science shows that one phase of error will not destroy another phase of error. It shows that the human mind cannot destroy the evil conditions which that mind produces. Nothing but truth can destroy error, for the

Digitized by Google

same reason that nothing but light can destroy darkness. One form of mortal belief may take the place of another form, and temporary relief may seem to result from this change, but nothing can permanently eradicate human error and the effect thereof, except the absolute understanding of divine Truth. Christian Science teaches that all disease is due to some phase of mortal belief. It shows that not only mental but bodily sickness is directly or indirectly caused by some erroneous conditions of thought, such as fear, sin, worry, hatred, envy, lust, or by some generally accepted belief of the human mind claiming to operate as law. It shows that the scientific cure of disease must therefore come from an opposite source, from the Mind which is divine, eternal, universal, omnipotent, the Mind to which Paul referred when he said, "Let this mind be in you, which was also in Christ Jesus."

[L. H. Jones in the *Louisville* (Ky.) *Herald.*]

We believe that there is abundant Scriptural warrant for the attitude of Christian Science in denying reality to things material. It may be presumed that no one will question the scholarly attainments and eminent competency of Sir William M. Ramsay for the task he has undertaken in his book, "The Cities of St. Paul," which has just been issued from the press. We quote what he says of St. Paul's teaching on this point, for it is exactly what Christian Science teaches:—

"I should, in the first place, ask you to glance at the philosophy of history, as St. Paul declares it. To him the philosophy of history was the history of religion, for in his view there is nothing real except God. Things are permanent and firm only as they partake of the divine. All else is evanescent, mere illusion and error and uncertainty." Now this is a basic, exact, and comprehensive statement of the position of Christian Science. If it is a correct statement of Paul's teaching, since God is admittedly Spirit, then everything taught in Christian Science as to the unreality of matter and material objects follows as a necessary and inevitable corollary. For, if there is nothing real but God, and God is Spirit, then there is nothing real but Spirit, and materiality, not being Spirit, is unreal in all of its manifestations. Hence Christian Science teaches that all reality is Spirit and spiritual, and that physical nature or the material universe, being not only not spiritual, but the antipode of Spirit, is unreal in any correct application of the word reality. Yet this is the position of Christian Science, which our critic declares to be the "most absurd of all."

Does all this read as if Christian Science teaches "a theology without a God," as our critic charges? This critic is quite as wide of the mark when he says it denies personality to God and the Christ. It does deny, and it utterly repudiates, no doubt, the anthropomorphic sense of personality. It teaches that God is supreme personality and that the Christ is the expressed image and likeness of that personality. No doubt God's personality as much transcends the ordinary conception of what real personality means as God's thoughts are higher than any mortal's thoughts.

The critic is reported as saying that the essentials for Scriptural healing "are prayer, faith, and the use of means." What does he mean by the addition "and the use of means"? Does he intend to say that prayer and faith are not "means," and that God must needs resort to material means, to drugs and nostrums, in order to heal the sick? Where in all the Scriptures does he find the least authority for such a statement? Why should God use pills and paregoric to heal the sick? "Not by might, nor by power, but by my spirit, saith the Lord of hosts." "And my glory will I not give to another, neither my praise to graven images." Jesus spent the greater part of his ministry in healing the sick; did he ever recognize as "means" anything but prayer and faith? Did he or his disciples ever refer a patient to Luke, "the beloved physician," either for a prescription or for diagnosis? Are not Jesus' means both Scriptural and sufficient? Jesus said, "I am the way, . . . no man cometh unto the Father, but by me." Read the beautiful chapter on "Prayer" in Science and Health, for a sufficient refutation of the charge that Christian Science is a religion "in which there is no place for prayer in the real sense." A Christian Scientist knows his prayer is a "prayer in the real sense," in the best and only way it can be known, viz., because it brings an answer in the healing of sin and sickness.

A statement is often true in inverse ratio to the violence of its utterance, and this is the case with the critic's ejaculations over the statement in Science and Health [see p. 482] that the word "soul" is often used in the Scriptures as meaning sense rather than Spirit, and he quotes from Ezekiel, "The soul that sinneth, it shall die." The Greek word in the Scriptural text that is translated "soul" is a different word from that which is used to express "Spirit," and often means, according to high authorities, animal life, the life that man has in common with beasts—that is, sense life—as against Spirit or the immortal, divine Principle of life that distinguishes man from the brute creation. Hence its use in Science and Health is entirely correct. Soul in the text quoted by the doctor cannot mean Spirit—although he seems to think it does—for Paul says there is "one Spirit," meaning, of course, that there are not others; and Jesus says, "God is a Spirit;" hence Spirit can neither sin nor die. As to the charge that Christian Science makes light of sin, no one endeavors more faithfully to eschew all evil than a Christian Scientist; not, however, because he is afraid of the judge and the workhouse, but because he knows the disastrous effect of a belief in sin on his health and happiness, both here and hereafter.

[Frederick Dixon in the *Cornish Guardian*, Bodmin, Eng.]

The critic has said that "the Christian Scientists were trying to win America and London," and that they must be fought. Now Christian Scientists are preaching not merely in America and London, but throughout the world, the fact that the gospel of Jesus was a gospel not only for sinners but for the sick; a gospel not only of moral but of physical healing; and that this is why he said, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk?" There is just one way in which any orthodox church can fight Christian Science, if you are going to admit for an instant that such a term is admissible, and that is by healing more quickly, more efficaciously, more universally. If it will attempt to do this, it will very soon find that we are both working for a common end, and there will grow up instead of rivalry a loving and Christian cooperation. Jesus said, "Go ye therefore, and teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost: teaching them to observe all things whatsoever I have commanded you; and, lo, I am with you alway, even unto the end of the world." Is it not about time the inhabitants of Christendom began to put this command into practice instead of devoting their energies to the criticism of one another, and of those in particular who are endeavoring to carry out this command most thoroughly?

The day is gone by forever when it is possible to ignore the movement whose followers have set themselves the task of demonstrating the practicability of the teachings of Christ Jesus in their entirety. Originally the pioneers of the movement were sent out by Mrs. Eddy from Boston, but the pioneers have developed into companies and the companies into battalions, recruited from all sorts and con-

Digitized by Google

ditions of men, in half the countries of the world. These men are drawn from the great churches, and from the medical schools; there are to be found amongst them distinguished officers, as well as the rank and file of the services, brilliant advocates, and members of the legislative councils; they number amongst them thousands of the most clear-sighted business men, and artists of every description: you will find them in the mining camps of the Andes, in Australian stations, in the shops, workshops, and factories of the world. The force which has given impetus to this great movement, the attraction which is binding together this vast concourse of men and women, the influence which is enabling them to demonstrate the power of the spiritual law which governs them instead of bowing beneath the burdens with which physical law would claim to burden them, is the knowledge of Truth, in the understanding of the Bible, taught to them in their text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

It is an admitted fact, it is indeed a fact which can no longer be denied, that the reading of Science and Health has made thousands upon thousands of happier, healthier, and better men and women,—men and women rescued from pain and disease, and from the "valley of the shadow of death;" rescued from sorrow and poverty, from despair, and from the misery of living; rescued from the myriad temptations of sin, and going out, in their turn, into the world to preach "glad tidings of good things." Before this critic turns to fight this movement, would it not be well for him to read once again the story of Jesus' rebuke to John: "And John answered him, saying, Master, we saw one casting out devils in thy name, and he followeth not us: and we forbad him, because he followeth not us. But Jesus said, Forbid him not: for there is no man which shall do a miracle in my name, that can lightly speak evil of me. For he that is not against us is on our part."

[R. Stanhope Easterday in the *Indianapolis* (Ind.) *Star*.]

History would seem to record, with credit to all, that the broad-minded men of all ages were keenly alive to the humorous, but there is no evidence in the Apocalypse that there will be any joking in heaven. Possibly the key-note of the whole proposition is expressed in the words of the wise man, "There is . . . a time to weep, and a time to laugh." It is barely possible that the reverend critic chances always to meet Christian Scientists out of the laughing season. The writer can bear unhesitating testimony to the fact that he never had a good laugh nor really enjoyed a joke until after his healing in Christian Science.

It is an old adage and a true one, that "extreme remedies are very appropriate for extreme diseases." The agony of Gethsemane and the tragedy of Calvary, as recounted in the Gospels, are sufficient to overshadow any tendency to the mirthful in the life of the Master. Mrs. Eddy in her treatise on the life and works of the Saviour, commonly known as the text-book of Christian Science, "Science and Health with Key to the Scriptures," amply justifies the serious nature of her work on page 226 of this book. If Christian Scientists are, as our critic himself admits, happy, wholesome, buoyant, and cheerful, this fact in itself justifies the serious trend of their thoughts during even a greater portion of their waking hours. For Addison has said, "Mirth is like a flash of lightning, that breaks through a gloom of clouds and glitters for a moment; cheerfulness keeps up a kind of daylight in the mind, and fills it with a steady and perpetual serenity." Whatever may be the teaching of Christian Science as to the material, Christian Scientists themselves appreciate the fact that it takes "backbone" to meet and vanquish the tempter, and that while "a merry heart" is in itself wholesome and desirable, a mere laugh will not quench sin nor cure an ache.

AMONG THE CHURCHES.

GORGONA, CANAL ZONE, PANAMA.

In an article on "Religious Work in Canal Zone," the *Canal Record*, the official paper, says: "The Christian Science Church was organized on the Isthmus in January, 1906, and services are held in the Commission Chapel in Gorgona every Sunday morning at 8.15 o'clock."

COEUR D'ALENE, IDAHO.

The Christian Scientists residing in this city commenced to hold services last September in a private house in the Park. Last spring the number had increased so that it became necessary to remove into a hall. On July 12 a Christian Science Society was organized, and steps are now being taken to open a Reading Room.—*Correspondence*.

BUZZARDS BAY, MASS.

Christian Science services have been started at this point, although it is little more than a railroad junction. Two Christian Science families had lived here (one during the summer months only) for many years, without knowing of each other's interest in Science, and it was not until the Communion season of this year that this fact was discovered. The writer, upon her return from Communion, proposed that the two families meet on Sunday morning for the purpose of reading the Lesson-Sermon together. It was soon found that others in near-by places were also interested, and each week the number increased, until after the fourth Sunday a hall was engaged and two weeks ago the first Wednesday testimonial meeting was held.

Divine Love has met our every need. Readers have been appointed, a piano and an accompanist provided, Hymnals and *Quarterlies* have been bought and paid for; and in thanksgiving for all these blessings we send greetings to the Field, and our gratitude to the Discoverer and Founder of Christian Science for showing us the way in which we may be about our Father's business.—*Correspondence*.

SAN FRANCISCO, CAL.

As superintendent of the Sunday School I am greatly interested in this part of the church work. In our teaching we follow carefully The Mother Church Manual By-law, and we have sent a letter to the parents of the pupils asking for their cooperation in encouraging the pupils to study the Lesson-Sermons. We have also called their attention to paragraphs in Science and Health, which answer many questions that are often put to the pupils in our Sunday School by those who are not interested in Christian Science. For instance, as to the scientific definition of God, page 140, lines 25 to 27; of Christ, page 583; of Jesus, page 589; of angels, page 581; of baptism, page 581; and of heaven, page 587.

The sending of this letter to parents has awakened much interest, and better results are being realized from our teaching. We encourage the pupils to earn their own money for the collection on Sunday morning, and to make their offering with love. The teachers have formed the habit of meeting together each Sunday morning for a few moments of silent prayer just before the opening of the school that they may be prepared for their holy work, and in doing this they are helped to demonstrate promptness, which they feel to be very important. They send their hearty greetings to all Sunday School workers in Christian Science.—*Correspondence*.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy upon proper subjects *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

NO TRUST NEEDED.

WE clip the following from an editorial in the *Springfield* (Mass.) *Union*:—

Any movement to form a "doctor's trust," of which there appear to be some symptoms, will be severely frowned upon by the public. We are not willing to have the blessings of medicine and surgery cornered and run purely on a commercial basis. The tendency has been so long the other way that sentiment would not brook any such reaction. There is a disposition in many quarters to invoke legislation for the purpose of placing the public in more direct dependence upon the doctors. This is a tendency that may easily be carried too far, especially as the request for such legislation is generally accompanied by arguments advanced on other than business grounds, which appear more or less plausible, as in the case of the recent ruling of the Louisiana Board of Health prohibiting the refilling of prescriptions without a physician's order. The ignorant and indiscriminate use of drugs and medicines certainly should be discountenanced, and the only point we seek to emphasize is that mercenary considerations should not be allowed to intervene in a matter of this kind.

This editorial indicates that the public is at last waking up to the fact that medical legislation such as has been proposed in a number of the States in the past would be class legislation pure and simple. To place "the public in more direct dependence upon the doctors" has been the purpose of practically all of the medical bills that have been introduced in the legislatures in recent years and it is time that this purpose should be fully recognized and exposed.

The people at large have not asked for medical legislation and none is needed other than that which will protect them from the quacks and criminals who pretend to be legitimately practising medicine; anything further than this would be an invasion of private rights. It is not within the province of the State to dictate the system of healing or the system of religion which shall be followed by its citizens.

ARCHIBALD MCLELLAN.

THE PURIFICATION OF SENSE.

REFINEMENT of experience is always preceded by purification of thought, the ennoblement of our living by the exaltation of our concepts, and it is this that gives such dynamic significance to the ideal. The believer's highest concept of Christian truth and of Christian privilege is the spiritual magnet, in loyal and continuous response to which he realizes his spiritual advance, together with the advance of his ideal, and this process is never more certainly indicated than when he finds himself entertaining a higher and holier sense of things, when words bring to consciousness an ever sweeter, more uplifting meditation.

All this will appear when we think of the simple and familiar word love, to which different people give such diversified and contradictory interpretations. For those whose activities are impelled, for the most part, by animal instincts, love means fleshly satisfaction, and like Queen Guinevere, they may have to learn through unspeakable suffering the unworthiness of this too common sense, and in their shame and agony cry out with her,—

> Ah, my God,
> What might I not have made of Thy fair world
> Had I but loved Thy highest creature here?
> It was my duty to have loved the highest:
> It surely was my profit had I known.

To others, love brings the thought of absorption in and devotion to human personality, the paternal, fraternal, marital, and patriotic attachments which lead to so much heroic sacrifice, and which bring their meed of transient joy, and, sadly oft, of pain.

For yet others, love signifies that oneness and intercommunion of spirit which in its unselfishness, its purity, and its impelling inspiration, is intuitively recognized as the highest realization and expression of the heart of God. They have come to understand our Leader when she says of Christ Jesus, "Out of the amplitude of his pure affection, he defined love" (Science and Health, p. 54), and with the poet, they can unhesitatingly say, "Love is the highest we feel, therefore we must believe that God is Love." Upon this spiritually scientific plane of apprehension we who are parents may find a new and more intelligently sympathetic interest in our children. We perceive that from God's point of view they are our brothers and sisters, and that we truly love them only as we regard them, and reckon with them, in the light of this diviner sense. Their faults are now uncovered, not as identified with them, but as manifestations of that which is wholly incongruous with their true selves, and as we lovingly lead them to see this they will join us in resisting the asserted reality and rule of appetites and tempers which are the common enemies of all mankind. We are beginning to love our children in a helpful way. Our sense of affection and our sense of relation are both being advanced.

Upon this plane, too, husbands and wives are led to think of the ideal marriage, that true comradeship in which spiritual aspirations are given the rule and authority, and the home becomes like unto "a watered garden." Upon this plane all genuine and lasting ties are formed, and ideal affection is proven to be the mutually appreciative attraction and intercommunion of divine ideas. Such love is not conditioned by age, sex, or human surroundings, but only by likeness of apprehension and spiritual impulse. It may exist, therefore, between men no less certainly than between man and woman. Thus were David and Jonathan united, thus Tennyson and Hallam. After seventeen years of unforgetting, the sorrowing poet erected, in his matchless elegy, "In Memoriam," a monument in honor of Love's pure reflection which will delight the vision of all great hearts until time's end.

Christian Science points the way to the redemption of human living by revealing the beauty and the gain of an ever-advancing ideal, that higher and higher reach of concept and of aspiration which declares for the unmeasured greatness of the spiritual possibilities of man.

JOHN B. WILLIS.

THE DIGNITY OF LABOR.

THE sentence imposed upon Adam—"In the sweat of thy face shalt thou eat bread, till thou return unto the ground"—is usually remembered with a bitter sense of resentment on the part of those who believe that they must suffer endless pains and penalties because of the mistake made by their remote ancestor, but Paul gives a happier turn to thought when he says, "As in Adam all die: even so in Christ shall all be made alive." Mrs. Browning writes,—

> After Adam work was curse . . .
> But after Christ, work turns to privilege . . .
> I count that Heaven itself is only work
> To a surer issue.

In Science and Health we read, with reference to this subject, "The condemnation of mortals to till the ground means this,—that mortals should so improve material belief by thought tending spiritually upward as to destroy materiality" (p. 545). We then read that the real man, created by God, "was given dominion over the whole earth."

Digitized by Google

Whatever be our religious opinions, the fact remains that the race as a whole must labor for their bread until they gain some sense of the "dominion" which is the spiritual man's birthright. The vital question is how our toil can be made to count for something, for that which shall bless our own lives and enrich the lives of others. No one can deny that every step of real progress, even on the ordinary plane of experience, means the recognition of a power superior to matter or brute force. Whatever makes labor less toilsome and more hopeful points to the supremacy of Mind, which must be understood before ideal conditions can be realized in human experience. It is easily seen and generally admitted that the marvelous improvements in all that pertains to the home, to travel, etc., do not really make human life less burdensome; indeed, it often seems as if the opposite were the case. This does not mean that we should think of going back to outgrown conditions, which would be at once impossible and undesirable, but Christian Science shows that Mind-directed, purposeful activity is the true goal, and that such activity is both invigorating and restful. Our revered Leader says, "God rests in action" (Science and Health, p. 519). If we reflect the divine activity we shall accomplish wonders and work without weariness.

Christ Jesus said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." He worked incessantly for the good of all humanity in all ages. He did not quarrel with existing conditions, but showed how the hungry could be fed by recognizing the divine source of all supply. His demand in everything was perfection and no less, and our ideal should be perfection in both process and results. With this ideal in view, labor can never seem hard; never a curse, but a blessing. No one can enjoy work ill done, and there is no need that any work be poorly done. Mrs. Eddy says that God, divine Principle, "expresses Science and art throughout His creation" (Science and Health, p. 507). This surely furnishes a model for all our activity, and every Christian Scientist should rejoice that whatever be the character of his work, he may express both "Science and art" in all he does, as did the artificers who wrought in the temple at Jerusalem, those who came forward in response to the call, "Who then is willing to consecrate his service this day unto the Lord?" Is not this really the call to each one of us, whatever our station in life, and does it not follow that as we respond to it, gladly and intelligently, we become coworkers with God, and not only realize but prove to all mankind the dignity of labor.

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

Randsburg, Cal., Aug. 19, 1908.

Mrs. Mary Baker G. Eddy,
Box G, Brookline, Mass.

Dear Madam:—The thought has come to me that I must write to you, and tell you, if I can do so, what a revelation "Science and Health with Key to the Scriptures" has been to me. I believe that you will understand why I feel constrained to write when I make known to you my personal experience, for this understanding of God which you have revealed to the world means more to me, perhaps, than it would to one who had never known the sweets of divine Love. In my early manhood I found what I believed to be the Christian's secret of a happy life. The knowledge I obtained at the time I surrendered self, and trusted wholly in the Christ love to do the work for me which I felt I could not do for myself, enabled me to overcome temptation and sin all through my life. At the time this sweet sense came to me, many of the errors of mortal mind were destroyed within me, such as envy, strife, hatred, etc. As I believed that I was already in possession of the Christian's secret I could not hope to find a better way, and I doubt whether I would have become interested in Christian Science if I had not read the criticisms of Mark Twain and others, published in some of the leading periodicals of the day. These criticisms caused me to investigate your writings, and I soon found that the severe criticisms were not only unjust to you and your writings, but that you taught the truth as it was taught by Christ Jesus. When I grasped the thought, while reading Science and Health, that God's kingdom is wholly spiritual, such a revelation came to me that I saw I was only a babe as yet in God's household; that I had been feeding upon the milk of the word when I might have partaken of the strong meat, so to speak.

Since I have grasped the thought that all is Mind, and that Mind is Spirit, God, and that God is Love, Life, and Truth, that He is All-in-all, and that there is nothing real but Truth; that sin, sickness, and death are only the false concepts of the mortal mind, which (as Paul tells us) is enmity with God and is not subject to the law of God, neither indeed can be, I feel that I have lost sight of my age (sixty-one years) and that I have only begun to realize what life means and is to the real man created in the image and likeness of God. Oh, how my heart goes out to you in love and gratitude for revealing to this age the highway of holiness, for making the way to heaven (which is within us) so plain, and the rule for working out the problem of our salvation so simple that a little child can understand and know God as He is, and be able to grow up free from false beliefs about God, good.

I am not a member of the Christian Science Church, but hope to be in the near future if found worthy. My dear wife and I are the only two here who are particularly interested in the study of Christian Science, but we believe that others will become so in the near future. Randsburg is a mining town and I am one of the miners. I will add that since taking up the study of Christian Science my thinking and reasoning powers have developed far beyond what they were, that my memory is growing better, and that I can express what I know better than I ever could.

Yours in Christian love,
S. L. KAIN.

London, England, July 28, 1908.

Dear Mrs. Eddy:—I want so much to thank you for your book "Science and Health with Key to the Scriptures," and for all that your teaching means. It has been such a great help to me in trouble, making me see things in a wonderful new light. I am quite a beginner, having read your book for the first time at Christmas. Though I have at present only a small glimpse of what it really means, I have been so helped, and it is all so wonderful, that I feel I must write and thank you. I had read a portion of the Bible each day for twenty years, but it is a new book to me now; it is as if a veil had been lifted. My great desire is that I may grow in this new understanding and so be able to help others as I have been helped. Again thanking you,

Yours faithfully,
GRACE L. M. ELLIOTT.

Osage City, Kan., Aug. 24, 1908.

Mrs. Mary B. G. Eddy, Boston, Mass.

Dearest Leader:—May I have a moment of your time to tell you that I am truly grateful for the great work you have done for the cause of humanity. Your teaching has rolled away many stones from my path, and I have the assurance that all will disappear as I have one God and that good. Your setting aside of the Communion season helped me to overcome a disappointment because I could not

Digitized by Google

attend it, and gave me a needful rebuke that I did not commune more with divine Mind. It gave me a deeper sense of God as ever-present Love, thereby removing a sense of limitation, and taught me that all are welcome in The Mother Church always. I am grateful that I live in this age of our dear Pathfinder. If I can be of any use to you or the Cause, command me.

With sincere love,

GRACE L. UNDERWOOD.

New York, N. Y., Aug. 27, 1908.

Dear Leader:—When working this morning on a seemingly stubborn problem these words from page 504 of your book, Science and Health, came to me: "The rays of infinite Truth, when gathered into the focus of ideas, bring light instantaneously." This opened up such a vista of light upon my mental horizon that I felt I must thank you for all you have done and are doing for all mankind. I pray to be found more trustworthy every day, and to do my part in this great and noble work of which you are the Leader.

With a heart full of love and gratitude to you, I am one of your earnest followers,

CHARLOTTE B. ELDRIDGE.

Chatfield, Minn., July 24, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader and Teacher:—I wonder if you have ever known that the inspiration for the little poem from which the hymns 121 and 122 in our Church Hymnal were taken, was gained from the study of the beautiful words in Science and Health, page 55, lines 15 to 25, which conclude our Lesson-Sermon for next Sunday? Many times, as I have studied the Lesson this week, my heart has gone out to you in boundless love and gratitude for your great gift to needy humanity, and I have thanked our dear Father-Mother God that at least a partial realization of your "weary hope" is vouchsafed to you. God help us all so to purify our lives from all sin that we shall speed you on to the fuller and grander consummation of this sweet and sacred prophecy. With dear love,

Gratefully yours,

LAURA C. NOURSE.

Sevenoaks, England, July 7, 1908.

Beloved Leader:—I wish I could express to you something of the joy and gratitude I felt in reading over your letter about the abolition of the Communion season in The Mother Church. Your teaching has so unfolded to me the sense of the unbroken continuity of Love's activity that I was longing for the time when special occasions should no longer seem to be there. Some of our little community live far away from a town, so after the services on Sunday the 5th we stayed to read the letters and By-laws together. I think you will be glad to know that though we have held services for only two and a half years, and that some of us are very young in Science, there was not one present who did not see clearly the advanced step, and many expressed the desire that our thought in the branch churches might be so uplifted that the step may soon become universal. I would like to thank you too for the new By-law about numbering the people. The work here is in a small country town, and, to sense, it is a great overcoming for young students to come forward openly and attend the Christian Science services. The result has been, that while our beloved text-book is in great demand and much quiet healing is going on, the attendance at the services has been small. The members were eagerly counted and disappointment and undue elation alternated; also a desire to interfere and enquire closely into causes of absence, thus trying to steal the freedom of individual action. We had seen that this was wrong and stopped it, but when we read the new By-law we saw much more clearly that adherence to divine Principle, to Love, alone can build us up.

I know that our experience will be the same as that in many small towns where similar conditions have to be overcome; and that they will feel the same uplifting which we feel. I humbly and gratefully thank you for the loving wisdom that has thus supplied our need. It has given us a joyous sense of fresh encouragement, guidance, protection, and we thank God for our Leader.

Yours lovingly and gratefully,

JEANIE C. E. ANDREWS.

Boston, Mass., Aug. 8, 1908.

Mrs. Mary Baker G. Eddy, Chestnut Hill, Mass.

Beloved Leader:—I wish most heartily to thank you for the latest amendment to the By-law regarding music in The Mother Church. In defining so clearly what music you consider appropriate, you make the task of the musicians easier, and I shall gladly strive to be increasingly obedient to both the letter and the spirit of the By-law. Especially do I thank you for the protecting love with which you surround all those who are trying to serve the cause of Christian Science.

Gratefully and lovingly yours,

ALBERT F. CONANT.

Vineyard Haven, Mass., Aug. 20, 1908.

Dear Mrs. Eddy:—My heart is so full of gratitude for Christian Science and for the privilege of reading the Bible in The Mother Church, that I must write just a word of love and loyalty to you, dear friend and beloved Leader. My daily prayer is that I may be worthy to do this work, and that I may be able to get myself sufficiently out of the way, that the reading of the Word of God may be healing. My love to you I cannot express, but perhaps you, with your great loving heart, will understand how I love you.

Faithfully,

CAROL HOYT POWERS.

Grand Rapids, Mich., Aug. 29, 1908.

Dearly Beloved Leader:—After an entire night spent in the reading of Science and Health, the command comes clearly to thank you. As the first activities of a new day are beginning in the streets, I am reminded of the true definition of morning, "Light; symbol of Truth; revelation and progress" (Science and Health, p. 591). This "morning" is, indeed, the new era of Christian Science; and is it not imperative for all those "arrayed in white robes" to serve Truth "day and night in His temple"? (Revelation, 7 : 13, 15.) Dear Leader, I thank you for the redemption that your heaven-born messages have brought to me during the past years; but most of all I thank you for this latest and greatest gift,—the healing light that has been with me, during the hours of the night just past, through your inspired explanation of man's relation to God in Science and Health. I owe a very great debt of love to humanity for the many, many times I have been healed through reading Science and Health, and I realize more than ever before that the only way to begin payments on this obligation is by being "faithful over a few things." Lovingly and gratefully,

AGNES F. CHALMERS.

THE LECTURES.

SYDNEY, NEW SOUTH WALES, AUSTRALIA.

Bicknell Young of Chicago, U. S. A., delivered his first lecture on Christian Science for First Church of Christ, Scientist, Sydney, Australia, Sunday afternoon, June 21, in the Sydney Town Hall at three o'clock. The attendance was large, there being nearly three thousand people present. The lecturer was introduced by Charles H. Gibbs, chairman of the church, who spoke in part as follows:—

Representing the Christian Science Church of this city, it gives me very great pleasure to welcome you here most cordially. We may not know everything about any one subject, but as intelligent people we wish to understand it. It is not the object of this lecture to make proselytes of people or to disturb their faith, but to correct misconceptions and misrepresentations regarding Christian Science. Sometimes Christian Science is condemned by those who have never investigated it, but who have been influenced by the opinion of some other individual who has never looked into it carefully; others feel prejudiced against any new thing.

Christian Science is commanding the attention of many thousands of intellectual people throughout the world at the present time. The lecturer who will address you to-day is an accredited member of the Board of Lectureship of The First Church of Christ, Scientist, Boston, U. S. A., and can speak with authority on the subject of Christian Science. I am confident that this audience of intelligent people is competent to divest itself of all hindering prejudices and give close attention to the lecturer.

Correspondence.

A second lecture was delivered at the same place June 29, the chair being occupied by William W. Virtue, who in introducing the lecturer spoke in part as follows:—

Consciously or unconsciously the world has always been seeking for truth, for absolute truth, and to-day it is more actively and consciously seeking for it than ever before. We Christian Scientists believe that our great Leader, Mrs. Eddy, in her book "Science and Health with Key to the Scriptures," has given the world a glorious message, a message of hope, and joy, and healing, one which, when understood in conjunction with that Book of books, the Bible, enables each student individually to answer the great question propounded by Pilate of old—"What is truth?"

Let me say, as did the chairman at the first lecture, that the purpose of these lectures is not to proselyte. Christian Science is not aggressive, nor should Christian Scientists be so. We have our church services and free Reading Rooms, and our literature is within the reach of all who care to read it; but, believing that we have a message, and knowing that the public are apt to get utterly false impressions about Christian Science from newspaper articles and books written by persons who know really nothing of the subject, or who are openly hostile, these lectures are provided to give the public an opportunity to learn something of what Christian Science really is.—*Correspondence.*

[The local papers gave large space to reports of the lectures.—EDITOR *Sentinel.*]

FALL RIVER, MASS.

Bliss Knapp lectured on Christian Science to a very attentive audience in Music Hall, Fall River, Monday evening, June 1. He was introduced by Rev. Dr. J. F. Packard, formerly a Baptist clergyman, who said in part,—

I have been asked to introduce the speaker of the evening, and it is with great pleasure that I have accepted the invitation. But had such an invitation come to me two years ago, I not only would not have accepted it, but would have remained away from the lecture. Having been reared according to the teachings of one of the strictest of our so-called evangelical denominations, and having occupied its pulpits as a regularly ordained minister for nearly eighteen years, I had come to regard the Christian Scientists as a people who were making a very great mistake, and for whom I could see only a miserable hereafter. Hence I felt it to be my duty to warn the people to whom I ministered, from the pulpit and in every manner possible, to beware of what I regarded as a monstrous deception. Need I tell you that all this was not born of the spirit of the Christ I professed to love and preach, but was the outcome of ignorance and prejudice. I actually knew nothing of the teaching which I condemned. I had heard some things about it, and foolishly refusing to investigate its claims, proclaimed it a lie. But I had not studied the Christian Science text-book; indeed, I had not even read it. Since that time, however, circumstances have occurred which have led me not only to read, but to study that book, and it gives me great pleasure to say to you that I honestly believe that Christian Science teaches the very same truth that Jesus the Christ proclaimed when his feet pressed the hills and valleys of Palestine,—a truth which shows most clearly the true relation existing between God and man; a truth which will transform this world and bring in that glad hour when "the kingdoms of this world shall become the kingdoms of our Lord and of his Christ."

To me, Christian Science has been a great blessing, physically and spiritually. I loved the Bible before, but it has become a new book to me. I have not given up the Saviour I learned to love in boyhood, but behold him in a clearer light and love him with increasing affection. Prayer also has a new meaning, and brings a constant blessing, and as I thus commune with God, I realize in a sweeter sense than ever before, that the child is talking with the Father, whose name is Love, and that I am eternally safe in His arms. It has been said that by taking this step I have lost much. Nay, nay, I have gained more than words of mine can express. Jesus said: "By their fruits ye shall know them." Friends, Christian Science is in your midst, and its fruits may be seen in the lives of those who have been helped by it both physically and spiritually. Judge it not by what the voice of ignorance and prejudice may say about it, but judge it by its works, remembering that the Master has said that "a corrupt tree cannot bring forth good fruit."—*Correspondence.*

ON A FLY-LEAF OF SHAKESPEARE.

HON. CLARENCE A. BUSKIRK.

Were there no other proofs for us to see,
O mighty Bard, thou and they like to thee,
Like th' rainbow proves the sunlight, prove to me
The stature of man's immortality.

WHAT rare bee-bread was that which Shakespeare's lips
Fed on, and whose Olympic nectar drips
Forever on his page!
Surpassing sweets the fancies gathered then,
To run in honied raptures from his pen,
Such sweets as fancy gathers not again
For poet, wit, or sage.

Often his kindling sentence starts a flame
Of swift delight, and thoughts which erst were tame
And torpid in our hearts,
Leap into iridescence; oft a word
Comes to us like the wood-notes of a bird,
And hints supernal music never heard,
That nevermore departs.

TESTIMONIES OF HEALING.

I did not come to Christian Science for the physical healing, although I was anything but a strong woman at the time; it was from mental unrest—a feeling of stagnation—an intense longing to know more of God. I had been a working church member since childhood, but I found as time went on that I knew no more about God than I did thirty years before, and understood no better about man and all the sorrows and mysteries that seemed to surround him. I could not understand why an omnipotent, all-loving Father should make His children with such imperfect bodies and senses that while they had them they could not see Him,—why He made them subject to sickness and death. If it was God's will that people should be sick and die, why, I questioned, did Jesus go contrary to God's plan and heal their diseases and raise them from the dead, and say he was fulfilling God's will.

I had been taught that we must be resigned to God's will,—wait patiently until we died and reached heaven, when all these things would be made clear to us; but I could not see that the Bible taught this. Jesus said that to know God is eternal life. He did not say that we had to die to know God, but that if we knew Him we should never die. It seemed strange that in the midst of so many wonderful material discoveries so little should be known of God and of man,—His highest creation,—and that the science of man's being should remain such a mystery. I was prejudiced against Christian Science, but when finally I was led to read Science and Health I found in it an answer to the above questions and to many others that had been puzzling me. I found that the revelations of Christ Jesus, spiritually interpreted, appealed to me as the most consistent theory of God and man that I had ever heard. Although the Bible meant so much more to me, now that I had a "Key" to unlock its mysteries, still I clung to the Church of my youth, which I loved very dearly, hoping to remain where I was and also to enjoy the blessings that come from Christian Science. But how could I, when the Church taught directly or indirectly the reality of evil and that God used it, or permitted it, to perfect His creation? The blessings of Christian Science come from knowing that God is All and that evil is not real.

For months and months I was on the rack. No one knows the struggle unless he has been through it. I was beset on all sides by doubts and misgivings in my own mind, and with arguments in every conceivable form from my loved ones. For me the question must be settled once and for all. Had Mrs. Eddy rediscovered the truth? The first thing to do was to find out exactly what Christian Science teaches, and the only thorough way to do this was to study Science and Health, attend the church services, and put what I learned to the test in every sickness or trouble that came to me. I did not have to wait long, as shortly afterward I was taken with a severe attack of illness. After a practitioner had worked for me a short time, the thought suddenly came to me, If there is no sickness and this is only a false belief, why am I lying here? I immediately arose and went into the adjoining room. When the children came in they were surprised to find me so much improved. The next morning my first thought was that perhaps I might sit up half that day and longer the following day; when I suddenly realized that I did not have to convalesce from a false belief, and soon I was attending to all my household duties as usual. Some six months later, I had a severe attack of throat trouble, from which I had suffered under *materia medica*. This time a Christian Science practitioner came to see me, and the healing was most rapid. I regained my strength almost immediately, whereas under medical treatment I had been three weeks reaching my normal condition. I learned later how this was accomplished. Mrs. Eddy says, "God pours the riches of His love into the understanding and affections, giving us strength according to our day" (Science and Health, p. 5). I continued to read the text-book, and gradually overcame chronic liver trouble. The attacks had been so severe for two successive springs that the physician feared a fever would be the result. I began to see that the cause of the disease was mental, and if worry or other discordant thoughts had produced a pain in my side, what good could a plaster do? If I wished to be healed I must change my thoughts; as St. Paul tells us, our bodies are transformed by the renewing of our minds.

Because of the above experiences it was not difficult for me to give up *materia medica*, although my brother, father, grandfather, and great-grandfather had been physicians, but the church question was a more difficult problem. The first few Sundays that I attended the Christian Science services I was most unhappy. I found, upon questioning myself, that it was the form of service, the familiar hymns, and my friends that I missed. All this was but a gratification of the senses, not the worship of God "in spirit and in truth." I found through the Lesson-Sermons, however, that I was learning more about God and man, and how to worship as the Master taught. I found a working basis, a Principle, and rules which could be demonstrated to the extent that they were understood, thus proving that Christianity is scientific. I found that the life and teachings of Christ Jesus, spiritually interpreted, contain the truth concerning God and man and their relation to each other. There is still much to be learned, but the effort is a joyful one, full of assurance that we shall be conquerors, because we are working with God, the Principle of our being, and that this truth, when known, sets us free from evil of every kind, and brings us that "peace of God, which passeth all understanding."

Having found all this through the new commentary on the Bible, Science and Health, should I not be deeply grateful to Mrs. Eddy, our beloved Leader, the author of this inspired book.

ANTOINETTE W. STEPHENS, Hollywood, Cal.

Jesus said, "Ye shall know the truth, and the truth shall make you free." Before reading Science and Health I thought as did the Jews when they answered Jesus, "We . . . were never in bondage to any man;" but now I look over the last ten years and clearly see that divine Love has freed me from legions of taskmasters, among which are fear, worry, and an obstinate clinging to an undemonstrable theology. When I found Christian Science I was a slave to glasses, having worn them eight years for defective vision. Soon after beginning to read Science and Health, reading having been a great task, I laid aside the glasses and have had no need of them since. Almost as long as I can remember I had been subject to supposedly hereditary stomach trouble. At times it seemed to be of a serious nature, but this unreal master, too, was soon dethroned. My first personal proof of the benefits of Christian Science was an instantaneous demonstration over a throat trouble which had become chronic with me, but from which I am now free. I very reluctantly gave up several theological views, among which were a material sense of baptism and communion. I held to Jesus' words, "This do in remembrance of me," but I came to see that he returned to his disciples in three days and comes to each one of us as we understand, accept, and demonstrate his word. He said to his disciples later, "Lo, I am with you alway;" and Mrs. Eddy inquires in Science and Health (p. 34), "If a friend be with us, why need we memorials of that friend?"

The truth, as revealed in Christian Science, makes life

Digitized by Google

mean much more to me, and is enabling me to reach a broader and truer concept of being, for which I am indeed thankful.—J. W. BUSH, Greenfield, Ind.

When I came to Christian Science I was nervous and wretched after a long and tedious illness. I remember asking the doctor when I would get over it,—when I would wake up without the feeling that something dreadful had happened or was going to happen,—and he smiled and said, "What you want is to be a child again: no one over twenty wakes up very buoyant or happy." I carried this same trouble to the Christian Science practitioner, and though she smiled too, her smile was somehow different—it reminded me that joy is second on the list of the fruits of the Spirit. Henry Van Dyke says to be "afraid of nothing but cowardice;" but I was afraid of everything, and though I had heard again and again that "Christian Science is all right for nervousness, but would not do for anything serious," in my experience it was the serious things which melted away first.

I was helped almost at once with the physical troubles I had, one of these being a stiffness and aching in my fingers from several attacks of rheumatic trouble, which had been the cause of a great deal of pain and annoyance and which the doctor had said that I would always have. Nevertheless, this has almost entirely left me, and whereas formerly I was a slave to climate and food, detesting and fearing the damp and spending one winter in California and another in Italy, without daring to eat an orange because the doctor had said it was bad for me, now I eat anything and go out in all sorts of weather and am better than I ever was in my life,—so much better that one of my friends said to me the other day, "What makes you look so well; is it Christian Science?"

It certainly is Christian Science, and though there are sometimes sly "little foxes" at the vines, when I look at the milestones passed instead of the ones ahead, I am most grateful for this teaching and for the loving patience that has never failed me.

MISS JULIA BENTON, Chicago, Ill.

When I was five years of age my ankle became affected with paralytic trouble, and for about two months I was unable to take a step. My parents tried everything, hoping to find relief; but although I walked again, that ankle was never secure, so I received many serious falls. I also suffered constant pain in some part of my body. My eyes became very weak, and a specialist said I would always have to wear glasses, which I did constantly for five years. Then the paralytic trouble appeared in my face. I would go to bed at night wishing that I might sleep on; then the thought would come that I could not leave my mother, who had been a never-failing help during all those weary years, but to-day those years of pain and sorrow seem to me as a dream.

A dear friend, knowing I was in need of help, asked me to try Christian Science; which I did, and in it have found strength and peace. I laid aside my glasses, never to need them again. In the past eleven years God has never failed me in anything when I have trusted Him absolutely. Christian Science teaches that God is no respecter of persons, and I know that divine Love is for us all if we will only open our doors to receive that aid. I trust that this experience may help to lift some one out of darkness into light, even as I have been lifted. My gratitude to God, and to our beloved Leader, Mrs. Eddy, increases each hour for the many blessings which have come to me; and my daily prayer is that I may be humble enough to "love away" all that is unlike God, all that is not good, so that only what is real and eternal may appear in my life.

IDABELLE DAY COUTANT, New Britain, Conn.

In no other way can I express my gratitude better than to give to the *Sentinel* a statement of the healing of my mother through Christian Science. My mother was an invalid, confined to the bed for over a year with rheumatic, stomach, and bowel trouble. She had tried medical treatment, but with no lasting benefit. At last her physician told her that her case was incurable, as it was so complicated that nothing in medical skill could reach it. He then spoke of a case of which he knew where the woman had been an invalid for eighteen years, and was now well and doing her own housework. When my mother asked what had helped her, she was told that it was Christian Science.

Some Christian Science ladies had called and talked with mother, but it all seemed dark to her until one lonely day a friend brought a Christian Science practitioner to call. During the conversation, in which the practitioner was explaining Christian Science, my mother got a glimpse of the light, and a few days afterward she decided to take treatment. I wrote the practitioner to commence treatment at once; which she did, and from the very first we could see a change. Whereas mother could not be moved in bed without fainting, and she was living mostly on a milk diet, as she was unable to take other food, in two weeks' time she was taken out to the table in a chair and ate whatever she liked without any harm to her. When she commenced treatment she was in a dropsical condition and she could not raise her left arm; but all these things have been overcome, and she now does all the family sewing and assists in the housework, including the washing and ironing.

The treatments given were mostly absent ones, the practitioner calling once a week. There are still some things to overcome, but we feel that God is an ever-present help, and as we come more and more into the understanding of this great truth, as taught in Science and Health by Mrs. Eddy, we feel that we shall be able to rise above the thought of life in matter, and the remaining error will naturally disappear. I have long been wanting to tell of this healing, and I feel that now the time has come, and I hope it may be the means of bringing many a poor sufferer to seek the truth that will set him free.

How grateful we should be to Mrs. Eddy for this wonderful discovery of primitive healing, and for giving it to the world through her writings and those she has sent out to do the work our great Master did, in healing the sick and preaching the gospel that sets the captive free. The Bible and Science and Health are our daily companions.

ANNA C. AVERY, Syracuse, N. Y.

When my husband and I turned to Christian Science, eight years ago, we had many physical ills, while fear and anxiety for the future seemed to reign in our home much of the time. I had been a trained nurse, was a church member, and believed that God sent our various afflictions; therefore, that we must bear them as best we could until released by death. Fortunately for us, a loyal Scientist saw our great need, and with loving persistence persuaded us that there was hope. I commenced to read the *Journal*, and a minor ailment, which physicians can only relieve, was healed. From this we took fresh courage, and began to read Science and Health, the text-book of Christian Science, together with the Bible. I wanted to see if Jesus really intended that we should do the works that he did. I knew the Bible said so, but I had never believed it was for us. In a very short time, however, I was convinced that Jesus meant just what he said,—"He that believeth on me, the works that I do shall he do also."

About this time our little boy of three years awakened one night with a dreaded throat trouble. We had no telephone, our practitioner was some distance away, and

Digitized by Google

according to my medical training immediate relief was necessary. Well we knew that our time had come to decide for God or go back to *materia medica*. I knew only too well how far from sure one can be of what medicine will do, and we quickly decided for God. With a few Bible texts that I could remember—God's promises to care for those who trust in Him—we clung steadfastly to Truth, and in a very short time the child was asleep and did not awaken until morning. This was proof positive to us that Christian Science is the "way," and we have striven ever since to live as Jesus taught, his teaching having been explained and made applicable for us here and now by our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

During the eight years which have followed, I have never sat up a single night because of sickness in the family, although another child came to us a year later. At the time of its birth only a Christian Science practitioner attended me, and it was a very different experience from my previous one, or any I had ever witnessed in my medical training. Conditions which are considered most serious were overcome without even a degree of fever. I was down-stairs for dinner on the fourth day, and took care of the baby after the sixth. We were the only Scientists in the family or among our friends at the time, and many were the predictions that I would suffer in the future for being so "injudicious." This was seven years ago, and I have never known an hour's discomfort as a result. Many and varied have been the proofs to us in the intervening years of God's power and willingness to care for us if we only trust Him.

I am very thankful for this understanding which enables us to overcome or prevent the physical ills which come to mortals, but it is a small part of what Christian Science has taught us. Best of all, we are learning that God is good; that God is Love; and that joy and health are our rightful inheritance. We have learned that it is possible, this side of the grave, to possess the peace which passeth understanding. We know that Christian Science is the truth that Jesus taught and practised, and which he promised should be revealed to the world, for it is doing to-day the works which he did, and what greater proof do we need?

To say that I am grateful to Mrs. Eddy seems too meager to utter, but "deeds are more than words," so I am striving to let deeds express my gratitude.

HELEN SWEET STONE, Chicago, Ill.

By thus publicly expressing my thanks to God for His ever-open and welcoming arms to those who have so long walked in forbidden paths, and to Mrs. Eddy for the clear interpretation she has given us of the Scriptures, I am in hopes of encouraging some fellow-traveler who is just beginning his search for the truth. In April, 1907, I turned to Christian Science as a last resort in restoring to health our youngest child, who was continually having severe attacks of throat trouble, each one leaving him in a more serious condition. Doctors had worked over him repeatedly and carefully for six years, but could not stop the frequency or severity of the attacks, nor the complications which would seem to arise each time, and they finally told us that the child had probably inherited a dreaded disease. Having previously lost a child, I could not feel reconciled to giving up another, and this was my reason for trying Christian Science as an experiment.

The boy was very ill and in a high fever when I left our house to go to the home of a practitioner, where I asked for treatment for the child. When I entered the front door on returning home, the little patient called down-stairs to me, "I'm all well, mamma; may I get up now?" Imagine my astonishment, for under *materia medica* this feverish condition would usually last for from three to five days, and the symptoms were always accompanied by an acute derangement of the stomach; consequently, when he finally did get up he would be very weak. However, under this one treatment of Christian Science every previous condition was changed, and he was almost immediately healed. This demonstration was a revelation to me, and though he has had two slight recurrences of the trouble, they have been met and overcome at once, and it is several months since he has had any trouble at all. I also hope that my fear for him has been met through my own understanding of Truth.

Another demonstration of which I would like to speak was made for me in May. Early one morning I was suddenly seized with painful and alarming symptoms of bowel trouble, and though I am naturally strong and healthy, I was soon completely overcome with pain and unable to help myself in the slightest degree. My husband called a practitioner, and inside of an hour after her arrival I was without pain and able to go down-stairs and join the family at the noon meal. By three o'clock in the afternoon I felt as well as ever in my life, and never had a return of the complaint. I rejoice in the fact that my husband and our boy of eleven years have recently come into Science, and we are now a united family, searching diligently for a clearer understanding of Truth than we have had while in bondage to material belief.

MRS. RUTH T. BAYLEY, Pomona, Cal.

[Translated from the German.]

Five years ago I suffered from what a doctor said was a disease in the knee-joint, but in spite of all he did there was no improvement. I was in great pain most of the time, and could attend to my household duties only with great difficulty. When I went to bed the pain increased to such a degree that I could not sleep at all during the night. I was taken to a sanitarium, where I remained five weeks, but was not healed. Then the doctor advised me to submit to an operation. He said the condition of the knee was very serious, and added that he could not promise a cure, but could give me some relief. That, however, was poor consolation. About the beginning of the year 1907 I received the address of a Christian Science practitioner from a friend. I wrote to her at once, describing my condition, and asking her whether she could help me. Her answer inspired me with confidence and courage, and I called on her the next day. After the first treatment I was able to sleep all night, and after three weeks I was able to take up my work in a silk mill, and have not lost an hour since, although I have to work all day. I learned to stand strong in the truth, and I am very thankful to God, and to Mrs. Eddy.

MRS. ROSINE OCHSNER, Ettenhausen, Ct. Zurich, Switzerland.

My first experience with the wonderful efficacy of Christian Science was about nine years ago. I was practically an invalid, had undergone several operations, and being dependent on my own exertions for a livelihood, saw nothing to live for and was filled with despair. I had refused to take any more opiates, but was willing to try anything else recommended, so when a dear friend wrote me to "come to Portland and try Christian Science," I thought it was a rest-cure. I telegraphed her that I would be there the next day, but for the next week I was unable to get out of bed. When I did meet the practitioner, she told me to eat whatever was set before me that I liked. I was instantly healed of chronic stomach, bowel, and heart trouble of several years' standing, also of spinal trouble.

Is it strange that I should be grateful to Mrs. Eddy, the most scientific woman the world has ever known, when

Digitized by Google

health, happiness, and holiness are every day becoming more real to me, all through this pure woman having given to the world the healing truth.

MRS. M. C. PEARSALL, Seattle, Wash.

It is now almost fourteen years since I was healed by Christian Science, after having tried many doctors and when I was steadily getting worse. Each doctor said that only an operation could help me, and that every organ in my body was affected. I became very despondent, not being able to do my housework nor care for my two small children, and having spent all my money for doctors and medicine. In this dark hour I heard of Christian Science, and went to see a practitioner. Never shall I forget the joy, peace, and strength that came to me after that first treatment. I was not healed at once, for there were many fears to be overcome; but, thanks to the love and patience of the practitioner, I gained right along, and in two months' time was completely well and able to do all my housework. Many trials have since come to me, but Christian Science has met them all, and I feel sure that it always will.

I am indeed thankful that this healing truth came to me in my great need. The spiritual understanding is, however, of much more importance to me than physical healing. I also realize that the daily living of this truth means daily growth in health and harmony. I am truly grateful to God, and to our Leader, for all the blessings that have come to my home through Christian Science.

MRS. H. RASMUSSEN, Glencoe, Ill.

I came to Christian Science for physical healing, suffering from organic heart failure which physicians had failed to cure or relieve in any way. After exhausting the material means within my reach, I turned to Christian Science, on the advice of my employer, and was quickly healed. I have since been stronger, healthier, and happier than ever before. Later I met with a severe injury to my foot. Bystanders called a surgeon, who dressed the wounds but could not set the bones as they were too badly crushed. The surgeon said I would not be able to walk in less than three months. I immediately called for help in Christian Science, and was able to walk in three weeks. A little later the healing and restoration were perfect, the bones and joints being restored to their normal condition and the foot as serviceable as before. This healing was the more notable in that at no time after the first treatment in Christian Science was there any pain, soreness, inflammation, or abnormal temperature.

Far greater than the physical healing, however, is the spiritual uplift, the peace and harmony, and the greater understanding of the Bible as interpreted by our text-book, "Science and Health with Key to the Scriptures," by our inspired Leader, Mrs. Eddy. I am deeply thankful to God for having been directed to this great truth.

J. A. FREEMAN, Denver, Col.

Christian Science has so completely changed the meaning of life to me, and has brought me so much happiness, peace, and contentment, that I shall ever deem it a privilege to tell others of it. Perchance some other weary and disappointed mortal may take heart and come to the living waters to learn the truth about God and man. I was a member of an orthodox church for many years, but it brought me no comfort, and the ceremonial of the church appealed only to the senses. The mystery of life, and the strangely inharmonious conditions in and out of the church, puzzled and discouraged me; all seemed vanity and vexation of spirit.

After enduring many trials and disappointments, as a very tired child I turned to Christian Science, read "Science and Health with Key to the Scriptures" by Mrs. Eddy, and was healed. Some years before I had had the great privilege of class instruction under Mrs. Eddy, but the seed seemed to fall on stony ground, and it was not until after I had wandered in the wilderness many years (to mortal sense) and been beaten with many stripes, that I was spiritually awakened and the good seed began to bear fruit. I emerged from the darkness of mortal beliefs, and was "born again;" then came "the awakening from the dream of life in matter, to the great fact that *God is the only Life*" (Miscellaneous Writings, p. 16). Since taking Science and Health for my daily guide in studying the Scriptures, it has indeed made a new heaven and a new earth to me. Mrs. Eddy teaches that Christian Science is a demonstrable science and that it is not understood until demonstrated. It is our demonstration that proves to us the truth, and this is our safeguard from all evil each and every day.

My heart goes out in loving recognition to our dear Leader for all she has given us and all mankind; for the rediscovery of the truth that heals the sick, the sinful, and the sorrowful, and enables us to fulfil the command of our Master to preach the gospel and heal the sick. The garment of Truth cannot be divided, as we apprehend after gaining our spiritual light in divine Science, and when we preach the true gospel, or glad tidings of great joy, we heal the sick, physically, morally, and spiritually.

Our revered Leader has said, "He who has named the name of Christ, who has virtually accepted the divine claims of Truth and Love in Divine Science, is daily departing from evil; and all the wicked endeavors of suppositional demons can never change the current of that life from steadfastly flowing on to God, its divine Source" (Miscellaneous Writings, p. 19). How full of comfort and cheer is this message, exhaling heavenly perfume, and peace and good will (God's will) to all mankind.

EMMA K. S. SAWYER, Santa Barbara, Cal.

It is with the deepest gratitude to God, and to our dear Leader in this great and wonderful truth, that I express my thanks for what Christian Science has done and is doing for me, and for others through my understanding of it. I was healed in 1899 by reading the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had suffered from stomach trouble and severe headaches, also an injury to my back caused by a fall. I had all the symptoms of lung trouble, and one physician thought I had it. I had been a nurse for a great many years, but had not been able to do scarcely anything for five years and was fast using up all my savings of years, which made me despondent as to the future. I had lost faith in creeds, but I had never doubted God and His Christ for one instant, and when I read Science and Health I knew that the promised light had come to me. I have since been enabled to prove it many times, even when mountains of error have seemed to hide it from me, and I know that according to my love and faithfulness the way will grow brighter unto the eternal day.

My heart is ever singing its gratitude for our Leader's selfless love for all humanity, and my one prayer is that through the same power of divine Love I may be able to follow the truth. Words are empty; only deeds can prove our gratitude and love.—MARY J. KEEFE, Buffalo, N. Y.

He that loveth little prayeth little; he that loveth much prayeth much.—AUGUSTINE.

FROM OUR EXCHANGES.

[*The Congregationalist.*]

If the peculiar beauty and power of Christ's life can be reproduced to some extent in a multitude of other lives, the one from whom they derive their incentive and their pattern will always have his full measure of honor. We can never effectually safeguard the majesty of our Redeemer merely by creedal statements about him. We can never increase his influence over men by putting up bars in the vain effort to keep away any one who sincerely desires to be associated with him. In proportion as we love and trust our Lord we shall be calm and confident concerning the world's appreciation of him. Jesus Christ's own royal, matchless personality will by its own inherent force, in an increasing measure, command the world's homage. If we really want to contribute something toward that universal esteem, if we really want to suppress what seems to us inadequate views of his person and to perpetuate some of the lofty and hallowed conceptions that go back even beyond the days of Nicea, the best way—the way which he approves most—is not to constitute ourselves sole arbiters as to whom he will receive, but to exhibit the type of character which he forms in every one who wills to do the will of the Father.

[*The Christian Register.*]

The one nearest duty of every one who aspires to be a helper of his fellow-men, and for himself to win strength and peace, is to think the right thought, to speak the right word, to act with honest simplicity. We have had successes and victories enough to renew our courage and quicken our faith, but the great things are of slow growth, and the best things are long coming. Whatever happens, we ought to remember that the work of righteousness is peace, and the effect of righteousness quietness and confidence forever. It is also true that in quietness and confidence are the secrets of strength and power.

[Rev. C. A. S. Dwight in *The New York Observer.*]

God uses and blesses, as a rule at least, only eager and alert people, who, not keeping their gaze fastened on the ground at their feet, look afar, as from some Carmel's height, to see what may be calling to them from beyond the floods. Let us not miss the vision of the cloud out of the sea, for by it God may now be calling to our spirits to prepare themselves to receive the copious showers of blessing—perhaps revival blessing—which will betoken and secure the plenteous harvestings of such a spiritual gathering as the world has never seen.

[*Zion's Herald.*]

The joy of the moral life arises out of an instant and glad obedience to the demand of conscience as soon as it is apprehended. The way to become morally strong is to do the right immediately and without excuse whenever the choice between right and wrong is presented. Character is built up in this way, stone by stone, on the foundations of sincere, whole-hearted obedience. When we get into the habit of doing the right thus immediately and gladly, the process becomes constantly easier.

[*The Examiner.*]

God and the world are hungering for good things done gladly. Christian service has not its rightful place in us till it sings and is a delight. Paul tells the Corinthians that he will most sweetly spend and be spent for them.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

The Publishing Society announces that the supply of the List of Members of The Mother Church has been exhausted, and that no additional copies will be printed for the present.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

Terms of Sale, Postpaid to any Address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, Mexico, and Cuba, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. This pamphlet is also printed in German. 29 pages.

MR. KIMBALL'S LECTURE. 31 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. This pamphlet is also printed in German. 50 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

THE CHRISTIAN SCIENCE CHURCH. Its Organization and Polity. The History of the Apostolic Church and the Foundation of the Christian Science Church Compared. By CAROL NORTON. 38 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

THE REAL AND THE UNREAL.
SERVICE AND STIPEND.
THE LESSON SERMONS.
A PROTECTING RELIGION.

Price: Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

MISCELLANEOUS PUBLICATIONS

BIBLES. Clarendon Brevier (01483 x), heavy faced, very distinct type, Turkey morocco, size 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.

Morocco cases, to hold pocket Science and Health and above Bible, may be had at $1.25.

Text Bible (01561 x), pica square type, Alaska seal, size 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price $7.50.

CHRISTIAN SCIENCE AND LEGISLATION. A pamphlet of one hundred and twelve pages, containing articles by JUDGE CLIFFORD P. SMITH, EDWARD A. KIMBALL, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. Single copies, 10 cents; twelve copies to one address, $1.00; twenty-five copies, $1.85; fifty copies, $3.50.

PICTURE OF THE MOTHER CHURCH. A half-tone reproduction, size 12 x 15 inches, mounted on a white mat 21 x 25 inches. Single copies, 50 cents; a dozen copies to one address, $4.50.

SOUVENIR POST CARDS, showing picture of The Mother Church, 25 cents per dozen.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9.00; per half dozen, $5.00. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each. Pocket Edition, size 4 5-8 x 6 5-8. Full Morocco. Per copy, prepaid, $3.00; Twelve or more copies to one address, prepaid, each, $2.50.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. One hundred and three pages. Illustrated. One copy, $1.50; six copies, $7.00; twelve copies, $12.00.

MUSIC. Three poems written by MARY BAKER G. EDDY, and used by special permission, have been set to appropriate music by WILLIAM LYMAN JOHNSON:

"THE MOTHER'S EVENING PRAYER." For soprano or tenor, C sharp to A: for lower voices, B flat to E. The arrangement for both high and low voice is printed in the same copy. 75 cents per copy; $7.00 per dozen.

COMMUNION HYMN — "SAW YE MY SAVIOUR?" Published in two keys, G and E, for high and low voice. 50 cents per copy; $5.00 per dozen.

"CHRIST MY REFUGE." Arrangement for high and low voice in same copy. 75 cents per copy; $7.00 per dozen.

REMITTANCES: Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago, or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request. We ask that no money remittances whatever be made to the Editor or Editorial Department. Address all ORDERS and REMITTANCES for literature named above to

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

FALMOUTH AND ST. PAUL STREETS, BOSTON, MASSACHUSETTS

All orders for the works by Mrs. Eddy should be sent with remittance directly to Allison V. Stewart, Publisher.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of
Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Cloth binding, each, prepaid $3.18
Two to twelve books (cloth only) to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00
Twelve or more to one address, each, prepaid . . 4.75
Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00
Twelve or more to one address, each, prepaid . . 5.75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy $5.00
Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid $2.25
Twelve or more books to one address, each, prepaid 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents per copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The members of the forestry division of the National Commission for the Conservation of Our National Resources, appointed by President Roosevelt last June, have just returned from a trip to Germany, France, and Switzerland, where they have been studying forestry conditions with the idea of adapting some of the foreign forestry methods to our forests. The chairman of the committee says, "One of the best administered forests visited was that of Sihlwald, fifteen miles outside of Zurich, Switzerland. The city of Zurich owns the forests. It is the best managed forest in the world. One hundred years ago Switzerland and Germany were in the same position we find ourselves to-day. Their forests had been cut away and there was little timber to be had. The forest of Sihlwald costs for administration $16.50 an acre. The city of Zurich receives $28.25 an acre from the output of the forest every year. So the net profit to the city is $11.75 an acre. The net profit on our own forest preserves is not more than ten cents an acre. They take stock every year. They know exactly how many million feet of lumber are in each of the divisions. The roads through the forests are beautiful. The dead limbs are collected as they drop from the trees. On every Friday the poor people of Zurich are allowed to come into the forest and carry off the broken limbs in little packages on their backs. Nothing goes to waste. They find abroad that they have to keep the forests up for the sake of the rivers. We have got to do the same thing for our rivers."

The National Association of Audubon Societies has mapped out every section of the United States and organized a force of speakers to bring home to all the people the necessity of protection for the native land and shore birds. It is hoped that eventually the Federal and State Governments will establish bureaus to meet adequately the national need for economic bird preservation. Seven able ornithologists have been assigned to cover as many divisions of the whole country and establish local headquarters in this campaign. At a cost of ten thousand dollars a year these trained workers will be kept on tour till every community in the land has had the opportunity to hear the story of the wisdom and need of protecting the birds.

The Argentine Republic has become a rival of the United States in the world's beef market, supplying 7.1 per cent of the entire cattle stock of the world, against 17.5 supplied by the United States. The Argentine Republic ranges in latitude from about 22 degrees south to 52 degrees and has an area of about three hundred and twenty thousand square miles and a population of less than six million, while the United States has an area of over three million square miles and nearly eighty million people.

Chicago is to have the highest school building in the world. It will be fourteen stories and will be a commercial high school. The total cost will be not less than $1,000,000. There will be room for grammar school children, but primarily it will be a commercial school building. It is one step toward carrying out the idea of commercial and continuation schools which have been successful in Germany.

The United States Forest Service practically looks after 168,000,000 acres embraced in forest reservations. There are fifteen hundred rangers, with nearly one hundred and fifty supervisors, to whom these rangers report. These rangers receive from $900 to $1,400 a year, their salaries alone amounting to a million and a half dollars annually. All these men are located in the West, with one exception.

It is expected that the announcement of the names of the cities which are to be the six administrative headquarters of the United States Forest Service, along with the lists of the men to be in charge of the various offices, will be made this week. The actual transfer of the business to the field will be made gradually, so that there will be practically no interference with the routine work.

The tug Edwin L. Pilsbury was the first of all water craft to make the trip through the big lock of the Charles River Dam at Boston last week. It signalized the opening of the lock as a main channel for all river craft, up or down. The former open channel in the main river will soon be entirely closed. The dam, however, will not be completed for about two years.

The comparative statement of the Government receipts and expenditures shows a deficit for the month of August, 1908, of $3,009,127 as against a deficit for the preceding month of $24,860,438, and a surplus for August, 1907, of $3,628,491. This small deficit for the month just closed is wholly due to the very large decrease in expenditures for the month.

The receivers of the Metropolitan surface road of New York city have flatly denied that the Public Service Commission has authority to force joint routes or rates upon the street railway companies. The issue raised is said to affect the very life of the Commission.

The famous old schooner yacht Puritan, which in 1885 defended the American cup and defeated the English challenger Genesta, is to pass from the ranks of racing and pleasure craft to the packet trade and is to ply between Providence and the Cape Verde Islands.

Recent rains and floods have caused a loss of a million and a half of dollars in Augusta alone, and of a million in other cities in South Carolina and parts of Georgia, and rendered thousands of people homeless.

Architects for the new Grand Central station, New York, have completed their plans and estimates for the structure. The total cost of the building will reach $20,000,000.

The Chinese government is said to be considering the recall of Wu Ting-fang, the Chinese Minister at Washington, because of alleged diplomatic indiscretion.

A shortage of upwards of $53,135 has been discovered in the Bureau of Supplies and Vouchers in the General Post Office in Cuba.

Importations into Cuba for the fiscal year of 1907-8 reached a value of $60,993,131, and exportations, $67,440,917.

International.

The Geographical Commission appointed by the Mexican government seven years ago to map all of the towns of the country has just made its report and states that they discovered 7,079 towns which were not officially known to exist and which have heretofore had no federal control. Many of these towns are of considerable size, ranging in population from five thousand to fifteen thousand people. Most of them are situated in the remote recesses of the Sierra Madre and in localities far removed from ordinary courses of travel.

The German Foreign Office has sent instructions to the German ambassadors and ministers accredited to the governments that signed the Algeciras pact, that in the opinion of the German government the speedy recognition of Mulai Hafid as Sultan of Morocco by all the signatories of the act would be in the interests of peace.

An edict has been issued setting forth in detail the stages that will be reached each year in the conversion of the form of government in China to the foreign system, and assuring the people in the name of the Emperor that a constitution will be granted nine years hence.

An extra session of the House of Delegates of Porto Rico was called for Sept. 8 to consider the irrigation project, an additional appropriation, the continuance of the commission which has been investigating the disease anæmia and the settlement of the Church cases.

The German War Department has invited Wilbur Wright, the American aeroplanist, to carry out his experiments in Berlin.

Industrial and Commercial.

The petroleum output of the United States in 1907 was 166,095,335 barrels, more than 100,000,000 barrels in excess of that of its closest rival, Russia, and was far in excess of any previous year. There was also an unparalleled accumulation of stocks and high prices for oil of all grades. The increase alone of nearly forty million barrels was greater than the total output of petroleum in any year up to 1889. The total value was $120,106,749.

The extensive dock and terminal facilities of the Atchison Railroad at Port Bolivar, Texas, will be opened for traffic about Sept. 20. This will mark the establishment of a new deep-water port on the Texan Gulf coast. It is to be primarily a lumber port and will be used as the gateway for the Atchison's export lumber traffic from eastern Texas.

As a result of the prohibitory wave which has of late swept over the country, the California Wine Association, so it is reported, has decided to buy no wine grapes this year, as the association has already more wine than it can sell. It also has a large acreage of its own grapes under previous contract still extending for a number of years.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

CHRISTIAN SCIENCE AND CHRISTIAN SCIENTISTS.

HON. CLARENCE A. BUSKIRK.

It becomes necessary at times for us to differentiate between Christian Science and Christian Scientists. Otherwise we may, through a confused and illogical association of ideas, charge against Christian Science some of the faults and inconsistencies of its adherents. We may do this without being conscious of it. Or, it may be done consciously and perversely. Strictly speaking, of course, a Christian Scientist is one who is consistently loyal to his tenets and professions,—consistently loyal at all times in conduct and motive and thought as well as in utterance. This is a very high standard. It is the high and difficult standard of the ideal Christian Scientist. I am referring in this connection to the ordinary concept of a Christian Scientist as one who adopts and openly accepts the doctrine and practice of Christian Science as true, and who is honestly trying to think, act, and live consistently, whatever may be his shortcomings. There are many thousands of good men and women who belong to this class. If I can read myself aright, I belong to this class. The absolutely ideal Christian Scientist is, surely, a *rara avis*, but this does not excuse any relaxation of effort to attain the highest standard.

It ought to be obvious at once to every one who reads these words, that Christian Science cannot justly be charged with the faults and inconsistencies of its professed adherents. Higher mathematics is no less true and useful because there are many mathematicians who fail to understand and apply its laws. A sonata is no less harmonious and beautiful though there are countless lovers of music who are incapable of performing it on a piano. It is a musical ideal and incentive, however, which benefits all of them: yes, and thereby the world.

If it could justly be charged that Christian Science has in any way led or contributed to any errors manifested by its followers, then it ought to be held responsible; otherwise, not. Any general accusation along these lines is nothing better than a mere expression of ill-will, if unsupported by a proven bill of particulars. When, or where, or by whom has such a bill of particulars been produced? On the other hand, is it not true that the testimony shows that the influences of the Christian Science doctrine and practice have been beneficial to mankind at large? If these influences have seemed in any instance not to be beneficial to any particular individual, is not the fault traceable to the peculiarities of the individual, or to his environment, rather than to the influences? Would you decry milk because some person may drink it unwisely? Or sincere piety because there are hypocrites and Pharisees? Or the piano because an ignorant or unskilled hand may evoke discord from its keys? It is the consensus of instances, and not the occasional exceptions, which justify a verdict of approval or of condemnation.

Necessarily, the Christian Science movement has had to deal with a great diversity of human materials. How could it reasonably be expected to be otherwise when we consider the fact that within a few years it has become a mighty and world-sweeping movement? Among its adherents we find recruits from nearly all camps. We find erstwhile Christians, Jews, agnostics, infidels, materialists, flocking to its standard. We find the educated and the illiterate, the good and the bad, the high and the low, the rich and the poor in the vast array. The Calvinist discovers that his elbow is often rubbed by the elbow of a former Methodist, or of a skeptic, and that they are all traveling along amicably together in the same direction. Men and women are there who had been condemned to die by their physicians, and some of them with the gray shadows of their expected doom not yet wholly lifted from their foreheads. Men and women are there who are still seeking surcease from their sufferings, encouraged by men and women at their sides who call to them that they too have suffered but have been healed by the blessed Christ-truth. And multitudinous children are there, many of whom have been helped to walk and run, to hear, to see, and to discern the beauty of divine Truth and Love. Many men and women are there whose lives are reformed, whose ideals and incentives, and affections and motives have all had a renaissance. In its grand humanitarian mission Christian Science deals with the sinning and the sick in the performance of the works which were taught and commanded by the Nazarene. The beauty and symmetry of its religious philosophy appeal to all alike, the sinning and the saintly, the sick and the well; but thus far the majority of its adherents are those whose physical ailments or vicious habits and tendencies have been overcome. Let us then, if we desire to be just, remember to be reasonable in our expectations.

Does a Christian Scientist sometimes go back to his old ways? He does not thereby degrade or invalidate Christian Science. He may disappoint our expectations in respect to himself, but that is no rational ground for us to feel disappointed in Christian Science. It only serves to illustrate what a stupendous work Christian Science is doing, when such men are being constantly bettered, and nearly all of them permanently so. And if a Christian Scientist does retrogress, what is the Christian duty in respect to him? To pass him by on the other side of the street, like the self-loving Pharisee? Or, rather, to act the loving part of the Samaritan? We have the right to judge and condemn and oppose error,—indeed, this is our duty; but what right have we to judge, condemn, and oppose one of our fellow-men? Of course, this question does not intrude itself into the legitimate domain of the laws which protect society; although it is too often apparent that the operation of these laws, even at their wisest, may work injustice in exceptional instances. How can any one of us correctly judge another, his temptations, his weaknesses, his environment, his motives, his circumstances, and so on? "Judge not."

Suppose that a Christian Scientist succumbs to the belief

Copyright, 1908, by Mary Baker G. Eddy.

Digitized by Google

in disease and quits this mortal life. Does that justify in the least a smile of triumph on the face of an opponent? Does it justify in the least any sense of dissatisfaction or of disappointment or of discouragement in the consciousness of other Christian Scientists? Surely not, however it may tend to illustrate that the last enemy to be overcome is death. The world-thought has not sufficiently emerged from its beliefs in matter to be able to grasp the thought of eternal Life, but still believes death to be an inevitable and necessary fact. Once it was the world-thought that the earth is the center of the universe. Many generations have passed since Galileo, and this belief which was once entertained by all mankind has not yet been wholly eradicated. But it has ceased to be a world-thought. There are many erroneous world-thoughts to be overcome by the light of Truth, vast continents still in darkness to be illumined, and before all this can be expected the world-thought must so change that it will regard matter and all its incidents as phenomenal.

Happily, a truth is not affected nor altered *per se* by our attitudes of belief or non-belief, by our loyalty or disloyalty. Only its effects upon us can be influenced. If the Persian sun-worshipers should fail to kneel and pray at daybreak, the daylight would be sure to arrive in due season, nevertheless.

THE CONSCIOUSNESS THAT HEALS.

REV. G. A. KRATZER.

IN Christian Science great emphasis is laid upon the Scriptural statements that God is Spirit; God is eternal; God is perfect; and God is the only cause and creator. The creations of God would naturally and inevitably bear His characteristics, and not characteristics opposite to Him. Therefore, the real universe and man were created like to God,—spiritual, eternal, and perfect,—and they so remain, because God's all-power preserves them as He made them. And God, Spirit, knows or discerns His universe and His children as they are; that is, spiritual, eternal, and perfect. If we could discern the universe in the same way that Spirit discerns it, then that would be spiritual discernment on our part; but we are not able to exercise spiritual discernment through the physical senses, nor ever shall be, "for the carnal mind is enmity against God." We may, however, exercise spiritual discernment in spite of the physical senses by reasoning, as above indicated, from God as premise; thus determining what the character of man and the universe must be, and obeying the Scriptural rule of "comparing spiritual things with spiritual."

If we have spiritual discernment, we have faith; for the two are identical. And if we know or discern the universe and man as God knows them, then in our thinking or consciousness we reflect the divine thinking, just as Jesus did. When we do this, we know the power of Mind as did the Master; and the Mind or consciousness which Jesus had was that consciousness which healed the sick, raised the dead, and cast out devils (evils). Having freely received this consciousness from God, he freely gave it to as many as would receive it; and it is our duty to reflect this same consciousness. St. Paul exhorts, "Let this mind be in you, which was also in Christ Jesus."

To have and to exercise this healing consciousness, and obtain results therefrom, several things are requisite. First of all we must understand that all God's ideas and their expression are spiritual, eternal, and perfect; but it is far from sufficient to accept this intellectually, as a creed to be recited in church and on other formal occasions. On the other hand, this view of all that is must become a part of our habitual thinking. The tendency with us, as mortals, is to let our thoughts, moment by moment, dwell upon the subjects presented by the physical or bodily senses, and to be thus directed by what seems to transpire in our bodies and in the so-called physical world. In other words, it is considered "natural" for us to let our thoughts drift with the current of sense testimony. The duty set before us is to make head against this current and never to drift with it a moment, when we can avoid it.

Our problem is to gain gradually, and as rapidly as possible, the ability to keep habitually our thoughts on the plane of spiritual discernment. This we shall accomplish by distinctly and purposely lifting our thoughts, moment by moment, away from the presentations of the bodily senses, and by fixing them on God and on the nature of His spiritual creation; or, if sense testimony obtrudes itself upon us so much that we cannot ignore it, we may then deny and reverse it in favor of the spiritual truth, until its claims are so much silenced that they retire into the background. If we thus persistently take control of and direct our thoughts, in a few weeks or months the spiritual attitude of mind will become habitual, and most of the time there will abide in consciousness a realization of the perfection of man and all real things; that all are expressions of the spiritual, eternal, and perfect,—and this quite independently of the fact that at the given time we may be "treating" ourselves or another for sickness, sin, or any other trouble. To have such a consciousness is to "pray without ceasing."

This consciousness must be not merely intellectual; it must be transfused with love,—the love of God and the love of His whole creation, as being spiritual and good, and therefore lovable. By conscious, persistent effort we can acquire the habit of having our thoughts and feelings turn to God and to the right perception and active knowing and loving of His creation; and the time soon comes when this no longer calls for effort, but our thoughts and feelings run naturally in such channels.

Finally, the spiritual consciousness, to the degree that it is attained, must find exemplification in our lives, so far as it is possible to make the demonstration. If loyal to the spiritual program of life, we shall not seek material things as an end in themselves, or under the belief that they are real, but we shall know that substance is Spirit and matter is only shadow. Then we will seek "first the kingdom of God, and his righteousness," and let the material take a secondary place until such time as the appearance of it is destroyed by the fuller realization of Truth. We shall not recognize intelligence or power in matter by taking drugs, and we shall not, when we can harmoniously avoid it, seek the pleasures of the flesh.

Such a spiritual consciousness exemplified in daily life will be, in large degree, Godlike, and will be transparent to the divine Mind, even as a pane of glass is transparent to sunlight. Mrs. Eddy says, "The manifestation of God through mortals is as light passing through the window-pane" (Science and Health, p. 295). In like manner, the light of Truth passes through a spiritualized consciousness and destroys all belief in sin and disease, and ultimately will destroy the belief in death and matter. Such a consciousness is a window open toward heaven. It lets in the light for ourselves, and whoever turns toward us for help may experience enough of the light of Truth and Love shining through to heal him partially or wholly of his diseases. To change the figure, if we have such a consciousness, it is as a mirror reflecting the divine Mind, and by consciously directing our spiritual thoughts, we may reflect the healing rays of Truth and Love upon whom we will.

From this description it will be seen that in Christian Science it is the divine Mind and the reflected consciousness thereof which heals the sick. It will also be seen how radically different is this process from faith-cure, based on blind belief, and from processes of hypnotism or sug-

Digitized by Google

gestive therapeutics, wherein a human consciousness which accepts matter, sin, and disease as real is the supposed curative agent. It must be very evident that Christian Science healing is based on the divine Mind, God, while all other forms of mental treatment are based more or less on the human, "carnal mind," which, as Paul says, "is enmity against God."

The state of consciousness above described exemplifies the 1st Psalm: "Blessed is the man that walketh not in the counsel of the ungodly, nor standeth in the way of sinners, nor sitteth in the seat of the scornful. But his delight is in the law of the Lord; and in his law doth he meditate day and night. And he shall be like a tree planted by the rivers of water, . . . his leaf also shall not wither; and whatsoever he doeth shall prosper."

THEORY AND PRACTICE, EXAMPLE AND EMULATION.

R. STANHOPE EASTERDAY.

SOME time since, the idea of the divine sonship, as exemplified in the transfiguration, together with the sweet possibility of its attainment as portrayed in the vision of the Apocalypse, featured prominently in one of our Lesson-Sermons. It recalled the fact that instructors in mathematics frequently demonstrate difficult propositions for the benefit of their pupils, and sometimes ruthlessly erase the results of laborious effort, thus leaving each student to work out the problem for himself. A skilled musician will, in like manner, himself demonstrate classical selections, but will do so for the sole purpose of illustrating to the student the possibility of achievement. An artist may with a few strokes of his brush transform a commonplace drawing into a thing of beauty, while his pupils look on in wonder and admiration; some enthused and inspired, others merely awed and bewildered. As the next step the master may, with a single stroke, mar the picture and require its reproduction at the hand of each aspiring young painter. When this demand comes for individual effort in any case, that one who has felt the inspiration for achievement aroused in his breast, will struggle to emulate the teacher and approximate in a degree the desired end; while to the one who is a bewildered admirer only, there will be little of inspiration in the experience, and poor work will result. We find it so in all walks of life. It is not theory, nor example, nor aspiration alone that brings results; but these three taken together and coupled with honest effort, with practice and emulation, will always win the day.

On one occasion, the great Teacher chose three of his most advanced students and took them apart for a special and marked demonstration of the great Principle of being, an idea of sonship which he was striving to make plain to his disciples. Turning from earth to heaven, fixing his gaze upon the perfect ideal and clinging steadfastly to the truth of being, our Lord was able to produce in the presence of his disciples, and in a few brief moments, the reflection of the divine idea, immaculate man. The disciples, however, wondering and admiring indeed, awed but not inspired, failed to grasp the deep import and significance of the occasion and felt merely, "It is good for us to be here." Peter said to the Master, "Let us make here three tabernacles; one for thee [the Messiah], and one for Moses [the law], and one for Elias [the prophecy]." In other words, Let us enjoy here, forever, the sweet consciousness of the perfect example, of the letter, and of the glad promise of fruition.

But not so. Though there were represented in that experience three vital essentials to the solution of any problem,—the rule, the example, and the possibility,—there was still lacking the supreme essential, the individual demonstration or work. For this there had to be the descent again into the valley. The solution of Life's great problem had to be taken up by the disciples just where it had been laid down for a look at the great Teacher's demonstration, and the desired result had to be patiently and obediently worked out. It is furthermore deeply significant to note, in this connection, that the first effort on the part of Peter and James and John and the other disciples, after this wonderful experience, was an ignominious failure; and it is still more significant that the Master said, by way of explanation, that they could not heal the lunatic boy because this healing ability "goeth not out but by fasting and prayer." Like the fine linen of the Lamb's wife, the apparel of our transfigured Lord—"the seamless dress . . . by our beds of pain"—is the "righteousness of the saints." This lesson once learned, the disciples, in their ministry of healing to mankind, many times rejoiced that the devils were subject unto them.

In much the same manner, the student of Christian Science may have been fortunate enough at some time in his experience to receive class instruction from a faithful teacher. For two weeks that teacher patiently and lovingly unfolded a higher law, revealing and explaining the Christ-ideal to the student's awakening consciousness. The classroom becomes indeed "none other than the very gate of heaven" to him, and like Peter he feels moved to say, not once but many times, "It is good for us to be here;" or he may express himself, "I wish I could remain here all the time. I could be good in such an atmosphere." Such a thought, however, is as undesirable as it is unreasonable, and the wise student represses at least its expression. Two short weeks soon speed by, and the learner goes from that class to work out the problem in his own consciousness; goes down again into the "valley of humiliation" to struggle with the human belief in disease and sin. There will doubtless be some seeming failures, but thanks be to God that, with the letter of the law of righteousness, illumined in Christian Science, with the sweet promises of the Comforter made nearer and ever applicable in our Leader's writings, and with the immaculate example of the Wayshower emphasized by Mrs. Eddy in precept and practice and held forth for safe emulation, the honest and earnest student makes "some progress" (Science and Health, Pref., p. ix.).

Who of us, indeed, that have in any measure sought this truth honestly and earnestly, cannot say that every step during the intervening years since beginning the study of Christian Science has been an upward and an outward one? Each succeeding step has indicated a gratifying progress away from the belief in material selfhood toward that high ideal, portrayed nowhere outside the teachings of Christian Science—even Christlike, divine manhood. The stepping-stones, moreover, to present and to final achievement are those well-earned periods of spiritual exaltation which come to us when some poor pain-racked or sin-sick brother is healed by our efforts; for herein we experience, legitimately, that peace "which passeth all understanding" and which is indeed a foretaste of heaven.

THE CHRISTIAN'S BANK.

S. J. HARE.

SUPPOSE a man were to go to a bank and demand one hundred dollars, and the paying teller found he had no account with the bank, what would and what should the teller do? Refuse the demand. And why? Because the man was demanding something for nothing. It might be argued that this man was not a criminal at heart; that

Digitized by Google

he was possibly ignorant of the fact that he had nothing on deposit; perhaps some one had told him that his great-grandfather had deposited money to his credit in that bank, and he had believed it, and only demanded what he thought he was entitled to.

Many of us have labored under just such a delusion for years. We have believed that Jesus made a deposit for us, and that all we had to do was to demand what we supposed was our salvation from all that was unlike success, health, and happiness. Christian Science opens our eyes to the fact that first of all we must acknowledge and obey divine Principle; that if we wish to draw on the infinite good, we must have something to our credit before we begin to draw. For thirty years I was a church member, and as we met together, week by week, in our prayers we begged God to be good to us, thereby implying that He had been or might be otherwise; we also told Him just how and in what way we wanted Him to display that goodness. Christian Science has taught me that God is good, and that as we deposit in His bank of our faith in Him, and return thanks to Him for His past goodness, in proportion as we think right and do right, we are entitled to draw for ourselves success, health, and happiness.

The Hebrew word "blood" is symbolically used in the Scripture for "life." In Christian Science we learn it is Jesus' life, not his death, that ransoms all mankind, and that by living as he did we can draw on the infinite power just as he did; but we must have to our credit a life like his, if we would give to mankind as he did. In his epistle to the Philippians Paul tells us just how to start our bank account. He says, "Finally, brethren, whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things. . . . and the God of peace shall be with you." This is the deposit that we must first place to our credit if we wish to draw on the infinite source of supply for success, health, and happiness; for these point to Principle, and rightness is our standing or rating at the bank of the infinite. Thousands have learned, and thousands are learning, that in order to have their demand honored at the Christian's bank, they must first establish their credit, that the paying teller's books must show that they have an account with the bank. Paul also tells us of some things that are not legal tender at the Christian's bank, such as unrighteousness, impurity, covetousness, malice, envy, murder, deceit, backbiting, etc., and he says it is "the judgment of God, that they which commit such things are worthy of death;" in other words, their account is closed.

Unjust demand is the curse of the age. It is the cause of all strife, it is the robber that wants something for nothing, it is the cause of all wars, all labor trouble, all discord, and its only remedy lies in a change of thought both with the offender and the offended. First we should learn what God is; then man's relation to Him. We should educate ourselves to think only the things that are good, pure, and just. We should be willing to work full time and to make our every act conform harmoniously with our right thinking. Then and not until then will war and strife cease; then will capital and labor cease to make unjust demands; then will all dis-ease and dis-cord cease, and mankind recognize that "the God of peace" is among men; that heaven, harmony, is here and now.

"BLEST BE THE TIE THAT BINDS."

PORTER BOLLES JORDAN.

ONCE, just before Thanksgiving, while thinking of the wide continent which separated me from home and loved ones, a feeling of loneliness and sadness came over me for an instant. Then came also the words which a Christian Scientist had spoken only a few weeks before: "Whenever there seems to be a lack or need in your experience, that simply indicates the scientific fact that the seeming need is already supplied by God's gracious abundance. Then give thanks with your whole heart, because you have learned in Christian Science that God's supply is ever at hand."

So I thanked God for His already rich gifts to me, especially for the gift of friendship. Almost the next mail brought a package containing fourteen letters from kind friends in my home church, who had thus chosen to send to me a Thanksgiving meal of encouragement, cheer, inspiration, and love. Through each letter was woven the golden thread of gratitude for Christian Science, which is hourly binding coast and coast, continent and continent, closer and firmer in God's indissoluble bands of Christian unity. "Blest be the tie that binds."

RELIGION.

JEAN DE FOREST-KRIDLER.

OUR attention has recently been called to a remark by the late Professor Huxley, that it is probably impossible to find an acceptable definition of the word religion. Consulting the Century Dictionary, we find the root of the word to be the Latin noun *religio*. According to Servius, Augustine, and others, also the common modern view, our word is taken from the verb *religare*,—*re*, meaning back, *ligare*, meaning to bind: literally, to bind back.

Quoting further from the Century, "Words of religious use are especially liable to lose their literal meanings, and to take on the aspect of sacred primitives, making it difficult to trace or impossible to prove their original meaning or formation." We have accepted the French word *religion*,—into which had grown the meaning of right relations and harmonious expression of the spiritual idea. In the epistle of James we read, "Pure religion and undefiled before God and the Father is this, To visit the fatherless and widows in their affliction, and to keep himself unspotted from the world." In our text-book, "Science and Health with Key to the Scriptures" (p. 20), Mrs. Eddy says, "The truth is the center of all religion." And again (p. 67), "The epoch approaches when the understanding of the truth of being will be the basis of true religion."

It thus appears that religion means the scientific understanding of our right relation to God, the Principle of creation, to all creation, and the harmonious expression of that understanding. We shall be greatly helped in gaining this scientific or provable understanding by a careful study of our great Wayshower's command, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind;" and Mrs. Eddy's comment thereon, in which she says, "This command includes much, even the surrender of all merely material sensation, affection, and worship. This is the El Dorado of Christianity" (Science and Health, p. 9).

If I knew you and you knew me—
If both of us could clearly see,
And with an inner sight divine
The meaning of your heart and mine,
I'm sure that we would differ less,
And clasp our hands in friendliness;
Our thoughts would pleasantly agree,
If I knew you and you knew me.

Anon.

SELECTED ARTICLES.

[Editorial in the *Scottish Chronicle*, Dumfries, Scotland.]

We publish to-day [July 10] a letter in defense of Christian Science, written in answer to certain strictures which appeared in our columns a couple of weeks ago. No apology is needed for the publication of this letter. Christian Science . . . is not to be killed or scotched either by a conspiracy of silence or jeers and sneers and cheap abuse. It has gained the ear and the heart of large numbers of devout and reverent-minded Christian people, who have seemed to find in it something which other organized forms of Christianity have failed to give them. What *is* that something? we ask. Is it not just a profound, personal, practical belief in the solemn truth that "God is not the God of the dead, but of the living," and that the healing offices of the Holy Spirit concern the body as well as the soul of man? Has the Church been sufficiently clear and explicit in the recognition of this vital fact, and has she been brave enough and trustful enough at all times to stir up the wonderful gifts of healing that are latent in the ministry of prayer? We fear the answer is in the negative: hence Christian Science, and all the excesses which schism in every form entails.

[The letter referred to above was written by Miss E. M. Ramsay, of the Publication Committee, and is in part as follows.—EDITOR *Sentinel*.]

It is with confidence that I ask you to accord me space to reply to some of the statements about Christian Science made at the Pan-Anglican Congress, as recorded in the *Scottish Chronicle* of June 26. All, or nearly all, of those who took part in the discussion at the Kensington Town Hall admitted that cures are effected by Christian Science. This, indeed, is the conclusion now reached by the public at large. A few years ago it was vehemently denied that Christian Science effects cures; later, the healing was generally admitted as efficacious in the case of certain hysterical and functional disorders; now our critic goes farther than this, and (according to the report of her address given by the *Morning Post* of June 18) admits the cure of "real, organic disease," but one and all deny that Mrs. Eddy's explanation of the method employed is the right one. It is natural enough that agnostics, and others who do not accept the Bible narrative as true, should ascribe the cures of Christian Science to the action of the human mind; but does it not seem strange that Christians should be so loth to admit the healing efficacy of prayer, or to believe that God is still, as He was of old, the healer both of disease and sin? This critic ascribes the healing of Christian Science to certain psychological laws which she says the Christian Scientists are unconsciously using, and tells us that the body responds to emotional states, whether truth or error lies behind them. . . .

Far from being ignorant of the methods of the human mind, Mrs. Eddy devotes much space in her books to the consideration of this important subject, and in passing I may point out that she had attained to the conclusion that the human mind controls the human body long before Professor James or Mr. Myers arrived at the same conclusion from a different starting-point of thought. Mrs. Eddy tells us that it was from this very discovery that her attention was directed to the line of thought which eventually led her to the discovery of Christian Science. Mrs. Eddy, however, does not regard the human mind as a healing agent; she points out that the thoughts of mortals are as inharmonious and unsatisfactory as their bodies; that a mortal controlled by nothing higher than the human will and intelligence, so called, is indeed a rudderless boat, driven of wind and wave.

On page 111 of Science and Health Mrs. Eddy says, "I find the will, or sensuous reason of the human mind, to be opposed to the divine Mind as expressed through divine Science." This, surely, is Bible teaching. The apostle Paul wrote, "The carnal mind is enmity against God," and "The wisdom of this world is foolishness with God." Mrs. Eddy shows us that the human mind and body need to be controlled by something far higher than themselves; that man cannot be harmonious unless governed by God. She points out that this is the teaching of the gospel; that as we learn how to be governed by God we will gradually rise above sin, sorrow, and illness, and be able to do the "greater works" of which our Lord spoke. . . .

To return again to our critic's address. It is hard to believe that she is in earnest when she declares that Christian Science is "absolutely antagonistic to moral growth." We know of cases where men and women have been lifted by this practical Christian teaching from the lowest depths of degradation and vice; our periodicals contain numbers of well-authenticated cases of healing from drink, drug, and other bad habits. In all her works Mrs. Eddy inculcates the highest ethical standard of living, nothing less than the standard of the Sermon on the Mount.

[W. F. W. Wilding, M.R.C.S., L.R.C.P., in *Busy Man's Magazine*.]

The purpose of this article is not to criticize the methods of the medical profession; it is rather to show that the age in which we live demands a more intellectual and spiritual medicine, and that Christian Science is meeting this demand. Christianity, when understood as Jesus practised it, heals the sick and casts out evil; and Christian Science, the Science of Christianity, is attended with these "signs following." It is generally supposed by those who do not understand Christian Science, that because Luke was a material physician, and joined Paul in the healing work, he went on practising the drugging system, but Christian Science proves the mistake of such a conclusion. There is nothing in the Bible, nor out of it, to indicate that Paul and Luke worked from opposite standpoints. In order to become a true follower of the Saviour, Luke must have practised metaphysics—the standard his Master set before him.

It should be known that the practice of medicine sprang from idolatry, and although its practice has evolved much that is useful in certain directions, it still bases its healing power upon matter. The only instance in which matter is in any way mentioned in connection with Jesus' healing is in the case of the blind man at the pool of Siloam, and surely no one to-day really believes that the healing power resided in the clay. Is not the explanation given by Mrs. Eddy a more likely one, viz., that Jesus' act exemplified his contempt for matter as a healing agent? Christian Science has no quarrel with prevailing systems of material healing. Righteousness, right thinking, will aid the advocates of empirical systems, but if they are ever to be scientific they must be based upon one fixed Principle. Christian Science as taught by Mrs. Eddy, its Discoverer and Founder, declares that God—Spirit, Mind—is the true healing power, as the Bible teaches, and that Spirit acts independently of matter. It reverently affirms that this is the only real power, and that it can do all and more than faith in any other belief of power.

After I was convinced of the truth of Christian Science, I gave up the practice of medicine. I had spent nineteen years in its study, and thirteen years in its practice. Such a step, taken by one who loved his work and profession, could only be justified by very powerful motives. My reason for accepting Christian Science is best explained by some of my experiences during the last six years. I first heard of Christian Science early in 1900, when I was well

Digitized by Google

established as a general medical practitioner in a populous colliery district in Lancashire, England. My father had been suffering for many years from an internal trouble, culminating in a serious attack of hemorrhage, and while contemplating an operation, he was persuaded to try Christian Science first, with the result that the operation was never required. He was completely healed in a few days' treatment. The report of this healing raised such a bitter feeling of resentment in me that I think I should have been more pleased if the cure had failed, for I then deemed Christian Science to be quackery.

However, some months later came my extremity, when medicine failed to check my daughter's headlong passage to her grave. When her condition was hopeless and helpless, from the material standpoint, I was advised to try Christian Science for her. That "man's extremity is God's opportunity," again proved itself a true proverb. I had no faith in Christian Science and had seen none of its literature, nor even met a Christian Scientist; in fact, it was practically unknown in the north of England. Life in the open air and residence in a pure atmosphere and all other means to combat the scourge were tried, and yet at the age of nearly eight years my daughter had wasted down to less than thirty pounds, *i.e.*, to the weight of an average child of two years; in fact, to less than her own weight at two years of age.

I can never be sufficiently grateful for what Christian Science effected in this case. It completely unlocked the bonds of disease and destroyed the very nearness of death, transforming the whole outlook for my daughter. The material shackles were at once discarded and the child began to walk without suffering pain. From that day, six and a half years ago, she has gone on improving, without any setback and without spending an hour in bed through sickness. The joints became free, the stiffened limbs supple, and the wasted tissues were steadily and regularly rebuilt, until she is now one of the most healthy girls of her school,—never ailing, never absent, always able to take her part with other girls, both in school and out of school. She has not one symptom of disease about her.

I could go on enumerating case after case of similar physical and organic disease being healed by Christian Science prayer, and also cases of abject slavery to sinful habits and cravings. I have been able to keep myself well through Christian Science, and now I always take the medicine I recommend to others—the medicine of Mind. While Christian Science was doing such good work among my medical patients, I began to study its text-book, and soon found that my thought was changing; that the diseases I was called in to treat could be healed more quickly by Christian Science, with the inevitable result that it was impossible to serve two masters; one had to go. Believing Christian Science to be the truth, and seeing it time after time healing where medicine failed, my lot was thrown in with those who practised the teachings of Christian Science, a step which helped me to gain some small understanding of what Deity is.

It has been said to me: "You gave up a great deal for Christian Science?" Mrs. Eddy gives the correct answer to this. She says: "There are various methods of treating disease, which are not included in the commonly accepted systems; but there is only one which should be presented to the whole world, and that is the Christian Science which Jesus preached and practised and left to us as his rich legacy" (Science and Health, p. 344). To me the giving up has been all gain, it has been receiving, not giving up at all; it has brought newness of life. Christian Science is bringing more love and joy into my home and into my work. It is uncovering in my own consciousness the nature of self-love, laying bare the "old man with his deeds" and so enabling me to reach out for the "new man" and to realize something of the beauty of holiness and the practicability of its attainment.

[Charles K. Skinner in *The Laingsburg* (Mich.) *News*.]

We are told by some critics that the use of drugs is as reasonable a part of God's plan to cure disease as any other. If such be the case, God's words, "I am the Lord that healeth thee," and "Bless the Lord, . . . who healeth all thy diseases," have no meaning. The Scriptures are full of the promises of God to heal, and also the mistake in not going to Him for help, as, for instance, we read that King Asa "sought not to the Lord, but to the physicians. And Asa slept with his fathers." Let us take notice that in God's command to Israel, no mention is made of any specific or formula of drugs to be used, yet He said, "I will restore health unto thee, and I will heal thee of thy wounds."

Likewise the Master's words, "I must work the works of him that sent me," and "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." No mention is made of drugs, and at no time did Jesus resort to material remedies to accomplish his wonderful work, but he did say, "It is the spirit that quickeneth; the flesh profiteth nothing," emphasizing his teaching with the words, which should remain indelible on the mind of his every follower, —"If ye love me, keep my commandments." Does our brother mean to tell us that, after the great Teacher had proved to the world the efficacy of Spirit to heal all diseases, and when the Church for three hundred years had proved his promises to be true, God intends man to resort to mindless matter for relief from suffering?

While it is true that Luke was called the "beloved physician," it is also true that Jesus was called the "great Physician," and there is nothing more to prove that Luke used material remedies after his having become a disciple of Jesus, than that the Master himself used them. In fact there is a deal more logic and reason to assume that, having learned a better and surer way, he did not use them. The assertion that Luke was a doctor, and was loved on that account, has the merit of novelty but no foundation in fact, as all well-read theologians will admit.

[Frederick Dixon in the *Methodist Times*, London, England.]

It is always a mistake to conclude that your neighbor is a fool because he differs from you. If there is a type of mind which is turning towards Christian Science, it is the type of mind which is seeking truth as truth—that is to say, regardless of personal or preconceived views or prejudices. There never was a man who seemingly was a more earnest seeker after truth than Lucian; and yet when Lucian was brought face to face with the phenomenon of Christianity, he turned away, and apparently refused to examine it because all his prejudices were offended by it. What type of mind was it, he seems to have reflected, that, rejecting the philosophies of Plato, of Aristotle, or of Epicurus, could be led captive by the rhapsodies of a mystical Syrian carpenter? As a matter of fact, however, the Christian Science movement is being recruited from all sorts and conditions of men on every continent. If you met them socially, I am afraid the only characteristics by which you could recognize them would be their unfailing calmness and cheerfulness; if you met them officially, you would find them cultivated and intelligent, doing their duties in the world to the satisfaction of all connected with them. Finally, it is quite true, and nothing to be ashamed of, that Christian Science "makes no embarrassing appeal to the intellect," and indeed "the wayfaring men, though fools, shall not err therein."

Digitized by Google

The Christian churches have numbered amidst their members many men of immense erudition, but if intellect had been the dominant force in the world, paganism would have had little to fear from Christianity. The earliest founders of Christianity were a handful of despised Galilean fishermen. The ignorance of the primitive Church was the gravamen of the great attack of Celsus. But a fisherman raised Dorcas from the dead, and a fisherman and a tentmaker between them wrote the greater part of the New Testament. The fact is that the pagan world had outgrown paganism. The disreputable gods of Rome and Greece had fallen into disrepute. The Christian missionaries preached as they journeyed a mystery more satisfying than the mysteries of Eleusis, "the mystery of godliness;" a sacrifice more ennobling than the doves of Diana, the "living sacrifice" of their bodies; they pictured an arena where men fought not with beasts or as gladiators, but with sin, and a stadium where they raced not for the wild olive of Olympus or the withered parsley of the Isthmus, but "for the prize of the high calling of God in Christ Jesus." But they preached all this, "not with enticing words of man's wisdom, but in demonstration of the Spirit and of power."

[Alfred Farlow in *The American Business Man.*]

To meditate on the "law of the Lord, day and night," and to have delight therein, means simply that he who, through spiritual understanding, discerns the unseen but ever-present, ever-operative power of God in all things, and who readily yields his will to the divine impulse, shall surely prosper. There may be as many opinions as to what constitutes prosperity as there are individuals; nevertheless, there can be but one true prosperity. The only thing that one can desire which can be of any real benefit to him, considered from the standpoint of spiritual value, is to be better. As only that creed which makes its devotees better is beneficial, so only that occupation which improves the moral condition of those concerned is beneficial. It is what one does for God, good,—not material gain,—that improves his prospects. That material things are not essential to happiness is evidenced by the fact that there are many persons in the world who are happy and contented in spite of limited earthly means, while there are also many who have an abundance of this world's goods and yet are discontented and unhappy.

Having thus defined prosperity and happiness, it is readily seen how Christian Science aids us in securing them. It is a rule of right that one is never left comfortless during the course of his spiritual progress. God never takes away one's present footing until he gives another and a more advantageous, if not more desirable, one in its place. There are certain needs which pertain to the present stage of our advancement and the supply of which is requisite, but these will be eliminated from our experience as we progress. Science has regard not only for the spiritual fact of being which is to be obtained, but to a wise disposition of "the powers that be," and the human conditions in which it finds us.

When the Christian places himself under the dominion of God, Spirit, his present material wants are provided for, his "needs" are to be supplied. We infer that the term "needs" has reference to whatever provision is necessary to the health, comfort, and general well-being of the individual, and it is evident that such needs depend largely upon the situation and condition of the individual. Some need one thing and some another. To some an increase of earthly substance would be an advantage, while in other instances an abundance of supply would beget carelessness and indolence, and it would therefore prove a detriment not only to the individual but to those with whom he came in contact. There are many persons in the world who need to be richer, others who need to be poorer. Divine wisdom and human judgment might not always agree respecting the matter, therefore the human sense of the individual may rebel against an apparent ill fortune, may regard the situation as an evidence of ill success, while from the viewpoint of divine intelligence he may be advancing.

A Christian Scientist depends upon God for whatever of benefit he may derive from his work for others. For this reason he cannot always judge his progress nor the divine grace which is being bestowed by the amount of money he may possess or acquire. The fact that he has lost money is not always evidence that he has failed in the sight of God; neither is the fact that he has acquired money always an evidence that he has succeeded in the sight of God. Sometimes individual prosperity is not rightly grounded, and like a house with inadequate foundation, it must therefore be taken down and rebuilded. That which is not rightly done is a misdoing, not a real accomplishment, and, painful as the ordeal may seem to the one concerned, the sooner there is an undoing and a redoing, the better. What appears to be loss under such circumstances is not loss but gain. If our riches are not fittingly acquired they are not really ours, and the sooner we lose them and learn our actual situation, the better. As a matter of fact, the present wisdom of a Christian Scientist may not be adequate to judge righteous judgment in such matters, and hence it is better for him to trust God under all circumstances.

Christian Science clarifies the mentality of the individual. It gives him keener foresight and better judgment, and this constitutes one of its great advantages to its adherents. Whatsoever we do in the light and under the guidance of Truth and Love will be rightly done, and we shall be entitled to prosperity in return therefor.

[George Shaw Cook in *The State Register*, Springfield, Ill.]

The teaching of Science and Health with regard to marriage, which seems to disturb our critic, is based upon the teaching of Christ Jesus that the human institution of marriage is a "suffer it to be so now" condition, the obligations and responsibilities of which must be conscientiously observed by those who assume them, but that when the universal consciousness has been sufficiently spiritualized to have eliminated the belief of intelligence and life in matter—the state of consciousness referred to by Jesus as the resurrection—then, as he declares, there will be no marrying or giving in marriage, but they shall be "as the angels of God in heaven." In the present state of the race's evolution marriage will no doubt continue indefinitely, and it is but just to say that Christian Scientists have no patience whatever with free love or infidelity in any form. They respect the right of any one to enter into the marriage state and fulfil its obligations, but know perfectly well that the ideal condition described as the kingdom of heaven within can never be established until step by step the individual consciousness is freed from material thinking; and that a righteous and legitimate ascendency over the material will the sooner be gained if a beginning is made now.

CORRECTION.

In the Lesson-Sermon for September 27, subject "Reality," the Science and Health references in Section III. should be as follows:—

(*f*) 487—27; (*g*) 488—20, 21; 489—8; (*h*) 311—14 to 19; 130—26.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy upon proper subjects *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

HONOR TO WHOM HONOR IS DUE.

We quote the following from an interesting article by Rex G. White in *The Kansas City Spirit*:—

Kansas City has found that Christian Scientists are an exceptionally interesting class of people and that they are generally admired and esteemed. That they have done incalculable good and are among our most worthy citizens who are a power for the elevation of the community, passes unchallenged. Whether they are right or wrong in theory and tenet, they have compelled acknowledgment of their past good works, which, if taken as an earnest of the future, must likewise force the confession that they are a factor for the higher development of the people, and, remembering early struggles, give thanks to the little white-haired woman back in New England, whose devotion to her Cause has enabled many of us still to greet some friend or relative who otherwise would have long since been in his or her grave. No woman since the world began has had a greater, more loving or loyal following than Mrs. Mary Baker G. Eddy, and none have deserved more.

This recognition of the value of Mrs. Eddy's work,—that it "has enabled many of us still to greet some friend or relative who otherwise would have long since been in his or her grave,"—gives honor where honor is due, but the writer might have gone farther and still kept within bounds had he said that likewise through Mrs. Eddy's work and teaching the sinful have been reformed and the broken-hearted comforted.

The healing of the sick is popularly supposed to be all there is to Christian Science, and it is because of this misapprehension that other systems have been so frequently confused with it; but the real mission of Mrs. Eddy's teachings is to lift mankind to that right apprehension of God, and man's relation to Him, which destroys all sin. She says in Science and Health (p. 476), "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick." But it was the "perfect man" that the Saviour saw,—he whose sins had been forgiven (destroyed),—and his constant admonition to those he healed was, "Sin no more." Christian Science is far more than a system of healing without the use of drugs, and the fact that the followers of some particular system eschew drugs does not necessarily make them Christian Scientists.

Mrs. Eddy's work has not only healed the sick, but it has elevated and spiritualized the consciousness of all who have in any measure comprehended her doctrines and put them into practice. Our Master laid great stress upon the healing of the sick, and obedience to this command is no less important to-day than it was at the beginning of the Christian era. The time is coming when the universal test of Christianity will be the healing of the sick and the reformation of the sinful,—"Ye shall know them by their fruits,"—and that there now is a growing demand for this healing in connection with the other offices of the Church, but goes to prove that the testing time is not so very far distant.

ARCHIBALD MCLELLAN.

ENJOYMENT.

It is scarcely possible to lay too much emphasis upon the fact that joy is one of the essentials of our being, that it is to our mentality what sunshine is to fruit and flower. Many of us were taught that the "chief end" of man is to glorify God and "to enjoy Him forever," but in most cases it was believed that the enjoyment must be deferred until after death. In Christian Science, however, we have come to see that as we glorify God,—in other words, reflect the divine nature,—we enjoy Him here and now. We also learn that we glorify God by enjoying Him, and this includes the enjoyment of all the good He confers, for as Mrs. Eddy says, "God is not separate from the wisdom He bestows" (Science and Health, p. 6), neither can He be separate from the good He bestows. Unfortunately, mortals have so long entertained a false sense of happiness that its pursuit has come to be regarded as always disappointing, if not actually wrong. It was Burns who said,—

> Pleasures are like poppies spread,
> You seize the flower, its bloom is shed;
> Or like the snow—falls in the river,
> A moment white—then melts forever . . .
> Or like the rainbow's lovely form
> Evanishing amid the storm.

Not so the Hebrew poet, whose words are, "In thy presence is fulness of joy; at thy right hand there are pleasures for evermore."

Coming to the good which all may legitimately seek, we find health. To "enjoy good health" is a common phrase, but it has a profound meaning. If health is believed to be a material possession, it may vanish in an hour because of the fluctuations of material sense. To enjoy permanent good health we must know where it is to be found and how retained. We must realize constantly what it means to be "in thy presence," and to reach out for "fulness of joy." In Christian Science the possession of good health means the awakening in us of spiritual faculties which reveal the goodness and beauty of the kingdom of God. This means vastly more than an improvement in physical sight. It means the fulfilment of the Beatitude, "Blessed are the pure in heart: for they shall see God,"—see good and only good as the reality at all times, and this seeing is what constitutes true enjoyment.

What we need is to have our eyes opened; then we shall see, as did Hagar, wells of water to supply our thirst, or chariots and horsemen to defend us from our foes. A mother who had accepted Christian Science through the healing of her child was coming slowly to see "the things that God hath prepared." She had long been looking at the dark things that God had never prepared, and had believed them real; but health had been restored, and with its enjoyment came the spiritual faculty which means an ever-enlarging sense of goodness and beauty. One morning when the clouds seemed heavy, her child of two years slipped from his cot and ran out into the yard, where the early dandelions were bravely telling of springtime. The child gathered a bunch and brought them to the mother, and never before had any flowers seemed so beautiful as those miniature suns, for they brought their message, and it was more than hope—it was joy. They reminded her that, like the lilies, we need neither toil nor spin in materiality to avail ourselves of the divine bounty, but that we must *see*.

The pearly gates of the heavenly city stand each one of them for opportunity to enter into the joy of our Lord, but we can never take within the sacred portals anything "that defileth, . . . or maketh a lie," or anything that denies the truth, for this would be a killjoy. We must first see the gates, then accept the invitation, "Enter thou into the joy of thy Lord."

GOD FOR THE RIGHT.

No attribute of the Deity is more frequently and more emphatically named in the Scripture than is His justice. Everywhere He is declared to be "a God of truth and without iniquity," and Christian believers have always been at one in holding to the immutable integrity of the divine nature. It must follow that every feature and fact of God's ordering is also "just and right," so that in all the range of His government there cannot be the least increment of wrong-doing. More than this, it must be His desire that full justice be secured to every creature,—that absolute justice be administered under all circumstances,—and in all His kingdom this is surely effected.

When one turns from this concept of God and His rule to the consideration of past and present human conditions, the unspeakable wretchedness imposed by heredity and environment upon the unnumbered millions who merit only good, he can but know that the protest of his own moral sense against this colossal and world-embracing injustice is divinely impelled. He is entirely sure that God is against all this wrong, and that every expression of His Word is the coming of the divine "advocate," to declare and make good the freedom of man, to champion the cause of the oppressed, to lift up the fallen, to set the captive free.

Christ Jesus' "Render therefore unto Cæsar the things that are Cæsar's" was not an endorsement of the cruel and sanguinary rule of Rome, nor of the present world-wide despotism of material belief. His whole life of healing and of earnest espousal of the cause of the downtrodden is a rebuke to every tolerance of wrong and injustice. His heart was with the people, he stood for them against the iniquities of material law and mortal order, by whomsoever voiced, and his attitude is forever right. It is Truth's eternal protest against the reign of error.

This thought of the administration of long-delayed justice is given practical and persistent emphasis in Christian Science, and in this its teaching presents a distinct contrast to the attitude of all those religionists who openly or tacitly recognize the material order as of divine procurement, and who are thus led to conclude that its appalling injustice must somehow harmonize with the rule of right; otherwise it would not be. The very generally accepted view among Christian people, that suffering is divinely imposed upon the innocent for educational purposes, can but rob resistance to the conceded wrong of human experience of all courage, since it is clearly both illegitimate and useless to fight against that which God regards with complacence if not approval. Indeed, its futility is so apparent that protest against the most flagrant and irritating wrongs becomes nerveless and indifferent the moment they are attributed in thought to the working of natural law.

Christian Science is a vigorous revoicing of Christ Jesus' practical plea for the rights of man. Says our Leader, "The enslavement of man is not legitimate. . . . Mortals will some day assert their freedom in the name of Almighty God" (Science and Health, p. 228). Christian Science turns the human protest against the injustice of the material order to practical account by showing that this human enslavement is not normal, and not divinely approved; that it is needless, and that it may be escaped from through Christ, Truth. The significance of this truly Christian attitude of thought is at once realized in a conscious increase of intelligent sympathy with the oppressed, and in the greater courage and expectation of success with which the righting of earth's wrongs is entered upon "in Christ's name." With a sense of things which rejoices in the fact that God is *for* and not *against* us in our struggles, we can face the saddest seeming, the most stubborn resistance of mortal belief, and in the heart of the fray we can cry with Paul, "If God be for us, who shall be against us?" "I can do all things through Christ which strengtheneth me."

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Boston, Mass., Aug. 27, 1908.

Dear and Revered Leader:—I cannot refrain, during my brief stay in Boston, from expressing sincere gratitude for the help which my family and myself have received from the study of "Science and Health with Key to the Scriptures," which has led us into the "glorious liberty of the children of God." Nearly two years ago, my daughter, and afterwards my wife, were healed through Christian Science. This led me to the investigation of this Science. For many years I have been a minister of the Congregational Church in Australia. During that period, I have spent ten years in city mission work in the slums and opium dens of Melbourne, five years in the gold-mining camps, another five years in the Australian bush, or frontier work, and the rest of the time in a city church. I have ever tried to keep my thought open to the leadings of God's spirit, believing with Robinson of the Pilgrim Fathers, that "fresh light would yet break forth from God's holy Word," and looking for its appearing. I had become convinced that the works which Jesus did could be done to-day, if we could but find the way—the spiritual law by which he wrought. While searching for this way, I came across a copy of Science and Health. A very brief study of it convinced me that you had found it, and I rejoiced. Here in this precious book I found what I had prayed and longed for, and my problem of thirty years was solved.

After a careful study of over a year and a half, I felt I must take my stand for Truth; consequently I resigned my church in order to come to America to learn more of this scientific Christianity. In doing so, I shall have traveled twenty-six thousand miles, but what is this to the joy of knowing Life, Truth, and Love. I am now on my way back to that far-off land, to spread this "light of the knowledge of the glory of God," by healing the sick and reforming the sinner. I think I am correct in saying that I am the first and only clergyman who has come out for Christian Science in the Australian continent, but others will follow. Again thanking you as the means in God's hand for bringing such blessing to me, I remain

Yours in truth,

REV. GEORGE MARTIN.

Greenville, Miss., Aug. 29, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—I wish, in deep gratitude to God, to express my sincere love and devotion to you for what you have done and are doing for mankind. The last thirty years of my life have been devoted to the practice of *materia medica;* and I honestly thought that God sent sickness and used me as His instrument to cure it through medicines which He had placed here for that purpose. But my conception of God has undergone a change, brought about by the honest study of the "little book," "Science and Health with Key to the Scriptures," written by you. I was convinced, in a very short time after commencing its study, that it was the truth again brought to the world, and though I have studied it for five years, yet it was only last year that I made my demonstration out of *materia medica.*

Last August the voice of Truth came to me in these words: "Choose you this day whom ye will serve;" if God be God, serve Him; if *materia medica* be God, then serve it. That forever settled the matter. I came home and told my wife, who had preceded me by several years in Science, that I was through with medicine; that hereafter her God should be my God, and her people my people. How happy she was over the news! In November I was

Digitized by Google

admitted to membership in The Mother Church, a privilege I greatly appreciate, and trust I may ever prove a faithful member. I had asked my wife if she would be willing for me to give up medicine and trust God for a living, and she had replied, "Yes, indeed!" So I am now giving all my time to trying to preach the gospel and heal the sick in the way which Jesus did and commanded his followers to do, and all our needs have been met. "Divine Love always has met and always will meet every human need" (Science and Health, p. 494). My wife unites with me in sending love to you.

Yours in truth and love,
C. H. JONES, M.D.

Aug. 28, 1908.

Beloved Leader:—The lectures in Australia were excellently provided for and managed by the churches in Sydney, Melbourne, and Ballarat. The largest available halls were secured, the attendance was very large, and the interest genuine and impressive. The newspapers reported the lectures with fairness and a reasonable degree of accuracy, and in Sydney and Melbourne the lecture was published in full in one of the leading morning papers of each place. The journey, together with the time necessary for the lectures, involves an absence from home of at least three months and, in the present instance, even a longer time, because, for many reasons, unnecessary to enumerate, I concluded to return by way of the Suez Canal and London and Liverpool. I arrived in New York this morning and expect to proceed on the final part of my journey to my home in Chicago within a few hours. Such a journey serves to impress one more and more with the wonderful blessing that has come to mankind through your discovery of Christian Science; and the prayer which heals, the pure and unselfish communion with good, is beginning to be understood and used in every clime.

The Christian Scientists in Australia are stanch and true. Their church organizations were founded upon the healing of the sick and sinful, and because that work goes on the churches are growing in numbers and influence.

With most respectful and loving regards, believe me faithfully yours, BICKNELL YOUNG.

Chicago, Ill., Aug. 20, 1908.

Revered and Beloved Leader:—That Christian Science has healed many persons of many ills, I know to be a fact. It has also cured me. That the "little book" contains much wisdom is also a fact acknowledged by thousands of persons. For all the good you have done, for the healing, for the very opportune companionship and help of your priceless little volume, I am deeply and profoundly grateful. There is a thread of pure gold through it all. Believe me Lovingly and sincerely yours,

FLORENCE BARTON BOYD.

Melbourne, Australia, July 1, 1908.

Beloved Leader:—Though it is your desire not to be burdened with material gifts, we feel that we may send you, by Mr. Bicknell Young, the first Christian Science lecturer to visit Melbourne, a small souvenir,—this love-thought from the land of the Southern Cross, "The Cross of Calvary, which binds human society into solemn union" (Science and Health, p. 575). We know that the most acceptable gift Christian Scientists can offer you is the fruit of righteousness, casting out error and healing the sick through Truth and Love; and we rejoice to think that we could gladden your heart by telling you of beautiful instances of healing here, through Christian Science, of withered limbs, club feet, consumption, cancer, and other so-called incurable diseases.

Mr. Young's lectures have already given a great impetus to Christian Science in this field; they have drawn the students closer together; given us all increased light. We realize even more clearly than before how you have been divinely directed in establishing the Board of Lectureship and all the other "stately operations of Christian Science" (Science and Health, p. 464). We are daily more grateful to you for unsealing the Bible to us, and for showing us the way to the kingdom of heaven.

Lovingly, three of your student's students,
Resident in Melbourne.

Manila, P. I., July 25, 1908.

Mrs. Mary Baker G. Eddy.

Beloved Leader:—My heart goes out to you in love and thanks, and I feel that I must write you to express my gratitude for the By-law concerning the Sunday School. It is to me the fulfilment of my heart's desire, as our two oldest girls had never had a chance to go to a Sunday School and would have been too old now according to the former law. Our little society here seems just ready for a Sunday School, and a student of your student, Dr. Fluno, is the teacher. Our society is slowly but steadily growing; healing is being done; and even here in Manila one notices the growth of Science in the different attitude of thought towards it. We all feel blest to have our Sunday services and Wednesday meetings in this far-away country, and we are daily reaping the benefits of your unceasing labor.

What Christian Science means to me personally I cannot express in words, but I am striving to have my life express in thought and action my gratitude to God, and to you, whose revelation and faithful stewardship have made it possible for me to say, "I know that my Redeemer liveth." The unity of the little Christian Science society here is a love-offering to God, and to you, our beloved Leader.

In loving obedience,
MAGDALENE FLEMING.

Seneca, Kan., Sept. 4, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—When one has been rescued from the grave and delivered from the depths of doubt and despair, gratitude involuntarily flows out to the one who has made this salvation possible. I am one of the many thousands who owe countless blessings to Christian Science; and to you, its Founder, I owe deepest gratitude.

Very sincerely yours,
MISS EVA SCRAFFORD.

Boston, Mass., Sept. 3, 1908.

Beloved Leader and Teacher:—It is with a deep sense of gratitude to God that I thank you for the By-law, "Rule of Conduct," from our Church Manual, which has been hung upon the wall in every room of our new publishing house. Your loving and humble student,

JANET T. COLMAN.

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be Nov. 6, 1908. Applications should be in the hands of the Clerk of The Mother Church on or before Oct. 21, 1908. Application blanks may be had by addressing William B. Johnson, C.S.D., Clerk, at the church edifice, Falmouth, Norway, and St. Paul Streets.

THE LECTURES.

MADISON, N. J.

Last Sunday afternoon [June 28] about three hundred people attended the lecture on "Christian Science" given in Assembly Hall by Frank H. Leonard of Brooklyn, under the auspices of the Christian Science Society of Madison. In introducing the speaker, Richard L. Remnitz said:—

When a force for righteousness appears in the world we inquire whence it comes. When Christ came he arrested the attention of the Hebrew people, and all classes of the race inquired of him. With almost Christlike power the word is being demonstrated to-day, and mankind are seeking to know whence the power. When Christ came he healed the sick without medicine, and they marveled. In healing the sick he drove out sin, and they marveled. He triumphed over sin, over sickness, and over death. He demonstrated their impotence to oppose Spirit. He gave the same power to his disciples, and he even told them that they would do greater works. His works were raising the dead, healing the sick, casting out sin, preaching the kingdom of God to poor and rich.

Christ Jesus was the great practitioner. He despised the sham of good profession but inaction. When he said that unless we accepted the kingdom of heaven as a little child we should not enter therein, he meant it. He was a doer of the word. There was no patience in him for pharisaism. For many hundreds of years mankind have listened to a theology of inaction; men have not had the courage to submit themselves wholly to God and to do His will to the uttermost. In New York city I heard a minister of the gospel say to other ministers of orthodox churches, who were all deploring what they called spiritual stagnation in the churches, that the membership was not gaining as it should, with one exception. The exception was the Christian Science Church. "Why is it that our gain is not what it should be?" he asked. "It seems to me that we lack the spirit of the Master. What shall we do to get it, and to get it more abundantly?"

The question was not answered. I found this spirit in Christian Science only about two months ago, when it gave new life to me. You can see the power of this spirit in the progress of the Church, in the illuminated faces of its consecrated members,—in their lives of sacrifice,—"doers of the word," are they.—*The Madison Eagle.*

MELBOURNE, VICTORIA, AUSTRALIA.

There was a very large attendance—mostly ladies—in the Town Hall yesterday evening [June 23; also on the following evening] to hear a lecture on Christian Science by Mr. Bicknell Young, of Chicago, a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, The Mother Church, in Boston, Mass., U.S.A. The chair was occupied by Rev. Prof. Gosman, D.D. The chairman asked for a cordial—an Australian—welcome for the lecturer. He was presiding to ask the audience to be quiet because he believed that if a man had a message he should be allowed to deliver it. Further, if he had a message he was under an obligation to deliver it—and we were also under an obligation to listen. But we were not under any obligation to receive the message unless we were profoundly convinced of its truth, for every one was responsible for his own opinions. No one had a right to impose upon others anything which he considered right, unless those others were also convinced of its truthfulness; for the imperial authority in all matters is the truth, which, when apprehended and received, harmonizes the discords of our minds and gives us peace and joy. He (the chairman) did not profess to know much about Christian Science, but he professed to know a little about its fundamentals—the things on which it was based—and one of these was that, whether we liked it or not, we were subjects of that great moral order of which the divine Giver was the author and sustainer and guide. He firmly believed that conformity to that moral order would bring peace and happiness; and he further believed —which we all believed by experience—that if we violated that order it would impose its penalties upon us and stir us up in some way or other to avoid those things that were not in harmony with our constitution and were not for our highest welfare.—*The Argus.*

[We learn from correspondence that the chairman of the evening is a professor of the Congregational Theological Training College of Victoria; also Examiner in Mental and Moral Philosophy at the University. His degree of Doctor of Divinity was conferred by a Scottish university. *The Age* and *The Herald* published large portions of Mr. Young's lecture.—EDITOR *Sentinel.*]

NASHVILLE, TENN.

At Watkins Hall last night [May 24] a large audience heard Hon. Clarence A. Buskirk of St. Louis expound the doctrine of Christian Science. H. M. Mason delivered an introductory address, speaking in part as follows:—

Christian people of the world, irrespective of creeds and doctrines, must necessarily unite in the acknowledgment of one God, one Saviour, and therefore in one infallible plan of salvation. This state of affairs existing, all worshipers of God must, inevitably, eventually come to one form of worship and one process of action. Prophetic discernment and Christ Jesus' announcement will surely some time be realized: "There shall be one fold, and one shepherd." The activity of censorious criticism will avail nothing in breaking down barriers and removing differences that at the present time seem to divide and subdivide the people of the world respecting their religious views, but with a God of love who will have all men to be saved, and a compassionate Saviour ever active, reconciling the world to God, intelligently substantive in general thought, the frail walls of doctrinal factions must totter, tumble, and become dissolved, and unity of sentiment and action will finally establish all mankind in the bonds of peace and perfection. Christian Science is a religion. It teaches of God and of man's relationship to God, and its vital force is in its susceptibility of proof. In this religion there is found a healing balm that is applicable, practical, and efficacious in the healing of sickness as in the healing of sin.

Nashville Banner.

NOTICE.

The Publishing Society has been asked by some subscribers to the *Quarterly* to trim down their copies to the size of the pocket edition of Science and Health, and, in order to meet this demand, trimmed copies of this size —4½ x 6½—will be furnished on application, provided a request accompanies the order or subscription. In filling orders from Reading Rooms, the regular size will always be sent unless the number required of each size is designated in the order.

Quarterly covers in black seal leather fitted for the two sizes of the *Quarterly* will be offered for sale at the following prices:—

Regular size, 5¼ x 7¾, $1.50 each or $12.50 per dozen.
Pocket size, 4½ x 6½, $1.15 each or $11.00 per dozen.

Leather cases for the pocket editions of the Bible and Science and Health are now made slightly wider in order to provide space also for the trimmed *Quarterly* with or without cover. The price remains the same as heretofore, $1.25 each.

TESTIMONIES OF HEALING.

I take a great deal of pleasure in reading the testimonies of healing that appear in the *Sentinel* each week. It gives me courage to work and labor that I may reach a higher and better spiritual understanding of the truth,—the truth that makes one free from all belief in the reality and power of sin, sickness, and disease, and brings a full realization of the allness of God, good. Having received so much benefit from these testimonies, I feel that I should give to the Field my own experience, hoping that it may be of assistance to some one struggling for relief as I struggled and fought. I pray God that it may, and with like results; and I know that it will, if they will only rely fully and wholly upon divine Love.

For many years prior to December, 1906, I had been addicted to the use of intoxicating liquors. The appetite for liquor grew as time passed on, though I believed (as all who use liquor believe) that I could stop drinking at any time I desired to do so, and that I was in no danger of its getting control of me. I labored under this delusion until some time in 1906, when I was awakened to the fact that according to belief I was in the clutches of this demon and could not escape. How many, many times did I try to break loose and free myself from this appetite, only to fail each time and find myself plunging deeper and deeper into bondage. Many times during the year 1906 did the thought of ending it all find lodgment in my mind, and it was given serious consideration; but the thought of my loved ones, my wife and children, was strong enough to save me from this, though it did not save me from the awful and consuming appetite for drink. How I prayed God for help time and time again, resolving and determining in my own mind that I would drink no more; but my prayers were seemingly unanswered, and my will-power was gone, undermined and consumed by alcohol. I finally was in such a condition physically that I could not sleep, and was compelled to have stimulants to use during the night in order to allay my nervous condition, while my appetite for food was practically gone.

This was my condition in the fall of 1906, when I again made a desperate effort to quit the use of liquor by the exercise of will-power. I left home, went away where I thought that by having new surroundings and being away from old associations I would be able to overcome this appetite. I remained a month and was somewhat benefited, but it did not last long, for in a few days after my return I was as bad as ever, if not in a worse condition. At this time my wife, who had commenced reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, and was attending the Christian Science meetings, asked me to read the chapter on "Prayer." I did so, and thought it good, but it did not appeal to me very much. At that time I had never heard of a case where a person had been healed of the liquor habit through Christian Science, but had always believed that Christian Science was only good for nervousness and other minor troubles. I continued, however, to read the book, and the more I read the more I wanted to, but I kept up the drinking just the same.

On the 23d day of December, 1906, my wife, little daughter, and myself left Omaha upon an early morning train for O'Neill, Nebraska, to spend Christmas with a daughter living at that place. The day before I had been drinking more than usual, and when I arose that morning I had only enough liquor for one drink. I took that, and after having breakfast we started for the depot. I soon wanted more liquor, but had none and could get none at the depot. After taking the train the thirst and desire increased, and I was in a condition which only those addicted to the use of stimulants can fully realize. At this point I thought I would read a little in Science and Health, thinking it might possibly do me some good. I went back in a car where I could be alone, and began to read with the sole object and desire that I might be healed, if possible, of this awful appetite and consuming fire. I had read for about an hour when all at once I realized that the desire for liquor was gone; that the burning thirst had wholly disappeared, the nervousness was all gone, and I was myself once more! How thankful I was. It seemed like the awakening from a dream, but immediately came the thought, Will it last? Can it last? We reached O'Neill late in the afternoon. My condition was perfectly normal, my appetite good, no trouble of any kind with the stomach, no period whatever of convalescence, and from that day to the present time I have never had any desire for stimulants of any kind. I am wholly, fully, and completely healed, thanks be to God and to Mrs. Eddy!

I had also for many years suffered with stomach and bowel trouble, the former being marked by acute suffering, but these ailments have all disappeared. I am no longer troubled with them, nor am I worried about what I am going to eat; I eat anything I wish and with no ill effects. For many years I had been in the habit of smoking. About six months ago I was completely healed of this habit by Christian Science, and since then have had no desire whatever to smoke; in fact, I never think of it unless some one calls my attention to it. In reference to the smoking I will say that I had quit it a number of times by will-power, but always retained the desire to smoke. Christian Science has completely removed this appetite and desire.

As to the spiritual benefits I have derived from a study of the Bible in connection with Science and Health by Mrs. Eddy, I would say that language is inadequate to describe them. In my own consciousness there has been a wonderful transformation. I bear no more resemblance to the man of two years ago than daylight does to darkness. I have never taken any treatment from a practitioner, but all the benefits have been derived from reading the Bible and "Science and Health with Key to the Scriptures." I want to add that for the past ten years my wife had always kept some kind of medicine in the house, but since Jan. 1, 1907, God has been our only physician. My wife has been fully and completely healed of stomach and bowel trouble, and our little girl, thirteen years of age, has healed herself of various minor ills common to children, and is perfectly well through the study of Science and Health.

How aptly the words of the psalmist, as found in the 103d Psalm, apply to my case: "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with loving-kindness and tender mercies." I thank God for revealing this wonderful truth to our dear Leader, Mrs. Eddy, that through her teaching and explanation of the Bible we may each have an understanding of God and our relationship to Him, and that through this knowledge and understanding we may be healed of all our diseases. I will gladly answer all inquiries in reference to my healing.

CHARLES T. DICKINSON, Omaha, Neb.

About four years ago Christian Science was brought to my attention by a dear sister, and I began to investigate it for myself. Not living near her, I inquired among my friends concerning this faith, of which I knew nothing save the name, and even that meant very little to me. As a result of this lack of knowledge I was led to study so-called mental science literature, and I never saw the text-book of Christian Science until I had become somewhat prejudiced against our dear Leader and her writings. However, my sincere desire for the truth led me to the Christian Science services held in the city of Evansville,

Digitized by Google

Ind., close by, and a practitioner of whom I inquired the way soon showed me the error to which I had been subjected. I put aside all unauthorized literature and began the earnest study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, which I now consider the most valuable book, aside from the Bible, published for the religious instruction of the world to-day.

Prejudice soon melted away, and grateful, heartfelt love for our Leader took its place, thus proving the power of Truth over error. I found man's relation to God as His spiritual child, and the healing for a diseased body, which I had hopelessly given up as the prey of supposed hereditary laws. A condition previously diagnosed as rheumatic trouble was entirely healed two years ago. Two children have been born under the most harmonious normal conditions, the second being an almost perfect demonstration of painless birth. I was down-stairs in less than twenty-four hours, around the yard the second day, and doing my own work in a week, my maid being called away. I suffered no ill effects whatever from so doing, proving once more that God's laws are all good, and that He does protect us in Christian Science from the asserted laws of *materia medica* and physiology. Having previously suffered much from continued illness and weakness following such conditions, I feel that I have reason to be very grateful for Christian Science.

Every day brings a more fervent desire to express through greater spirituality my thanks to God for such a consecrated Leader as dear Mrs. Eddy, for the Christian Science publications, and for the privilege of being a member of the Christian Science Church, which is fast proving itself to be "the structure of Truth and Love" (Science and Health, p. 583). It has the corner-stone rejected by so many, the healing of the sick as well as the sinful. I wish to say that I look back upon years of service in an orthodox church, previous to this time, with gratitude for the help and experience which came therefrom, and which fitted me to grasp more quickly the higher thought given to the world through Christian Science.

MRS. ELSIE WHEAT MILLER, Howell, Ind.

This is to testify that after twenty-six years of suffering I am completely healed of bronchial and asthmatic trouble, as well as of other complications, by the understanding of the Principle of Christian Science. On the 24th of October, 1907, I was passing the Christian Science Reading Room in Johannesburg and I craved permission to rest, as I was then having a dreadful attack. While I was resting there some new thoughts came to me, especially when one or two people spoke to me of mortal mind, and when a gentleman mentioned that his son had been completely healed of asthmatic trouble, I wondered what it all meant.

I was then a member of a church of which I can only speak with reverence and love, but this did not help me in my bodily distress. Doctors and nurses many, some of them personal friends, had done all that mortal men could do. What more did life hold for me? A failure in all things, I was stopping at the home for incurables at Fordsburg. On my return the superintendent of the home sent for a doctor, who treated me kindly, but I took only one dose of his medicine. I had a copy of "Science and Health with Key to the Scriptures" and a bottle of poison. I intended it to be "kill or cure;" no more was I going to be a trouble to the general public as a pauper patient. It was on Friday that I read these words, "To those leaning on the sustaining infinite, to-day is big with blessings" (Science and Health, Pref., p. vii.). I felt in a degree that I was healed. A friend was giving me absent treatment, and every afternoon I struggled to get to the Reading Room. A week later a very severe attack came on. The men in the home were terrified, but I held to it that God is Love, and although the attack seemingly increased in severity, I still held that God is Love. Toward midnight I grew calm; the strain had left me, and a friend who was with me thought I had passed on; but all was well.

To our Leader, Mrs. Eddy, may be applied the words of blessing bestowed on Peter by the Master, "Blessed art thou, . . . for flesh and blood hath not revealed it unto thee, but my Father which is in heaven." Although I had been a Bible student previous to this, it never had helped me, but I have learned through Christian Science that we can "live in the Spirit," and prove the power of Truth not merely as an opinion to be held. The God whom I now serve is the God of whom Christ Jesus spoke in these words: "God is not the God of the dead, but of the living;" and like the writer of the Pauline letters, I mean to "prove all things" and "hold fast that which is good." I am completely healed, having given myself a rare personal treat in going out in all sorts of weather, combined with the doing of heavy manual work.

CHARLES OSBURN JACKSON, Johannesburg, Transvaal, S. Africa.

With a heart overflowing with love and gratitude, I desire to testify to what God has done for me through Christian Science. It was about four years ago that I turned to Christian Science for help for my daughter. I was at that time a nervous wreck, and through reading Science and Health, in my efforts to help her, I was myself healed, although I did not then know that it was possible for any one to be healed through reading the book. I shall never cease to praise God for leading me into this truth, and for the wisdom and love of our revered Leader in so placing this teaching that all may receive the good which is here for all. I receive much instruction from the Lesson-Sermons and from the periodicals, and find the testimonies very helpful. I can only show my gratitude by striving each day to live nearer to God, and to let that Mind be in me "which was also in Christ Jesus."

MRS. EMMA C. FLETCHER, Moscow, Idaho.

I would like to send my testimony as an expression of gratitude for all the good I have received since coming into Christian Science. I was healed physically after a number of physicians claimed there was not an organ in my body that acted properly. Three specialists pronounced my trouble brain tumor. They said there was not one case on record that had ever recovered. My case was a puzzle to all physicians and they finally refused to do any more for me as they said I was beyond their help. In this dark hour a friend wrote asking us to try Christian Science, saying that if it did not help, it would not do any harm. Like a drowning man grasping at a straw, we were willing to try anything that promised help. Our friend sent the address of a practitioner and my mother wrote to her asking her to begin treatment. After the first treatment there was a marked change in my case for the better and in six weeks' time I was able to be out again. I have not as yet received the spiritual consciousness of sight I am striving for, but I know that by being faithful the demonstration will be completed.

I am indeed thankful for having been helped on the road from sense to Soul.

ETHEL M. FLETCHER, Moscow, Idaho.

About a year and a half ago, I was healed through Christian Science of cold and hoarseness which had become a chronic condition. Before treatment, whenever it was most necessary for me to use my voice in singing, the

Digitized by Google

condition seemed to become more apparent. Any one who has had this experience can appreciate my gratitude for the help given me in Christian Science. The destruction of a lie (a false condition) proves its nothingness, and in grateful acknowledgment and appreciation of my freedom from the ailment from which I seemed to suffer so much, I send this testimony, hoping it may help some reader of the *Sentinel*.—LURA E. HATHEWAY, Roxbury, Mass.

Being "compassed about with so great a cloud of witnesses" to the power of ever-present Truth to destroy all forms of error, discord, or disease, of whatever name, I feel prompted to add my mite of testimony to some of the good that has come to me through Christian Science. While there is a similarity in each individual's experience, each may express his appreciation of the infinite goodness with words peculiar to his own individuality, and thus, to quote Paul's words, "The Spirit itself beareth witness with our spirit." Whatever the human belief, we find that man, the image and likeness of God, remains ever the same, unchangeable and inseparable from his creator.

I will relate a demonstration of the power of Truth, and simple though it may appear, it proves the power of God to heal all erroneous beliefs, such as pain, inflammation, etc., even when mortal mind seems to be trying to enforce its so-called law. I was up in a tree, chopping off a limb, which was about twenty feet long, green, and very heavy, being about six inches through at the point where I was cutting. As the limb broke it fell with its full weight about three feet, landing upon my right foot. It struck with considerable force, and it seemed as though my great toe was crushed. I did not yield to the temptation to look at the toe, but kept declaring the truth to the best of my ability all through that night. The next morning a chance look revealed the fact that the toe was perfectly black, but there was scarcely any pain. I continued to work mentally, and the result was satisfactory,—a normal condition was soon in evidence in every respect,—even to the nail, which to me seemed remarkable. The day preceding the above demonstration I had trouble with a tooth,—my gums were very painful and the tooth was aching severely, according to mortal mind,—but in this case, too, Truth relieved me of that trouble. So complete was the demonstration that next morning I felt as though the trouble had never been.

These are but two out of many proofs of the healing realized through Christian Science, for which I find that words can give but a faint expression of the gratitude I owe to God, and to our revered Leader, Mrs. Eddy, who has given us the "Key to the Scriptures" and the rule by which to apply the power of Truth to our every need. Constant study of the Bible and Science and Health during the past twelve years has been to me a source of joy and peace which the world cannot give, neither can it take it away.—J. E. BOUNDY, Melvin, Ill.

Jesus said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." I have proved these words true. Young womanhood found me a delicate, frail girl, battling with the world to add a little to the home and support of the family, which had always had one dreadful disease after another hanging over it, like a dark cloud, until this had marred all that was fair in life and left us poor indeed, physically and financially; but my efforts to help were not crowned with success. Twice I was stricken with disease: the first time I lay from August until November and required constant care, and for many days there was no hope of my recovery; but I finally began to improve, and by February I was able to resume my work. In October my health again began to fail, and I came home in March. The physicians said I could not live two months longer, as I had serious lung trouble, and that there was no help for me in *materia medica*.

My dear parents had been told before this of Christian Science, but they had not listened. Now, however, when my case was plainly stated, they at once turned to Christian Science, and after a consultation they asked me if I would take the treatment. I replied that I would do so if they wished it. I felt that if I were strong and well I could be of use to them, but if I always had to be sick and a burden I would rather pass away; but I was willing to do whatever they wished. So it was decided that I was to take Christian Science treatment. I was not then able to sit up much of the time and suffered from fainting spells and some very alarming symptoms. I shall never forget the joy that filled me when I received my first treatment. I think I was healed in that hour, but it took me several weeks to realize it. In three days I was able to walk a mile for treatment, and improved rapidly in every way. In two years' time I was a strong, healthy, happy girl, having all the necessaries of life and a few luxuries. It is now fifteen years since I was healed, and I have continued strong and well and prosperous.

For all these blessings I am very grateful to God,—grateful to Him for giving to this age Mary Baker G. Eddy, and I am grateful to her for her labor of love,—for her book "Science and Health with Key to the Scriptures." This book has helped me to understand and prove the truth of the Scripture, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." Health, happiness, and prosperity have been added unto me through Christian Science.

MRS. ELLA BATES, Whittier, Cal.

I feel that I should no longer refrain from expressing in some measure, through our periodicals, my gratitude to God, and to our dear Leader for what Christian Science has done for me. After five years of suffering from very severe stomach and rheumatic trouble, more than half of which time I was confined to my bed, and being treated by several different doctors without getting any relief, I was healed in about three weeks in Christian Science. I have since had many demonstrations in my family of the power of Truth, and for this I am very thankful to God and to our dear Leader, Mrs. Eddy, for what she has done and is doing for the world.—FANNIE E. BARNES, Peoria, Ill.

It is with a deep sense of gratitude to Christian Science for the wonderful healing that has come to me in the past year, after a life of pain (in almost forty years I cannot remember an hour's freedom from suffering), that I send my testimony for publication. I have known Christian Science in my personal experience for about a year and a half. Before that time I had been very ill for nearly ten years, and all who knew me were looking for my death at any time. Having tried every material means which I thought would help me, I finally decided to try Christian Science treatment, in response to the advice of a friend who had been healed. I was suffering from disease of the bowels, liver, kidney, and heart trouble, besides a dropsical condition, etc. All of these have gradually been healed, and for this I am very grateful, as I never expected to be well. These ailments had produced nervous trouble in its worst form, with a desire for death in order to get away from the load of suffering from which I could then see no escape, but this also has been met by the truth and vanquished. Added to all the rest, were three malignant growths, which likewise have vanished before the light of Christian Science. The fear of death, which was always present before in my thought, has left me. I have done all

Digitized by Google

my own housework for nearly a year, because I felt perfectly able to do it.

Words cannot express my love and gratitude to Mrs. Eddy, for most surely I should not be alive and well to-day were it not for what she has done for me in making the Christ-healing again possible. The understanding of our Father and His Son Christ Jesus, and of the Bible, which is growing clearer every day,—an understanding which has come to me from the study of Science and Health, "Miscellaneous Writings," and the Lesson-Sermons,—is as wonderful as the healing. Instead of a far-off God who could not heal the sick except, presumably, by "taking them home," I have found a God near at hand, who never made evil and knows it not, and has only good for His children. May this testimony help some one who is sick and suffering to turn to the only help there is,—to God and His Christ,—for this heals our bodies and blots out our transgressions through Christian Science.

MRS. MAY D. SPRINGER, Concord, N. H.

That divine Truth heals was demonstrated to me when my little son, three years old, was bitten by a rattlesnake. We killed the snake and saved the rattles, which were four in number. The child was bitten about sundown. I sent a telegram to a Christian Science practitioner a hundred miles away, and held to the truth myself. The practitioner gave him absent treatment, and the first treatment did the work. The boy slept well all night, and by morning, although his little foot and leg were swollen so as to prevent his walking, he crawled around and played all day. The next morning he came out of the bedroom walking, and the only trace of the injury was just the mark of the bite and a slight swelling, with a blue ring around it, but there was not one particle of inflammation. No signs of the so-called poison have appeared since. God bless our Leader, who has shown us the way to live this blessed truth.—MRS. EMMA SCOTT, Gloster, Miss.

About four years ago I became interested in Christian Science through reading its literature. At this time I was suffering from a severe cough and had great difficulty in breathing, and I also had chronic bladder trouble. The physicians were unable to help me, and had told my family that my age—seventy-eight years—made it impossible to offer any hope; that my heart was simply worn out, and that there was nothing to be done. One night I was taken with an acute attack of bladder trouble, and although the pain was excruciating I decided to test the truth of Christian Science. A practitioner was called, and in less than twenty minutes after her arrival I was asleep, awaking the next morning free from this trouble. It had taken the physician two weeks, calling twice a day, to meet a similar attack a short time previous. The cough and heart trouble yielded within a few months.

I can truthfully say that in my four years in Christian Science I have found it able to meet my every need. I am most grateful to our Leader for this religion of hope that frees us from the bondage of age as well as disease and sin.—WHARTON R. CLINTON, Indianapolis, Ind.

I became interested in Christian Science in 1899, and in October of that year I was healed of a dreaded fever and lung trouble in the first treatment. Not only was I healed of these diseases but also from the smoking and drinking habits and from the use of profane language, for all of which I am indeed most grateful. I cannot express myself in words as to what Christian Science is doing for myself and my family. It has brought my dear wife into a better understanding of man's relation to God, and as for myself I am trying to live the Christ-life daily. My wife was healed in one day of serious lung trouble through the little understanding which I had of the truth. For the last seven years Christian Science has been our only medicine and we trust in Truth for all our needs. For the many demonstrations of the truth that I have had I am indeed thankful to God; and to our dear Leader, Mrs. Eddy, for bringing this new-old religion to us. I am striving to live worthy to be called a Christian Scientist.

ALFRED CHRISTIAN, Grand Rapids, Mich.

It was for relief from acute physical pain that I turned to Christian Science, but having learned that God is Mind and that man is spiritual, I straightway threw an earnest effort on the side of a complete religious life. It was a great joy to "let the dead bury their dead," and with the *modus operandi* of Christian Science to work diligently toward health, holiness, and happiness. At best the growth is slow, but now, after three and a half years, my body is quieted so that I can listen for the "still, small voice," and I am experiencing happiness such as I never before knew. What this means to a person who had spinal trouble, who suffered all the disappointment of retarded schooling; to whom nervous breakdowns came with alarming regularity, and finally whose very life seemed warped, distorted, and wrecked,—what it means to have overcome all this, words can never make clear.

What a comfort it was to me to remember that St. Paul had thrown stones; hence the blessing that from the spiritual view-point one's past history does not count, and that with the right Mind one can make a clean start. Christian Science is all so sane, logical, and gratifying that the perspective of a little over three years shows me that an existence outside its tenets would be unbearable. So, with a heart full of gratitude to Mrs. Eddy, whose consecration to the needs of mankind has taught us how to lay down our burden, I push on to the goal of Christian Science.

MISS ELINOR DOUGLAS FLOOD, Chicago, Ill.

[Written for the *Sentinel*.]

HUSBANDRY.

KATHARINE J. SMITH.

For the earth bringeth forth fruit of herself: first the blade, then the ear, after that the full corn in the ear.—JESUS.

Except a corn of wheat fall into the ground and die, it abideth alone: but if it die, it bringeth forth much fruit.—JESUS.

THE husbandman who goes afield at dawn,
And sees afar his wealth of springing corn,
Knows that each tender stalk of vital green
Finds firmer fiber e'er the flower is seen;
And he who plants with wise and patient skill,
Doth bide the law of growth, and fear no ill;
The shimmering blades must wait the season's prime
The stripling corn is but at tassel-time.

The soft embrace of earth gives mothering care,
Both light and balm of dew fall unaware;
Day calleth unto day for growth apace,
Till stalwart corn, all symmetry and grace,
Comes to the sweet full-burthened ear in strength
And stands, beyond the summer's joyous length.
As tawny husks reveal the harvest gold,
So ripened thoughts unbounded Truth unfold.

Of all the precious store there is a part
Which hath its mission not in mill nor mart,
But to renew the stript and fallow fields
The chosen corn its perfect wholeness yields:
They who escape the nether millstone's power
Save not their "life," except it come to flower
In lives laid humbly down,—seed within seed,—
God chooseth these, a famished world to feed.

FROM OUR EXCHANGES.

[*The Universalist Leader.*]

To him who pauses in the midst of life and listens to the sounds from afar, there comes through din and strife the echo of something like the music of cathedral bells as they ring at night across the city and the silent multitudes who rest from toil. It is the rhythmic movement of a people as they touch all the infinite number of the keys of life to lift their psalm of God. Far and clear from Palestine we hear it now. The tumult dies away. The conflicts and the tragedies have passed into history. Voices that spoke the words are dumb. But Israel's God, the sense and consciousness of a world in which abides the eternal who loveth righteousness, was, and is, and ever shall be, the vastest fact in human consciousness, a voicing of the hymn of creation, the first stanza of a song, the second of which the angels sang as the shepherds watched their flocks near Bethlehem.

[Rev. Dugald Macfadyen, M.A., in *The Hibbert Journal.*]

There is a great and increasing company of cultured and earnest laymen who are outside the churches, "not on account of godlessness, but rather of exceptional moral earnestness." For reverent feeling, moral insight, elevation of sentiment, and personal self-sacrifice many of these men are more to be relied on than the regular frequenters of churches. They sit loosely to every creed, but they are, in the true sense of the word, not far from the kingdom of God. They have a true conception of the spiritual kingdom, and give reverent obedience to its demands. They create a problem for the churches, not exactly because they are knocking at their doors for an admission which is refused, but because the churches ought not to be content to leave them outside.

[*The Churchman.*]

The lesson that the Church throughout the world is learning to-day is that the primary principle of Christ's family is oneness, and that the foundation of that oneness is birth into the family—citizenship in the kingdom of God. Until Christendom begins to build its Christianity upon these corner-stones, the superstructure of visible union and communion will never arise. Churches or their representatives who put anything before these fundamental facts are sectarian in principle and will be sectarian in act. Unity is the first principle and the last. It is the working principle of the Church. Where fraternity, cooperation, unity in Christ exist, there is that love which alone is the fulfilling of the law.

[Rev. C. A. S. Dwight in *The New York Observer.*]

The vision of faith is constantly seeing the cloud of promise hanging over the face of destiny. God declares Himself in many ways, and hangs out His signs of promise in unexpected places. When perhaps we look to see an angel messenger approach with some particular revelation from on high, we are directed instead to look to the sea to discern the divine message writ in airy vaporings and misty nomenclatures. But it makes little difference how the message comes, so be it that we take advantage of its promises or warnings.

[*The Congregationalist.*]

In our common experiences of temptation the help is first in God's occupation of the fortress of the soul, and then in letting Him fill up our time and thought so that there shall be no open door for evil. He who lingers to parley at the door is in danger. Only he who is so occupied within and guarded without by God's asked and granted care that evil gets no access, is secure against temptation.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

The Publishing Society announces that the supply of the List of Members of The Mother Church has been exhausted, and that no additional copies will be printed for the present.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

Terms of Sale, Postpaid to any Address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, Mexico, and Cuba, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. This pamphlet is also printed in German. 29 pages.

MR. KIMBALL'S LECTURE. 31 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. This pamphlet is also printed in German. 50 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

THE CHRISTIAN SCIENCE CHURCH. Its Organization and Polity. The History of the Apostolic Church and the Foundation of the Christian Science Church Compared. By CAROL NORTON. 38 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

THE REAL AND THE UNREAL.
SERVICE AND STIPEND.
THE LESSON SERMONS.
A PROTECTING RELIGION.

Price: Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

MISCELLANEOUS PUBLICATIONS

BIBLES. Clarendon Brevier (01483 x), heavy faced, very distinct type, Turkey morocco, size 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.

Morocco cases, to hold pocket Science and Health and above Bible, may be had at $1.25.

Text Bible (01561 x), pica square type, Alaska seal, size 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price $7.50.

CHRISTIAN SCIENCE AND LEGISLATION. A pamphlet of one hundred and twelve pages, containing articles by JUDGE CLIFFORD P. SMITH, EDWARD A. KIMBALL, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. Single copies, 10 cents; twelve copies to one address, $1.00; twenty-five copies, $1.85; fifty copies, $3.50.

PICTURE OF THE MOTHER CHURCH. A half-tone reproduction, size 12 x 15 inches, mounted on a white mat 21 x 25 inches. Single copies, 50 cents; a dozen copies to one address, $4.50.

SOUVENIR POST CARDS, showing picture of The Mother Church, 25 cents per dozen.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9.00; per half dozen, $5.00. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each. Pocket Edition, size 4 5-8 x 6 5-8. Full Morocco. Per copy, prepaid, $3.00; Twelve or more copies to one address, prepaid, each, $2.50.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. One hundred and three pages. Illustrated. One copy, $1.50; six copies, $7.00; twelve copies, $12.00.

MUSIC. Three poems written by MARY BAKER G. EDDY, and used by special permission, have been set to appropriate music by WILLIAM LYMAN JOHNSON:

"THE MOTHER'S EVENING PRAYER." For soprano or tenor, C sharp to A; for lower voices, B flat to E. The arrangement for both high and low voice is printed in the same copy. 75 cents per copy; $7.00 per dozen.

COMMUNION HYMN—"SAW YE MY SAVIOUR?" Published in two keys, G and E, for high and low voice. 50 cents per copy; $5.00 per dozen.

"CHRIST MY REFUGE." Arrangement for high and low voice in same copy. 75 cents per copy; $7.00 per dozen.

REMITTANCES: Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago, or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request. We ask that no money remittances whatever be made to the Editor or Editorial Department. Address all ORDERS and REMITTANCES for literature named above to

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

FALMOUTH AND ST. PAUL STREETS, BOSTON, MASSACHUSETTS

All orders for the works by Mrs. Eddy should be sent with remittance directly to Allison V. Stewart, Publisher.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Cloth binding, each, prepaid $3.18
Two to twelve books (cloth only) to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00
Twelve or more to one address, each, prepaid . . 4.75
Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00
Twelve or more to one address, each, prepaid . . 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all the different styles of binding.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy $5.00
Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid $2.25
Twelve or more books to one address, each, prepaid 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion: 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents per copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The cruisers of the Pacific fleet, commanded by Rear Admiral Swinburne, finished the first stage of the cruise undertaken to test the practicability of towing torpedo boat destroyers, when the flagship West Virginia, the Maryland, Pennsylvania, and Tennessee docked at Honolulu on the 2d inst. The destroyers Preble and Perry were towed the entire distance from San Francisco without break or delay of any kind. The Whipple's line once became chafed, and her consort was obliged to slacken speed while repairs were made. Each of the other destroyers had one or two broken tow-lines to its credit.

The Bureau of Equipment of the Navy Department has taken up with Secretary Metcalf the project of making use of the Washington Monument as a wireless station, and advised him that the plan is feasible. Without relaying, it is asserted, it would be possible to reach stations in western Europe and to communicate with the vessels of the American fleet at sea in distant waters. The plan is to use the Washington Monument only temporarily, and if the experiment proves successful to erect a permanent tower of the necessary height.

Six Chicago educational institutions, says the *Chicago Inter-Ocean*, have perfected plans for consolidation into a university that will be liberally endowed by Andrew Carnegie. Under the name of the Jefferson Park College the following will affiliate: The Illinois College of Law, the Bennett Medical College, the Jefferson Park College of Pharmacy, Jefferson Park Hospital Training School for Nurses, Jefferson Park Musical Institute, and Brooks Classical School.

Suit to recover land granted the Oregon and California Railway Company, now controlled by the Southern Pacific Company and valued at over $40,000,000, has been begun by the United States Government. The suit is based on the alleged failure of the railroad company to live up to the terms of the grant in disposing of the lands in question, which represent some of the best timber tracts on the Pacific coast.

A new world record in aeroplane flights was established at Fort Myer, Va., on the 9th inst., when Orville Wright circled above the broad parade grounds there fifty-seven times and remained in the air fifty-seven minutes and thirty-one seconds, official time. He has since made several better records. His brother, who is in Europe, has also made records there with a similar aeroplane.

The New England Telephone and Telegraph Company has secured control of the Northeastern Telephone Company, the Lewiston-Auburn Telephone Company, and the Cumberland Telephone Company, three independent telephone companies operating in some twenty-five towns and cities in the State of Maine.

The Government has contracted with the Atlas Portland Cement Company of Northampton, Pa., for 4,500,000 barrels of Portland cement for use on the Panama Canal. This is said to be the largest cement contract ever awarded in the history of the cement business.

The estimated acreage of tobacco in Wisconsin shows a slight falling off from that of last year. The beet sugar industry has cut into it to some extent, and it is believed that next year the acreage will be reduced from thirty-five thousand to thirty thousand acres.

The demand of Mississippi Valley interests for a fourteen-foot waterway from the Lakes to the Gulf and for a big extension in the scope of river improvement in general, is officially recognized in the annual report of the Mississippi River Commission.

Governor Fort of New Jersey, at a recent dinner at Long Branch, urged the construction of an ocean boulevard from Atlantic Highlands to Cape May, which he thought could be built and maintained at a comparatively small expense.

The total excavation for the month of August at the Panama Canal was 3,252,506 cubic yards, against 3,168,840 cubic yards in previous month, and 1,288,692 cubic yards in August last year.

On Sept. 5 the American Atlantic fleet weighed anchor at Melbourne and stood out to sea for Albany, West Australia.

International.

The Federal Government of Mexico has agreed to give its financial support to the proposition to build a great dam across the Nazas River at a point where it emerges from the mountains in the San Fernandez canyon, about one hundred miles southwest of Torreon. Government engineers have been making surveys and estimates of the projected dam for several months. According to these estimates the dam will cost about $6,000,000, gold, to build. It will be one of the largest water-storage reservoirs on the continent, and will afford a water-supply for the whole Nazas River cotton-growing district for a period of three years without replenishing. In connection with the great dam it is planned to install a hydro-electric plant, which will generate enough electric power to supply all of the towns within a radius of one hundred and fifty miles.

The new railway from Damascus to Medina, which was projected as long ago as 1900, has just been opened. Medina is the second city in Islam in point of sacredness, and is near to Mecca, the objective point of the pilgrimages of Moslems. It is the purpose of the Sultan later to extend the road to Mecca itself. The distance from Damascus to Medina is one thousand miles, and Mecca is nearly three hundred miles farther. Hitherto the only method of penetrating to the holy city from the north has been by camels and horses through the heat and sand of the Arabian desert. The country opened up is for the most part barren and unproductive.

The Japanese Exposition has been postponed from 1912 to 1917. In that year will be celebrated also the fiftieth anniversary of the accession of the Emperor to the throne, and this will be a season of general rejoicing for Japanese subjects.

The Sultan of Turkey has announced his intention to surrender crown domains yielding a yearly revenue of $2,000,000 as a guarantee for the forthcoming loans for the treasury and the civil list.

The majority in Switzerland in favor of the prohibition of absinthe was 100,694. Twenty-three out of twenty-five cantons were carried.

Andrew Carnegie has added a gift of $60,000 to his present total of $500,000 for district libraries in the city of Glasgow, Scotland.

The two new steamships of the White Star Line, just laid down at Belfast, will be bigger, but no speedier, than the Lusitania.

Industrial and Commercial.

The entire car-line system of Sheffield, Eng., which is owned by the municipality, furnishes regular employment for fifteen hundred men, and the weekly wage bill amounts to $12,165. During the time of municipal management, the hours of labor have been reduced forty per cent, while the rate of wages has been increased substantially for motormen and doubled for conductors. In 1907 the total number of miles run was seven million, and seventy-four million passengers were carried. The receipts a car mile have amounted to nineteen and a half cents, and the total working expense to a fraction under twelve cents.

During the third annual shoe and leather market fair, held recently at the Coliseum in Chicago, fifty thousand persons, according to the estimate of the management, viewed the display. Exhibitors booked orders aggregating $2,000,000.

A combination to include every independent hand-blown glass company in the United States, and to involve $7,000,000, is in process of formation to compete with the American Window Glass Company.

The United States Steel Corporation has decided to embark in the manufacture of steel cars for its own use. The Clark Car Company has been incorporated at Pittsburg for that purpose.

The annual statement of the Memphis Cotton Exchange, covering the season of 1907–08, shows that the value of cotton handled in that city during the year was $29,588,582.

A total of $19,200,000 worth of gold was shipped from Australia to Germany this year.

General.

To secure the better definition of international electrical units and standards is the main reason, says *Scientific American*, for an international electrical congress, which will convene at London on Oct. 12. Since the electrical congresses of Chicago in 1893 and of St. Louis in 1904, the subject has been under the careful consideration of leading physicists and electrical engineers and much experimental work has been carried on in various national and other laboratories with the object of obtaining data which would lead to the amplification and more accurate statement of the definitions adopted at Chicago. First suggested in 1906, the coming congress has been twice postponed, but now, apparently, matters are in shape for action.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL—WATCH" JESUS

[Frederick Dixon in *The Northern Whig*, London, Eng.]

CRITICS AND CRITICISM.

CRITICISM of Christian Science is apt to be very like what Hamlet says of an unweeded garden—that is, to grow to seed. Years ago, when the movement in England was very young, it occurred to some one to say that it was neither Christian nor scientific. The phrase was intended for an epigram, and though it would have had little chance of inclusion in "The Pilgrim's Scrip," it was "grateful and comforting" to those who like to find their thinking ready done. In recent months it has become the joy of the supporters of the Emmanuel movement, who, sharing apparently the views of the worthy showman Codlin, regard some violence of speech towards the opinions of those who differ from them as a natural adjunct to the advocacy of their own. The contention, therefore, of Dr. M'Comb, that he takes his stand "fairly and squarely" on the Bible, while Christian Science is neither Christian nor scientific, is worth examining.

Christ Jesus said quite distinctly that those who believed in him would be able to do the works he did. Christian Scientists accept this test of their faith without any qualification whatever. Not so Dr. M'Comb. First, he says, you must call in a doctor to decide whether the disease is functional or organic. If it is organic, you must leave it to a doctor; if it is functional, under certain qualifications you may proceed to deal with it. It is not recorded that Jesus himself, he points out, ever healed a case of tuberculosis, typhus, or diphtheria, though he is "reported" ("reported" is good) to have healed leprosy, which, according to the medical theories of to-day, is regarded as incurable; but he explains there were in the East two kinds of leprosy—the one a mere eruption on the skin, and recognized as curable, the other admittedly incurable. If, therefore, we assume ("assume" is likewise good) that "this was the type of leprosy mentioned by all the first three evangelists as having been cured at Capernaum, we can understand why the leper was permitted to come up close to Jesus and to mix with other people." Unfortunately for this argument, it is bound to lead to many other assumptions, for unless you assume that there were two kinds of water in Palestine, on one of which you could walk, whilst in the other you would sink,—and even here the difficulty that Peter did sink comes in,—there is not much advantage in having disposed of leprosy.

On the whole, the argument is one which would scarcely be expected to result from a teaching based "fairly and squarely" on the Bible. Dr. M'Comb is, however, as a certain writer says, "an arbitrary gentleman." Not only will he have no meddling with organic disease within the Emmanuel movement, but he insists flatly that "in no case can organic disease be treated successfully by Christian Science." Now, as a matter of fact Christian Science has healed thousands of such cases. There is evidence enough of this, in a phrase of Mr. Chesterton, to fill Hyde Park. For the moment, however, that is not the point; the point is the effect on Dr. M'Comb's argument of so reckless an assertion. First, then, it reduces law to a mere *obiter dictum* of his own; secondly, it reduces him to the quandary to which Huxley pointed out Hume's argument with respect to miracles had reduced him—namely, that that of which we have no previously recorded evidence never can happen; thirdly, it is a limitation of the statement of Jesus Christ that those who believed on him should do the works he did, though it admits incidentally that a physician who is an agnostic may succeed. It is not part of the business of any Christian Scientist to attack the opinions of those from whom they may differ; and I have dealt here solely with the criticism of Christian Science involved in the interview with Dr. M'Comb, printed in your issue of Aug. 17. Some day the opponents of Christian Science will learn wisdom, for they will find that humanity is wearying of criticism, and is asking for something which will give it instead "the peace of God, which passeth all understanding."

FACING ONE'S DIFFICULTIES.

SAMUEL GREENWOOD.

AN enemy is never conquered by running away from him, for we thus acknowledge him to be the stronger. When next we met, it would be with greater fear and trembling; and thus fear would grow, in increasing ratio, until in the consciousness of our God-derived strength we rose up and overthrew him. It is only our belief that evil is power which prompts us to flee from it. Fearful shrinking from our difficulties serves to increase them and to weaken our position, while a determined stand in the face of opposition will often vanquish the foe and redeem the situation.

Mrs. Eddy writes: "Evil is not something to fear or flee before, or that becomes more real when it is grappled with" (Miscellaneous Writings, p. 284); "It is neither person, place, nor thing, but is simply a belief, an illusion of material sense" (Science and Health, p. 71). Since evil is not a real something, and has no existence or action separate from human belief, there can be nothing in it to fear except the mistake of believing in it. Strong men are sometimes terrified by mere shadows, but when the unsubstantial nature of these shadows becomes apparent, then their terror disappears. Even the most timid are not afraid of a shadow if they recognize it for what it is; but if unaware of its nothingness, they may run away from it. One who tries to grasp a shadow, thinking it is something, sharply realizes its utter blankness, its absolute lack of being anything; but often we fail to recognize that the evil confronting us is as unsubstantial as a shadow, because we lack the courage to grapple with it.

Our trouble, to a large extent, comes from the fact that

Copyright, 1908, by Mary Baker G. Eddy.

Digitized by Google

we face our difficulties as stubborn realities; we accept them for what they seem, not for what they are. We think it is a personality that persecutes us, a material disease that afflicts us, the lack of money that impoverishes us, etc. Is not the root, or fundamental evil, underlying all human discord, the supposition that there is something real besides God? Then, if we believe that God is All, infinite, we should know that such a supposition is false, in whatever shape it may appear. That which opposes our progress or our welfare is not a thing nor a person, but a belief in the reality of evil, an erroneous sense of being as separate from God, and of itself it is nothing, no one. This view does not imply that we have no work to do in removing our difficulties, but that this work is to dispel an illusive belief and not to destroy a reality; to overcome a sense of evil and not an evil person. Facing our problems thus, we shall not be so easily discouraged or discomfited, for though complete success may seem distant, we know that we are steadily winning our case in the degree that we are gaining in the understanding of Truth.

What Bible student does not pause at the story of Daniel's deliverance from the lions, to admire his lofty courage and unshrinking allegiance to the right? Although he must have realized the extreme peril of his position, from the human point of view, there was no weakening of his faith, no wavering in his loyalty to conscience, no cringing before the murderous machinations which had been evilly set at work against him. If ever one had reason to run from his difficulties, or to compromise with evil, Daniel surely had; but he faced the situation, beginning his work with prayer and thanksgiving, and winning because he had served God "continually." He knew that the lions could have no power over him unless it were given them of God, hence he could face the seeming terror and prove its unreality.

The general who is informed of the weakness of the enemy goes forward with confidence to the battle, whereas one who believes himself inferior in strength and numbers retreats in fear of defeat. In the Christian warfare, with God on our side, we should know that in numbers and strength we are always superior to the enemy. Jesus, knowing the powerlessness of all evil, of all that is opposed to God, said, "Be not afraid." Common experience proves that appearances are often but optical illusions; and did we know all of Truth, did we but realize that God, good, is infinite, we would regard the human sense of evil as only a mental illusion, and the sin and suffering resulting therefrom as false experiences, which will diminish as the truth of being is discerned and understood. The fact that evil has no influence over goodness, proves that it is nothing to be feared if one lives righteously and relies wholly upon God.

Each mortal has his individual problem to solve, his own salvation from the sense of evil to work out, and success demands that the conditions which would hinder that work or render it difficult be courageously grappled with and overcome. If one is tempted to despair because his efforts seem ineffectual, he should awaken to the real nature of whatever opposes him, and watch lest he be deceived by an illusion or attach reality to that which is unlike God. Without one's consent, nothing outside of his own thoughts can prevent his prosperity or bar his progress. Even the bitterest persecution from those most dear cannot shut God away from us, nor prevent daily growth in reflecting Love. Like wise generals let us send out our scouts—our true thoughts of God—to examine the strength of the enemy; and these true thoughts of God will report that evil, with all its pretensions and change of face, is but a deception, or a deceived sense, and that God does not give it one iota of power or intelligence or reality. This being true, we have but to face every adverse condition and hold our ground until we prove God's power over it, however long this may seem to take.

It is the spirit in which we face our difficulties that always counts. The right attitude is not that of stubborn resistance, but of quiet, unshaken confidence in the integrity of our Cause, and the conviction that in maintaining it we are working with God and He with us. It is not the spirit that wearies itself in contemplation of the seeming resources of evil that conquers it, but the spirit that renews its strength in contemplation of the omnipotence of God, good. Instead of fearing what some evil may do to us, or giving up in discouragement because we seem unable to meet it, let us, like Daniel, give thanks that we can be faithful to God under all conditions and can trust to His protection in the face of every threatening appearance.

We are prone to think that our difficulties lie in the circumstances, the conditions, or the environments in which we find ourselves, when they really lie in our lack of the knowledge of God. Instead of battling with evil persons and things, as they seem to us, we should strive to overcome the sense of evil in ourselves; for we can have no worse enemy than ignorance of God. The truth that good is infinite holds the remedy for every evil. There is no error so great but the truth exists to correct it, no difficulty so hard but there is always the way out of it, no righteous demand so large but God has provided the means of meeting it. In working out our salvation, then, the vital point for us is to learn more of Truth, to become more Godlike, to realize more clearly the presence of the infinite.

We cannot evade the final working out of our problems, for all that the erring sense of evil claims concerning man must be met and destroyed before mortals can "put on immortality." Turning away from this work because of indolence or discouragement, leaving evil in undisputed possession of the field, brings but a temporary sense of release, a dangerous respite in which our adversary increases its asserted power. Mrs. Eddy writes: "Evil let alone grows more real, aggressive, and enlarges its claim" (Miscellaneous Writings, p. 284). Evil never recognizes a flag of truce, never modifies its badness, never ceases its enmity to God and His offspring; and to counteract and destroy its influence, human thought and desire must remain steadfast in God as All-in-all. Facing our difficulties in the light of Christian Science, we shall look through them to the reality of being beyond, even the ever-present good that is God; and thus discerning the unsubstantiality of all wrong conditions, we may rest confident in the eternal triumph of right.

IMPERSONAL GIVING.

FRANK H. SPRAGUE.

DESPITE the declaration of the great Teacher, that "it is more blessed to give than to receive," Christians, as a rule, have been accustomed to treat the subject as if the recipient were almost if not quite the sole beneficiary in the case. On this, as on almost every point, the teachings of Jesus, when interpreted in the light of Christian Science, are found to rest on a basis of metaphysical certainty instead of the arbitrary dictum of personal sense. The giving to which he referred in the passage cited was evidently not of the perfunctory order, in which a sense of duty is the main incentive. Whatever the intrinsic value of a gift, the spirit which prompts it is always of paramount importance. This becomes increasingly apparent as we approach the question from its metaphysical rather than its physical side. While giving discriminatingly and with a right motive cannot fail to benefit the recipient in a greater or less degree, the reflex influence of such giving is calculated to bless the donor even more abundantly. The instinct of giving, rightly exercised, tends to free human consciousness from

Digitized by Google

the bondage of false, material sense, which is the source of sin, suffering, disease, and all forms of evil.

The pool without an outlet stagnates, and the springs which feed it become clogged with scum and debris,—"Ceasing to give, we cease to have," the poet Trench phrases it; and so the consciousness which is absorbed with self and ceases to give out, stagnates until it becomes congested with beliefs of discord and disease. Christian Science diagnoses the ground of all human discord as personal, self-centered sense, a false sense of self. Giving releases consciousness from the fettering conditions of a limited, selfish existence, and opens a wider outlook in which the center of human affection is transferred from the individual to the larger circle of mankind. The unfolding of ethical ideals and purposes which attends this expansion of personal sense marks a step toward spiritual freedom. Such ideals belong to a transitional stage of experience, in which the self-centered tendencies of personal sense, manifested in acquisitiveness, self-aggrandizement, and gravitation matter-ward, are being superseded by outgoing, liberating tendencies, which lead away from the personal to the impersonal, from the finite to the infinite. The steps in this progression are clearly indicated by Mrs. Eddy in Science and Health (p. 115) under the caption "Scientific Translation of Mortal Mind."

The impersonal standard of giving must be apprehended in some measure before the true status of man as the spiritual reflection of God, the All-giver, can be discerned. Thus understood, giving becomes the means of raising consciousness to a plane where personality—the essence of self-centered sense—is seen to be a myth, a figment of false belief. Jesus declared, "He that loveth his life [sensuous existence, personality] shall lose it; and he that hateth his life in this world shall keep it unto life eternal;" *i.e.*, through self-abnegation and the pursuit of spiritual ends one comes naturally, by degrees, into a realization of man's immortal selfhood. "Be of good cheer," said Jesus, "I have overcome the world." His acknowledgment of Spirit as the only Giver or source of power, ruled out of his consciousness self-centered, personal sense, so that material so-called laws and conditions, in other words, matter—which, according to its structural basis, represents the combined aggregate of self-centered sense or supposed resistance to Spirit—offered no impediment to his demonstration of the allness of Spirit. During his earthly career he rose superior to material beliefs and triumphed over matter because he had so far overcome the claims of self-centered sense subjectively, in his own consciousness, that he was able to meet and master those self-same claims when presented objectively to the physical senses in the guise of a material world.

The exploitation of human mind-forces is diametrically opposed to Christianly scientific demonstration. Hypnotism, telepathy, and auto-suggestion stand for specific developments of personal, self-centered sense, and therefore represent the antipodes of the Christ-method, or Christian Science, which teaches us how to give impersonally; in other words, how to work from the standpoint of spiritual sense, in which man appears as the mirrored reflection of divine Mind, and thereby how to follow the footsteps of the great Exemplar in his demonstration of spiritual power.

THE LAW OF SUPPLY.

WALTER SHAW.

In "Miscellaneous Writings," by Mrs. Eddy (p. 259), we read that "whatever appears to be law, but partakes not of the nature of God, is not law, but is what Jesus declared it, 'a liar, and the father of it.'" Jesus taught his followers to take no thought for their life—what they should eat, etc.—and illustrated his statement of God's abundant provision by referring to the birds and the flowers, adding, "Ye are of more value than many sparrows." Our human sense of law would argue conditions totally unequal to the supply of humanity's needs, but "either there is no omnipotence, or omnipotence is the only power" (Science and Health, p. 249), and as we grow to realize that our all-powerful God is good, kind, loving, and just, surely we can trust Him to provide for our needs. We must be relying either upon an actually existent spiritual law, or upon a material belief miscalled law, which may any time fail us. Obviously opposite systems, such as the spiritual and the material, cannot both hold power and sway. Certainly one wars against the other, because our human sense of matter is not yet banished, but we can never banish it by relying upon it and making it our support.

We read in the Scriptures that "the law of the Lord is perfect, converting the soul;" thus a perfect law cannot be inefficient, inadequate, or sometimes inoperative. Our faith is based either upon the material or the spiritual, and a divided faith is no faith. Paul pertinently asks, "What a man seeth, why doth he yet hope for?" We must "walk by faith," and then in due time we shall be rewarded by seeing "the salvation of our God;" not after death, but now. Our constant temptation is belief in some other power opposed to God; this is humanity's bane, and Christian Science shows the only way by which we can escape from it. Surely every demonstration aids us onward toward a clearer realization of the truth. Because the smaller problems of the past have proved the Principle of divine Science, the harder ones must yield to persistent effort if we continue to work faithfully upon the same basis, that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468).

Material sense argues lack,—a phase of discord,—a condition the reverse of dominion over the earth. At the creation God gave the real man control over all lower conditions, the words in Genesis, 1 : 28, implying complete authority,—an authority which the teaching and example of Christ Jesus accentuated. He met human conditions as their master; they never controlled him nor appeared to influence this perfect example of the perfect man. As we grow to understand the Mind of Christ, surely we also may exercise this God-given dominion over earthly conditions. What is to prevent it? If there is in reality no matter, there can be no mortal mind. It is evident that divine Mind never produces lack or poverty; then what can? Is mortal mind at any time a lawgiver? Are there two primal causes, one good and one evil? or are we allowing evil to seem a cause and power in our consciousness? If so, we are tacitly denying God's reign and law of perfection. We must know that God is, and we cannot know this until we have actually proved His loving help in time of trouble. We may have hoped, thought, or believed that God is, but to know it is quite a different matter. We must be as sure as Jesus was, when he said, "Father, I thank thee that thou hast heard me. And I knew that thou hearest me always: but because of the people which stand by I said it." This is knowledge born of experience, not belief, and we may therefore welcome even adverse conditions, that we may prove more fully the affluence and power of divine Love and Truth.

The less you require looking after, the more able you are to stand alone and complete your tasks, the greater your reward. Then if you can not only do your work, but direct intelligently and effectively the efforts of others, your reward is in exact ratio: and the more people you direct, and the higher the intelligence you can rightly lend, the more valuable is your life.—ELBERT HUBBARD.

SELECTED ARTICLES.

[From an editorial in *The Times*, Montgomery, Ala.]

A wonderful woman is Mrs. Mary Baker G. Eddy. However we may consider her as the discoverer of a faith, or the founder of a religious propaganda, we are bound to concede her claim to singular merit as a personality of wondrous merit and power. This claim is not more apparent than in a longevity which, so far, has been preserved from the encroaching infirmities of age to undermine the faculties in whose exercise the religious peace and comfort of unnumbered thousands have been found. The soulful benefaction dispensed in the life of this venerable woman has written her name, as it will preserve her memory, deep in the hearts of a large portion of the world's humanity.

[Editorial in the *Mexican Herald*.]

. . . The wide-reaching influence of this notable woman [Mrs. Eddy] is manifested in the extension of Christian Science to all parts of the habitable globe. As much a philosophy as a religion, this new faith undoubtedly meets the spiritual needs of a great and growing body of men and women. It certainly appears to make for serenity of mind, to banish the modern demon of worry, and so to promote health and cheerfulness. Its influence has extended into other denominations, so that one sees the Episcopalians adopting what is termed psychotherapy, while other forms of mind- and faith-healing are being taken up by clergymen of various Protestant sects. If Christian Science had not been known, we should not have seen these flattering imitations.

Mrs. Eddy has been ridiculed—the modern form of persecution; she has had her life examined microscopically, and no one in these latter years has been subjected to a more minute scrutiny; but she emerges from it all a powerful and strangely interesting personality, and takes rank in our times with that other remarkable woman, the empress dowager of China,—to compare women quite unlike, yet similar in their prominence and provocation of world-comment. The quiet, persistent, indefatigable New England woman of good descent has come to be revered by devoted disciples from England to South Africa, and from Argentina to Russia. It is one of the most singular phenomena of our times.

[Rev. William P. McKenzie in the *Boston Times*.]

The question presented to every man is really this: To what do you give power? Evil or good? Christian Scientists, by virtue of their experience, are confirmed optimists. They have seen healing accomplished where human love and human skill had given up hope. They have seen apparently incurable bad habits changed with such a change in life as yearly takes place in the earth when the barren cold yields to the beneficent warmth of spring. They have seen bitterness and cynicism and cruelty melt away, and kindness and joy and gentle courtesy take their place. They find that their faithful application of the teachings of Christian Science to all the problems of life has brought so many solutions and proofs of the power of good to overcome evil that they can foresee the ultimate triumph of good; and "forgetting the things that are behind," they press forward in the direction of that goal.

Our fellow-beings approach the problems of life from many sides, giving emphasis to a variety of supposed powers. There are various forms of fatalism, according to which men allow themselves to believe that both good and evil are equivalently foreordained, one being as inevitable as the other. We have said that Christian Scientists are optimists because they hope for good, and reasons have been given for discarding theories which are fatalistic or pessimistic. But we do not rest in hope; we must rise to faith. It is through faith or understanding that all overcoming is accomplished. "This is the victory that overcometh the world, even our faith." Christian Science revives that faith in good which in ancient days was so potent. It shows how to obey with scientific certainty the direction of Paul: "Be not overcome of evil, but overcome evil with good." But in this, its method of establishing by demonstration the reality of good, it meets the criticism of those who believe in the reality and permanence and power of evil. In Jesus' day the people likewise believed in the reality of evil, and supposed that there was an adversary to good, a personal devil. Christ Jesus characterized this devil of his contemporaries as a murderer and false witness. "There is no truth in him," he said; "when he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." "For this purpose the Son of God was manifested," writes John, "that he might destroy the works of the devil." Christ was revealed to disintegrate the whole fabric of lies, to unweave the reticulated complexities of deceit, to erase from human minds their false beliefs in sickness and sin, and thus emancipate man from a deceived condition into the "glorious liberty of the children of God." All Christians should be enlisted to become victors over every phase of evil.

Christian Science maintains that the eternal Principle underlying all reality is God. Does any one naturally conceive of this Principle as being manifested in any condition which is admittedly adverse to God? Can a condition entitled "a murderer from the beginning" or "a liar, and the father of it," be expressive of God's nature or be the agent of God's will? We must be careful, then, about accepting philosophies which make evil the agent of good, or which give evil an equivalent existence with Deity.

[Editorial in the *Elyria* (Ohio) *Chronicle*.]

At last there has come out from the army of noble physicians one who dares to admit that the healing method followed by Christian Science practitioners has proved to be a curative agency in the matter of the treatment of disease. Dr. R. C. Cabot, a physician who stands high in his profession as a gentleman and a scholar, has in magazine letters given Christian Science all the credit, in his opinion, that belongs to it. He will only admit that this Science cures functional and nervous ailments,—a very good admission,—though he draws the line at organic diseases, and like the doubting Thomas or the man from Missouri, he wants to be shown before he will believe. One would think that the doctor ought to be better informed on what Christian Science can do. He ought to be possessed of facts to show him that there are thousands of people in the United States standing to-day as living monuments of the great healing power of this teaching. These people, snatched from the jaws of death, having been given up by physicians as incurables, as a last resort went to practitioners, and were healed by the simple prayer of faith in God as understood in Christian Science. Abundant testimony verifies the statement that there is not a disease in the whole long list known to the medical fraternity that has not been cured by Christian Science treatment. Possibly Dr. Cabot does not want to make too great an admission at the present time, for it is not long since medical men declared that Christian Science could not cure anything,—that it was a humbug, a fad,—and called for one case that Christian Science had cured.

Dr. Cabot tries to make a point in stating that Christian Scientists cannot diagnose cases, and therefore are not able to treat them as successfully, but this does not seem to stand in the way of Scientists doing good work in the healing of disease. They do not pretend that they can diagnose

Digitized by Google

disease after the manner of physicians, but their method of healing does not call for such diagnosis. In the face of the fact that there are many cases on record of the curing of tuberculosis and locomotor ataxia by Christian Science, the doctor says that he is skeptical on this point because he has not been able to locate one patient who was cured of either one of the diseases mentioned by the Christian Science method. If the doctor will attend Wednesday evening testimonial meetings in any large city, he will hear people tell of being cured of the diseases mentioned as well as of other organic ills. The doctor's articles are very fair, however, as a whole. He is willing to give Christian Science credit for the health and happiness that is evidenced in the lives of its adherents.

[James D. Sherwood in the *El Paso* (Texas) *News*.]

Christian Science is the practical demonstration of Christianity which was preached, taught, and practised by Jesus of Nazareth centuries ago, and it has no partnership with the several forms of mental suggestion that are mentioned by our critic. Christian Science gives men a clearer understanding of God as ever-present divine Love. It illumines thought, and thus aids one in comprehending the Holy Writings and understanding God's plan of redemption, as illustrated by His Son, Christ Jesus. Its teaching purifies motive, uplifts the standard of morals, purges out sin, sensuality, and superstition, and thus transforms and reforms the sinner and heals the sick. A man who has been healed by Christian Science is a better man in every way and is worth more to his family and to the commonwealth. I agree with our critic where he says, "The whole man—body, mind, and soul—needs to be saved by the atoning blood of the Son of God from the curse of sin," for that is just what Christian Science is to-day accomplishing.

In the *Milwaukee Wisconsin*, Dr. Edmund F. Burton tells why he gave up the practice of medicine and surgery to devote himself to Christian Science work. Among other remarkable things that came under his observation he mentions the following: "For about fifteen months I studied the theory of Christian Science and investigated its results. As I read and investigated I found it not difficult to be convinced that it might do away with the use of drugs in the treatment of disease; partly because I knew that medical men everywhere were coming to place less and less reliance upon drugs, that I myself had found their power most uncertain, and partly because from my own experience I welcomed the doing away with such dangerous tools. As to surgery, I was much more slow in believing that mental treatment could be of any use, and it was not until I came to understand the real Principle upon which Christian Science is based that I understood that it will eventually do away with operative surgery as well as the demand for it. I myself have seen a broken bone and dislocated joint restored to normal condition and function within a few hours, and that without manipulation, splint, or bandage of any kind. I have seen a child of five years freed instantly from a congenital deformity without touch of hand or instrument. I have seen a woman, who, according to the verdict of the best medical talent, was within a few hours of death from cancer, restored to good health and spirits within a few days."

Our critic endorses mental suggestion, and recommends it. In doing this he recommends a method not in conformity with the teaching and practice of our Master, who said, "Thy faith hath made thee whole." There is no warrant in the Scriptures for believing that Jesus' method was "mental suggestion." Christian Science teaches that Jesus' way is the only way whereby men are to be saved. In his epistle to the Philippians St. Paul admonishes, "Let this mind be in you, which was also in Christ Jesus," and elsewhere he declares, "The carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be," showing a vast distinction to exist between that Mind which was in Christ Jesus and the mind of mortals. Mortals must get rid of the carnal mind, and become, as St. Paul says, transformed by the renewing of the mind, that they may prove what is that good, and acceptable, and perfect, will of God. By this divine process, and by none other, is the healing and redemptive work in Christian Science practice accomplished.

[Ida Hodnett in the *Montgomery* (Ala.) *Times*.]

Christian Science does not say to sufferers that they have no bodily ailments. It does not look upon these phenomena as merely figments of the imagination, but as solid conviction based on erroneous beliefs and practices. In this condition the feeble human sense needs help to flee from these abnormalities and seek safety elsewhere. Is the arm of God, the infinite intelligence, shortened that it cannot save from all error and restore one to his normal condition?

I desire to say that the mere fact of the death experience coming to believers in Christian Science does not disprove its efficacy as a remedial means nor its truth as a religion. "The last enemy that shall be destroyed is death," says Paul in his epistle to the Corinthians. Then the preceding enemies must be destroyed first. We assuredly need the moral healing and the physical healing which will bring the new and true man to light, and in which we shall find that the body is transformed by the renewing of the mind. We have good reason to hope that both wilful error and unconscious error can be eliminated by the light of Truth, and their effects ultimately destroyed.

[John L. Rendall in *The Gate City*, Keokuk, Ia.]

In a recent issue an excerpt from an article by Prof. Hugo Munsterberg, under the caption, "Hypnotism not a Cure-all," states: "The small good which faith-curers and mental healers and Christian Scientists may have done is heavily outweighed in the criminal wrong they did in stirring up the prejudices of the masses against the scientific work of physicians. Suggestive therapeutics can ask for a hearing only after the scientific physician has made a diagnosis, and has made reasonably sure that no lesion of a vital organ demands very different treatment."

The writer of the above-mentioned article is evidently laboring under somewhat of a misapprehension as concerns the methods and work of Christian Scientists. It must be patent to all thinking people that every movement touching the welfare of humanity must stand or fall absolutely upon the basis of its merits or demerits. This applies to what is termed "the science of medicine" and to Christian Science. Christian Science is now recognized as an established religious faith, because it has been proved to be an important factor in the healing of the sick, the overcoming of the many discordant conditions incidental to humanity, and in the regeneration and reformation of the sinner. Christian Scientists do not decry the work of physicians or their attempts to alleviate suffering. They recognize and appreciate the honesty and integrity of the better class of physicians, and respect their endeavors; therefore they make no attempt to "stir up prejudice" against the work of said physicians. At the same time, they insist upon their individual rights to employ such means as have been proved to them to be most efficacious.

It is a notable fact that a large majority of the people who come to Christian Scientists for help are those who have run the gamut of medical experience and have failed to find healing. To these people Christian Science offers a hope of surcease from their sickness and distress. That this hope has been justified is abundantly proven in the practical experience of those who have embraced the heal-

Digitized by Google

ing ministry of Christian Science. If the Bible teaches anything of a positive nature, it is that the power of God is equal to every emergency and necessity. Christian Scientists rely upon this one power, having proved by practical experience that the words of the psalmist are true: "He sent his word, and healed them, and delivered them from their destructions." In proportion as Christian Science becomes better known, the intrinsic value of its healing ministry is being more clearly recognized and understood for what it really is, and mankind is finding less in its teachings to antagonize and more to appreciate and respect.

[Margaret Beecher White in the *New York American.*]

It is often thought by those who do not understand the Science of spiritual healing, that healing the sick by any but material means cannot be done, and never has been done except by Jesus and his disciples, and because of that mistaken idea it is hard for them to believe that the sick can be healed to-day through Christian Science treatment. Jesus, the Christ, healed through his knowledge of spiritual law, and he said: "I am the way, the truth, and the life," and that all who believed on him or understood his teachings should and could do as he did, and "greater things than these." Christian Science, or Christlike knowledge, is based simply upon the teachings of the great Nazarene. We know that spiritual law has always existed, and those who lived before the time of Jesus, who were spiritually awake, healed through its power. There are cases of such healing throughout the Old Testament, and, in fact, we find a strong rebuke given in the case of Asa's failure to depend on the prayer of faith. He trusted not to the Lord, but to the physicians, with the result that "Asa slept with his fathers."

We are familiar with the healing throughout the New Testament and with the command of the great Teacher and Wayshower to go into all the world "and preach the gospel to every creature;" and he declared the signs that would follow those who believed in or understood his method: "They shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." And that promise was fulfilled in the lives of all those who did understand up to the third century. In the history of the early Christians, or Ante-Nicene Fathers, as they were sometimes called, there are many instances of healing through spiritual power—and in some cases even the dead were raised. Why should we believe these things to be impossible to-day simply because they are not in accordance with material law, and therefore impossible to it? Has material law proved itself to be infallible, limitless, and all-powerful, that we should be afraid to leave it for God's law?

Christian Science coincides entirely with what we learn in the Scriptures of spiritual law and its effects. Mrs. Eddy has simply revived the methods of healing the sick which were practised by the early Christian Church.

[Capt. D. D. Baynes in the *Boston Times.*]

The opposition shown to Christian Science by professed Christians of other denominations often springs from a belief that the teaching of Christian Science is contrary to that of the Bible. That they are mistaken in this belief is shown by the following tenet, to which all who unite with the Christian Science Church are required to subscribe: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal life" (Science and Health, p. 497). Let us assume, as a starting-point for consideration of this attitude of opposition, that all who profess to be Christians—in which category we must include Christian Scientists—accept Paul's statement that the Bible is able to make them "wise unto salvation through faith which is in Christ Jesus." Then, when professed Christians attack Christian Science and its adherents, who, if the above-quoted passage from the Christian Science text-book means anything, do most certainly thus accept the Bible, the ground of disagreement must be either on account of differing interpretations of the Scriptures or because of misinterpretation of the teachings of Christian Science.

In either case the onus lies with those who attack Christian Science on the ground of its being contrary to the Scriptures—if they desire to prove that their interpretation of Holy Writ is right and that of Christian Science is wrong—first to come to a correct understanding of the Christian Science teaching. This is possible only through an open-minded, entirely unbiased study of the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mrs. Eddy. In order to study this book without the bias of preconceived opinions and beliefs, the student must be willing to put them aside for the time being and examine the book solely from the bias upon which it is written. That the book is scientific will appear as it is seen that its basic idea permeates every statement therein, and that, when understood, no statement will be found to be inconsistent with this idea.

If the student can accept the basic idea, then he cannot honestly reject the book as unscientific unless he can prove that it also teaches what is inconsistent with that idea. Assuming that he is unable (as every sincere student has found) to prove any inconsistency, he must then proceed to consider whether its teachings accord with those of Holy Writ. He will probably find at first that previous concepts of the meaning of the Scriptures will assert themselves in conflict with that which Christian Science declares, but if he will again put these preconceptions on the shelf and study the Bible solely from the fresh viewpoint of Christian Science, he will assuredly find the Scriptures indeed making him "wise unto salvation through faith which is in Christ Jesus," to a degree he has not previously deemed possible.

The basic teaching of the text-book of Christian Science may be briefly stated as follows: (1) That there is only one God, the cause or Principle of all real being, *i.e.*, of all that really has entity; (2) that this Principle is necessarily infinite; (3) that it is Love, omnipotent and omnipresent; (4) that whatever does not express God, expresses nonentity, nothing, or illusion, *i.e.*, that which seemeth to be but is not, and that in proportion as we who seem to behold illusion as reality, learn the truth and reject the lie, we shall realize the omnipresence of God, and the consciousness of evil will disappear, even as the appearances of a dream disappear when the dreamer awakens and comes to himself.

[Nellie M. Johnson in the *Omaha* (Neb.) *Bee.*]

By eliminating sin from the individual consciousness and inculcating a love of good, Christian Science is laying the axe at the root of disease, and so proving to be a powerful prophylactic. Christian Science departs from all other curative methods in that it relies solely upon Spirit, God, as the one healing power, and eschews all material methods, including suggestion. The Christian Scientist does not practise medicine, consequently a knowledge of its various systems would be valueless to him. As well insist that all Christians who pray for the sick be instructed in *materia medica* in order that they may be safe members of the community.

The methods of Christian Science and *materia medica* are so widely divergent that any attempt to unite them in practice must prove futile. Attempts to regulate the practice of Christian Science by first erroneously classifying it as a medical system, and then through legislative enact-

Digitized by Google

ment restricting or prohibiting it, involve the curtailment of religious liberty, and such a law would be unconstitutional. Christian Scientists are not forcing their beliefs upon others; hence, no protection is needed from them. Is it necessary to invoke government control to save the enlightened people of our country from their own choice of religion or medicine? Regulation for the practice of medicine may be requisite, but no legislative body has the right to restrict the functions of prayer sanctioned by divine authority.

[Bicknell Young in the *Melbourne* (Australia) *Herald.*]

No Christian Scientist ever agreed to heal anybody. He agreed to treat him. You take the ordinary physician in good standing, and if a man comes to him for help he will say, "Yes, I will take your case, and do the very best I can." We assume exactly that position. With the knowledge we have of Christian Science, which at the present time we acknowledge to be in its infancy as a practice, we undertake a man's case and do the very best we can. It seems rather strange that anything which would have a tendency to bring Christian Science into disrepute should be telegraphed from one country, however distant, to another, when there are constantly occurring cases of healing, of what are generally considered incurable diseases, by Christian Science; and no telegraphic agency takes the pains to inform the world about those. Yet there is no question as to their relative importance. The method of Christian Science healing is purely mental—or the word spiritual may, perhaps, describe it more exactly. It is prayer in the very highest sense of the word. But it is not what is ordinarily called prayer; for it not only involves faith, but absolute understanding of what God is, and of what His law is. As a method it is set forth in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and in no other literature will the correct method be found.

[Alfred Farlow in the *Boston Times.*]

Our critic declares that he hears nothing about the healing of the soul in Christian Science. If by healing the soul he means spiritual improvement in contradistinction to bodily healing, then there is certainly strong evidence that he has heard nothing from Christian Scientists nor has he read the testimony of Christian Scientists. In her book "Rudimental Divine Science," Mrs. Eddy declares: "Healing physical sickness is the smallest part of Christian Science. It is only the bugle-call to thought and action in the higher range of infinite goodness. The emphatic purpose of Christian Science is the healing of sin." As we have already stated, bodily improvement in Christian Science practice is the result of spiritual regeneration. The body responds as the "soul" is saved from sin and evil. The neophyte in Christian Science may be considerably enthused by the bodily benefits which he receives, but the spiritual uplift which he gains soon swallows up his interest in the material benefits.

Mrs. Eddy speaks kindly and gratefully of the noble work which has been and is being accomplished by our good physicians. Christian Science encourages all reasonable hygienic methods, including pure air and food and cleanliness, in keeping with the old adage, "Cleanliness is indeed next to godliness." If the Christian Scientists had their way about it, the city sewerage would be much improved and the streets would be kept much cleaner. It is natural that to one whose thought has become more elevated, any lack of cleanliness in his material surroundings would become more noticeable and more objectionable to him, although he might have an unusual amount of grace to bear with untidiness. The homes and persons of Christian Scientists will bear testimony to the fact that they are quite as advanced in the habit of cleanliness as they are in spirituality, and thus "by their fruits" they are known. The best and purest in the material most nearly approaches the spiritual, and hence is most desirable to Christian Scientists.

[R. Stanhope Easterday in the *Franklin* (Ind.) *Star.*]

Far from "sweeping the entire universe of all material phenomena," Christian Science but urges the reasonableness of its conclusion that in the light of the spiritual teachings and facts of Scripture, the material universe about us is but a mortal, finite misconception of the spiritual, perfect creation recounted in the first chapter of Genesis, and pronounced, in the estimation of infinite wisdom, "very good." It might be interesting and helpful just here to recall how Jesus conceived of and handled so-called physical forces and "material phenomena."

Jesus once made the significant statement, "I am not come to destroy, but to fulfil;" and yet, throughout his earthly career, he ruthlessly set aside material laws and forces,—walking on the water despite the law of gravitation, changing water into wine in direct contravention of all known physical and chemical laws, and healing the sick without compliance with or any recognition of ancient or modern laws of health and hygiene. Yet all, we may reasonably conclude, was in due accord with the true, spiritual laws of being, and in full conformity with "the will of the Father." Jesus, before he left his followers in the ascension, promised that "the Comforter," should eventually lead men "into all truth." Inasmuch as truth is the basis of all true science, it is but reasonable to conclude that the basic laws of Christianity are to be the very essence of true science; hence the Christ concept of men and things must have been the truly "scientific" concept, and his the only "scientific" methods. It will therefore be conclusively seen that the Christian Science interpretation of the facts of the universe is the truly "scientific" interpretation of all "phenomena."

It should be recalled that, according to the scientific definition of this word, phenomena means "appearances," resulting from "underlying realities" called "noumena," which are not cognizable to the physical senses. So-called "physical science" necessarily eschews all consideration of these latter, in consonance with Paul's statement, "The natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." This latter indeed covers the whole ground; substantiates the Christian Science contention, if the latter is rationally understood; opens up a large field to the earnest Christian for profitable research and study; leaves no room or justification for quibbling or controversy, and justifies Jesus' sweeping admonition, "Judge not."

[From the *Jamestown* (N. Y.) *Journal.*]

Mrs. Mary Baker G. Eddy, who, of course, has no faith in medicine, told a western Christian Scientist, at one of her latest audiences, an anecdote about a friend of hers. This friend, a thin and nervous woman, could not sleep. She visited her physician, and the man said,—

"Do you eat anything just before going to bed?"

"Oh, no, doctor," the patient replied.

"Well," said the physician, "just keep a pitcher of milk and some biscuit beside you, and every night, the last thing you do, make a light meal."

"But, doctor," cried the lady, "you told me on no account to eat anything before retiring."

"Pooh, pooh," said the doctor, "that was three months ago. Science has made enormous strides since then."

Exchange.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy upon proper subjects *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

"PERFECT LOVE CASTETH OUT FEAR."

THERE recently appeared in *The Boston Herald*, under the caption, "The Enemy—Fear," a somewhat remarkable editorial, from which we quote as follows:—

There is nothing men need fear. Fearlessness conquers the evil that was feared, annihilates it, transforms it into the classification of the has been or the never was. Fearlessness is not rashness, it is wisdom. Fear is ignorance, born of the ignorance that forges all the fetters which man has worn and chafed in since first he walked the earth. What you fear are phantasms. You make them forces by fearing them. Every four years this nation fears a presidential election. It is a foolish fear. The country has had experience enough to teach it this. It can trust the people. And yet men stand in corners and say: "We don't know what will happen." They fear what they call "uncertainty," and so create a certainty of uncertainty. They let business slacken, withhold investments, sit on the fence and wait. Is this the famous American optimism? Get courage. Work. There is nothing to fear. Don't take half-inch views. . . . Shun the men who have fears. They are worse than the plague. Nothing but yourself can injure you. Nothing but the city can injure the city or the nation the nation. Fearlessness is wisdom, and the first part of wisdom is mastery of self. It is also the last part. It is the sum of life.

It is time that mortals should awaken to the seriousness of the condition to which they are self-condemned by their fears, but in order to do this they first must realize that fear is not the normal state of man. Paul said, "For God hath not given us the spirit of fear; but of power, and of love, and of a sound mind." If we believe this, we must also believe that fear is an abnormity, an illusion. To think otherwise is to deny the omnipotence of God, or to enthrone Him as the king of misrule. Our salvation from fear and its results must come through the knowledge that God has "not given us the spirit of fear;" that His creation is good, and that He is governing and guiding us in all that we do.

Mrs. Eddy points the way to this salvation in Science and Health. She says, "We should master fear, instead of cultivating it" (p. 197); and she has shown Christian Scientists that this mastery is obtained only through the right living which is based upon a full recognition of God's omnipotence. Fear is no more a part of God's creation than is discord a part of harmony, or death a part of life, and it is only because mortals are prone to follow their erroneous belief in the existence of a power apart from God, divine Love, that they have become slaves to such a merciless taskmaster. John had learned what this freedom means when he wrote, "Perfect love casteth out fear;" and only through an appeal to divine Love can we avail ourselves of this promise.

ARCHIBALD MCLELLAN.

SEEING.

IT is said that the sense of sight determines every movement of the body. This is self-evidently the case so far as walking is concerned, though very few are conscious of it. To do anything well we must see clearly, but this means far more than seeing physically. One may claim perfect physical sight and yet may see nothing rightly. Though he may have been able to lay aside his spectacles, he may yet see everything "through a glass, darkly." It is very apparent that an appeal must be made to the reason and to the higher faculties before one can say even with respect to any human problem, "I see!"

In St. John's apocalyptic vision we read in its wonderful symbolism of the sea of glass, and the "living creatures" (Rev. Ver.) that were "full of eyes before and behind," also "full of eyes within." We find this same idea in the prophecy of Ezekiel, but in Revelation its climax is reached when these creatures with the wings and the eyes join in ceaseless praise to God, saying, "Thou art worthy, O Lord, to receive glory and honor and power: for thou hast created all things, and for thy pleasure they are and were created." They could see the divine creation, in which are no elements of evil,—no sin, disease, nor death,—and seeing this they were impelled to praise without ceasing the creative Mind. They thus typify the divine ideas brought to light in Christian Science when the importance of man's spiritual faculties is recognized, and when spiritual evidence is sought instead of the false evidence of material sense.

No one questions that Christ Jesus was the highest representative of God to humanity, and we find that he declared entirely for that which was unseen to the physical senses in making his marvelous demonstrations. "She is not dead," was his positive declaration respecting Jairus' daughter, a declaration made in the face of the scorn and incredulity of those who could not see what he saw,—the deathless reality of being. Our revered Leader says, "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick" (Science and Health, p. 476). Seeing always this spiritual evidence, Jesus might well ask his disciples, "Why are ye so fearful?" And should not Christian Scientists ask this question of themselves and others when the false evidence of material sense seeks to overwhelm them? Should they not at such times remember the eyes "before and behind" and "within," all revealing the unbroken eternal harmony? With such seeing, the Christ-healing comes naturally and inevitably.

One of the most sublime passages in Isaiah is that in which the prophet tells of him that "stoppeth his ears from hearing of blood, and shutteth his eyes from seeing evil." Of such an one he says, "He shall dwell on high: his place of defense shall be the munitions of rocks: bread shall be given him; his waters shall be sure." More than this, he shall see "the land that is very far off" (from material sense),—the land where the inhabitant does not say, "I am sick," because he sees God, and with this seeing, "sorrow and sighing shall flee away."

ANNIE M. KNOTT.

SEPARATE FROM SIN.

THERE are few mature people of thoughtful temperament and refined moral nature who have not suffered a sense of unspeakable revolt as they recalled the occasions of the past when they said and did ignoble things, when they clung to brooding thoughts which were an offense to their present ideals. Indeed human experience supplies no better sample of the tortures of hell than the feeling of shame and humiliation experienced by sensitive souls as they have stood face to face with a bit of their own history, burned into the very bone of memory, from which their better self turned away with a shudder of disgust. To know that one could have been so selfish, so mean, so vulgar, is to experience a sense of self-condemnation which well-nigh begets despair.

This remembrance of an unworthy past has amounted to

Digitized by Google

such a tyranny in the case of some, that they have sought escape from it in the desert of asceticism or in the hoped-for forgetfulness of death. To a far greater number, however, of less tragic but more heroic souls, it has brought those frequently recurring periods of depression and discouragement which have marred the peace and satisfaction of otherwise normal lives. They are standing for the ideal, and they are overcoming, but ever and anon they are beaten by the past "with many stripes," as the result of a baneful habit of mentally entertaining the unideal; a habit which is persisted in by many who would acknowledge at once that nothing could be more profitless and unchristian than this hanging-on-to-the-hateful, this pressing of the asp to one's bosom, upon every occasion of retrospect, until its poison is surging through every vein.

When evil has grown repulsive to men it is surely time for them to turn their backs upon it, and one of the great things about Christian Science is this, that it brings escape from memories which one can but despise. It does this by defining the true selfhood; by making it possible for men to separate between the condemned culprit of past sense and the inspiring consciousness of the Christ-idea. To cling to an unworthy past after the recoil of one's nobler selfhood is realized and registered before God, after the contrasting ideal is embraced and one is honestly and loyally pledged to it,—this is the very acme of unwisdom, and yet this is precisely what one may have done a thousand times. "As far as the east is from the west, so far hath he removed our transgressions from us:" so sings the psalmist rejoicingly, but how can this be so long as men persistently cling to and identify self with the unideal? Right living is a constant and persistent turning away in thought, in desire, and in declaration from all evil, and especially from all self-identification therewith.

The prodigal's coming to himself, his facing fatherward, was splendid and altogether worthy of him, but how hard he tried to take the hated swine home with him. Though his repentance was sincere, his contrition genuine, his consecration honest and complete, he seemed to be rather insistent on retaining that sense of unworthiness which is legitimately branded on the belief of material selfhood, but which, thank heaven, pertains not to that consciousness of sonship to which the father in all he said and did was evidently seeking to lift his boy's thought and realization. The father's outsurging love would not consent to the declarations of an unworthy self, and thus does Love ever declare to aspiring, home-coming thought, "Thou art my Son; this day have I begotten thee."

The awakening to the *me* and the *not me* which Christian Science is bringing to human consciousness is no less vital than inspiring. As never before it is seen to-day that man is eternally separate from sin. The mud of mortal sense may seem to be a compound of water and dirt, but the scientist knows that the water is untouched, that it ever remains pure as crystal; and this the call of the sun is ever proving true. It is ours to know, and know every moment, that the integrity of Spirit and Spirit's every manifestation is forever maintained in divine Science, and that salvation is nothing other and nothing less than arrival thereat, the abiding consciousness of this eternal fact.

JOHN B. WILLIS.

NOTICE.

The Christian Science Board of Directors respectfully announce to the Field that it has become necessary to enlarge the new publishing house in order to accommodate the presses and other machinery required for the printing of the Christian Science publications. Contributions from those who wish to assist in the erection of this addition to the publishing house will be thankfully received by Mr. Chase, Treasurer.

LETTERS TO OUR LEADER.

Boston, Mass., Sept. 13, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—I wish to thank you, in behalf of the congregations as well as myself, for the beautiful roses which you so thoughtfully and lovingly provided for to-day's services in The Mother Church. Announcements were made to both congregations that the flowers were your gift; and I am sure that all enjoyed them as flowers and appreciated them as your gift. I certainly did.

During the last three months the attendance at the services and meetings in The Mother Church has been very good, and the audiences have been earnest and attentive. Persons have been present from Australia, Philippine Islands, Panama, Canada, England, Germany, France, Greece, and South Africa. With few exceptions the testimonies at the Wednesday evening meetings have been prompt, concise, and convincing. They have been the subject of much favorable comment.

At these meetings many persons have expressed their gratitude to you in memorable ways. The instance which most impressed me was this: A gentleman whose healing from sickness and sin was itself remarkable, said that for years before he finally turned to Christian Science he was critical, hostile, and even bitter toward you. And he said that when correct information had changed his attitude toward you, and Christian Science had healed him, his uppermost thought was that during all the years when he was thinking and speaking evil of you, your work was making his healing possible. With love and gratitude, I am

Sincerely yours,

CLIFFORD P. SMITH.

Providence, Aug. 6, 1908.

Dear Mrs. Eddy:—The last By-law, another evidence of your unceasing vigil and loving care, brought anew such a deep sense of "quietness and confidence" that I cannot resist sending my love and gratitude, though the written word may not reach you. Day by day your teaching and example enable me to overcome the seeming. My desire is to live the life of one who follows Christ. I marvel at your steadfast standing, your clear sight, and your pure thought giving help to all,—the result of dwelling in "the secret place." With grateful love,

FRANCES PRENTICE.

Kansas City, Mo., Aug. 6, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dear Mrs. Eddy:—I am only one of the legion healed through your inspired writings, and would like to add my mite of gratitude. Christian Science brought to a barren consciousness hope,—the star of Bethlehem shining in the midnight darkness,—a beacon of promise, appearing ever brighter as the pilgrim leaves behind the shoals of sin and pain and nears the shore of spiritual understanding. I want to thank you for your beautiful verses in "Miscellaneous Writings," page 396, entitled "Christ my Refuge." They are indeed jewels of comfort, a "Peace, be still" to at least one sea of unrest. To follow "in his steps," with love and obedience to our dear Leader, is my daily prayer; thus would I pay my debt to you.

Most gratefully yours,

NANCY CRANE.

Coldwater, Mich., Aug. 31, 1908.

Dear Mrs. Eddy:—I want to thank you for those helpful lines added on page 200 of your latest edition of Science and Health. For years I was in bondage to sin and suffering, and a belief that Christ was dead (but un-

Digitized by Google

derstood); but through the discernment of the "scientific line of demarcation between Truth and error" (Science and Health, p. 586), which you have so plainly shown to us in all your writings, I have been free for fifteen years, by clinging to this as my life-line. Command me, dear Leader, for I am at your service, and am determined to know more of "Jesus Christ and him glorified," through adherence to divine Principle, and the rules given us in your immortal book, "Science and Health with Key to the Scriptures." Believe me, gratefully and lovingly,

Your student's student,
MRS. BELLE W. STOWE.

Boston, Mass., July 15, 1908.

Mrs. Mary Baker G. Eddy, Chestnut Hill, Mass.

Beloved Leader and Teacher:—Again I see the advance in our Cause manifested by the repeal of Article V. of the Church By-laws. I am specially thankful for the privilege of doing a slight service each week at our Roxbury church. You are showing us how the truth may be upheld and lived. All who have become spiritually awakened see that a quiet mind, adherence to Principle, and love for our fellows, constitute a bulwark of character that is unshakable, and that from these individuals thus quickened our mighty Cause is being upbuilded. On page 255 of "Miscellaneous Writings" is written, "Man should be found not claiming equality with, but growing into, that altitude of Mind which was in Christ Jesus." This encourages me to try.

Sincerely your student,
BERT POOLE.

Philadelphia, Pa., June 29, 1908.

Beloved Leader:—Only a deep desire to express our grateful recognition of your untiring labors could induce me to trespass upon your time. It is an added incentive to more earnest effort to know that you deem your followers ready to receive the advanced spiritual unfolding indicated in your "A Word to the Wise," and by the changes in and additions to the By-laws. We gladly see in all these the rapidly appearing mile-stones along the way to the goal implied by Paul when he said, "But when that which is perfect is come, then that which is in part shall be done away." That we may be readily receptive of all you may be led to give us, is the earnest desire of my good wife and myself. We are one in loving gratitude.

Thankfully your follower,
C. H. FAHNESTOCK.

Boston, Mass., July 30, 1908.

Dear Mrs. Eddy:—I come from Manila, and being in Boston I feel that I cannot go away without sending you a few words of love. Just before leaving Manila, I had occasion to be deeply grateful to God, and to you, His messenger, for the practical help of Christian Science. A little child was badly scalded on his head and face, also the chest and back. The father said he thought the boy would go into convulsions, but the mother at once asked for Christian Science treatment. She said that in ten minutes after she got home the child went quietly to sleep. He slept all night and in the morning wakened and said, "Why, mamma, I am all well." The father said that of course the child would be marked for life, but in less than a week one could not tell which side of the face had been burned, and after the first treatment there was not the slightest pain. My heart went out in such gratitude to you that your work had made such a thing possible.

I have been in Europe for two months, and in all the beautiful art which I saw, two pictures interested me very much. I am sure you are familiar with the first one by Botticelli, "Tobias and the Angels," in which the child Tobias has gone out to find something to heal his blind father and meets the three angels, who tell him they will go with him, and that his father will be healed; but did you know that Rembrandt took up the story and finished it? His picture hangs in the Louvre, and it is called "The Angel Leaving Tobias." The father's sight has been restored, and he is kneeling in a most reverent attitude. The angel is ascending, and all the light in the picture comes from him, falling on the group. Little Tobias looks up in amazement, for he did not know it was an angel that had been with him. Then I turn to your definition of angels, "God's thoughts passing to man" (Science and Health, p. 581), and think what Truth is doing for the human race to-day. A case of total blindness was healed by Christian Science while I was in Paris.

After the cathedrals of Europe,—the one at Milan, and Notre Dame, and others,—I come to The Mother Church, in its beauty and simplicity, with a sense of inexpressible thankfulness. It was built by people who have been healed of sin and disease.

With devoted and grateful love,
ANNA M. CAMPBELL.

Cotulla, Texas, July 8, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dear Leader:—It is with a heart full of love and gratitude that I write to tell you that the sick are healed, the lame walk, the drunkard forsakes his cups, the tobacco-user ceases to smoke, he that profaned God's holy name swears no more, and the poor have the gospel preached to them; the Bible is being read and searched to see if these things be so, and God's name is honored and glorified here in this place. Church people are becoming more tolerant, and prejudice is giving way to a more liberal feeling toward Christian Science. It is a pleasant task to preach Christian Science, though ofttimes there is but the lone listener. The truth heals, and God sets His seal on the sermon by healing the sick. One demonstration of the truth gives me more joy and satisfaction than the sermons preached in years of ministerial career in the old thought. When we speak the truth to error and it disappears, we have the blessed assurance that the Master is with us, and the ancient promise is fulfilled, "Lo, I am with you alway." Surely the kingdom of God is among men.

Yours in gratitude and love,
MATT RUSSELL.

NOTICE.

The Publishing Society has been asked by some subscribers to the *Quarterly* to trim down their copies to the size of the pocket edition of Science and Health, and, in order to meet this demand, trimmed copies of this size —4½ x 6¼—will be furnished on application, provided the request is made at the time of submitting the original order or subscription, or when subscription is renewed. The Publishing Society cannot undertake to cut down returned *Quarterlies* or those covered by partially expired subscriptions. In filling orders from Reading Rooms, the regular size will always be sent unless the number required of each size is designated in the order.

Quarterly covers in black seal leather fitted for the two sizes of the *Quarterly* will be offered for sale at the following prices:—

Regular size, 5¼ x 7¾, $1.25 each or $12.50 per dozen.
Pocket size, 4½ x 6¼, $1.15 each or $11.00 per dozen.

Leather cases for the pocket editions of the Bible and Science and Health are now made slightly wider in order to provide space also for the trimmed *Quarterly* with or without cover. The price remains the same as heretofore, $1.25 each.

AMONG THE CHURCHES.

CHELSEA, MASS.

The experience of the Christian Science church in Chelsea, Mass., at the time of and since the great fire of April 12, 1908, seems of sufficient general interest to warrant its being related briefly to the readers of the *Sentinel*. After the fire it was recalled that the Scripture selections read at several services preceding the fire, as well as the Lesson-Sermons, had been wonderfully fitting, in view of the experience to be faced. Even as the fire was raging—although it was not known by those present to be of especially threatening character—the First Reader read the 91st and 23d Psalms, and the closing hymn was "In heavenly love abiding." The appropriateness of the Lesson-Sermons to the situation in Chelsea, following the fire, also was so striking as to impress many.

As soon as the city was cool enough for any one to enter it, Mr. William D. McCrackan and Mr. F. B. Homans, as a committee representing The Mother Church, came to Chelsea in an automobile seeking fire victims, and bringing the cheering news that The Mother Church stood back of the Chelsea branch church to relieve suffering, among Scientists or non-Scientists. The hall occupied by the church and the homes of thirteen of the church members were burned. Furthermore, all but three of the church edifices in the city were destroyed, and two of those remaining were given up to housing and feeding the homeless; nevertheless the way was opened for our church to use the auditorium of the Horace Memorial Free Baptist Church. There was no interruption of services, and the regular testimony meeting, three days after the fire, was especially inspiring. Several of those affected by the fire spoke, and all these bore glad and grateful testimony to being sustained in the time of trial. There was no note of depression and there seemed to be wonderfully little sense of loss. All were eager to help those less fortunate than themselves, and at a business session immediately following the service all members were formed into a relief committee. Persons in the congregation, a number of whom were sympathizing Scientists from other places, left substantial sums of money for relief work. Some of the money was placed that night in the hands of persons known to be in immediate need. An executive committee was chosen to distribute cash and goods on behalf of the church. Excellent relief quarters were offered on the premises of Mr. James S. Wilson, and Mr. Horace P. Stevens was given immediate charge of the work.

Contributions of money and clothing came promptly. One of the first was one hundred dollars telegraphed by a church which had been through a similar experience,—that at San Francisco. The Mother Church took up two special collections, amounting to more than two thousand dollars. Special collections in many branch churches far and near were forwarded to the relief committees, those of The Mother Church and the Chelsea church handling the funds jointly. Many members of The Mother Church residing in Boston gave unsparingly of their time to assist at the relief station during the five weeks it was kept open. That Christian Scientists are not without charity was demonstrated by the fact that one family in The Mother Church collected and sent to Chelsea six hundred dollars and sixty packages of clothing. More than six thousand dollars cash, about twenty-two thousand garments of good quality, and other useful articles were distributed, and between two thousand and three thousand sufferers, who came disheartened, were sent on their way rejoicing. The vast majority of these were in no way identified with Christian Science.

Although many attendants and some members removed from the city after the fire, the Chelsea church has been sustained financially as well as spiritually, its building fund is gradually increasing, and it is hoped that before many years have passed it will have an edifice of its own. Notwithstanding a marked tendency to remove from the city before as well as since the fire, the church membership is well sustained. Last year the sales of Christian Science literature in the Reading Room amounted to seven hundred dollars. The city is now being rebuilt, and the feeling seems to be general that better days are in store for Chelsea.

JOHN L. WRIGHT.

LECTURE AT KENNEBUNK, ME.

Tuesday evening, Aug. 18, was the date of the first lecture given by the Christian Science society of this town, when Bliss Knapp addressed an audience of fully three hundred attentive listeners in Mousam Opera House. The lecturer was introduced by W. Franklin Burnham of Reading, Mass., who said,—

It is a very great pleasure for me to extend to you a most cordial welcome. Many of you have heard of Christian Science. Many of you have heard of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Rev. Mary Baker G. Eddy. Some have heard of it in a friendly way and know its good works, while others have heard it spoken of ignorantly and attacked maliciously. I am frank enough to admit that four years ago I belonged to the prejudiced class, and could not and would not tolerate the mention of Christian Science, to say nothing of taking its truth into my home. But, friends, there came a crisis, a time when we would accept anything in our family if it promised relief, and as a last resort we sought Christian Science. I need hardly assure you that a case of diabetes in its most acute stage was successfully met after three physicians had given the patient no encouragement. This healing by Christian Science was made in my father's case, a man who had led a Christian life, and who for many years had been a trustee in a Methodist church. From that time on I have been a student of Christian Science, and little I ever expected or thought I should be in the position I am to-night. Friends, that the uninformed may be enlightened, and the hopeless and helpless healed, the Christian Science Church has provided a Board of Lectureship, and it is my privilege and my pleasure to present as the lecturer this evening, Bliss Knapp of Boston.

Correspondence.

LECTURES AT OTHER PLACES.

Telluride, Col.—Judge Septimus J. Hanna, July 23.
Cotuit, Mass.—Frank H. Leonard, Aug. 3.

NOTICE.

Branch churches, after giving lectures, will please send notices of such lectures to the editor of the *Sentinel*. Clippings from local papers which have reported these lectures are preferred.

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be Nov. 6, 1908. Applications should be in the hands of the Clerk of The Mother Church on or before Oct. 21, 1908. Application blanks may be had by addressing William B. Johnson, C.S.D., Clerk, at the church edifice, Falmouth, Norway, and St. Paul Streets.

TESTIMONIES OF HEALING.

I desire to make acknowledgment through the *Sentinel* of the many blessings and benefits that have come to me through the teachings of Christian Science. I became interested in this Science not for my own healing, although I was far from being physically well, but to encourage my husband to take treatment for diseases which had been pronounced by physicians as beyond the reach of medical skill. The most distressing symptoms of these diseases were partial blindness and utter helplessness, and these conditions were becoming more manifest daily, so that reading or walking was almost impossible. In addition to the physical affliction there was an increasing desire for stimulants, which, together with an accumulation of debts, etc., caused an intolerable gloom to settle like a pall over our home.

As for myself, I was a constant sufferer from chronic bladder and bowel trouble, for which I had had medical treatment at intervals for over fifteen years without receiving any benefit. These troubles increased to such an extent that I was unable to perform my household duties without great suffering and fatigue. At times I suffered from neuralgic trouble in my head and eyes, which was never relieved by *materia medica*. I had never supposed that my ills were incurable, but expected to continue to consult physicians and take medicine as I had always done. The physical suffering which I endured, however, was nothing in comparison to the mental, when I thought of God as causing and permitting what I experienced and witnessed in my husband and others. This thought caused many tears of self-pity and robbed me of many nights of peaceful sleep. I found no consolation in my religion, though I had been an earnest worker in the church for years; I was made only the more unhappy and miserable by the repetition of prayers which were never answered. In our text-book we are told of the "all-hearing and all-knowing Mind, to whom each want of man is always known and by whom it will be supplied" (Science and Health, p. 7); and I feel that divine Love led me into the path of Christian Science. I had been told that it would heal incurable diseases, so I determined to investigate the subject, as my husband persistently declined to have treatment. A friend of mine loaned me her copy of Science and Health for two days, but its meaning seemed so obscure that I returned the book with a feeling of discouragement. I then decided that I would devote myself to reading the Bible, which I had never before systematically done. I read the New Testament very diligently for several months, but could find no rule that I could apply to physical healing. I perceived that Jesus and his disciples practised physical healing daily, and I felt convinced that there was a rule or Jesus would not have commanded his disciples to "heal the sick." I learned, however, that he took his disciples apart and taught them, and what he taught them I yearned to know.

One afternoon I went to the Christian Science Reading Room and inquired if they had a book containing references from the Bible sustaining the doctrine of Christian Science, and I was handed a pamphlet, over which I pored with a new hope and joy. I learned that the teaching of Christian Science is founded on the Bible, from Genesis to Revelation. I caught a glimpse of the perfect creation and what Jesus meant when he said, "Every plant, which my heavenly Father hath not planted, shall be rooted up." This and other beautiful verses had a new meaning for me, yet I was in the same position so far as gaining a knowledge of healing was concerned. I resolved upon fasting and praying, as that appeared to be the advice Jesus gave his disciples when they failed to cure a young man; but I abandoned that notion, as I felt it would be a useless performance. I then decided that I would again attempt the reading of Science and Health; so I obtained a copy from the public library, and I shall never forget the beautiful truth that was revealed to me upon this second reading and how tenderly and persuasively my bruised heart was soothed by its loving, compassionate appeal. It taught me that God does not afflict, but is ever-present Love,—"our Father-Mother God, all-harmonious" (Science and Health, p. 16),—and I read and thought of nothing else for days.

The physical healing came at some moment unknown to me; I took cognizance only of the fact of my mental and spiritual freedom; I saw that my capacity for thought and reflection had increased beyond anything I had ever enjoyed in the past. I had a deeper yearning for the spiritual, and a desire for a better understanding of the truth that had so far overpowered the material senses. I knew the doctrine of Christian Science was of God, for He had sent His word and healed me, yet I felt I had been healed without an understanding of how to apply this truth to my daily needs. I was at a standstill, not knowing how to go on, but making occasional efforts at forcing the reading of Science and Health upon my husband and friends, until I was led to seek a Scientist, who pointed out to me the rich inheritance which is man's birthright. Through kind and helpful ministrations I have found greater freedom and peace in the realization of God as substance, and I have been released to a large degree from the bondage of debt and financial embarrassment which had at one time seemed beyond remedy. I was helped in directing my renewed strength and energy into paths heretofore untried, and with success. My husband consented to take treatment, and was relieved from pains which were at times so excruciating that delirium would result; his blind eye was opened, and the craving for stimulants and tobacco was removed. A new and brighter hope arose, pointing to restored activity and greater usefulness.

My blessings have been tenfold, and I feel a deepening sense of love and gratitude to our Leader for all that Science and Health has done for me, and for the world.

MRS. CAROLINE M. HUTCHISON, Houston, Tex.

I am glad to be able to write a testimony of my healing through Christian Science. I came from Norway in the spring of 1892 with good health and bright prospects. My good health continued until 1901, when I was stricken with fever; and as I was unable to recover my strength after that, I was soon a physical wreck. About a year after having the fever, I began drinking and kept it up for two years. This was the final stroke, and my health was completely broken down. I went to a physician, but he could not tell what was the matter with me; I took medicine all summer and got somewhat better, but soon found myself worse again and was not able to work for five months. At this time I was living in Wisconsin, and was treated by two of the best physicians in the middle West, who finally said they had done all for me that medical skill could do, —one of them saying, "There is not a doctor in the United States that can cure you." I left Wisconsin and came to Idaho, thinking a change of climate might help me, and consulted another physician, who pronounced my case kidney disease. I was treated by him for some time, but got no relief. I told him what the other doctors had said, and he responded, "They told you the truth." He talked to me as though he expected me to die at any time. I then quit medicine, and after trying osteopathy for nine months I was satisfied that it could not help me. I was greatly discouraged, and without hope, as I had spent all my money and was not able to work. Poverty and death seemed to

Digitized by Google

stare me in the face; my suffering, physical and mental, seemed more than I could bear.

At this time I was urged to try Christian Science, and I sent for a practitioner, though with little faith of ever getting any help. The practitioner told me that God would heal me if I would but trust Him, and as it was my only hope, I began taking treatment in March, 1907. I improved from the first; in less than a week I went on a farm and began to work, and have worked at hard labor ever since. I can truthfully say that I am now a well man, and I am thankful to God for the physical and spiritual healing, and to Mrs. Eddy, who discovered this truth that lifts humanity out of sin and suffering.

OTTO PEDERSON, Moscow, Idaho.

Since my mother was healed of a severe illness some six months ago by divine Truth, it has been in my mind to express through the columns of the *Sentinel* my gratitude for such a beautiful proof of God's allness. The attack seemed very alarming, and the disease appeared on the face and head, and was accompanied by great pain and swelling. A Christian Science practitioner came to the house about two o'clock in the morning, and was left alone with her patient. At breakfast time mother was able to speak intelligently, where before she had been delirious. The appearance of the disease on the head had received its death-blow, making one think of a weed that had been uprooted; but its power to cause suffering was utterly destroyed. It took a few days before my mother's face was quite normal, and then, besides the pleasure of looking on a wholesome skin, there was the face illumined by the light of divine Love, for the wrong thoughts whose direful effects we had seen had been destroyed, and the light shone unobstructed. From the Christian Science treatment a scalp disease of a lifetime disappeared, leaving the skin as clean as a babe's; and where there had been baldness, there is now a beautiful growth of hair, and this at the age of seventy years. While there is untold gratitude for a mother restored, there is more for the knowledge that the God who "healeth all thy diseases" is a power available every day and on every occasion, and that those whose baptism is a purification from error can give the proof thereof.

To Mrs. Eddy, the "pure in heart," who has revealed to waiting humanity God's ever-presence and All-power, our gratitude goes forth with an earnest prayer to express in our lives the beauty of her teaching.

MAGGIE M. MACKENZIE, Pomona, Cal.

[Translated from the German.]

Christian Science has restored my health, and I consider it my duty to give public testimony to this fact. Its divine Principle has quickly and safely healed me from blood-poisoning. From the spring until the autumn of 1907 I suffered night and day, and spent six weeks in a sanitarium. At that time God led an old friend to visit me who had formerly told me of Christian Science, though I did not then place my full confidence in it. Now I began to investigate this noble Cause, and I learned to distinguish error from truth. While I had in former years been temporarily relieved by material remedies, they failed entirely to bring me any relief at this time. I turned to a Christian Science practitioner for help, and after the first *treatment* my trouble grew less, I could walk better and breathe better. I made daily progress, placing more confidence in this spiritual healing, and slight relapses were met with courage and conviction. Thus did the most severe symptoms of disease vanish in about six or seven weeks.

I can never be grateful enough to God for restoring my health, and for the spiritual understanding I have gained thereby. May God protect Christian Science, and its noble Leader.

FRAU MARIE JOEPPRITZ-TROELTSCH, Stuttgart, Germany.

Four years ago I was suffering from rheumatic trouble and a general breaking down of health which had been going on for years. I was a quartz miner, and as mining is hard work I had to give it up. As I did not know how to do anything else for a living, I became very much depressed. In talking to a neighbor one day, I expressed the wish that I were dead, and she said, "Why do you not try Christian Science?" As a last resort I got a practitioner's address and began taking treatment. It seems to me now that I was practically healed at the first treatment, though I had six in all, but for different symptoms. A few days after I had been healed, a plasterer in the vicinity wanted a man to mix mortar and carry the hod, and he was sent to me. At first I was afraid, as I had never done any of that kind of work; then I thought that this would prove Christian Science, so I went to work. I mixed mortar all day and carried it in the hod. When quitting time came my employer asked how much I had packed that day. I said I supposed it must be five or six tons. He said, "Yes;" and predicted that I would have a dreadfully sore shoulder in the morning. Next morning I got up, took breakfast, and went to work. I did not think of my shoulder till eleven o'clock, when I had a little rest, and then I could scarcely believe it, but there I was, and I did not have any pain anywhere. I had been an infidel and a scoffer, but I did more thinking that afternoon than I had ever done before. I have used no medicine since, though up to that time I was always using some kind of remedy. I am trying to be as good a Christian Scientist as I can. My sight has been renewed, and a habit of profanity overcome. Many other blessings have been given me, so I am very thankful to God; also to Mrs. Eddy for Christian Science.

DAVID ANDREW, Allendale, Cal.

A little more than two years ago I first learned the truth about Christian Science,—that it did heal; and I knew that if it healed others it could heal me, for surely God is no respecter of persons. I was very miserable indeed, and truly life did not seem worth the living, but a book that came into our home as a Christmas gift so cheered me that I was inspired with the hope of recovery to health and happiness. I had been a sufferer for some time with a trouble which our family physician could not name and failed to relieve. My fear was very great, as it seemed to me at times that I could never breathe again, and with each attack I seemed to grow weaker. I was never allowed to sleep alone, nor to be alone if it could possibly be avoided. Just before I became interested in Christian Science I had as many as eight of these attacks in twenty-four hours. Aside from this particular trouble there were many others,—a cough of a year's standing, a weak heart, and for three years I had suffered intensely from bowel trouble; but, thanks to the Giver of all good, I found relief almost immediately after I began the study of "Science and Health with Key to the Scriptures." A large quantity of medicine was thrown away, and I gave myself over to the constant study of the Christian Science text-book. Each day I could see a marked improvement. I also had a practitioner give me two treatments for the bowel trouble, and I was relieved in a very short time. I weighed but ninety-six pounds when I began to read the text-book, but within two months I had gained twenty pounds.

Before our little son was two years of age he was taken

Digitized by Google

with a catarrhal condition of the bowels. We called our regular physician, but as the child did not seem to improve we made a change. The doctor then called continued in attendance for a month, but our baby was growing worse instead of better. Fearing that we would lose him, and not knowing what else to do, we again called our old physician. After a three-weeks struggle we were told that while it would be possible to relieve our little one, the disease was one which could not be cured. In consequence our child was delicate, and required a great amount of care and nursing, with frequent visits from our family physician, until at last we learned to know that the true understanding of God does make us "every whit whole." Every symptom of the catarrhal condition disappeared after two weeks' treatment by a Christian Science practitioner, together with a trying attack of throat trouble and an eruptive disease. My heart goes out in deepest gratitude to God, and to our dear Leader, Mrs. Eddy, who has shown us the way to this fountain of life, where all who are athirst may drink and be satisfied.

MRS. MABEL CARR WARREN, Wausau, Wis.

After about ten years spent in bondage to severe headaches, I was influenced, by the benefits which a friend received through Christian Science, to submit my case to a practitioner. When I started with the treatment I was obliged to be absent from work about once a month, sometimes oftener, on account of the above-mentioned condition, and had been told by my employer that unless this condition could be conquered, it would be necessary for me to seek employment elsewhere. My healing was gradual, but sure, and now at the end of three years I am able to say that I occupy the same position at an advanced salary, and that during the past year I have been absent from work only one day on account of sickness of any kind. Christian Science has met many discordant conditions for me, for which grateful appreciation is due to its Discoverer and Founder, Mrs. Eddy.

H. Y. SUTHERLAND, Chicago, Ill.

In December, 1903, I was taken down with lung trouble and was confined to the house for two weeks. The following January I had a second attack, being confined to my bed about two months, and was not out till the latter part of April. All this time I had the best of medical attendance, and my physician advised me very strongly to go to a higher altitude as soon as I was able. In June myself and family went to St. Agathe and spent the summer there. In October we came home, and on our way I stopped in Montreal and was examined by a leading specialist, who told me that my lungs were diseased and advised me to go to Denver, as my chance of recovery here was slender. On my return home my former doctor claimed that my improvement had been very slight and he also advised me to go to Denver. In November I started for that city in search of health, and after being examined by a specialist there, I followed his treatment. I may say here that I had for some years a stomach trouble that doctors and diet had failed to cure. The specialist treated me for this disease as well as the lung trouble, but in a month's time I was no better. He then gave me another prescription, telling me that if this did no good in a few days, to stop it. I followed his orders, and finding that the prescription was not doing me any good I gave it up.

About this time Christian Science was brought to my attention by an old schoolmate who had been healed of lung trouble. When I was told that I could be healed without medicine it appeared rather strange to me; however, I consented to have a talk with a practitioner, and we went to see one the following day. I was convinced before I left the home of the practitioner that Christian Science is the truth, and I commenced to take treatments. My healing seemed slow, but I thank God that it was so, for this taught me how to rely on God for all things. In the following August I decided to come home, although my healing then seemed far from complete. The thought came to me very strongly that I should be examined again before going home, as my family did not know that I had taken up Christian Science. I spoke to the practitioner about it, and she tried to have me see God's allness, and that I really was better and could go home. The following day I went to the doctor, and after an examination he told me that I was foolish and would never again be able to live in Canada, but if I stayed in Denver he thought that in about two years' time I would be able to do something. When I told this to the practitioner, she lovingly assured me that God would care for me at home just as well as in Denver. I returned home in August, and many of my friends advised me to go back, for my appearance did not indicate health, but I continued to gain steadily, and in October commenced office work again, though not without a protest from my friends. I, however, believed that God would complete the healing, and He has, for I have had no return of either of the above diseases, and we have had many healings in our home since. One that I will mention was that of our little daughter, then four years old. She had been doctored for stomach trouble about two years but was no better. Her healing in Christian Science was instantaneous and she has never had a return of the trouble.

Best of all, Christian Science has taught me how to read the Bible, which before was almost a closed book. I am trying to follow the truth; and I know that by so doing I am under God's law and not the man-made laws of disease. I am indeed grateful to God for His unbounded love and goodness, and to Mrs. Eddy for showing us the way.—JOHN J. PAYNE, Granby, Que., Can.

I wish to express my gratitude for all that Christian Science has done for me. A little over three years ago I had a bad fall from a wagon, but nothing serious developed until eighteen months afterward. I was treated by medical doctors for four months, being in bed over a third of this time, finally becoming so ill and suffering such intense pain that I was kept under the influence of an opiate most of the time. The doctors advised me to take treatment of an osteopath, which I did. He pronounced my disease a paralytic trouble. After being treated by this method for a year, I got so I could walk a little on crutches, a very few steps; and was wheeled in a chair when I became able to go out, but I seemed to stand still there, and was finally advised by a doctor to go to my aunt in Colorado, a Christian Science practitioner, who had been writing for me to come; but we had no faith in Christian Science. I, however, decided to go in July, and I took my first steps without help a week after I arrived. In two weeks I walked eighteen blocks with the aid of a cane, having to learn to walk again. I came home in October entirely well, and resumed my school work immediately. I have not missed a day on account of ill health since then, and I never felt better in my life, for which I thank God from the depths of my heart. I am also very grateful to our dear Leader for bringing this truth to suffering humanity.

PEARL L. BRADSHAW, Ellsworth, Kan.

It is almost six years since I came to Christian Science, and I find in it a practical religion, meeting my every need every day, including physical, mental, spiritual, and financial difficulties. My heart goes out in grateful recognition to our great and noble Leader, Mrs. Eddy, for her untiring labor to give to a weary world a spiritual interpreta-

Digitized by Google

tion of the sacred Scriptures which should be for the redemption of mankind from the curse of materialism. I had three supposedly incurable diseases, viz., lung, heart, and catarrhal trouble; consequently I was in constant fear of death, which resulted in a distressing nervous condition and extreme melancholy. For about seven months before I found Christian Science, I feared the thought of self-destruction, when left alone. But thanks to a faithful friend, who pointed out to me the way to God through Christian Science, I was helped immediately. Nothing can erase from my memory the perfect peace and spiritual uplifting that I received with the first treatment. It was more wonderful than the physical healing, and I rejoice even in the suffering that led me to Christ, Truth. To any one who is discouraged, I would say, Never give up.

I have had glimpses of the promised land of harmony, but the path has not always been strewn with roses. I have stumbled and fallen, but always rose up stronger than before. Through the help of friends in Science, and my constant study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, I am finding that the emergence out of mortal beliefs is a gradual process, and my heart's deep gratitude goes out to divine Love as the opening flower unfolds its petals to sun and shower. My daily prayer is that of the psalmist: "Create in me a clean heart, O God; and renew a right spirit within me."

MRS. MARY A. DENHAM, Minden, Neb.

My heart is filled with gratitude to God, and to our dear Leader, Mrs. Eddy, for the good I have received through Christian Science. I was healed of bowel trouble when the doctors had failed to give me any relief, also of nervous and heart trouble, besides some minor ailments. A few years ago, I had a beautiful demonstration over severe injuries in the case of my son, ten years of age. He with some other boys was coasting, and ran into a post, injuring his leg very seriously. His companions brought him home on a sled, but no doctor was called. I trusted in divine Principle for the healing, and through my own understanding of divine law as revealed in Christian Science he was healed in a short time. In three weeks he could stand on his feet again, and in six weeks he was perfectly healed. The first day and night he suffered some pain, but after that he made no complaint. He learned the 91st and 23d Psalms, the "scientific statement of being" (Science and Health, p. 468), and the Lord's Prayer with its spiritual interpretation (*Ibid.*, p. 16).

I am indeed thankful to God for this wonderful truth of which we can make use every day. I have seen many fears and falsities disappear before the power of Truth and Love. Christian Science has been so much help to me in sorrow and trouble that I can never be thankful enough.

MRS. MARIA C. HANSEN, Clinton, Ia.

It is with a heart full of gratitude and love to God, and to our dear Leader, that I send my testimony to the Field. Seven years ago I was preparing to go to an infirmary for an operation on my limb, which had been terribly injured fourteen years previous, when a dear friend brought me some Christian Science literature, asking me to read it and see what I thought of it. I did so, but I suppose I was not ready for it, as I was not willing then to trust Truth as I do now. I had the operation, but three years later my limb was in a worse state than ever and my general health was very bad. I had a dreadful cough, and suffered greatly otherwise. I was in bed for two weeks at a time; in fact, had almost all the ailments that flesh is heir to. The doctor in attendance decided to consult a bone specialist, and they together diagnosed my case as a dreaded disease of the bone. This frightened me very much, and I at once submitted to a very serious operation. Later it was decided that the former diagnosis was wrong, but my husband was told that if I was alive at the end of three months it would surprise them. I did get better, however, and was able to walk around pretty well; but my limb would not heal, and was a source of great annoyance to me.

Last June a young man was calling at my house, and knowing that his mother was a Christian Scientist, I jestingly remarked that I thought I would try Christian Science. He very quickly said, "It will surely cure you;" and when he called again he brought me a *Christian Science Journal* to read. Then my eyes were indeed opened, and I thought that if others could be healed, why not I. I went to another dear friend who is a Scientist, who talked to me and loaned me a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have been reading the text-book and our other Christian Science literature constantly since. I attended an experience meeting at the church the first Wednesday night after I began reading Science and Health, and while there I heard a testimony which made me know that I must lay aside all material remedies. Next morning I took the bandage and poultice off the limb, put on a clean white cloth, and from that time have never used any material remedies, either for this or for any other trouble. I had a few treatments later on, which destroyed all fear and gave me the peace "which passeth all understanding," and to-day I can truly say that I am "every whit whole."

I am indeed grateful to God, and to our dear Leader, for the many blessings Christian Science has brought to me and that I have been so lovingly helped over the rough places. I also wish to add that I became a member of the Christian Science Church last January.

MRS. BELLE BELSER, Louisville, Ky.

I wish to express my gratitude for what Christian Science has done for me. One afternoon a few weeks ago I found myself suffering from a severe attack of mumps, but thanks to Christian Science it was overcome and I was immediately healed. I wish to speak of another demonstration of the power of Truth. Several months ago I had a throat trouble which would seem to grow better and then worse. Finally I called for help in Christian Science, and the trouble was speedily overcome. I am very grateful to God for Christian Science.

HELEN MARIE BLAKE, Hudson, Mich.

[Written for the *Sentinel.*]

THE BUILDERS.

STELLA E. SAXTON.

JUST a little game of life, dear—
The children building houses out of toys—
Block towers rise,
'Most to the skies,
And then they fall—oh, sorry little girls and boys!

With the fleeting years the game goes on,
And grown-up children, careless, blithe, and gay,
Build castles in the air,
And call them fair,
And see them tumble, even as the house of play.

Dear children, raise the walls again!
Nor choose thin air nor shifting sands to build upon.
But seek the rock,
Where wind nor shock
Can cast thee down—fair Truth—'tis safe to rest thereon.

FROM OUR EXCHANGES.

[*The New York Observer.*]

Just because it is so pressing, the King's work must be planned. God plans it, and He means that men in their lesser way should wisely plan it, too. Not all of these human plans can carry through, but, on the whole, a man's life will be more effective if he prayerfully and constantly seeks to employ the grand strategy of a consecrating purpose which does not overmuch hurry or worry, but which loses no time—either in loitering by the way or in bootless wanderings off along bypaths or unimportant errands—because of inattention to the direction of God's Word, or miscalculation of the methods and means needed for a proper use of the opportunities of life. Make haste, but leave God to order all thy ways; use the very best discretion possible to a mortal man in planning your work and warfare day by day, but trust in Him whatever betide!

[*The Examiner.*]

The preaching of Jesus was ethical in the highest degree, and so are the teachings of the writers of the Epistles. They aimed at nothing less than holy living—the being good and doing good—on the part of those they had won to the truth. But their exhortations are always based on the presupposition of a profound spiritual transformation through which their converts have passed. Behind the ethical action there must be a spiritual motive, and the undertone of all their preaching is this spiritual implication.

[Rev. J. H. Jowett in *The British Congregationalist.*]

I wonder if the Church went wrong when she permitted the healing function to drop out of her hands and become the business of a separate vocation. Have we lost some of our purposed power? Was it intended that the Church should retain the exceptional power of the early days? I do not know, but this, at any rate, must be true, that whenever we lighten pain, whenever we lift the burden from a weary back, whenever we relieve the sicknesses of men, we are the friends and disciples of the Lord.

[Rev. W. C. E. Newbolt, M.A., in *The Church Times.*]

If we materialize the Bible, if we stifle the voice of the Holy Spirit in its pages, it will never lead us to Christ. We shall never be able to say Jesus is the Lord. It is the spiritual, the divine presence in Holy Scripture which is so valuable, as giving us an outlook beyond the materialism which threatens to overwhelm us. It gives us an estimate of things which is quite different from the ordinary estimate. It causes us to look into quiet places, hidden lives, buried motives of conduct.

[*The Christian Life.*]

If the social problems which loom upon the horizon are soon to be solved, as many of us pray and hope and expect, no wise and reflective person dreams that they can be settled otherwise than by the dominance in the private and public life of the people of true Christianity, unfettered by any arrogant dogma and unhindered by any stagnant creed. That is, as it has ever been, the key to the whole social situation.

[*The Congregationalist.*]

It takes a long period of association with Jesus Christ really to understand of what manner of spirit he is. Even the Christian does not escape the peril which inheres in all religion, of becoming selfish, and exclusive, of wanting to monopolize Christian faith and hope and to admit others to participation only when they come along the path which intense zeal may prescribe.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

The Publishing Society announces that the supply of the List of Members of The Mother Church has been exhausted, and that no additional copies will be printed for the present.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.
Terms of Sale, Postpaid to any Address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, Mexico, and Cuba, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. This pamphlet is also printed in German. 29 pages.

MR. KIMBALL'S LECTURE. 31 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 28 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. This pamphlet is also printed in German. 50 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

THE CHRISTIAN SCIENCE CHURCH. Its Organization and Polity. The History of the Apostolic Church and the Foundation of the Christian Science Church Compared. By CAROL NORTON. 38 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Price: Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

MISCELLANEOUS PUBLICATIONS

BIBLES. Clarendon Brevier (01483 x), heavy faced, very distinct type, Turkey morocco, size 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.
Morocco cases, to hold pocket Science and Health and above Bible, may be had at $1.25.
Text Bible (01561 x), pica square type, Alaska seal, size 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price $7.50.

CHRISTIAN SCIENCE AND LEGISLATION. A pamphlet of one hundred and twelve pages, containing articles by JUDGE CLIFFORD P. SMITH, EDWARD A. KIMBALL, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. Single copies, 10 cents; twelve copies to one address, $1.00; twenty-five copies, $1.85; fifty copies, $3.50.

PICTURE OF THE MOTHER CHURCH. A half-tone reproduction, size 12 x 15 inches, mounted on a white mat 21 x 25 inches. Single copies, 50 cents; a dozen copies to one address, $4.50.

SOUVENIR POST CARDS, showing picture of The Mother Church, 25 cents per dozen.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9.00; per half dozen, $5.00. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each. Pocket Edition, size 4 5-8 x 6 5-8. Full Morocco. Per copy, prepaid, $3.00: Twelve or more copies to one address, prepaid, each, $2.50.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. One hundred and three pages. Illustrated. One copy, $1.50; six copies, $7.00; twelve copies, $12.00.

MUSIC. Three poems written by MARY BAKER G. EDDY, and used by special permission, have been set to appropriate music by WILLIAM LYMAN JOHNSON:
"THE MOTHER'S EVENING PRAYER." For soprano or tenor, C sharp to A: for lower voices, B flat to E. The arrangement for both high and low voice is printed in the same copy. 75 cents per copy: $7.00 per dozen.
COMMUNION HYMN — "SAW YE MY SAVIOUR?" Published in two keys, G and E, for high and low voice. 50 cents per copy: $5.00 per dozen.
"CHRIST MY REFUGE." Arrangement for high and low voice in same copy. 75 cents per copy; $7.00 per dozen.

REMITTANCES: Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago, or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request. We ask that no money remittances whatever be made to the Editor or Editorial Department. Address all ORDERS and REMITTANCES for literature named above to

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY
FALMOUTH AND ST. PAUL STREETS, BOSTON, MASSACHUSETTS

All orders for the works by Mrs. Eddy should be sent with remittance directly to Allison V. Stewart, Publisher.

Works on Christian Science

Written by MARY BAKER G. EDDY, Founder of Christian Science and Author of its Text-book

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Containing many important changes and additions by the author. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. This edition contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

Cloth binding, each, prepaid $3.18
Two to twelve books (cloth only) to one address, each, prepaid 3.00
Twelve or more books to one address, each, prepaid 2.75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . 3.75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00
Twelve or more to one address, each, prepaid . . 4.75
Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00
Twelve or more to one address, each, prepaid . . 5.75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy $5.00
Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid $2.25
Twelve or more books to one address, each, prepaid 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents per copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

In order to work out a plan of close co-operation between the office of the Comptroller of the Currency, the bank examiners, and the various clearing house associations of the United States, Comptroller Murray will ask the various clearing house associations to send a committee to Washington to consult with him and the bank examiners in the large cities. He has also decided to establish an office in his bureau to which bank examiners throughout the country will send information of any unusual facts in connection with loans in their respective territories; this office acting in a sense as an information clearing house. Bank examiners who may discover loans in unusual quantities made to other local or outside concerns will be expected to apply to this office for information as to what other examiners have reported regarding loans to the same concerns. The comptroller believes this information will be of very great help to him in determining the value of paper held by the bank under examination.

The first annual report of the Public Service Commission of New York State, second district, shows that the steam railroads of the district reported 104,113,466 passengers carried. The total number of persons killed in the year—passengers, employes, and others—was respectively 52, 440, and 591, an increase of 156. The total number of persons injured during the year was 2,427, an increase over the previous year of 167. The electric railroads of this district reported 416,270,788 passengers carried. The total number of persons killed was 95, an increase over the previous year of 21.

The journal of the American Medical Association says the total number of medical students (matriculants) for the year ending June 30, 1908, was 22,602, a decrease of 1,674 compared with 1907. The decrease from two years ago is 2,602. The total number of graduates for this year is 4,741, a decrease of 239 in a year and of 623 in two years. There also is a net loss of nine in the number of medical schools.

The War Department is planning the early completion of the work on the defenses of Pearl Harbor and Honolulu, and an estimate of the probable further defense is being prepared for submission to the Secretary of War. Pearl Harbor, which lies about ten miles from Honolulu, has been termed the "key of the Pacific," and more than $3,000,000 will be expended in its fortification.

Attorney General Bonaparte, it is reported, will take an appeal at once to the United States Supreme Court from the decision of the Federal Circuit Court at Philadelphia that the commodity clause of the Interstate Commerce Act is unconstitutional. This involved the question of the right of common carriers to own coal property and to carry its product.

Conservation of the resources of New England was discussed at a meeting at the Algonquin Club, Boston, last week. Governor Guild of Massachusetts had called the meeting, and he was present to entertain his distinguished guests, including four other Governors of near-by States.

At the urgent request of citizens of Cuba, President Roosevelt has directed that the United States troops be withdrawn from Cuba Jan. 28, 1909, three days in advance of the date originally set. This date would mark the anniversary of the birth of Jose Marti, the great liberator.

A contract for furnishing the Isthmian Canal Commission with 80,000 barrels of cement, in addition to the 4,500,000 barrels already contracted for with that company, has been awarded to the Atlas Portland Cement Company of Northampton, Pa.

If the recommendations which the Building Code Revision Commission of New York City is expected to make are adopted by the Board of Estimate and the Board of Aldermen, the limit for new buildings will be fifteen stories.

In spite of the opposition of machine politicians Governor Hughes of New York was given on the first ballot at the Republican convention 827 out of 1,009 votes for renomination on the Republican ticket.

The Government has opened its suit against the "Powder Trust,"—the du Pont Company and about thirty other powder concerns which, it is alleged, are controlled by the Delaware corporation.

International.

Western Ontario has abandoned the manufacture of beet sugar. The soil and climate there are much the same as that of Michigan, where the industry has been a success. The cause of the failure of the beet-sugar industry is due to several reasons: The farmers, after two seasons' trial, refused to raise any more sugar beets. They allege that it did not pay to farm them. They claim that labor is too expensive and the work too laborious. Other crops, with less labor, brought them better money returns.

The Japanese Government in carrying out its policy of retrenchment will, according to Premier Katsura, find it necessary to economize most extensively in the matter of military and naval developments. From his statement it appears that Japan proposes to enforce during a period of eleven years the postponement of works previously undertaken, amounting to a total of 357,000,000 yen ($178,500,000).

To an accompaniment of cries from the Conservatives of "Long live the King" the Belgian Senate has adopted the Congo annexation treaty and the Colonial Charter. The Congo annexation treaty was passed by the Belgian Chamber of Deputies Aug. 20. Its adoption by the Senate makes it final.

Industrial and Commercial.

A coke transaction involving $1,500,000 in cash and five thousand acres of coking land in Green County, Pa., was closed at Pittsburg last week, and a move set on foot that may shift the center of the Connellsville coke field. The Pennsylvania Railroad engineers reported the feasibility of extending one of the Pennsylvania lines into the new coke field, and this will give a good outlet and will permit the new concern, which has $20,000,000 besides, to enter into the manufacture of coke and to enter all the markets of the country with the product.

Five hundred thousand crates is the estimated yield of this year's Cuban orange crop, which will be the largest in the history of the island. Until a few years ago thousands of crates of oranges were brought to Cuba from Florida and California every year, but for the last three seasons these shipments have become less. Orange cultivation on a scientific scale did not begin in Cuba until about eight or nine years ago. The orange business on the island is controlled almost entirely by Americans.

Bridgeport, Conn., has been conducting a successful experiment in cultivating vacant lots. The element of charity was removed by charging $5.00 for each lot as rental. In all about one hundred and fifty gardens, 100 x 50 feet in size, have been cultivated by individuals and families. It is estimated that about $50 will have been realized in vegetables sold or used or stored away for the winter on each garden when the harvesting is ended.

The United States Steel Corporation is completing the development of its West Virginia coking properties in the Pocahontas region, near Gary, on the Tug River. Six new mines have been opened and one thousand coke ovens built, at a cost of $1,000,000, to supply the western mills of the company with coke.

More than ten thousand acres of phosphate lands have been leased near Cookeville, Tenn., and machinery will be installed for getting out the rock.

General.

Recently an interesting water-impounding scheme, says the *Scientific American*, has been carried to successful completion in Southern India at the Mari-Kanavè gorge upon the Vedarati River, in Mysore State. Land cultivation in the area contiguous to the river has hitherto been severely handicapped from the shortness of the rainfall, while the river, unlike those in the northwestern states, receives no reinforcement in its volume from melting snows upon the highlands. The result has been that the agricultural development of the country has been neglected in favor of other parts of the country where the natural watering facilities have been supplemented by a vast network of irrigation channels and canals. This irrigation scheme is intended to insure the crops grown in the Chitaldroog district, where famine is occasionally experienced. At the present time it is only intended to supply water for some twenty-five thousand acres. The lake that has been formed by throwing the barrage across the mouth of the gorge is one of the largest artificial sheets of water in the world, having an area of thirty-four square miles and containing thirty-one billion cubic feet of water, when filled to its maximum capacity, when there is a depth of one hundred and thirty feet of water on the up-stream face of the structure. The barrage is built throughout of rubble masonry. At roadway level it is 1,350 feet in length, and one hundred and forty-two feet above the bed of the river, while the foundations are carried down to a further depth of twenty-five feet. At the toe the masonry is one hundred and fifty feet in thickness, tapering to fifteen feet at river level (110 feet), whence it rises perpendicularly to the top.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

OUR PERIODICALS.

REV. WILLIAM P. MC KENZIE.

Two things are necessary for the spread of the truth, teaching and evidence. In Christian Science the teaching given by the "laborious publications" (Science and Health, p. 464) of its Discoverer and Founder, Mrs. Eddy, is acknowledged to be complete and sufficient. Any attempted modification of this teaching has proven to be harmful. The evidence for this truth is like a flowing stream which adds to its current from tributaries on every side. The proofs of early days are still potent as exemplified in the lives of those who recognized "the first faint morning beams" (*Ibid.*, Pref., p. vii.). The chapters on "Fruitage" in Science and Health, and "Testimonials" in "Miscellaneous Writings," contain the record of many redemptions through the agency of the discovered truth. The voices that rise in a thousand places at Wednesday meetings bear testimony to lives renewed and blessed in countless ways. In order that this ever-increasing current of evidence may be utilized for the world's good, we have our periodicals, which provide channels for its flow.

Why does a periodical have evidential value? Much is implied by its appearance. Before it can receive permission to be circulated as a periodical by the Post Office Department, it must have a list of actual paying subscribers. The issue of a pamphlet does not imply this, and involves only the expense of a single printing, but the periodical by its very name implies continued publication at stated periods. A force of workers is required for this, and heavy expense is involved, so there must be support given by many to the enterprise. If this support is given, it certifies that the periodical meets the needs of many, and expresses their views. So when, for instance at a lecture, a copy of the *Sentinel* is handed to a stranger, he is able to decide at once that a large body of people are united in the movement which it represents.

Furthermore, there is never a copy printed without direct evidence of the healing efficacy of Christian Science in the form of verified testimonials. In these records men and women from all parts of the world tell the story of their redemption from sorrow, illness, and despair. The careful reader cannot fail to discern in such beneficent changes the action of a cause producing effects ideally desirable. He may not be at once ready to acknowledge that God is this cause, for the reason that he may have been taught to believe that God is the originator of pain, disease, and calamity for man, and that the redeeming power to which the sick must look is resident in drugs or potions of various kinds. Nevertheless, an impression *will be made*, and perhaps a vague hope aroused, as if the *man should* question with himself, and say, "What if after all the true God were good and kind; not the jealous and vindictive punisher of sinners, but the friend of those who need goodness because they have not yet gained it, who need health because they are sick? Why not, if these people testify truly? This is what they say, that they have tasted and enjoyed the goodness of God. Their healing and redemption, they say, is a fact of experience. What if they are, after all, right in their explanation of it? I wish it were true, and that I knew this truth." Then if, as always, "the wish is father to the thought," it may not be long before the man has given himself the chance to know the truth by beginning the study of the text-book, and finding there the solution of his problems.

It is not enough to say that the testimonies in regard to healing constitute the evidence as to the work of Christian Science which our periodicals give. The editors set forth an ideal for living which but for Christian Science would have been to them unknown. Contributors who reveal the glimpses into harmony which they have gained, who interpret life in joyous ways and reveal endless reasons for gratitude, are really testifying to the uplifting and regenerating power of this truth. Workers on the Publication Committees, from whose writings to various newspapers quotations are made, by their logic reveal the effects of the teaching which Christian Science gives. It is their work to pursue falsehood and misrepresentation, and to destroy the lie by the flash-light of the fact. Through their efforts the newspapers into which misstatements regarding our work may find easy access, are becoming few and far between. Thinking of the vast results accomplished by a few workers, we again see evidence of Truth's action.

Considering as a whole all that is implied in the weekly message of the *Sentinel*, and in the appearance for a quarter of a century of the *Journal* month by month, noting the number of practitioners advertised, and the churches and societies announcing regular meetings, we may begin to realize the value to the human race of the wide circulation of these periodicals. The psalmist observed, "There be many that say, Who will shew us any good?" Indeed, that is the universal cry of the human heart. The Christian Science movement is an effective means, not only for showing good to man, but also for explaining its operation as Principle available for all.

When, therefore, the Publishing Society uses its endeavors to increase the circulation of the periodicals, and invites the cooperation of all Christian Scientists, this is by no means a cheap appeal for denominational increase. Christian Science is Christianity revived and once more connected with demonstration. It brings a knowledge of the saving influence, the healing power, the regenerating action of the Christ-truth. It answers to the need of all men, and in our periodicals appear every sort of a record and proof of this. To circulate this evidence is humane and Christian work, because thereby those who are seeking good may be brought under the influence of the teaching given by the one who discovered Christian Science. What better blessing could we desire for the friends we love? What larger beneficence can we offer to humanity than access to the truth that heals?

NORMALITY IN CHRISTIAN SCIENCE.

C. W. JENNINGS.

ONE of the slowest of the processes of development that take place after one has accepted the Principle of Christian Science as his rule in life, is usually that of attaining a normal attitude. During his first flush of awakening to the splendid possibilities that are before him, the student's thought soars to idealistic heights. He sees, far below him, on the plane of belief, the blackness of sins and sicknesses turning to gray, and gradually fading from view. The world has taken on a hue of promise, flooded with the glory of spiritual enlightenment and of freedom from fear and care, and he can find nothing to discourage him, he sees only the splendor of his larger sense of Life.

Probably all those who have reached this new understanding have had such an experience. Fortunately for their own progress, most of them have had to come back to earth and get hold of new bearings, and they are now climbing upward step by step in the path of acquired wisdom. To such as these this article is not addressed, but to those who may still be clinging to their day-dreams, trying to realize through imagination, rather than through knowledge based on works, man's oneness with God. This early enthusiasm is well for the time being; for, when one first perceives something of the greatness of his new outlook, he is like a youth just out of college, who, full of confidence and enthusiasm, is about to attack the world. His serenity and confidence mercifully obscure life's problems, until he has gained the necessary experience to solve them; but if he should so blind himself to the relative importance of things on the mortal plane as to try to theorize and not work them away, there is sure to be trouble in store for him, which will increase just so long as he maintains this attitude.

It is not enough for us to try to realize mentally that God is All and that man is His perfect idea; we must prove this before it can become part of our actual consciousness. The apostle James warns us that "faith, if it hath not works, is dead." What would be thought of one who claimed to hold the right thought toward his fellow-man, and talked of man as God's idea, but never lent a hand to assist a brother toward that ideal; who was so blinded by his own self-rightness as to display no practical consideration of the rights of another? It is so easy to be influenced by the thoughts surrounding us; to judge on the basis of human sense, instead of from the point of view of divine Mind; but if we yield to these suggestions, we are not solving our problems, we are only laying up greater trouble for ourselves. Every problem must be met some time, and it should be worked out without bringing unhappiness or hardship to any one; and the longer we put it off, the more difficult its solution is sure to be.

In the associations of travel, of business, and of social intercourse, abundant opportunities are supplied us for the display of that unselfishness, kindness, love, and good cheer, by which the truth of Christian Science will assuredly be commended. If one joins in the prevailing talk about discomforts and discord, instead of creating an atmosphere that brings health and happiness to others, he is certainly not letting his light shine. If there is anybody in the world that can reasonably be expected to be harmonious and contented, it is a Christian Scientist; and if this is not attained, the cause is not to be found in the mental attitude of others, but in our own. We give expression to our own concepts, and if these are what they should be, our experience will indicate the fact. If we are normal, have common sense and due respect for the rights of others, we shall meet with no insuperable difficulties, and our progress will be sure and continuous.

It is never wise for us to attempt more than we can prove, or to advise others to go beyond their understanding. We should also guard against making another a martyr to our own lack of spiritual understanding. It is unwise to attempt to force the ideal upon those who are but beginners in the heavenly way, and to send a hungry man from our door with a crumb of metaphysical advice. We must grow upward from where we are, and not try to leap to a lofty plane with the thought that we can go on from there. Our first duty is to God, and if we are faithful in this, and strive constantly to do good and to bring happiness to others,—as we find them, not as we would have them,—we shall certainly grow to an understanding that will enable us to do still greater things.

AN INHERITANCE.

HATTIE V. MOSS.

SOME time ago I read a news item which interested me greatly on account of the comparison it suggested. The story was that of a woman in very moderate circumstances, who as a means of economy did her own housework, sometimes with the aid of a little maid. When she went shopping or marketing, she found it necessary to consider the cost of every article before making a purchase, and a ride home on the car was to her a luxury seldom indulged. Then, one day, the whole situation was suddenly changed. The news came that her husband was heir to an immense fortune. It would no longer be necessary to buy the cheaper articles of food and clothing, when her whole being cried out for the better things.

One of the first uses she made of her wealth was to dress her two little ones in such clothing as she had always wanted them to have,—handsome suits, in keeping with her long-suppressed taste in such matters. She walked back and forth through the shopping district of the city, making such purchases as she wished, and often she caught herself considering the cost before deciding to buy, forgetful for the moment that her means were no longer limited. Then, remembering her wealth, she would laugh softly at the very idea, and turn to examine some more expensive fabric. There was nothing tedious or tiresome about her shopping that day, and when at last she started home she had walked briskly for several blocks before the thought occurred to her that she could take a car. Then in the car she remembered that she could have ordered a carriage just as well, and it would certainly have been more pleasant than a crowded car. It was quite a while before she grew accustomed to the new order of things, and often she would catch herself trying to economize, then laugh heartily at her fears of insufficiency. It was hard to remember all the time that she was the wife of a millionaire, and the old habits, which had been so long forced upon her, were not easily shaken off.

The thought suggested by this story was that we, you and I, have also received good news, which comes to us well authenticated in Christian Science. We are heirs of a great inheritance, more vast and enduring than that which came to the woman of whom we have read. We are heirs, joint-heirs with Christ, children of the King. Our supply is indeed unlimited, and we are given dominion over all the earth. Do we realize it? If so, our actions often fail to show it. We too often observe the strictest economy, not only in matters of finance, but also in health, peace, and happiness. Do we look at our scanty income and say it is not sufficient to meet the demands made upon it? Is our supply of health so small that we cannot eat what others eat, and cannot do what others do? Is our measure of happiness reduced to an occasional smile? If so, then we are forgetful of the fact that all things are ours, and we are Christ's, and Christ is God's.

Digitized by Google

We have been so long accustomed to the old way of doing things and getting things that we often fail to remember our absolutely inexhaustible supply, and go about hungering for a crust, instead of reaching out in the understanding that an abundant feast is ever ready for God's children. We are heirs, and the wealth of all good is at our command; then let us do away with the old limited thought, and grasp with firmer hand the health, wealth, happiness, and peace which the children of God should enjoy. The strenuous strife and struggle should give place to the calm assurance that our heavenly Father provides for all our wants.

TIMIDITY OVERCOME.

R. J. TODD.

IN Exodus we read that when God commanded Moses to go to Pharaoh and ask him to let the children of Israel go, He said, "Now therefore go, and I will be with thy mouth, and teach thee what thou shalt say;" and in the prophecy of Isaiah we read, "The wolf also shall dwell with the lamb, and the leopard shall lie down with the kid; and the calf and the young lion and the fatling together: and a little child shall lead them." These texts from the Scriptures were a great help to me, a few months ago, in bringing out a demonstration over fear and timidity. I had spent all the morning in my study, struggling with a sense of depression which seemed almost unbearable. I knew it was an unreal condition; that God, good, alone is real, that in Him is light, and no darkness. I was trying to realize this blessed truth, when the door-bell rang, and presently I was summoned to the parlor to meet a gentleman who wished to see me. On entering the room I found myself standing before a noted evangelist, an educated Scotchman, whom I knew to be holding services here. After introducing himself, the gentleman said, "I have come to talk with you concerning your religious belief."

My use of language is inadequate to express all that rushed thorough my consciousness at that moment. It seemed as if a mountain had risen up before me, leaving me mentally dark, almost physically weak, yet here must I talk to an educated man, one whom I knew to be well versed in the Scriptures as well as the ancient languages. Consciousness of my own lack of education, and that, like Moses, I was not eloquent, but "slow of speech," forced me to look away from the mortal self to God for help. However, I put on the bravest front I could, and kept looking to the divine source of infinite supply for help, and the first ray of light came from "Science and Health with Key to the Scriptures" by Mrs. Eddy,—"Divine Love always has met and always will meet every human need" (p. 494).

I knew what my need was, and like a rushing wind came the Scripture texts already quoted. I then began to feel composed and more equal to the occasion. After answering some very pointed questions on the mountain-top of holiness, I began to feel quite comfortable and at home; in fact, I felt a sense of joy springing up within me for the privilege of speaking for Christian Science with one who was not only an educated man, but a gentleman and a Christian, one who was ready to listen for and to hear a higher call. As soon as the way opened I got our text-book and some of the other works of our revered Leader, and soon my visitor was either reading or listening while I read from such subjects as the tenets, the Lord's Prayer, the chapter on "Atonement," "Creation," etc., etc. At this stage we were both so interested and so happy that when my visitor looked at his watch he was surprised to find he had remained past his dinner hour. On leaving, he said, "No one need say that what you have got is of the devil; it is of God, and I want another talk with you."

By appointment he called early one morning a week later, saying that it was his last opportunity while here, and he added, "I want all I can get." It is needless for me to express the joy this experience gave me. In obedience to divine Principle, Love, I had the feast prepared, and was just as anxious to give as he was to receive; so we lost no time. I introduced my plan, and it was agreed that we were to take the Bible and Mrs. Eddy's works. We first went carefully over the Lesson-Sermon for that week, the subject being "Truth;" then we read selections from Mrs. Eddy's "Unity of Good," "Retrospection and Introspection," "Pulpit and Press," her dedicatory sermon, etc., until we again found that we were into the afternoon.

More than once during the reading the clergyman exclaimed, "How beautiful! What a wonderful woman Mrs. Eddy must be." Again, he said, "I see now that I am but as John the Baptist, preparing the way. You people have got the real thing. Wherever I go I shall meet Christian Scientists as Christian workers and as helpers in evangelizing the world." He took with him a copy of our text-book and of *The Christian Science Journal*, saying that he would study them and preach what he got from his study. It was indeed a blessed privilege for me to break to him the bread of Life. It made me feel more grateful than ever before to our dear Leader for this rediscovery of the glorious truth of being as taught and demonstrated by Christ Jesus. This experience led me to say from my heart, in the language of the Master, "I thank thee, O Father, Lord of heaven and earth, that thou hast hid these things from the wise and prudent, and hast revealed them unto babes."

Before closing, I must again express my humble and heartfelt gratitude to our beloved Leader, for the example she has set us by her holy, consecrated life, in being the channel through whom God has so clearly and definitely spoken, in giving us that inspired book which is rightly named, "Science and Health with Key to the Scriptures," for truly it does unlock the Holy Word. Especially do I wish to express my gratitude for the revised edition of June, 1907. I had often heard of people being so drawn to Science and Health that they could not give up reading it, but although I had studied the book for eighteen years, it never had that effect on me until I received this edition. It then seemed impossible for me to become interested in anything else until I got through it, and that was a good while, for I had often to reread some paragraphs. It seemed to bring a higher sense of love and peace than I had realized in any previous edition. I am also grateful for the heavenly benediction of the later edition. Words are indeed empty! We can truly express our gratitude only in active and holy lives.

VAIN REPETITIONS.

ANNA C. GURSKE.

THE Master said in his Sermon on the Mount, "When ye pray, use not vain repetitions." According to the dictionary, vain means "ineffectual; useless; destitute of force; powerless." Christian Scientists are often asked, "What do you say when you pray?" True seekers who are yearning to know and understand the Principle of healing, learn ere long that it is not what one says, but what one knows about God and the perfect man that carries healing force with it. One might for hours repeat beauti-

Digitized by Google

ful statements about God and man, and yet find that the sufferer before him was in no way relieved. Such statements in themselves are as cold and ineffectual as are moonbeams upon ice.

When Jesus restored the withered hand it was not what he said, but what he knew about health and strength and perfection which brought about the restoration. We find no record in the Scriptures of any "vain repetitions" which he used. Jesus was always about the Father's business, ever penetrating farther and farther into the realm of Mind, and when a discordant, disorderly condition confronted him, it disappeared before that consciousness which understood Life, just as the belief that three times three are ten disappears from the consciousness of the child when the problem is presented to one who knows and understands the truth regarding that combination of figures, and who makes it clear to the child.

One must learn that it is Christ, Truth, who heals and saves; then there will be small use for words. The truth has not changed, and it uplifts, cheers, and restores to-day as when Jesus walked among men. Those who follow in the same path of mental purity and obedience to divine law will find their consciousness becoming a fit dwelling-place for the Christ-mind, and they will comprehend the words, "Lo, I am with you alway." He who is ever rising superior to the suggestions of mortal belief, and who through Christian Science keeps the healing Christ enshrined in his consciousness, will find little use for "vain repetitions." When the cry of him who has stumbled under the weight of human error comes to such a one, there will instantly go forth such a mighty mental wave of healing and peace that the discordant condition will be engulfed, and it will be found no more.

SERVICE.

CHARLES T. ROOT.

FROM Genesis to Revelation are scattered exhortations to mankind to "serve God;" and there can be no doubt as to the duty of all Christians to obey the command. The only question that arises is as to how this constant and all-inclusive duty can be performed. The meanings which most naturally attach to "serve," are to "benefit" or to "assist." But how can we benefit or assist the sole cause and creator, the omnipotent source and owner of everything that is; the all-Father, of whom the Bible says, "God that made the world . . . dwelleth not in temples made with hands; neither is worshiped with men's hands, as though he needed any thing, seeing he giveth to all life, and breath, and all things;" and again, "For all that is in the heaven and in the earth is thine." "For all things come of thee, and of thine own have we given thee." "All this store that we have prepared to build thee an house for thine holy name cometh of thine hand, and is all thine own."

Clearly we cannot serve God in the same sense that we can human beings. To serve God acceptably is to manifest Him, to reflect good; to think His thoughts after Him, and, to the widening limits of our understanding, to imitate His beneficent activity. Such service to the most High is also our most effective service to our fellow-men.

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be Nov. 6, 1908. Applications should be in the hands of the Clerk of The Mother Church on or before Oct. 21, 1908. Application blanks may be had by addressing William B. Johnson, C.S.D., Clerk, at the church edifice, Falmouth, Norway, and St. Paul Streets.

SELECTED ARTICLES.

[A. P. Cochran, in the *Kansas City* (Kan.) *Globe*.

Christian Science is the ascertained truth about God, good, and about His creation (man). It accepts nothing as true that has not been demonstrated to a perfect result. It declares that God is omnipotent, omniscient, omnipresent good, and that man is His image and likeness. It points out that the mission of Jesus was to make plain the relation of man to his creator. He taught the truth about it both by precept and example, and the inerrancy of this teaching was demonstrated by application to the lives of those who listened: the lame walked, the blind received their sight, the lepers were cleansed, the dead were raised, and the people listened with joy to the one that told of a God who is Love. Christian Scientists know this to be true, not as the result of any psychological research, not as the result of the lifetime study of some philosopher or school of philosophers, but by its humble, obedient application to the problems of their own lives, each for himself.

The attempt to fix a limit to the action of spiritual law, and as a substitute submit to and obey material law, is an impeachment of the infinite. It charges that He who "made all things that were made" failed to provide a method for the protection and perpetuation of His creation. Jesus did not teach so. The law he declared was the spiritual law. It was on the authority of the Father. It was not ambiguous. It was not uncertain in its results. "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself." Certainly if there had been a possible condition under which this would not apply, would not have been all-sufficient, he would not have assured his questioners: "This do, and thou shalt live." He sent his followers forth to preach this gospel of Love with as certain assurance that the spiritual law should apply and be sufficient in the case of all "them that believe," as in that of those who listened to him. He never made promises that were not to be fulfilled, and this was no exception to the rule. His immediate followers healed the sick and raised the dead. Paul, the apostle who never saw him, did the same. It continued among "them that believe" almost three hundred years. . . .

For centuries the physical senses have refused to accept the spiritual law pointed out by Jesus as sufficient, but have submitted to the material law that mankind are subject to sin and disease, with no escape except through death, and this escape problematical. Mrs. Eddy discovered the truth about this. She discovered that the work of the Master was in accordance with exact Science, the Principle and rule of which she demonstrated in her own life. She proved its truth. She called it Christian Science and gave it to the world in the text-book, "Science and Health with Key to the Scriptures," and the multitude testify to the healing which follows its understanding. Their evidence cannot be set aside. They were sick and the world knew it. They are now well and the world is taking notice. They were subject to every discord that can beset mankind; they listened to the invitation: "Come unto me, all ye that labor and are heavy laden, and I will give you rest," and now are free enjoying the fulfilment of the promise to "them that believe."

[Alfred Farlow in *The Mid-Western*.]

God is Spirit, or Mind. The result of mind labor, mind action, mind exercise—the product of mind—is thought. Mind thinks its thought, evolves its idea; its creation is therefore ideal. We do not look upon darkness as an entity. It is not regarded as something, but as the want of something, the want of light. So evil should be under-

Digitized by Google

stood as the absence of good, disease the want of health, discord the lack of harmony. If we plant ourselves unreservedly upon the premise that God is Spirit and the only creator, and are faithful thereto, we must hold that His creation is spiritual—the infinite expression of infinite Mind. If we stick to our text, hold to the foregoing premise, we must regard all which is seen or perceived, physically, as illusion. God created all that was made, and it was very good; hence evil has no creator, no source, and therefore has only a mythical existence.

The appearance of evil is a false claim which must have a hearing at the bar of Truth and be proved a nonentity. One cannot be aware of the omnipotence of God without realizing the impotency of sin and disease. If God becomes to us infinitely great, His opposite, evil, must become to us infinitesimal—infinitely small. We cannot believe in the greatness of God without seeing the littleness of evil. The prayer of a Christian Scientist brings one into communion with God, into a realization of His presence and power, into the consciousness of man's real being, and this breaks the power of sin and disease. Sin should be defined as the conduct of mortals induced by a wrong sense and consequent misappropriation of God's creation. Sin includes, therefore, all the mistakes of life as well as wilful wickedness—all errors in thought, word, and deed. All sin is instigated by ignorance—the false belief that there is pleasure, profit, gain, or benefit in error. Therefore, the remedy for sin is practice prompted by a knowledge of the bliss of doing good and the inevitable penalty of wrongdoing. Mortals must learn that "whatsoever a man soweth, that shall he also reap."

[J. V. Dittemore in the *Buffalo* (N.Y.) *News*.]

When Christian Science states that sin, disease, and matter are unreal, it is equivalent to affirming that they are temporal and destructible, the phenomena of our present material sense of that "heaven and earth" which Jesus said should "pass away." In Ecclesiastes we read: "Whatsoever God doeth, it shall be for ever: nothing can be put to it, nor any thing taken from it." Christian Science affirms that the creations of this infinite God, who is Spirit,—perfect and wholly good,—are like Himself, spiritual and perfect; that "the things which are seen"—matter and the phenomena of material existence—"are temporal," but the "things which are not seen"—the verities of spiritual existence, the manifestations of the infinite, perfect creator—"are eternal" and indestructible.

If the efforts of the clergy and the medical profession were suddenly realized, and sin and sickness were eliminated from the world, it would be readily admitted that they had no reality, and that their existence had been in the nature of a dream. Jesus referred to the sick as having been bound by Satan. He defined this Satan as "a deceiver," and when the deception was destroyed by knowing the truth of man's birthright of health and dominion and the unreality of all that would oppose this normal condition, the sick were healed. So to-day in Christian Science practice the spiritual understanding and realization of the real man's likeness to God, his divine Principle, and the knowledge that sin, disease, and discord of every nature are not of God, but are abnormal, illegitimate, and destructible,—this understanding is the basis on which the sick are healed and the sinful reclaimed. Jesus said: "Ye shall know the truth, and the truth shall make you free." Free from what? He must have meant free from the bondage of false theories about God and man,—the theories and conditions he destroyed, and told his true followers of all ages that they should destroy, if they "believed on" him or understood the Principle of his "works."

[Frederick Dixon in the *Cambridge* (Eng.) *Chronicle*.]

In speaking, at the meeting in the Divinity Schools, of his impressions of the Pan-Anglican Congress, Dr. Cunningham referred incidentally to Christian Science, urging, as one objection to it, that it was antagonistic to Christianity. He made it quite clear, at the Congress, that he founded the charge of antagonism on his belief that, in Christian Science, the salvation of the body was preferred to the salvation of the soul. If this were the case, I quite admit that Christian Science might be science, but it would not be Christian. But it so happens that this is not merely not true, but a complete reversal of the truth. Christian Science teaches that man's health is dependent on his spiritual understanding, and that just in proportion as he becomes conscious of the truth, he becomes, as Jesus said he would be, free; and free not only from sin, but from sorrow, and want, and sickness.

It has been customary for centuries to regard the miracles as supernatural. Hume, taking this line, committed himself in his famous essay on the subject to the statement that the suspension of a lump of lead, of itself, in the air might be regarded as a violation of law. And as he disbelieved in miracles he reduced himself to the argument that that of which there is no recorded observation is an impossibility. Huxley's reply to this was at once logical and crushing. Seeing, he said in effect, that violated law ceases, *ipso facto*, to be law, the suspension of a lump of lead, of itself, in the atmosphere, would be a phenomenon indicative only of some hitherto unsuspected law, which it would be more intelligent to examine than to disregard.

Christian Science takes Huxley's view of the matter up to a point; but there is a breaking point, and that breaking point is the definition of law. What Huxley would have referred to physical law, Mrs. Eddy refers to God. There is, she insists, an absolute spiritual law, working out in unvarying harmony, of which the wayfaring man may avail himself, and through the understanding of which the miracles become divinely natural. Jesus, she points out, broke every physical law, and demonstrated in doing so that that law was not God's law. The truth is that he healed the sick not by breaking God's law, but by the strictest conformity to it. What he did break was the human sense of law. So long as a man believes that physical causation is governed by law, he will be subject to that law; but when he learns that there is no law but God's law, he will realize why Mrs. Eddy has written, on pages 52 and 313 of Science and Health, that Jesus of Nazareth was not only the best man but the most scientific man that ever trod the globe. He knew more of law than any other man, because he knew more of God, of Truth; and, knowing more of Truth than any other man, he necessarily demonstrated that knowledge more fully. These demonstrations have been called miracles because they were wonderful to those who believed that law was physical, instead of understanding that it was the working of that divine Mind "with whom is no variableness, neither shadow of turning." And because this law really is law, it can be demonstrated to-day as it was demonstrated by Jesus. Indeed, it was he who made this demonstration the test of the understanding of his teaching, in saying that those who believed on him would do the miracles he did.

Our critic's second contention, that Christian Scientists ignore pain, is, if I may say so without offense, preposterous. The greater part of every Christian Science worker's day, and much of his night, is taken up with an incessant effort to overcome disease and pain. To tell a man passing his time in this way that he ignores pain is more likely to astonish him than anything else. The fact is, that the entire statement is founded on a misconception of the sense in which the word "real" is used in Christian Science. The Christian Scientist uses the word to express the abso-

Digitized by Google

lute, that is, the spiritual and eternal, as opposed to the relative, or purely temporary material sense of things. A similar distinction was made by Aquinas, in his "Summa Theologiæ," when he spoke of theology as the only absolute Science, in contradistinction to any mere relative knowledge of physical phenomena; and Dr. Westcott of Durham has insisted that the writer of the Fourth Gospel makes a similar distinction in his use of the word "truth," with or without the article. But because a Christian Scientist declines to handicap himself in his struggle with disease and pain by describing them as real, that is, as part of the divine creation, it does not imply that he denies that these have a relative sense of actuality to the human consciousness. Mrs. Eddy makes the position clear beyond question on page 460 of Science and Health, where she says, "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. Sickness is more than fancy; it is solid conviction. It is therefore to be dealt with through right apprehension of the truth of being."

This true apprehension of being has been summed up by Mrs. Eddy in the statement, on page 468 of Science and Health, that "there is no life, truth, intelligence, nor substance in matter. All is infinite Mind and its infinite manifestation, for God is All-in-all." As man begins to grasp this he begins, in the words of Jesus, to repent; to change his outlook—that is, if the pure meaning of the original text is adopted—from a material to a spiritual basis, and to base his demonstration, in his struggle with sickness as with sin, on faith in God instead of faith in matter. And so he rises gradually to a fuller understanding of those marvelous words of the Master, "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

[James Phelps in the *Racine* (Wis.) *Times*.]

If Christian Science should seem obscure to some who have not grasped its propositions with sufficient understanding to demonstrate them, they should remember that the gospel of Christ, and him crucified, was to the Jews a stumbling-block and to the Greeks foolishness; yet that gospel has been the most potent force for good the world has ever seen. That gospel, as applied by Christian Scientists, heals the sick and reforms the sinner with more certainty than all the material means with which the vast host of those who have been healed through the ministry of Christian Science have had to do, and the majority of them have had experience with many of the other systems of healing, regular and irregular.

[James D. Sherwood in the *Beaumont* (Texas) *Enterprise*.]

Our reverend critic has a very mistaken sense of the Christian Scientist's views concerning sin. The Christian Scientist goes farther, perhaps, than does our critic in defining sin, but he believes that sin can be overcome and its powerlessness be proved. The possibility of overcoming all sin is indicated by the Scriptural promise, "He that overcometh shall inherit all things," and when a man has overcome "the world, the flesh, and the devil" (evil), he has proved the unreality of evil by destroying its claims.

Christian Science does not ignore sin, but it declares that sin is no part of God's creation, and He made all things, and all that God made was pronounced by Him "very good." Sin is temporal. It is unreal, a factor of the dream of life in matter. Sin exists in erring mortal experience, and must be grappled with and overcome through the power of God. Christian Science teaches that there is no abiding pleasure in the practice of sin, and this enables the sinner to cease sinning and to get the victory over sin; thus he comes to know that he has been serving an unreal master, and is encouraged to resist sin, and in persisting against it he foresees its end.

Christ Jesus said of Satan, "He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it." Here the Master declares the unreality of the works of the devil, and we know that God is not the author of sin. By understanding sin to be no part of God's perfect creation, and by accepting God as the only creator, the Christian Scientist understands the unreality of sin. He does not ignore sin; but, knowing its unreality, he becomes able to overcome sin in the way our Master pointed out. Said Paul, "Overcome evil with good."

[Albert E. Miller in the *Philadelphia* (Pa.) *Inquirer*.]

The headline, "Church's Duty not Healing of Body," in the *Inquirer* some days ago, virtually threw down the gauntlet to all Christians on the question of religious healing. No one having volunteered a reply in the interval, I should like to present a few thoughts in behalf of Christian Science, which, as is generally known, contends that the teaching of Christ, properly understood, provides physical as well as moral cure for the sick and sinful. Even the most superficial study of our Saviour's teaching and works discloses the purpose and result of his efforts to be physical and moral regeneration and restoration. In fact, he demonstrated that both sickness and sin are the common product of evil thought.

It may be that the world has not been ready until the present hour to lay hold upon this fact and utilize it for the betterment of mankind; but of one thing we are certain, and that is the undeniable fact that Mrs. Eddy, the Discoverer and Founder of Christian Science, has set in motion a force which is gathering impetus with every hour, and is bringing to thousands a realization of the practical helpfulness and effectual cure for human ills which is embodied in Christ Jesus' teaching and example. To contend, then, that the "Church's duty is not the healing of the body" is to attempt to divide that seamless robe, the mere hem of which the woman in the throng touched and was made whole. Sin and disease are non-existent to human sense only in the degree in which they are obliterated and cast out, and to strive for this purification and to contend for its practical possibility is surely the duty of every Christian.

To lift one's thought to a higher plane than the human, and to invoke the presence of divine, omnipotent power can hardly be defined as hypnotic suggestion. Christ Jesus employed neither hypnotism nor drugs, yet a more potent remedy than that shown in his process of healing has never been manifested, nor can be, for its origin and ultimate are found in the infinite Mind that our Saviour called "our Father which art in heaven." Jesus said, "He that believeth on me, the works that I do shall he do also," and Christian Scientists claim this justification for their efforts to heal through prayer. The works of healing made manifest through these efforts are added proof, and are the "signs following" which our Saviour promised should accompany true belief.

[Charles K. Skinner in the *Detroit* (Mich.) *News Tribune*.]

In a recent issue of *The News Tribune*, an English writer is credited with a sharp criticism of what he is pleased to state is the teaching of Christian Science. He says, "The doctrine that pain and death are not real at all, except in so far as the victims are cowardly enough to submit to them, is a diabolical doctrine," etc. With all due respect to our brother across the sea, I must say his "man of straw," *alias* misapprehension, has been fought

Digitized by Google

by many earlier critics in their attacks upon Christian Science, only to end in their discomfiture.

The position of Christian Scientists on the reality of death and pain is precisely that of the Founder of Christianity. When apprised of the death of Lazarus, he said, "Our friend Lazarus sleepeth," and of Jairus' daughter, "She is not dead, but sleepeth." Then as now, materialists of the age discredited the voice of Truth, for it is related that "they laughed him to scorn."

And what did the Master do? Did he say, "I mistake, these older people know better than I, the maid is indeed dead?" No! in the face of the testimony of the material senses, he took the damsel by the hand and said, "I say unto thee, arise." Did he see death as a reality, or, in other words, a creation of God? The Scriptures say that God made all that was made and that His works are eternal, the only reality. Would Jesus have undertaken to destroy death or sickness, if he believed them creations of God? He saw the damsel in a dormant mental condition, from which, through the power of Truth, he aroused her. It is true that he passed through the same experience, but he said, "I will rise again," and he did, thus to demonstrate to mankind that man (spiritual man) was indeed given dominion over all.

This critic tells us that "Christianity says that even God thought of death with awe, while Christian Science says that man need not think of it." The statement in itself is most "diabolically" preposterous (I quote the critic), and I am at a loss to know where our English brother finds any authority for claiming the creator to be secondary to death, which he certainly would be if he looked upon it "with awe." We are told that "the last enemy that shall be overcome is death," but we are taught to believe that God is omnipotent. The Master said, "Be of good cheer; I have overcome the world." And again, "If a man keep my saying, he shall never taste of death."

The mission of Christian Science is so to spiritualize thought that the belief in materialism, or life and intelligence in matter, will give place to the understanding of life as Spirit. Then, and not till then, shall we overcome the "last enemy." To all such the words of the Revelator will be plain, "He that overcometh shall not be hurt of the second death."

[From an Editorial in *The Oregonian*, Portland, Ore.]

A reverend critic's challenge to the Christian Scientists is highly ingenious. He asks them, in his last Sunday sermon, to "prove their power by the restoration of incurable cripples," among other things. On a certain previous occasion the Nazarene was asked to prove his power by turning stones into bread. But Jesus declined. Why, indeed, should the adherents of any faith, old or new, submit to every test their enemies happen to fancy? Is anything gained by it? But as to the "restoration of incurable cripples." Let us meditate a moment upon the meaning of this singular proposition. An incurable cripple is one that cannot be cured. Here is where the good doctor's ingenuity comes in. No matter how many thousand cripples Christian Science may restore, he is always perfectly safe. The very fact of their being cured would prove that they were not incurable. Hence the test forever defeats its own fulfilment. It is like asking a man to make a square circle or to move an immovable body. . . .

Let us grant, for argument's sake, that Christian Science cannot quite keep all its promises in the way of curing diseases. Does that prove it to be "a fake and a pretense," as the doctor roundly asserts? A religion that does not keep all its promises is a fake, then. Very well, so be it. Let us apply the same rule to the critic's faith. It is promised in the New Testament that he and his fellow-pilgrims shall heal the sick, make the lame to walk, and cast out devils! By his own admission, the Christian Scientists fulfil part of their professions. They cure ailments which are amenable to treatment. But he cannot even do that. If the fulfilment of promises is a fair test, which comes nearer being a fake, the one who keeps none of his, or the Christian Scientists, who keep part of theirs? . . .

The truth is that the adherents of all faiths live in glass houses. . . . The theologians are safe only when they confine their assertions and promises to the other world. Then, if they turn out false, nobody knows it. Since all are in the same boat, it would look much more seemly if they would not throw mud at one another, but experience teaches that this is too much to expect. Still it is somewhat shocking to behold the doctor aiming his missiles at the ancient and respectable doctrine of the illusoriness of matter. It would be interesting to hear him prove that the external world, "the fleeting show for man's illusion given," is what it seems to be. If he can, he will succeed where all others, ancient and modern, pagan and Christian, have failed. Beyond question the hypothesis concerning matter which Mrs. Eddy has adopted is the only tenable one. Since Kant there has not been a respectable philosopher who held any other. It would also be interesting to hear our critic explain why it degrades prayer to use it as a "mental medicine." He says it does, but he does not tell why. What does he use prayer for? To produce good or harm? If he prays to produce good, or remedy evil, then he, too, uses prayer as a kind of medicine. The only difference between his prayer and that of the Christian Scientists seems to be that theirs accomplish results, while his does not.

After all, his unkindness to the Christian Scientists may be merely the feigning of a kindred spirit, for if he means what he says, he is one of them. Read and ponder this excerpt from his sermon, if you please: "Entity, or being, cannot be conceived of aside from personality." Then there are no real beings except persons, and matter, which has no personality, does not exist? . . . The simple fact is that half the time people who wrangle over metaphysical puzzles do not know which side they are on. In the sermon we are discussing the reverend critic begins as a crude materialist and ends in idealistic monism. If he had preached an hour longer very likely he would have adopted half a dozen more contradictory philosophies. It will be a happy time when the good people of the earth cease railing at each other's beliefs and join hands in the war upon evil.

[A. W. Mainland in the *Empire-Advance*, Virden, Manitoba.]

The atonement or at-one-ment, a condition of being at one with God, is one of the most important features of the teachings of Christian Science, though its interpretation differs somewhat from the ideas held by other churches. It does not teach that Jesus came to make God at-one with sinning mortal man, but that he came as a Wayshower, to lift men to a Godlike ideal of living and thinking in which is perfect salvation. Jesus brought to earth a clearer message of the Christ or Truth, "the Lamb slain from the foundation of the world," that through this Christ or Truth men might become Godlike, or at-one with God, and thus be eternally saved.

Mrs. Eddy does not "deny the New Testament idea of prayer," but explains it in a most helpful way, as is fully attested by the thousands who are healed of sickness and sin by reading her works. It is interesting to note that as a result of her work it is being more generally recognized that the healing of the sick is a part of the work of the Church.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy upon proper subjects *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

"BENEFACTORS."

WHO is there that does not desire to be rich—rich enough to bestow of his superabundance upon the needy? And there is nothing wrong in such a desire, the only trouble is that any should believe himself too poor to enrich others in a very vital way. The great Teacher, at his last supper, gave his disciples a wonderful lesson as to what constitutes a benefactor. They had been contending as to which of them "should be accounted the greatest," and Jesus at once turned thought to the high dignity of service, by saying, "I am among you as he that serveth;" and he added, "Ye are they which have continued with me in my temptations." He then asked, "When I sent you without purse, and scrip, and shoes, lacked ye any thing? And they said, Nothing."

Under the Master's instructions the disciples had gone out among their stricken fellow-men as "benefactors," dispensing heaven's gifts of health and harmony to those who were impoverished because they did not know God, Spirit, as the Soul and source of all being. The disciples had to know this truth for themselves before they could bring its blessings to the needy, but their Master had said, "Freely ye have received." So freely had they received of the truth that they lacked nothing,—neither health nor strength, shoes nor purse! He reminded them that it was their privilege to sit at his table, partaking freely of the divine bounty and dispensing it to others.

At the present period humanity is crying out against the long-prevailing opinion that poverty is a necessity, and that almsgiving is its remedy. Men are saying, "Give us our own;" and he who can indeed help his brothers to secure their own is truly a benefactor. To do this, however, he must himself know what is man's heritage and what it means to be rich,—"rich toward God," as Jesus expressed it. He must know in a vital and practical way the power of intelligence, of right, of Truth, and the consequent powerlessness of evil in any of its negative phases—and they are all negative to Truth.

On page 70 of Science and Health we are told that "the revelations of Christian Science unlock the treasures of Truth." No one who has accepted Christian Science and honestly striven to follow its teachings can deny this statement. Through the study of Mrs. Eddy's inspired writings our comprehension of the content of Christianity becomes so immeasurably enlarged that we have enough and to spare. There is no excuse for mental penury on the part of any sincere student, and we should be fully awake to our privileges in this respect. We should be constantly asking ourselves how much we have to give to those whom we daily meet. They may lack the sense of health, of happiness, of something that makes life beautiful. Have we anything to give them from the great treasure-house of divine Love, so that they will leave us feeling that they have been enriched? If not, why not?

We should ourselves have enough and to spare of the truth which overmatches every phase of error, for in our daily intercourse with mankind we are either beggars or benefactors. Which shall it be? Paul spoke of the possibility of being "poor, yet making many rich." We have to-day the same truth that made the poor rich in that earlier time, and, what is more, its application has been wonderfully extended through the teachings of Christian Science. No longer do we believe that poverty and spirituality are in anywise related, but rather do we prove that the latter excludes the former. In Christian Science we find that all sense of poverty vanishes as we come to realize more fully the affluence of Truth, and in making this known we become benefactors of all humanity.

ANNIE M. KNOTT.

THE NEARER CHRIST.

IF one were to ask what is the greatest and most impressive object-lesson of the past, he would elicit but a single answer. The character and conquests of Christ Jesus constitute the most imposing fact presented to human thought, a fact which is now well-nigh universally recognized, and which has made an altogether incomparable appeal to the intelligence, the affection, and the imagination of mankind. This is witnessed to by the most splendid heroisms and sacrifices of the Christian centuries, their greatest literature, their grandest art, their noblest song. It is witnessed to by all the inspirations and overcomings which have made living sensibly worth while to men, and despite all the selfishness and materiality of his professed followers, the ignoble feuds, strifes, and cruelties which their creedal contentions have brought about, he who suffered and triumphed on Calvary is the world's greatest hero.

Respecting the significance of this personal and objective sense of Christ Jesus as the embodiment of the highest ideals of truth and love and as the appointed Saviour of men, Christian history speaks in unqualified terms; nevertheless, when through ignorance or superstition devotion to "the historic Jesus" serves to satisfy spiritual aspiration, when it leads men to forget the assured coming of the Christ to individual consciousness, so that the faith of the Nazarene may again be demonstrated; when Christian believers are absorbingly zealous to honor Christ Jesus in creed and function and song while ignoring his commands to heal the sick,—then the vital of our Lord's requirement has been sacrificed, and the rebuke is again heard, "These ought ye to have done, and not to leave the other undone."

As understood in Christian Science, the supreme fact of the Christ-coming is its continuity. Christ Jesus was the Wayshower, that every man may become a waygoer. He said, "Greater works shall he do," thus indicating that all he did in the expression or manifestation of Truth was an earnest and index of what, in Love's plan and provision, humanity's achievement was to be; and to understand this is to divine the meaning, and enter into the fulfilment, of Christ Jesus' life-work. While Christian Science lovingly honors the man of Nazareth as "Christ's coming in the flesh" for the world's redemption, it lays its emphasis upon the importance of that individual realization to which Paul refers in his phrase, "Christ in you, the hope of glory." It teaches that to live the Christ-life is to fill out the concept of man which Christ Jesus defined; it is to place our feet in every footprint on the mount of his ascension; it is to perceive and express man's Christlikeness, in nature, in endowment, and in God-given dominion.

Thus thinking of Christ Jesus, not simply as one who has shown us the right path, but as our immediate prototype in spiritual consciousness and healing works, we enter into and appropriate his declarations of truth as never

Digitized by Google

before, since we perceive that in them he spoke for every man. Thus when we hear him say, "I can of mine own self do nothing: the Father that dwelleth in me, he doeth the works," there bursts upon us some sense of that conscious privilege and power and spiritual exaltation in which St. John declares for man's true self-identification: "Now are we the sons of God." When Jesus says, "And I, if I be lifted up from the earth, will draw all men unto me," we understand that he refers not only to the crucial event of his self-sacrifice, but that he declares for the efficiency of the Christ-idea in us, in the measure of our escape from materiality, our ascension above the plane and estate of those to whom the Revelator refers when he says, "Woe to the inhabiters of the earth!"

To this question of the personal possession of the Christ-life Christian Science is calling the world's attention, that the fruitage of faith which crowned our Lord's ministry may be gathered again by his every sincere disciple. Says our Leader (Science and Health, p. 271), "Christ's Christianity is the chain of scientific being reappearing in all ages, maintaining its obvious correspondence with the Scriptures, and uniting all periods in the design of God."

JOHN B. WILLIS.

LETTERS TO OUR LEADER.

Hull, England, Sept. 10, 1908.

Dear Mrs. Eddy:—We have so much to be grateful for that we feel impelled to send you an expression of our love and gratitude. Through the teachings of that wonderful book, "Science and Health with Key to the Scriptures," the truth about God and ourselves is being revealed to us as the Comforter. You will like to know that Christian Science is making progress here, brightening and uplifting the lives of those who are learning to love it, and attracting more and more attention by its healing and saving power. A new Reading Room and library have just been acquired in the center of the city; an increasing appreciation of Christian Science is continually manifesting itself in the greater numbers present at all our meetings. The Sunday School is so full that we are compelled to ask for more commodious quarters. Several cases of healing by the children bring home forcibly the glorious privilege of being either a teacher or a scholar in the Sunday School. The vessels in our docks are now visited, and our literature, which thus finds its way to ports all over the world, is welcomed. The public libraries now receive five copies of the *Journal* and *Sentinel* regularly, thanks to the generosity of our Publishing Society in Boston, and Science and Health is in constant demand both in our own library and in those of the city.

These, dear Leader, are some of the visible signs of an increasing sense of the attractiveness and practicability of the Christ-healing to this age, and behind all these is a growing sense of unity and love among our members which makes life in Christian Science such a joy. A few days ago it was said to a practitioner, by a venerable man living in the same house as a patient (in alluding to Christian Scientists), "I never thought there were such people in the world." I only quote this to assure your loving heart of the earnest and sincere desire of the members of this church to follow in the footsteps of our Master by obediently proving their faith in God by their works, and by their love one to another.

Yours gratefully and lovingly, on behalf of First Church,

H. BOARDMAN, *First Reader.*

Anamosa, Ia., Sept. 4, 1908.

Dear Mrs. Eddy:—My heart is overflowing with love and gratitude to you for showing us how to work out our own salvation "with fear and trembling;" how to "overcome evil with good;" how to interpret Jesus' sayings aright. I am trying to prove my love for you by being true to myself, and thus true to our Father-Mother God. I began to study your book, Science and Health, seven years ago, when I was healed in one week's treatment of rupture of twenty-five years' standing, with other troubles, after having paid out a great deal of money for an operation in Chicago that did no good whatever. But that is so little compared to the love of God that is finding its place in me. Like the old song, "it makes me love everybody," and I want to tell them that God is Love, as our baby lisps at night for her tiny prayer; and in the morning, "Good all day, mama.". Through your love for all of God's little ones, you have taught us to say "Thy will be done" with a joyful heart instead of a tearful thought, knowing that goodness is happiness. I remain your loving and thankful disciple,

LENA H. CHAMBERLAIN.

Avalon, Santa Catalina Island, Sept. 5, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—You will be glad, I know, to hear of the work that has been done on this island of the Pacific. Several years ago, a few Christian Scientists who spent their summers here began to read the Lessons from the *Quarterly* in their tent Sunday mornings. These meetings increased in attendance and interest, and were held in a private tent until two years ago, when a tent was rented for Sunday morning and Wednesday evening services. This summer the tent was found to be inadequate for the purpose, and a hall was taken, where the meetings were well attended and much interest manifested. So much thankfulness was expressed by many that we could have our meetings, even at Catalina. Many testimonies of the power of Truth and Love to heal sin and disease were given in the Wednesday evening meetings. Within the last year several families who make their permanent home on the island have become interested in Christian Science, and hope to continue the Sunday morning services through the winter months.

I have long wished to express to you my gratitude for the teaching of Christian Science that has brought such practical abundant good into my life, and to all those who will accept the truth.

Sincerely yours,

A. FLORENCE MEAD.

Ballard Station, Seattle, Wash., Sept. 7, 1908.

Mrs. Mary Baker G. Eddy.

Beloved Leader:—Knowing that you are glad to hear of faithful work done in Christian Science, I cannot longer resist the impulse to write you, that you may know of the progress of the work in this field. Six years ago, in the little city of Ballard, situated about six miles from Seattle, a few students of Christian Science met and organized First Church of Christ, Scientist. One year after its organization its members purchased the property known as the old Catholic church building, to be paid for in yearly payments. Although the membership was small, the payments were met, and the last one, which has just been made, was met before it came due. In the mean time the building has been repaired, the interior remodeled, Reading Rooms fitted up, and the whole suitably furnished.

During the past year, at the time when the congregation of First Church of Christ, Scientist, in Seattle, had filled its building to overflowing, Ballard became annexed to and a part of Seattle. It was therefore according to the eternal fitness of things that First Church of Christ, Scientist, Ballard, should take its place as Second Church of

Digitized by Google

Christ, Scientist, in Seattle. We are thankful to you, our dear Leader, for the understanding of Truth which makes these things possible. Through following the instructions given in your writings, we have been enabled to meet every emergency, and we know that through your writings is revealed the truth which will redeem the world. "The wilderness and the solitary place shall be glad for them," and through the warmth of Truth and Love, as shed forth in Christian Science, "the desert shall rejoice, and blossom as the rose;" even the byways may become highways for our God. We feel the divine impulse to press on with you in the spirit of your life-purpose,—"to impress humanity with the genuine recognition of practical, operative Christian Science" (Miscellaneous Writings, p. 207). With a heart full of gratitude to God for Christian Science, and to our Leader

Lovingly,

E. NORA YOUER.

Wetaskiwin, Alberta, Sept. 6, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dear Leader:—It is gratitude which prompts me to [illegible] the good I have received from studying and [illegible] Science as taught in Science and Health, [illegible] an understanding of man as made in [illegible] likeness, in whom sin has no place. My [illegible] your loving guidance, and I [illegible] obedience to keep me from [illegible] my [illegible] and to mankind, as we are taught in [illegible] Mother Church. There are [illegible] a [illegible] town who are studying Christian [illegible] one receives is immeasurable. [illegible] we meet and read the Lesson-[illegible] "Seek ye first the kingdom [illegible] these things shall be added [illegible] to have class instruction [illegible] reaches the earth's remotest [illegible]

AMONG THE CHURCHES.

PALO ALTO, CAL.

The Christian Science church of Palo Alto has been growing so fast of late that it has been impossible to accommodate the people in attendance at the quarters it has heretofore occupied in the Madison-Thoits Building. Consequently for some time the church has been looking around for a new location, and has leased the building formerly occupied by the Presbyterians on the corner of Waverley Street and University Avenue. The building is now being thoroughly renovated and will soon be ready for occupancy.—*Palo Alto Tribune.*

DARLINGTON, ENGLAND.

The new building in North Lodge Terrace for the Christian Scientists was formally opened yesterday [Aug. 2]. This is the first place of worship of this denomination in the county of Durham. The building, which is situated opposite the North Lodge Park, has a most attractive appearance from the outside. It is constructed of brick, the walls of the interior being white. On the ground floor there is an organ chamber and a Reading Room, while two rooms to be used as offices are above the entrance. The building has beautiful stained glass windows, is fitted throughout with electric light, and has a splendid system of ventilation. It has accommodation for two hundred people, and cost one thousand pounds.—*Yorkshire Herald.*

PARSONS, KAN.

A real estate transfer of more than passing interest has been made, in which First Church of Christ, Scientist, secures the property at 1519 Broadway. Work on the rebuilding has begun, transforming the structure into a modern church edifice. The purchase price is forty-five hundred dollars, and one thousand dollars will be expended in adapting the house to the needs of the congregation. The plans call for a seating capacity of three hundred, with Reading Rooms in connection. The church is to be finished in mission style and will be ready for occupancy in the early fall. The location is an ideal one from every point of view, and the building is sufficiently large for the needs for some time. The church in this city was organized in 1896 and has made a splendid growth. The buying of the Broadway property is evidence of the earnest spirit of the organization.—*Parsons Daily Sun.*

COLORADO SPRINGS, COL.

A handsome Kimball pipe organ was last evening [Aug. 12] formally presented to First Church of Christ, Scientist, of Colorado Springs, by Mrs. W. K. Jewett, and was accepted by the trustees on behalf of the church. The Christian Science church is the latest addition to the church edifices of the city. The organization owns the large and valuable corner at North Cascade Avenue and Boulder Street, and has erected on the east half of that lot a fifteen-thousand-dollar church building, the first service in which was held last New Year night. The congregation expects eventually to erect a larger edifice on the corner, fronting on North Cascade Avenue, and then use the present church for Sunday School room and Reading Room. The presentation of the splendid pipe organ came in the nature of a surprise to the church. At a special meeting of the church held last evening Mrs. Jewett made formal presentation of the organ, in gratitude for her restoration to health through Christian Science some years ago, and the gift was formally and lovingly accepted by the church.—*Colorado Springs Gazette.*

THE LECTURES.

MINNEAPOLIS, MINN.

At the Auditorium Friday evening, Sept. 11, an audience of three thousand persons heard a lecture on Christian Science delivered by Mrs. Sue Harper Mims of Atlanta, Ga., under the auspices of Second Church of Christ, Scientist. Mrs. Mims was introduced by Henry Deutsch, First Reader of Second Church, who said in part,—

The final goal of mankind is contentment—happiness—and in this quest we are all engaged. Whatever may seem to be the ideals—wealth, power, position, success—they are but our conceptions of the means to attain this end. In the pursuit of this ultimate, history demonstrates that, eventually, men turn from all other expedients, from all further seeking, to religion—the science of their relationship to a supreme power whom we call God; for there is in every human being an innate strain of religion, and at some time in his experience, when all other expedients fail, its undercurrents rise to the surface, and he turns for comfort and help to God as instinctively as the child does to the human parent. The great weakness of humankind, its irreligion and tendencies towards atheism and agnosticism, arise not from the absence of the religious instinct, but from the baffling indecision occasioned by lack of true understanding. The spirit of religion has been so enshrouded and hidden in the mazes of philosophical abstractions and theological speculations, that when men have asked for the bread of comfort they have seemed to receive nothing but the stone of cold theory and dogma, and the promise of a postponed salvation that offers no present path out of the conditions of chaotic doubt and uncertainty.

Something over forty years ago, a gentle, loving woman in New England, our Leader, Mrs. Mary Baker G. Eddy, was led to the mountain-tops of Spirit, and there beheld again the revelation of the Christ-truth,—religion pure and undefiled, religion that defined clearly and without possibility of question the relation between man and his Maker—man as the image and likeness of God. For three years afterwards she prayed, toiled, and worked earnestly and patiently to discover the positive rules by which this revelation might be brought to mankind. After her search was rewarded, she expounded with the exactness of science the rules by which the understanding of that truth might be obtained now, and thus enable us practically to demonstrate the attainment of our highest desire, a present salvation now at hand. During all the intervening years, this truth—designated by her as Christian Science—has been proving its validity by elevating and regenerating mankind, healing the sick, reforming the sinning, and bringing sunshine and happiness into human experience.

Correspondence.

VINALHAVEN, ME.

A Christian Science lecture, by Frank H. Leonard, was given Monday evening, Aug. 17, in Memorial Hall, which was well filled with a representative audience. The lecturer was introduced by the Rev. Oscar Smith, pastor of Union Church, as follows:—

I understand that a congregation never gathers to hear a lecturer introduced but rather to hear what the speaker has come to say. My remarks, therefore, will be brief, and I shall not detain you except to say that years ago I dedicated myself to the proposition, that whatever subject offers increased knowledge of life and its interests, that subject men have a right to investigate. I take pleasure, therefore, in the honor which I have in introducing the lecturer.—*Correspondence.*

TESTIMONIES OF HEALING.

As a child, without Christian training, without schooling beyond the art of reading and writing crudely, I was forced to face the world and live by my own efforts. Naturally sensitive, and inclined to be resentful under what I considered harsh treatment, my boyhood years were ever inharmonious and oftttimes turbulent; so, when scarcely more than a boy, I became as a piece of driftwood on the seething sea of mortal life, with nothing better to guide me than a heart full of half formed and evil-bent desires. Thus passed the period of nearly twenty years of a wild, reckless, vagabond existence, an existence hardly above that of the lowliest creatures which make their homes in the rocky caverns of the hills; but, in a manner too long to tell, I awoke to the fact that I was dead,—dead to all that was noble, true, and good; that my years had been squandered; that I had given nothing to the world, but had demanded many things from it.

Health had departed, the result of a wrong life, as I have since learned. Without companions, and with spirits broken, I was alone utterly, for of God's ever-presence I knew nothing. Do any know what it means to be alone, unloved and unloving, and without a knowledge of God? Well, may they never know! Again a few sad years were spent in years of misdirected endeavor to find some foundation more substantial than shifting sand to build my house of hopes upon, both as regarded my bodily health and the need of a higher life. After faithfully trying almost every remedy known to *materia medica*, after consulting and practising all sorts of human philosophy, I became myself faithless that any medicine could do me good, or that it could be demonstrably proved that there was such a thing as truth, or anything save the [illegible] As a last experiment, it appears, however, [illegible]

[illegible] "key to the Scriptures" [illegible] through curiosity and without [illegible] a growing fear that it was the same [illegible] however, started to read it through [illegible] I found [illegible] the second time I [illegible] was better [illegible] more comfortable [illegible] Much I marvelled, and [illegible] ever-increasing [illegible] those words, my eyes [illegible] for ever into the [illegible] wherein we [illegible] of those vast treasures [illegible] shining rights, but little ever [illegible] As happiness flowed [illegible] appeared brighter ideals, a new [illegible] sought, but I felt all the [illegible] it took all the names [illegible] I began the study [illegible] Many [illegible]

mine, but this testimony is my humble offering at the shrine of Truth as taught in our text-book. It is my wish that these words may in some way help my brothers and sisters.

JAMES F. EVANS, San Jose, Cal.

Hoping that my wonderful release from bondage through Christian Science may be of encouragement to some one who is but slowly realizing his own freedom, I would say that Truth does heal. Never considered strong in childhood, when ready to commence the high school course I found myself subject to frequent coughing-spells, which finally necessitated my leaving school for a time. Six months later conditions had become so much worse that a noted lung specialist, after diagnosing the disease as a nervous disorder, stated that further trouble could be averted only by the utmost exertion on my part as well as that of the family. For more than twenty years this effort continued; a year and a half of the time I walked on crutches. While stomach trouble and weariness seemed to hold sway, yet harder to bear were the depression and morbidness of thought, with a haunting fear that it must end in insanity. During the long struggle partial relief was attained through the strenuous efforts of physicians, for whom I shall ever feel gratitude and respect. Long I searched amidst the mazes of "mental science," psychical research, etc., hoping to find mental control over this physical condition, or at least strength to be of some use in the world despite it.

Not until five years ago, however, when the "still, small voice" of infinite Love came to my consciousness through its angel visitant,—Christian Science,—did I find this control. Under its teaching and demonstration the symptoms vanished, slowly yet surely, as the mistaken thought that our Father was ever watching us, only to punish each mistake, was changed to an understanding of Him as ever-present Love. Steadily, too, and in larger measure it seems to me, than ever before, joy and strength are becoming mine, as slowly doubt yields to a restful confidence that the way will be made plain, as self-condemnation gives place to a remembrance of our Master's assurance that he was not sent to condemn the world, as fear yields to ever-widening glimpses of Love, as a burdened sense on awakening gives place to a joyful sense of surrounding beauty awaiting recognition.

[illegible] that words might express my feeling of gratitude [illegible] the dear Leader who so patiently, steadfastly, lovingly has borne this message of Love to a needy world. Tender and deep is my gratitude for the Science which points so plainly the path to eternal Life, the path revealed centuries ago through the lowly Nazarene, and again revealed through Mrs. Eddy's faithful following of the Christ.

MIRIAM POPE, Beverly, Mass.

I am glad to be able to testify to the healing power of Christian Science. I was for many years a confirmed invalid and was never free from pain in my back. I submitted to four operations, and was under the care of the best surgeons and nurses in the Hull hospitals, but they failed to give me any relief, and I left the hospital more of an invalid than when I went there. The doctor told me after the fourth operation, that it was necessary for me to have another for ovarian trouble, but he did not consider me strong enough to undergo it just then. Another doctor told my husband that it would simply be a matter of time, if I did not have the operation, as all had been done for me that could be done. Soon after that we came to live near Beverley, thinking the change might do me good. We then heard of Christian Science, but I was very slow to take it up, after having taken medicine [illegible] for so many years.

Digitized by Google

I am very thankful to be able to say that since studying Christian Science, I have not needed the operation, and the pain has gradually disappeared. Instead of being a sickly woman and a burden, I am able to do my own housework, also to walk, or to ride a bicycle any reasonable distance, and have not had one day in bed for the last two years, nor have I taken medicine in any form. Heart trouble, also nervousness and headaches, have been overcome, the above ailments having all left me since I began the study of Science and Health together with the Bible. Influenza was overcome with one treatment from another Scientist.

I am very thankful for all this, and more so for the spiritual uplifting. I never understood the Bible before, or knew that its promises were for us to accept here and now, and that God is an ever-present help. I know if I put into practice daily the little understanding I have gained of the truth, I shall in time be able, by the help of divine Love, to overcome all seeming difficulties. I am very thankful to God, and very grateful to Mrs. Eddy for this clearer understanding she has given us of our relation to God.

MRS. REBECCA MARTIN, Beverley, Yorkshire, England.

It is with heartfelt gratitude that I testify to the correctness of the above statement of my wife's healing. I feel I owe so great a debt to Christian Science that it is my absolute duty to give to others, in some measure, an account of the many blessings I have received from the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. It has helped me to overcome worry, irritability, envy, hatred, and malice, of which errors I had a large share. I have also learned that divine Love does supply every human need, if only we seek first "the kingdom of God, and his righteousness." I have been healed of stomach trouble of many years' standing. We have also had several other demonstrations of the truth in our family, for which I am most grateful.

I am glad to say that I am a member of The Mother Church in Boston, and an active member in the Christian Science society of this town. I am thankful to God for the clearer understanding of Him which I have gained, —as divine Love. I am likewise grateful to our dear Leader for her life of self-devotion to the good of humanity, and my sincere desire is to help others.

HENRY MARTIN, Beverley, Yorkshire, England.

When I think upon the many blessings which have come to me and mine since this demonstrable Science has been presented to us, and how small a part I have made known, I deem it a duty and esteem it a privilege to grasp this opportunity of so doing. It is over four years since I became interested in this study, through the almost instantaneous healing of a sister whose case had practically been given up by the medical profession after more than a year's treatment with them. It was, as our dear Leader so truly puts it, another instance where "man's extremity is God's opportunity."

I was convinced by this proof that I, too, could be healed of a serious kidney trouble, for which I had been under medical treatment more than three years, when the only relief offered me was by submitting to an operation. This certainly was not a bright outlook, and I turned to God for my healing and received it in, I think, ten treatments from a Christian Science practitioner. After this I enjoyed such freedom of mind as well as body as I had never known before. I had been obliged to wear a bandage during the three years of my illness, and the list of "don'ts" under which I was held in bondage I shall not attempt to enumerate. I rid myself of the bandage in a short time, for I was learning that God is the one and only support and that I required no other. From then on I set to work to know something of that which promised infinite blessings, and through daily watching and praying I have been able to assist myself in the overcoming of many difficulties, both physical and otherwise. Words are indeed inadequate for an expression of my gratitude.

Not quite a year ago, my father, now past his eightieth year, became very receptive to this healing truth, and how true it is that God is no respecter of persons if we but turn to Him, and Him alone, for help. When the season for colds was close at hand, it never slipped his memory, nor ever passed him by, and this particular time his siege of illness seemed more severe than ever before. He was confined to his bed for several weeks in a very wretched condition with a distressing cough. Father was not at all interested in Christian Science, so he looked to mortal man for his relief—but he did not receive it. Then, like a tired child, after his medicines became absolutely distasteful to him, he was willing that some one should speak with him of Life as revealed in Christian Science. He had more than once expressed the opinion that he would simply have to stay in bed, owing to his age, and here was the mischief-maker. I should like to add that father was a Jewish minister for many years, and of course the Bible was no new book to him, so far as the letter was concerned, but he knew nothing of its spiritual interpretation up to this time.

Christian Science treatment was begun, and morning after morning father would touch his bell and ask for what he called "Mrs. Eddy's book," which would be close by his bed. He read this book and responded to the treatments as beautifully as a child, without even an argument. On the contrary, he loved to listen as the practitioner expounded to him some of the truths of the text-book. He began to improve immediately, and in a very short time he was up and about the house—"a new man." His thirst for a knowledge of Life and Love was being quenched, and I know is continuing to be day by day. He seems much younger in every way than before, takes an active interest in everything, is as spry as I am—in fact there is not a vestige of any of the former thoughts left in his consciousness. He used to enjoy smoking to some degree, but this has dropped away from him and he is satisfied that it has.

I know that father desires to express his gratitude to God, and to our dear Leader, Mrs. Eddy, for this beautiful demonstration, and in grasping this opportunity I heartily echo his sentiments for what has been done for him, and myself as well.—EDITH THURINGER, Chicago, Ill.

I wish to express my gratitude for Christian Science by telling of some of the great blessings that have come to me. I used to be very antagonistic to what I thought was Christian Science, even threatening to leave my wife if she had anything to do with it. Ever since I can remember I had been taking medicine, and about ten years ago I underwent a severe surgical operation, from which I received only temporary relief. About two years later my nervous system began to break down. I had a great many doctors treat me, but steadily grew worse, until in March, 1904, I was at the point of giving up my work. I became so desperate that I surprised my wife by asking her to write to her sister, who is a Christian Science practitioner, to give me treatment; which she gladly did. I continued taking treatment for about two weeks, and was completely healed. I have taken no medicine from the day of my first treatment up to the present time.

I had been a slave to the tobacco habit for sixteen years, both chewing and smoking. I had taken nearly all of the so-called cures, and several times had tried to quit by will-power, but without any success. About two months after

Digitized by Google

my healing in Christian Science I was prevailed upon to attend a Christian Science lecture. I became so filled with the truth which I heard, the inspiration of Life and Love, that I was raised out of mortal darkness into such a spiritual awakening that the desire for tobacco left me. I have never since for an instant had any craving for it, and my health is better in every way than at any previous time in my life. For these great blessings and many others, for the desire which I have to grow more spiritual every day, for the freedom and great rejoicing which I experience, for the protecting care and guidance of divine Mind, —for all these I am indeed thankful to God, and to our dear Leader, Mrs. Eddy.

W. L. CAVE, Frankfort, Ind.

It would be difficult to tell of all the demonstrations of healing we have had in Christian Science. It has been our only physician for the last four years. My first demonstration was over a burn, caused by spilling boiling fluid over my hand and arm. I at once declared the truth, and in less than a half hour all pain was gone and I went on with my work. A few weeks later our four children were taken with a supposedly infectious disease, and one of them had an attack which alarmed me very much. I was on the verge of going back to my old remedies, when suddenly the thought came to me that this was the time to test Christian Science. I then remembered that my sister had told me if I ever got in trouble when I was alone, to read in Science and Health. I did so, and I scarcely knew how long I had been reading when I thought of the sick boy. My surprise can be imagined when I found him sleeping peacefully, without any cough, and in a few days he had recovered from the illness. I remember how I rejoiced when I knew that the truth had healed him. After taking up the study of the Lesson-Sermons I noticed that the diseases from which I had suffered, such as stomach trouble, headache, etc., also fear and worry, were disappearing. For three years I was well and strong, but in October, 1907, I was taken sick with a fever, and being unable to meet it myself, I called upon my sister for help. She was with me two nights and one day, when the fever was broken. I then got up and dressed, and was soon in my usual health and have been ever since.

I consider Christian Science the greatest blessing that ever came to me, and my gratitude to God, to the great Wayshower, and to our dear Leader, Mrs. Eddy, is unspeakable.—MRS. ROSETTA K. CAVE, Frankfort, Ind.

It is with deepest thankfulness to God that I attempt to tell a little of what Christian Science has done for me. For years I was under a physician's care more or less of the time. My trouble was diagnosed as a chronic disease of the stomach, which had brought on other troubles, finally ending in a serious illness. During this last experience, I tried many material remedies. Physically, I seemed to gain a little, but the foundation of the trouble remained untouched. One Sunday I attended a Christian Science service, and just before me on the wall was this quotation: "Divine Love always has met and always will meet every human need" (Science and Health, p. 494). I realized that I was in great need, but did not then feel that I was ready to turn to God. When, almost a year afterward, a dear friend persuaded me to come to divine Love for help, my need was met.

Although the physical healing meant much to me, I am still more grateful for the spiritual uplift which has come. The Bible is becoming a new book to me, and I am finding my life as God's own child. It is my earnest desire that I may express my gratitude in each day's living.

ETHEL R. HULETT, Minneapolis, Minn.

I give my testimony with a heart filled with love and gratitude to God for all the good I have experienced in Christian Science. About two and a half years ago I was afflicted with an eye trouble. I consulted two local doctors, and both advised me to see a specialist, which I did. He told me that I would lose my eyesight. I then went to Kansas City to consult another oculist, who told me that both eyes were diseased, and he gave me a lotion to use which caused great pain. On my way home I saw a friend who was taking Christian Science treatment, and she asked me to go with her to a practitioner. I knew very little of Christian Science, but while she was taking her treatment the thought came to me, Why should not I be helped? I told the practitioner my troubles, and she said that I did not need to become blind; so I took treatment at once, continuing for one week. I then went home, my eyes being very much improved.

The healing was slow, but after five months of absent treatment my eyes were well. I have also been helped in many other ways; for one thing, of constant headache. I cannot in words express my love to God, and my gratitude to our Leader, Mrs. Eddy, for the many blessings I have received through the study of her blessed book, "Science and Health with Key to the Scriptures."

SIDONIA RAMMELSBERG, Ellsworth, Kan.

Trusting that my testimony will be of benefit to others, I feel that I should give it in gratitude for what Christian Science has done for me and my family. Last summer I was attacked with a trouble which was later diagnosed on two different occasions as a gall-stone. During the fall I kept getting worse, and the suffering at times was very severe, so much so that it was necessary to resort to hypodermic injections for temporary relief. After doctoring for two months or more without any benefit, but gradually getting worse and suffering more pain as time went on, I concluded I would try Christian Science, as I knew it had helped other people out of different troubles.

I was run down physically from this trouble and other complications which were brought on by it, and was greatly discouraged, as I had been informed by my physician that some cases lasted a couple of years without permanent relief, and I knew that many such proved fatal in the end. It was in this state of mind and in great pain of body that I made my first visit to a Christian Science practitioner. I received treatment, and as I felt easier, I was encouraged. I took treatment for something over two weeks, and was able to go to work thereafter, the trouble being gradually corrected through the understanding of Christian Science. Besides the treatments, I read daily in Science and Health, which was a constant help, as it was the understanding of Truth and the relationship of man to God that I needed. I was relieved of the gall-stone after two weeks' treatment, and three more treatments relieved me entirely of the other complications which were upon me. Since that time I have had good health, and have gained considerable in weight. Besides this we have had in our family several proofs of the healing power of Truth through the understanding of Christian Science.

My family and I are deeply thankful to God, and we wish to extend our gratitude to Mrs. Eddy for bringing to the world this wonderful truth. I can recommend any one in need of physical or spiritual help to seek it through Christian Science.—H. M. BATY, Los Angeles, Cal.

In grateful acknowledgment of the blessings that have come into my life during the past two years, I write this testimony, for I have had many proofs of the ever-presence of divine Love and have unbounded faith in this blessed truth. I shall never forget the first testimonial

Digitized by Google

meeting I ever attended—it opened up a new world to me. I felt very happy, for it seemed as if I had left all sorrow behind and that the future held only peace and happiness for me.

As one of the proofs that God is an ever-present help, and that Christian Science sustains us in times of great danger, I desire to tell of an experience I had during the summer of 1907. I started to light an oil stove, but in filling the tank I had unknowingly spilled some gasoline, and in an instant my hand was a blaze of fire. I tried to smother it with my apron, but the blaze flashed up and my shirtwaist caught. I struggled to put out the fire without letting any one know, but for a moment fear took possession of me, and I rushed out on the porch to call my neighbor. When she saw me in flames she became so excited that she could not come to my assistance, so I saw that my help was not there. The thought came to me that it would soon be all over, and what would become of my two little children! With the next breath I remembered that God is "a very present help in trouble;" and no sooner had I turned to God than I had all the help necessary. I ran into the yard, threw myself on the ground, and by rolling around extinguished the flames. The crowd which had gathered by that time found me perfectly calm, though according to material sense the injuries were very serious. When I asked that a Christian Science practitioner be called, strong men with tears rolling down their faces begged me to have a physician; but I said, "No, Christian Science is what I want." In a little while the practitioner came, and remained with me all night. It seemed advisable to have a physician administer a hypodermic when the burns were dressed for the first time, and his verdict was that I could live but a short time. Ten days later he called to inquire about the case, and remarked that all danger had passed and that the case was an exceptional one.

In thirteen weeks all the wounds were healed, and I was attending to my household duties as usual. My hands are without a scar, and there is no contraction or stiffness, although this was predicted for me, as being the usual result with burns. During the time I was unable to help myself, not only were my material wants supplied by my neighbors and friends, but the command to love one another was certainly obeyed by the Scientists. Every afternoon one of them would come and read to me from some of our Leader's works. The joy and peace this gave me is beyond expression. It seemed to me that every one was eager to help me out of my trouble. Science was always uppermost in my thought, and during the time the injuries were being dressed—which at first required three hours' time—my husband and I would repeat the "scientific statement of being" (Science and Health, p. 468), which was a great help to us. Although this experience seemed a terrible one, yet I rejoice that peace came to my troubled consciousness. Many lessons were learned during this experience, and the proofs of the brotherhood which Christian Science teaches were observed by my neighbors. They witnessed the true sympathy we feel for one another, and which helps us to see the unreality of evil.

I fully realize that I owe my life to Christian Science, and I am very grateful for the spiritual awakening and for God's constant guidance. I am also filled with gratitude to Mrs. Eddy, for leading us into this truth that heals the sick, binds up the broken-hearted, and reforms the sinner.—Mrs. Lizzie Miller, Houston, Tex.

In the hope that it will benefit some one, I wish to give my testimony through the *Sentinel*. Three years ago I was suffering from what one of the best physicians in Louisville pronounced very serious lung trouble, and his advice was a change of climate, as he said there was nothing else that could be done. I had been a constant sufferer from neuralgic and rheumatic trouble for years. As is generally known, when one is in this hopeless condition they try every remedy which is suggested, and this I did, but with no favorable results.

In this condition I turned to Christian Science, and was completely healed in two weeks. Since my healing I have not used any material remedies but am in perfect health and have not been absent a day from my desk. For this healing and for the spiritual uplifting I am very thankful to God, also to Mrs. Eddy for this truth which has led me and mine into a provable understanding of God's healing power.—W. D. Moore, Louisville, Ky.

About six years ago my little boy was taken seriously ill. The attack came on suddenly, about four o'clock in the afternoon, and by eight o'clock the conditions were very alarming. I did not know what to do at first, but I sent for a Christian Science practitioner and she came and treated him, remaining for three or four hours. Still the trouble did not seem to yield, and by that time I was so frightened that I asked the practitioner if I could call a doctor, and she said I certainly could if I wished to do so; but I did not, and she kept on treating the child. By one o'clock he was all right,—was well,—and the trouble has never returned.

I am very thankful to God for Christian Science and the peace we get every day from it, and I am grateful to our dear Leader, Mrs. Eddy, for bringing to us this saving truth.—Mrs. Harriet Hall, Prescott, Ariz.

After reading in the *Sentinel* so many good testimonies of healing, I feel it my duty to tell of what Christian Science has done in our family. To tell all it has done for us would take too much time and space, but what I consider one of the greatest blessings was the healing of our son, now fourteen years old, of lung trouble. He was taken ill, though I did not think it anything serious, but the next morning, very early, I found that he was unconscious, and did not know any member of the family (this was on Saturday). I immediately sent for a practitioner, who arrived about one o'clock and at once began to treat the boy; but in the mean time the child's father had become much alarmed, and he sent for a doctor. After the doctor had pronounced it a very bad case, we dismissed him and went on with Christian Science treatment, and by two o'clock in the morning the child was regaining consciousness. He kept on improving, and on Monday afternoon he was up and dressed and out on the porch, completely recovered; nor has he since felt any inconvenience from the trouble.

Mrs. Bettie Babcock, Waldron, Mo.

[Written for the *Sentinel*.]

THE "HIGH AND HOLY PLACE."

LYDIA B. MC KINLEY-HAY.

Pilgrim, dost seek the high and holy place,
Summit of glory, temple of God's grace?
Art humble, contrite, turning from earth's sin?
Lo! 'tis the vestibule thou'st entered in.
Then is the door before thee, opened wide,
The Christ, the way, the truth that never died:
Have faith in God, no man shall close this door:
Have faith in good, the spiritual, the pure.
Another step remains, e'er thou canst come
Up to the throne of bliss—thy heavenly home:
Step out from sin, and into holiness:
God's love will guide that step, thine effort bless.

FROM OUR EXCHANGES.

[*The Advance.*]

There never has been a time when more was said about science in religion than now. And yet there never has been a time when there was so much in the sphere of religion which was so unscientific as at present. Nothing could be more unscientific than for professors in theological seminaries to be trying to teach young men religious truth and doctrine when they do not know what they believe themselves; but not a few of them are making the attempt. Nothing could be more unscientific in its line than for the seminaries to be training men to preach and at the same time filling their minds with doubts as to whether they have anything to preach, and yet they are doing it. Nothing could be more unscientific than for preachers to go on preaching when they do not know what they believe, and yet there are those who are doing it.

[*The Christian Register.*]

This mystic way is the search for God, the abiding, indwelling God. A great hunger of the heart, an intense loneliness, a longing for perfection, led men to enter upon a course of life they believed would lead them to the living spring and the place of rest. In the worst and wickedest periods God-consciousness has been alive in men, transmitted from one to another prepared to receive the truth. No, the central fact of religion has not died out. It may flame at any moment in some great soul and kindle the world to new spiritual life. Let us not be too critical of the religious emotions we have never experienced, though we are in good and regular standing in the church. Let us not reject a new pattern of love and faith and devotion because it comes not within the measure of our little yardstick.

[*The Outlook.*]

The words of Christ, like the truth they convey, lie in a region beyond philosophy, science, the processes of education. They express the finalities for which we strive; but we are so encumbered with machinery, tools, and processes that few of us pass through the methods and stages of culture to the lucid heaven of attainment where he lived and the language which he spoke. We have gone so far astray that we have made skepticism, which is by its very nature a passing mood, the test of intellectual achievement, instead of faith, which is the irradiation of character by truth.

[Rev. W. C. E. Newbolt, M.A., in *The Church Times.*]

The sinless Saviour was plied in the desert with suggestions which appealed to body, soul, and spirit, and which left him as they found him, absolutely without sin. No, temptation comes to us because we are men, not because we are sinners. Temptation is an occasion out of which good may be evolved equally with evil. When we are tempted, we are tempted, we may say, to gain a spiritual advantage, as much as a spiritual harm. For a temptation which results in victory has left behind it not a stain, but a badge of honor.

[*The Universalist Leader.*]

To bring the whole human family to a state of willing obedience to the moral law, and thus into harmony with God the Father, is the end to which the efforts of all good men and women are directed. Now, the attainment of this end will not be realized without the energetic and persevering activity of good men and women in the work of substituting that which is true for that which is false in human thinking, and that which is pure and righteous for that which is evil and wicked in human action.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

The Publishing Society announces that the supply of the List of Members of The Mother Church has been exhausted, and that no additional copies will be printed for the present.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.
Terms of Sale, Postpaid to any Address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, Mexico, and Cuba, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. This pamphlet is also printed in German. 29 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

CHRISTIAN SCIENCE: ITS ADVANTAGE TO MANKIND. A Lecture delivered in London. By EDWARD A. KIMBALL. 46 pages.

CHRISTIAN SCIENCE: MAN'S DOMINION OVER EVIL. A Lecture delivered at Harvard University. By EDWARD A. KIMBALL. 28 pages.

ANSWERS TO QUESTIONS CONCERNING CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. This pamphlet is also printed in German. 50 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

MISCELLANEOUS PUBLICATIONS

BIBLES. Clarendon Brevier (01483 x), heavy faced, very distinct type, Turkey morocco, size 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.

Morocco cases, to hold pocket Science and Health and above Bible, may be had at $1.25.

Text Bible (01561 x), pica square type, Alaska seal, size 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price $7.50.

CHRISTIAN SCIENCE AND LEGISLATION. A pamphlet of one hundred and twelve pages, containing articles by JUDGE CLIFFORD P. SMITH, EDWARD A. KIMBALL, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. Single copies, 10 cents; twelve copies to one address, $1.00; twenty-five copies, $1.85; fifty copies, $3.50.

PICTURE OF THE MOTHER CHURCH. A half-tone reproduction, size 12 x 15 inches, mounted on a white mat 21 x 25 inches. Single copies, 50 cents; a dozen copies to one address, $4.50.

SOUVENIR POST CARDS, showing picture of The Mother Church, 25 cents per dozen.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9.00; per half dozen, $5.00. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each. Pocket Edition, size 4 5-8 x 6 5-8. Full Morocco. Per copy, prepaid, $3.00; Twelve or more copies to one address, prepaid, each, $2.50.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. One hundred and three pages. Illustrated. One copy, $1.50; six copies, $7.00; twelve copies, $12.00.

MUSIC. Three poems written by MARY BAKER G. EDDY, and used by special permission, have been set to appropriate music by WILLIAM LYMAN JOHNSON:

"THE MOTHER'S EVENING PRAYER." For soprano or tenor, C sharp to A; for lower voices, B flat to E. The arrangement for both high and low voice is printed in the same copy. 75 cents per copy; $7.00 per dozen.

COMMUNION HYMN—"SAW YE MY SAVIOUR?" Published in two keys, G and E, for high and low voice. 50 cents per copy; $5.00 per dozen.

"CHRIST MY REFUGE." Arrangement for high and low voice in same copy. 75 cents per copy; $7.00 per dozen.

REMITTANCES: Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago, or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request. We ask that no money remittances whatever be made to the Editor or Editorial Department. Address all ORDERS and REMITTANCES for literature named above to

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

FALMOUTH AND ST. PAUL STREETS, BOSTON, MASSACHUSETTS

All orders for the works by Mrs. Eddy should be sent with remittance directly to Allison V. Stewart, Publisher.

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . 5.00
Twelve or more to one address, each, prepaid . . 4.75
Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00
Twelve or more to one address, each, prepaid . . 5.75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy $5.00
Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid $2.25
Twelve or more books to one address, each, prepaid 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREED, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents per copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Comptroller of the Currency Murray, in addressing the conference at Washington of national bank examiners representing practically all of the territory east of Ohio, said: "I say to you emphatically that your work must be improved. Embezzlements have failed of discovery, defalcations and dishonesty have been concealed from you, and in many cases you have failed to estimate correctly or even approximately the value of the paper and the securities held by the bank. If getting fees from the bank is more important to you than getting information about the bank for me, then resign at once. If you are unable to discover the true condition of a bank, do not send excuses; simply send in your resignation and your commission for cancelation."

Admiral Sperry, commander of the Atlantic fleet, according to estimates made at the Navy Department, will have saved $75,000 in the coal consumption of the Atlantic fleet by the time it reaches the east coast of the United States from its voyage around the world. He has requested the Department to reduce by eight thousand tons his original estimate of the coal necessary for the fleet on the voyage from Manila to Hampton Roads. On the voyage from Hampton Roads to San Francisco a system of competition in the engine-room forces of the various battle-ships was instituted. This competition resulted in saving fifteen hundred tons on the trip, and was continued across the Pacific.

A bill to establish a National Children's Bureau was introduced in the United States Senate in the winter of 1905-6 at the request of the National Child Labor Committee. The bill did not come to a vote, although it received the hearty endorsement of President Roosevelt and Secretary Hitchcock of the Department of the Interior as well as of many members of both Houses of Congress. More recent reports from various Government departments emphasize the need for a bureau devoted specifically to the interests of the child. Such a bureau should investigate and report upon all matters pertaining to the welfare of children and child life.

Steam shovel No. 256, working on the Panama Canal at Matachin, is the champion digger of the Isthmus. It excavated 55,419 cubic yards of earth during the twenty-five working days in August. This represents as much space as would be enclosed by twenty-five city houses, thirty feet wide, forty-five feet deep, and forty-five feet high. Shovel No. 263 in Culebra Cut has the second high record for the month, having excavated 45,705 cubic yards of material in twenty-six days.

The constitutionality of the Oklahoma deposit-insurance law has been sustained by the Supreme Court of that State without dissent, and two more national banks have given up their national charters and taken out State charters,—making fifteen that have followed this course to secure the benefits of the deposit-insurance law in which Attorney General Bonaparte had decided that national banks could not lawfully participate.

Of the nine hundred and seven cities in the United States that have a population of five thousand or more, only ninety, or ten per cent, conducted playgrounds prior to 1908. During this summer one hundred and seventy-seven cities have had playgrounds in use, and one hundred and eighteen others are planning their immediate establishment.

The Georgia State Senate has passed the measure abolishing the convict lease system practically as it came from the House of Representatives.

The American Atlantic fleet left Albany, West Australia, on the 18th ult. for Manila, 3,649 miles away, where it was due to arrive Oct. 1.

International.

Representatives of Russia who are at present in Tokio have been instructed by the authorities at St. Petersburg to arrange with the Japanese for an agreement regarding pelagic sealing and the protection of the seal herds. The idea is to have Japan enter into the treaty existing between Russia, Great Britain, and the United States. A treaty has been practically concluded between the two nations whereby in the mean time sealing vessels will be prevented from hunting within thirty miles of Copper and Robben Islands rookeries. This is but half the distance of the prohibited zone in the Bering Sea under the Anglo-American sealing treaty.

More than four hundred cotton mills in Lancashire, England, were idle last week as a result of the dispute over wages between operatives and employers. This involves forty million spindles, more than $250,000,000 of capital, one hundred and forty thousand operatives, and $700,000 in wages a week. In view of the present glutted condition of the market it is not believed that this cessation of work will entail heavy damages to the employers. It is expected that the cardroom workers will soon agree to the five per cent reduction in wages, which already has been accepted by the spinners.

The Budget Commission of the Russian Douma met Sept. 28 to begin consideration of the budget for 1909. The extraordinary expenditures, such as the construction of the Amur and other railroads, the naval program, etc., will involve a deficit probably of about $75,000,000. Arrangements already have been made to cover this deficit by a foreign loan. The ordinary budget follows closely the lines of 1908. Economy will be observed in every department.

The German and Italian governments have requested that another peace conference be convened at The Hague. The last one recommended that a third conference should take place within eight years at a date to be fixed by common agreement among the Powers, and that the program should be prepared far enough in advance to insure that its deliberations might take place "with indispensable authority and rapidity."

The municipal street railways of Huddersfield, England, show a gross surplus for the year of $200,269 out of a total income of $412,212. After paying interest on capital, and providing for redemption of debt and depreciation, there was a net surplus of $31,700, which was turned into the city treasury for reduction of taxes.

The Chinese government is about to send two commissioners to investigate the question of the railway administration in the United States. In recent years there has been considerable railroad building in China and there are many questions that require consideration in their administration.

The new Turkish Council of Ministers has been approved. The Council will provide bonds for about $25,500,000, bearing interest nominally at four and a half per cent. This loan is for immediate necessities.

Andrew Carnegie has decided to found a "hero fund" in "his native land," and to this end is about to hand over to trustees the sum of $1,250,000.

Industrial and Commercial.

Cotton stalks, hitherto discarded, are to be used in the manufacture of paper. After many years' efforts, experts have devised a method for using this waste product in making pulp and paper of a good commercial quality. The cotton-stalk paper can be made on any regular paper machine. It is contended that the fiber in the stalk and limb of the cotton plant is considerably stronger than spruce wood fiber and that it is almost as strong as the fiber of the flax plant. Comparing the cost of production of cotton-stalk paper with that of straw paper, it is estimated that cotton-stalk paper costs $14 a ton, straw paper $18.35, while ground wood as stock for paper manufacture costs from $18 to $20 a ton, and bleached sulphite costs from $50 to $60 for the domestic and considerably more for foreign stock. From a compilation of statistics regarding the best fibers for paper making it has developed that cotton stalks make the finest paper for book work, and that paper so made is more lasting and durable than paper from any other material.

The first wire of the thousands of wires to be made into the four cables for the Manhattan Bridge over the East River, New York City, has recently been stretched. The four cables will contain 9,472 wires each, or 37,888 wires in all, each wire being three-sixteenths of an inch in diameter. There will be 23,100 miles of wire used in the construction of the bridge, weighing 12,637,000 pounds and costing $1,567,125. Each cable will have thirty-seven strands, each composed of two hundred and fifty-six wires, and will be completed inside of a year.

The Twin Falls North Side Land and Water Company has awarded a contract to the Carnegie Steel Company for twenty-six miles of steel rails for the construction of a railroad in Idaho. The contract is worth $70,000. The concern will build a railroad between Gooding and Jerome, Ida., for the purpose of penetrating the company's irrigation tract in the vicinity of Jerome. The line will connect with the Oregon Short Line at Gooding.

The Grand Trunk has inaugurated a passenger service over six hundred and sixty-six miles of track from Winnipeg to Wainwright. The territory served is rich in farming possibilities, and most picturesque in places.

The Census Bureau's cotton report shows a total of 4,575,438 running bales consumed in the United States during the year ending Aug. 31 last. The total number of spindles was 27,845,531.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

A THOUGHT OR TWO CONCERNING OUR THINKING.

HON. CLARENCE A. BUSKIRK.

THE habit of censorious thinking about others may become a pernicious one, and it is altogether too common. Of course, if one prefer to do so, he may find spots even on the sun, and decline to appreciate the sunshine. Byron once wrote:—

A man must serve his time to every trade
Save censure—critics are all ready-made.

"Judge not," are words of highest authority. Rightly interpreted and rightly applied, they embody a great lesson which the majority of us need to study most carefully. Are we ever perfectly sure that we are capable of judging another person with exact equity? Are we not more or less incapable of discerning all his motives, all his ways of reasoning, all his difficulties, all his besetments, all the influences surrounding and affecting him? May we not even misinterpret his actions and words at times, which are overt, as well as his motives and impulses?

Hate and love are antipodal to each other in effects as well as otherwise. Love is harmonious and healing; hate is discordant, and causative of sin, of disease, of death. Does not a censorious judgment of another person express more or less of hate, and therefore is it not essentially of a nature which makes it sure to harm its possessor even more than the person against whom it is directed? "Love one another" is an injunction for the benefit of him who loves as well as him who is loved. A loving thought (of course I mean the thought which is a reflection of divine Love) is kinetic. It blesses, it purifies, it uplifts, it heals. But a condemnatory thought, when directed against a person instead of being directed impersonally against error, helps no one and is liable to harm its object. Let a husband, for example, indulge the habit of frequently criticizing some unpleasant peculiarity of his wife, or let a wife do this in respect to her husband; let this become a fixed mental habit, even if there be no censorious words, looks, or gestures to cause anger or irritation, and a discordant condition of thought is likely to be aroused and fed, on the part of both husband and wife, which is inimical to physical health as well as to happiness. When understood to apply, not to our faults themselves, but to us as persons, it seems that there is true Christianity in the old rhyme, which reads somewhat like this, as I recall it:—

Be to her virtues very kind;
Be to her faults a little blind.

We may realize that harsh words and harsh conduct can harm our families, our friends, our acquaintances, ourselves; but do we sufficiently realize the cruel and baneful effects of habits of harsh thinking? One who gets into the habit of carrying around with him a quiver filled with arrows poisoned with hatred, will soon become known as a nuisance to others and to himself. We can habitually carry about with us an offensive, irritating atmosphere, and so be shunned by others, or we can carry about with us the sweet and energizing atmosphere of loving thought. The beneficent thought-habit which comes through obedience to the admonition, "Love one another," is well described in the beautiful words of the great dramatist in describing mercy:—

It is twice blest:
It blesseth him that gives and him that takes.

In conclusion, let us consider what is the habit of thinking which is most assiduously to be cultivated. Is it not the optimistic habit—the habit of cheerful, serene, contented, courageous thinking which comes to us from obedience to the blessed injunctions of Jesus, the maintenance of faith in God as our constant consciousness? And how, in the face of the disappointments and disillusions, the sorrows, worriments, defeats, fears, disasters, and their like, which seem to confront us so often, shall we be able, in a practical and provable way, to attain this high and joy-inspiring trust in God and in His ways? Is it not through seeking to understand God and to realize His actual immanence and sovereignty over all? If one can come to a vivid, daily understanding and realization that there is a supreme, all-powerful, all-wise, ever-present Being, who is Love, Life, Truth, who is always absolute loving-kindness, who is always the divine Principle of all existence, who is always true and good, and never false, cruel, capricious, revengeful, unjust, unkind,—if one can come to such a blessed understanding and realization, and clearly recognize the falsity of all appearances and beliefs which seem to testify to the contrary, then obedience to the command of Jesus to have faith in God is sure to follow. But how can it follow if we have a different belief in respect to the Supreme Being? Outside of the teachings of Christian Science, where do we find any modern religious or philosophical teaching which can lead us into this blessed understanding and realization?

In order to retain, as well as in order to get, this high habit of thinking, we need constantly and faithfully to do good; hence we need that habit of thinking which makes the duty of doing good a perpetual presence in our consciousness.

Let me here pen a verse which seems to me to illustrate, from one aspect, the value of doing good as a help to thinking good:—

The dreamer of dreams in the daytime,
In a world that seems rude and awry,
Grows sadder from life's disillusions
As the darkening years go by;
But let him become a doer of deeds,
With something to strive for and gain,
His dreams will be changed into visions heroic,
And victory banish his pain.

WHAT IS TRUTH?

REV. W. H. DODD.

JESUS' declaration, "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free," is very frequently quoted by Christian Scientists. Lord Bacon begins his essay on Truth with the remark that when Pilate jestingly asked, "What is truth," he did not stay for an answer; but while this great philosopher discusses the comparative merits of truth and falsehood, he brings us no nearer the solution of Pilate's query. This question has been indeed the question of the ages. It is answered, however, by Jesus in a way that is at once convincing and satisfying, and it would be well for all who are seeking the truth to look for it in the light of his teaching, for the words quoted above will answer the question satisfactorily for all who believe on him to-day.

That which Christ Jesus named "my word," defined the realm, scope, or kingdom of Truth. He declared that the truth is included in the word which is distinctively characteristic of his teachings. His word expressed God, and God is the fulness of truth. If we would know the truth, we shall find it in harmony with Jesus' word, for it is nowhere else to be found. And what was the word which was characteristic of Jesus' teachings? What peculiarity separated that word from the teaching of the rabbis of his time? The word is the expression of thought, and in his thought Jesus practically recognized God as man's helper, his creator, omnipotent, omniscient, God, good, was to him All-in-all. Mrs. Eddy says in Science and Health (p. 52), "The 'man of sorrows' best understood the nothingness of material life and intelligence and the mighty actuality of all-inclusive God, good." His word was the consistent expression of this thought, and in this it was characteristic of all his work; but the world, asleep in the belief of matter, did not know or obey his word—it could not see things from his standpoint. Mrs. Eddy adds, "His master was Spirit; their master was matter. He served God; they served mammon. His affections were pure; theirs were carnal" (*Ibid.*, p. 52). The Master offended their material beliefs,—his word, being the expression of Spirit, is contrary to many of the world's most cherished ideals. From Jesus' standpoint the most noble are those who see God, and the condition of seeing God is purity of heart. Entrance into the kingdom of Truth is to the loving, the meek. Material thought does not accept this teaching, and is therefore barred from the kingdom, for Jesus' words imply the direct conclusion that whatever is not in harmony with this word is of error or untrue.

The boundaries of Truth's realm are defined by Jesus' word. Further, the practical expression of his thought was, "Preach the gospel;" "Heal the sick." When he sent forth the twelve and again the seventy, his commission was to preach and to heal. His word in respect to healing does not include a single appeal to drugs, hygiene, or medicine. His dependence was wholly upon God, Mind, Spirit. He healed through the power of Spirit, not matter. Had he depended upon material remedies he would have instructed his students as to their use. This word of the great Teacher, "Heal the sick," has never been abrogated, withdrawn, nor disannulled, and surely none of his disciples are justified in denying or disregarding such an important and imperative portion of his word.

These words of Jesus declare also the condition of knowing the truth,—"If ye continue in my word." This suggests the thought that the task before the searcher for the truth may not be an entirely simple one. At times circumstances and occasions may arise that would tempt one to turn from Jesus' word. The rediscovery of hid treasures may mean toil and sacrifice. The rich soil has within it promise of a bountiful harvest to the husbandman, but it means labor, effort, and patient waiting before the grain is garnered into the storehouse. On the mount of transfiguration the disciples caught a vision of the real, but a long road lay before them ere it became a constantly realized experience. In one place Jesus speaks of the condition of discipleship as the taking up of the cross and following him. The Christian Scientist is engaged in a warfare, not against flesh and blood but against "principalities and powers." He must learn each day to deny every belief that is not in harmony with the "word." He must learn to recognize the voice of Truth, and refuse to follow the "stranger." By denying every suggestion of failure, overcoming every apparently discouraging circumstance, he meets all the subtle workings of error. By holding fast to Principle he continues in the word of Christ. Every promise of the word is "to him that overcometh." Through this experience in overcoming does Truth become not merely a matter of faith and hope, but of absolute knowledge, and the student enters into his inheritance of Truth demonstrated. The demonstration of Truth is freedom from bondage, the bondage of error.

In the presence of Jesus' word the fetters must fall and the "rights of man" be fully "vindicated" (Science and Health, p. 225). Jesus himself demonstrated liberty from every form of error, through the power of the word, and it is our inheritance to follow in the footsteps of the Way-shower. Through the teaching of their text-book Christian Scientists are learning the way.

What an inspiration and demonstration has been the life of our beloved Leader, Mrs. Eddy, though in an infinite variety of ways the so-called powers of evil have tried to swerve her from her steadfastness. How simple and free was her vision that she was able to discover Christian Science. How steadfast has she been, how loving, how loyal to Truth, until one form after another of error has fallen. Every shaft barbed with the venom of lust, pride, self-will, envy, hatred, bigotry, or ignorance, has been turned aside. Mrs. Eddy holds her position as the Discoverer and Founder of Christian Science, and every spasm of error that would seek to deprive her of her rightful place will but the more clearly reveal what that position is. Christian Scientists are unmoved by the attacks against their faith and Leader, because theirs is a demonstrable religion and they prove Christian Science to be the truth that sets free. "And let us not be weary in well doing: for in due season we shall reap, if we faint not."

THOUGHTS FROM A DISTANT FIELD.

HUGH MORETON FREWEN.

A TRAVELER in the heart of tropical Africa frequently feels appalled by the sense of separation from the ties of his childhood and his race, and if he allows himself to brood upon the supposed dangers which surround him, his attitude toward circumstances and his fellow-men becomes colored by a sense of fear and uncertainty. The student of Christian Science, however, when in these wilds feels himself near home, for in the quiet domain of nature the spiritual light is made manifest even more clearly than in the atmosphere of crowded cities, and a primitive order of life carries us straight to the fountain of Truth.

When attuned to the infinite goodness around him, one learns the secrets of the plain and of the woodland, the music of harmony echoes among the waterfalls, and the distant hills are veiled in the blue of heaven. Wonderful indeed are the lessons written by the hand of God for him who has eyes to see and ears to hear. While trekking across country, not long ago, I noticed a beautiful orchid growing in the long grass. It was a wonderful *Cattleya*,

Digitized by Google

and but one of its many blooms would have fetched in England a considerable sum of money. There it grew,—in its rare beauty a treasure in the field, a symbol of lavish plenty and of the ever-presence of divine Love.

For three miles around this town from which I write, Zungeru, the capital of Northern Nigeria, there is a game-preserve, and the little ourebi, roan antelope, and gazelle will frequently come and look through the palings into the grounds of Government House. Often, too, they are to be seen at play on the outskirts of the polo-ground, and neither horse nor horseman seems to disturb them in the least. They are a delight to all. Do they not afford us an example of the joy which will come to all through the conquest of the demon fear? Their trustfulness and joy and health are a standing rebuke to those of us who do not behold God reflected in everything.

Christian Science shows us the best means of dealing with a primitive race with certainty of success. As the spirit of our time, or rather let us say the spirit of eternal Truth, sweeps across the earth, the old method of ruling the "subject races" by fear is passing away, and true Christianity is substituting in its place the rule of Love. Missionaries in past years have preached this as a theory with but small measure of success. While teaching equality and universal brotherhood, they were apt to give the native credit for lying and thieving, and even cannibalism, and there is no doubt that from the mortal standpoint the impeachment was justified; but to hold these thoughts about him without a recognition of man's true being, was to attribute to him a separation from Truth, which should be denied rather than admitted, and which belied their own professions of faith.

To-day our course is clear. One by one the mental pictures of moral depravity engendered by mortal mind will yield to the sunlight of Christian Science. Wherever we may meet with them, in Christian or in pagan lands, they will be destroyed by the understanding of the grace of God and man's likeness to God. By meeting wrong thoughts in the right way the Christian Scientist knows that he has deprived them of the power of translation into action. Every day, every hour, the honest mental worker is raising the moral status of all mankind; and in a land like this, among primitive people, it is the experience of those workers who are now in the field, that the simple savage is peculiarly amenable to the gentle influence of divine Love, and answers readily to the healing truth revealed in Christian Science.

LOVE THE LIBERATOR.

JOHN E. FELLERS.

On page 225 of Science and Health, Mrs. Eddy says, "Love is the liberator." This is a plain, unqualified, declarative statement from one and by one who knows, and it is made to a suffering race that needs to know; but there are two facts suggested by this short statement of four words, which until recently had escaped my attention. First: "Love is the liberator;" not has been or will be, but *is*. Second: Love is not one of the liberators, nor a liberator, but *the* liberator. Jesus expressed the same general thought when he said to his disciples, "Ye shall know the truth, and the truth shall make you free;" but the fact that "Love is the liberator" and that the truth makes free, standing alone as a fact, is not enough. We must *know* that Love is creative, active, alterative, operative, reformative, corrective, regenerative, redemptive, constructive, illuminative, imperative, positive; then indeed is "Love the liberator." In like manner the truth makes us free when we know the truth.

A few years ago a large elephant was brought to the zoological gardens in one of our eastern cities. He had but recently been reclaimed from the forest and his natural wildness and shyness indicated to the keepers of the garden that he should not at once be given the full freedom of the park. Accordingly he was kept in chains for a number of years, very much longer, in fact, than was necessary, because elephants are usually very intelligent and are easily domesticated; but the animal's bondage was perpetuated either by the neglect or the thoughtlessness of the keepers, the limit of his abode being the circumference of the circle in which he lived from year to year. Finally the keepers concluded to set him free. They took off his chains, but to their surprise they could not lead, coax, nor drive him out of that circle. The habit of monotonous confinement to that limited abode had become so strong that when his keepers urged him beyond his old limitations, he would stand, with apparently sullen defiance, swinging his heavy head back and forth as if in mute protest. He had accepted the conditions and limitations for years, and was satisfied with them; he did not care for larger fields. In fact he did not know that at last the keepers were his friends and were now desirous of giving him wider range. Neither did he know that he was free, and not knowing this fact, he was as truly bound as before his chains had been taken off.

The manifest stupidity of the elephant may provoke a smile, but can we say with assurance that we fully appreciate and realize the freedom which Christian Science has brought to us from the habits that have limited our lives and opportunities throughout our brief years? Do we not often seem to be standing still in a sort of sullen submission, ignorant of our freedom until we have exercised what we already have? Do we realize that, having a part, the whole must be somewhere, and that some time we must account for the unused talent? The gleams of understanding we now have hint strongly to us the greatness and fulness of the Love that liberates, just as the minutest parts of the house in which we live give intimations of the wealth of mine and forest from which they were taken. Are we seeking as we should the liberty which was promised by Christ Jesus, and which may be demonstrated to-day through the teaching of Christian Science?

THE UNITY OF SCIENCE.

FRANK P. EBERMAN.

As one advances in the thought of Christian Science, he becomes more and more impressed with a sense of enveloping, inclusive oneness, inexpressibly satisfying to human aspiration. The one demand we intuitively make on the truth is harmony. Any new proposition, before it may take a place in the sacred halls of demonstrated truth, must abide comparison with every other truth of the household. A tittle of disagreement disbars it. Disharmony is a stranger in the entire domain of Truth.

This intuitive demand for unity is common to the farmer aspiring to perfect his herds in conformity to a certain ideal, as well as to the realm of philosophic investigation which would discover the universal cosmic law and unfold the riddle of the ages. The pathos of the situation is felt when we consider the earnest men and women whose ceaseless labors in the fields of "natural" science have failed to place them in touch with the great life of humanity waiting without, imploring, patient, hoping against hope in the newest revelations of microscope, "culture," and scalpel. Sage and scientist, agreeing on the supreme importance of discovering this universal law of life, have pursued the elusive forms of matter from atom to ion and to [illegible]my force, until the "baseless fabric" of this vision threatens to vanish and "leave not a rack behind."

To the Christian Scientist this concept of oneness, which has so cruelly coquetted with human longing de-

Digitized by Google

spite the love-knots of centuries, comes quickly: and the Christ says, "My reward is with me." Says Mrs. Eddy in Science and Health (p. 467), "The first demand of this Science is, 'Thou shalt have no other gods before me;' " and the Christian Scientist takes this as the lineal, literal, and blood-descended Word of God, traceable in the trial and triumph of every righteous man and woman from Genesis to his Leader. In the light which she has radiated he sees that this God is Spirit, Mind, freed of every animal taint. He has grasped the infinite thought, and the only condition of his advance to infinite possibilities is fidelity to his promise. Nothing but wrong motives on his own part can thwart him.

This idea of Spirit, its oneness and omnipotence, may at first appear as an abstraction, and devoid of determinative quality; nevertheless, it is the "sound of abundance of rain," and although he may have directed an anxious and disappointed gaze many times to an unanswering and brassy sky, yet the "little cloud . . . like a man's hand" will appear and grow until its refreshing showers, blessing first the parched places of his starving thought, envelop the whole earth in their benediction, and he finds "good in every thing."

It is the growth of this thought of unity and harmony that puts the Christian Scientist in practical and sentient touch with all human conditions, develops the divine qualities of justice, mercy, wisdom, and goodness, makes his brother's burdens his own, causes him to see in the flesh a common enemy, purifies sense and self, teaches him to seek happiness in doing good, envelops him and the world in an idealism of Love, and endues him with a consciousness before which all evil seeks the oblivion of its own darkness.

THE UNREALITY OF MATERIAL SENSE.

L. L. KIMBALL.

In striving to gain such a clear sense of the unreality of the material world as to enable one to grow into at least a partial realization of it, Christian Scientists often allude to this human experience as a dream; and our beloved Leader refers many times in her various writings to the "Adam-dream." The difficulty of putting aside sense testimony and turning away from a belief in the seeming to a realization of the truth of Mind's creation, has been somewhat lessened for the writer by a recent dream, and it is with the earnest hope that what follows may help some other traveler to climb over this stumbling-block, that the experience is written.

With that inconsequence which is characteristic of our experiences during sleep, I found myself standing on a wide shelf-like flooring in an enormous brick building. The floor did not reach to the fourth side of the inside wall, so that from this great shelf-like place I could look far down to the first floor of the building, where horses, wagons, and men were seen. The sense of shrinking away from the edge of the shelf was most distinct, and I drew back from the place whence I had looked down, with a shudder. The only person who seemed to be on the shelf with me was a casual acquaintance, and presently, for no apparent reason, I flung my handkerchief out over the edge into the large open space, and again I shivered and felt a throb of nausea as I made some comment to my companion on the horror of falling from such a height.

After a few moments we spoke of going down to the ground, and she called my attention to a small door over in one corner, which on being opened revealed a dark and narrow spiral stairway made of iron and entirely cased in. We discussed the smallness, inadequacy, and darkness of this mode of exit from our shelf, but finally decided that we must use it, since no other way of getting down was apparent. We stepped through the small door with some reluctance, my companion going first, and began to descend. The chill of a small iron hand-rail struck me as I took hold of it, and I noticed that the top wall of the staircase was made of a rough gray mortar and seemed quite near my head.

Having made a few turns on the spiral stairway, I became conscious that the space seemed to be growing less and less. I knew that the bottom must be a long way off, and I felt rather uncertain of my ability to get through a yet smaller space. I paused, and just then my companion called to me from below to say that she could go no farther. I replied that we must return, as I could hardly breathe in that close air and could move only with difficulty. I think I took another step or two down, for when I tried to turn about I was bent quite far backwards in my effort to avoid striking my head against the wall above me. I leaned against the iron stairs at my back, and felt their cold, unpleasantly sharp edges press against me as I lifted my bare hands to the wall, which was cold, damp, and very rough to the touch: I felt the hurt to my palms as I frantically pushed against it, and I thought to myself that it was as immovable as the eternal hills. Nothing has ever seemed more real to my waking sense. In the desperate struggle to release myself I wakened, and for a time I was unable to readjust my ideas: but presently I became convinced that I was really in my own soft, warm bed, while the wretched place and the companion I had just left were—where?

Many times since that night, in striving to overcome a sense of pain or discomfort or evil, I have thought, "This is no more real to you than the iron, the plaster, and the cold of that dream; why accept this as true, if you deny the truth of that?" And the thought has been unfailingly helpful in proving that a seeming reality can be clearly comprehended as a mere belief. Shakespeare avers that "we are such stuff as dreams are made on." Was he, then, unknowingly, a Christian Scientist? For of what are dreams made but unreality? Of what was that solid wall made? In what place had those bricks and horses and men existence? What machinery erected that iron stairway?

Of course any comparison between sleeping and waking dreams fails to present a perfect analogy, since in sleep we are seemingly unable to command that choice of conditions which is constantly exercised in our waking hours, and since our sleeping dreams do not present the constant or uniform similarity of experience known to us in our waking state; but in so far as it may be applied to our sense of those instantly constructed creatures and things met with in sleep, and to our sense of the objective creations of mortal thought in waking, the analogy holds. For if, to the human sense of things, we can create such a vivid, sensible reality during sleep, and on waking so easily dispose of it by calling it a dream, it is entirely conceivable that the same human sense of things can, in waking, construct the whole material concept of things, with its sequents of sickness and of sin, its hateful problems of disease and death, and, upon accepting and realizing God's spiritual creation, find that this material sense, too, is of the nature of a dream. It is our privilege to know that the truth of being is unaffected by the mortal dream and that it is forever harmonious.

RIGHT THINKING.

J. J. MASTERSON.

In the twelfth chapter of Numbers it is related that Aaron and Miriam became angered and spake against Moses because he did that which was contrary to their views; and they began to reason among themselves, and

Digitized by Google

said, "Hath the Lord indeed spoken only by Moses? hath he not spoken also by us?" Here we see self, pride, and envy shutting out from these people the spiritual understanding which enables us to separate between the human and the divine, the real and the unreal. They were not able to separate between the personal Moses and the truth or knowledge of God which was revealed to Moses, and which knowledge Moses tried to make clear to his people. The Bible states very clearly that this sense of jealousy and envy displeased God, and that immediately Miriam became white with leprosy. Then Aaron, repentant for the foolishness and sin which had brought such sudden and terrible punishment, appealed to Moses to heal her; and we read that Moses besought God, and that she was healed.

Is it not plain that history is repeating itself? Is not the world saying, Who is Mrs. Eddy that the truth should come through her? Are we not as good as she? Are not the prayers of our clergymen and other good Christian people as efficacious and fervent as hers? Why did God let His children wait so long, if this which she has written is the truth? Herein we see mortal mind or envious humanity blindly reasoning, and failing, like Aaron and Miriam, to discern the truth which has been revealed to her as it was to Moses, and which she also is giving through her writings to the world.

We find also, in the book of Samuel, that it was Saul's envious thought of David that eventually cost the former his throne; and it was the envious thought of the Hebrews which shut out from them the great truths which our Master, Christ Jesus, tried to teach them. It was their envy which brought forth the remark, "Is not this the carpenter's son?" "Can any good thing come out of Nazareth?" and finally it was this envious thought which brought about his crucifixion, and this false belief lost to the Hebrew people the liberator of their race. As we advance in the study of Christian Science, how true we find the teachings of the Master and our Leader to be. And when mankind wakens to this great fact and is governed accordingly, sin, sickness, and death will finally disappear. Jesus advised his followers to "watch," and our Leader advises us to "stand porter at the door of thought" (Science and Health, p. 392).

Humanity is longing for the great truth discovered by this grand woman, and this was proven to me recently in the following incident. While boarding a ferry-boat on the New Jersey side bound for New York, I was asked by a gentleman of eighty years to guide him. In the course of conversation he stated that he was almost blind, and as did we, before we understood something of the teachings of Christian Science, he believed that God for some unexplainable reason had decreed his affliction. I discovered that he was a faithful Bible scholar and could quote Scripture quite fluently. We had quite a lengthy conversation, and after many points of the Christian Science teaching had been explained to him he said, "Thank God that a new interpretation of the Scriptures has come, for surely Christianity as materially expounded is fast losing its hold on humanity." My heart went out in deep gratitude to our Leader for her firm and unswerving stand for Truth, and I said in my heart that some day all would acknowledge her great work for mankind, from the least even unto the greatest.

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be Nov. 6, 1908. Applications should be in the hands of the Clerk of The Mother Church on or before Oct. 21, 1908. Application blanks may be had by addressing William B. Johnson, C.S.D., Clerk, at the church edifice, Falmouth, Norway, and St. Paul Streets.

THE LECTURES.

WALLA WALLA, WASH.

Frank H. Leonard of Brooklyn, N. Y., addressed an appreciative audience at the Keylor Grand Theater last night [May 8] on "The Demonstrable Religion." In introducing the speaker, Attorney E. F. Barker said in part,—

One of the new thoughts of this age is that of Christian Science. I do not understand Christian Science. I have given it no study, but a large and growing class of intelligent men and women of our country have studied this subject and made its teachings a part of their lives. They pronounce it good, and their lives bear witness of its virtue. This ought to warrant a careful consideration, and we are here on this occasion to learn something of this subject.—*Daily Union.*

STERLING, ILL.

Last evening [Sept. 18] a large number of Sterling people went to the Academy of Music, where they listened to an interesting address on Christian Science, delivered by Bicknell Young of Chicago. The meeting was presided over by John Stager, a prominent attorney, who introduced the speaker, saying in part,—

But little more than a quarter century ago a new church was organized in this country,—a new church, but founded on an old religion, a religion claimed by its Founder and followers to be a religion for the body as well as for the mind and soul. From its inception the Christian Science Church has enjoyed rapid growth in the face of widespread antagonism. All great principles, when new, were met with opposition, and the more radical the idea the stronger the opposition, no matter whether the question was one of government, mechanics, medicine, or religion. It has been so in the case of Christian Science. Just as these other principles have been decried without being investigated, so, as a rule, those who criticize Christian Science do so because they have accepted hearsay rumors that it was all wrong, and have not sought to have their first impressions, received from unreliable sources, affirmed or corrected. People are becoming more charitable, however, toward those whose ideas differ from their own, and they have learned beyond dispute that Christian Science has accomplished wonderful things. They cannot deny that those who profess the Science religion live beautiful lives.

The Sterling Standard.

LECTURES AT OTHER PLACES.

Asbury Park, N. J.—Frank H. Leonard, Aug. 16.
Camden, Me.—Miss Mary Brookins, Aug. 30.
Dover and Foxcroft, Me.—Frank H. Leonard, Sept. 1.
Calais, Me.—Frank H. Leonard, Sept. 4.

A NEW PAMPHLET.

Orders will now be received for "Prophecy: Fulfilment: Revelation," and other articles, by Charles Adolphus Murray, Seventh Earl of Dunmore. This pamphlet is composed of articles contributed by the late Earl of Dunmore to *The Christian Science Journal*, *Christian Science Sentinel*, the *New York World*, and the *Cosmopolitan* magazine.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25.

SELECTED ARTICLES.

[From *The News and Courier*, Charleston, S. C.]

At times *The News and Courier* has intimated some skepticism as to the teachings of Christian Science, but in fairness to the cult we print the following statement of facts, for which we are prepared to vouch. After teaching school at thirty-five dollars the month for about twenty years, a lady's health failed and she became a physical and nervous wreck. Although she had no faith in Christian Science, she was visited by a "healer." She was soon cured, and since that time, seven or eight years ago, has been receiving a salary as school-teacher of twenty-two hundred and fifty dollars a year, and has been sent to Europe to spend her vacations, all her expenses being paid.

[Frederick Dixon in the *Sydenham Gazette*, Deptford, S. E. Eng.]

Our critic closes his last letter with the famous warning of Timothy against "science falsely so called." It may be incidentally remarked that as science does not happen to be the exact rendering of the Greek text, as may be seen by consulting the Revised Version, the quotation is scarcely so appropriate as he had hoped; indeed, I am afraid he scarcely recognizes that it has been used *ad nauseam* against precisely that kind of knowledge which he himself regards as scientific. All this, however, is by the way. For centuries people have been using these warnings of the New Testament against everybody with whom they have chanced to disagree, precisely in our critic's manner. They have, in short, been so particularly busy in pointing out the things their neighbors ought not to have done as to have curtailed seriously their own opportunities for doing the things they themselves ought to have done. The Christian Scientist recognizes this. Perfectly convinced of the truth of Gamaliel's great apothegm, he devotes his energies to the incessant struggle with all that is unlike God, and is never found writing to the papers to point out his neighbors' shortcomings. The Christian Scientist has become a Christian Scientist because he is convinced that the teaching of Mrs. Eddy, as given to the world in Science and Health, is at once the most beautiful and the most practical which he has ever known. That teaching, Mrs. Eddy herself has insisted, on nearly every page of Science and Health, is the teaching which Jesus gave to the world almost two thousand years ago; and when our critic explains that Christian Science was born centuries before Mrs. Eddy was thought of, he is merely offering conclusive evidence of the fact, which could never have been a secret to any Christian Scientist, that he has never properly read Science and Health.

This healing power, our critic may be quite sure, will never be demonstrated by means of giving a child a thrashing in order to prove to him that there is no pain. A Christian Scientist who thrashed a child by the way of proving that there was no sensation in matter could not possibly have an existence anywhere outside our critic's imagination. He is evidently confusing the teaching of Proverbs with that of the Gospels. Jesus said, "Suffer little children to come unto me, and forbid them not," but he nowhere suggested what is supposed to have been the advice of Solomon. Solomon believed in the theory of sacrificing herds of cattle to propitiate God, who was held to have created these cattle, and so, possibly, he did approve of inflicting pain on man held to have been made in the image and likeness of God; Jesus overthrew the tables of the money-changers and the tables of those who sold doves, and in so doing turned human thought from the idea of inflicting pain as a means of worship or government towards a truer understanding of God, who is Love.

Our critic quarrels with Christian Scientists because he says that the God of Christian Scientists "has no shape." The God of Christian Scientists is infinite, divine Love, and it is beyond any Christian Scientist to confine infinity to shape. He will probably find that giving a shape to God ends in anthropomorphism, it ends in setting up a Jehovah with the form of a man and the passions of a man; a Jehovah who can be appealed to with the blood of goats and rams. Christian Science has come to make new again the old teaching of the New Testament. It is doing this by teaching men to overcome "the lust of the flesh, and the lust of the eyes, and the pride of life" in themselves rather than in their neighbors, and it is certain that just in the proportion in which this is done will man truthfully be able to say, "The kingdom of God is within you."

[E. M. Ramsay in the *Dunfermline* (Scot.) *Press*.]

In your issue of Aug. 22, you quote from *The Hospital* of Aug. 1 a short passage on the kind of person who takes up Christian Science; he is described as of a neurotic and emotional type. That people of this type have found the peace, the strength, the poise and stability for which they have so long and vainly sought, at last and alone in Christian Science, is undoubtedly true, but experience shows that neurotic and hysterical people are not more easily helped by this means than are those who suffer from so-called organic troubles. The fact is that while the public at large are beginning to admit that Christian Science heals, they insist on attributing these cures to some form of suggestion; and starting on this assumption, they declare that only nervous and functional disorders can be got rid of by this means. Christian Science, on the other hand, maintains that all illness, poverty, sin, and misery are the effects of erroneous, confused thinking, resulting from a false estimate of God, man, and the universe; that what is needed is to "know the truth," that is, to have a clear, scientific understanding of the absolute, underlying reality of all things, as opposed to mere appearance and superficial seeming. Mrs. Eddy's book, "Science and Health with Key to the Scriptures," is showing us that the utterances of the great Master are not merely beautiful poetical sayings, appealing to the heart and imagination, but statements of scientific truth as demonstrable to-day as of old.

This teaching is so simple that the little child can grasp it and use it, so profound that it is bringing to the thinker and the truth-seeker the understanding which alone can solve the problems of the world, which alone can unite in one grand brotherhood, gentle and simple, rich and poor, capital and labor, east and west, and can set men free from the misconceptions, misunderstandings, passions, and prejudices which hold the world in thrall. Long ages ago Jesus Christ spoke of God as "the living Father,"—cause, Life itself. St. James saw Him as "the Father of lights, with whom is no variableness, neither shadow of turning," and St. John saw Him as Love. With a God who is unfailing Life, and unchanging law, and a First Cause which is inexorable Love, man can go forth with a stout and patient heart and an unquenchable hope, for he knows that the face of the race is set towards the dawn.

[From the *Chicago Herald*.]

Christian Scientists carry on a quiet propaganda. There are millions of people in America who have heard of Mrs. Eddy, but have no idea of the immensity of the organization of which she is Founder. While other organizations were using every means of publicity, Christian Scientists have been keeping their news within their own publications and have avoided noisy display of their marvelous progress.

Great movements start slowly. When Rev. Mary Baker G. Eddy first set forth the fundamentals of Christian Sci-

Digitized by Google

ence there were few who grasped its significance. From year to year the teachings of this remarkable woman have been spread over ever-increasing territory, and never in its history has the movement been so talked and written about as to-day. In all our cities, and throughout every State, can now be found Christian Science churches. This growth has not been accomplished without the overcoming of great obstacles. The virility of this Science of Mind-healing has astonished those who have not accepted or who do not understand its great teachings. Like all great movements, it has had strong opposition to overcome. Its adherents have been ridiculed, abused, and even persecuted; but as the gales cause the oaks to strike deeper and firmer their roots, so have opposition, misrepresentation, and calumny affected Christian Science.

Mrs. Eddy defines Christian Science as "the law of God, the law of good, interpreting and demonstrating the Principle and rule of universal harmony" (Rudimental Divine Science, p. 7). The Principle of Christian Science, says the same great teacher, "is God, the Supreme Being, infinite and immortal Mind, the Soul of man and the universe. It is our Father which is in heaven. It is substance, Spirit, Life, Truth, and Love—these are the deific Principle" (*Ibid.*). Having attained where its importance cannot be overlooked, having built all over the country great numbers of churches that express the architectural harmony of a people to whom harmony is the natural outcome of divine Principle, having gathered into these churches thousands of our most refined, cultured, and influential people, it is but natural in this commercial age that the Christian Science movement should attract the attention of publishers and critics.

[Editorial in the *Calumet* (Ill.) *Index*.]

To an observing person it is evident that the spirit of the age is against the use of medicine. To those who have not thought the matter over such a statement as the above seems preposterous—even silly. The use of medicine has been universal and from time immemorial; and for any one to advocate the breaking away from the custom seems revolutionary. Nevertheless the break is coming, and the indications of it are on every hand.

There are the Christian Scientists and the mental healers. Few will maintain that there is not something at least in the position taken by these people. Then there is a growing sentiment against the use of drugs. Leading magazines and newspapers are making sentiment against their use and refuse to advertise them in their columns. Others will fall in line as fast as they can make up their minds to dispense with the income from the advertising of drugs. The homeopathic school of medicine is opposed to the use of drugs or strong medicines. The osteopathic doctors use no internal remedies whatever.

This movement against the use of medicine has had its drawbacks. There have been the errors and extravagances of overzealous followers, and the fraud of charlatans, who take advantage of the advantages the movement offers to impose on the credulous and ignorant.

[Mrs. S. Isabel Ward in the *Henderson* (Ky.) *Gleaner*.]

In the magazine articles used by the recent "lecturer," Mrs. Eddy is not more grossly misrepresented than are her principal books. I have read Mrs. Eddy's books, and have failed to discover anything to indicate that she means herself when she calls God "Father-Mother." Mother love is accepted by all to be the best and most complete representation of pure and tender love that can be conceived of, and to make the tender, compassionate love of God more real to us, we learn to think of Him as both Father and Mother. Is not God the only creator, the only origin of man? Then He is our only parent, both Father-Mother, divine Love.

It seems somewhat strange that those who wish to disprove the facts of Christian Science and its teaching, claiming it to be contrary to Bible doctrine, should ever feel called upon to use aught but the Bible in refuting its claims. In trying to disprove Christian Science they run away from the Bible, stoop to personalities, etc. Christian Science brings to every household that lives this truth, a sweet peace and joy never before known. Even if but one member of a family embraces its teachings, the health and harmony of other members of the family begin to improve, and this is as it should be—"the unbelieving husband is sanctified by the wife."

Christian Science teaches that the "sweet amenities of Love" (Manual of The Mother Church, p. 40) should govern mankind in their relations with each other; that we should no more criticize a man's spiritual food than his table food; that if we take time to attend properly to our own spiritual attainments, we shall have little time to spare in dictating to our neighbors what theirs should be.

[C. R. Munro in the *Ottawa* (Can.) *Free Press*.]

It is universally acknowledged that Jesus was the greatest healer the world has ever known. All Christians look upon him as the great Exemplar, whose life and practice they regard as the ideal after which to pattern their lives and conduct. The question arises, How did Jesus heal? Did he call upon the medical doctors to diagnose his cases for him, turning over to them the more difficult cases, such as those of organic disease, and reserving for his own practice only cases of nervous and functional troubles?

Jesus healed all manner of disease, and never stopped to inquire whether it was organic or functional. He practised and taught an absolute and unqualified reliance on God, Spirit, to heal, and any method that would try to unite spiritual and material methods and means of healing is most certainly not in accord with Jesus' teachings. It is evident from the uniform success he met with that Jesus must have healed in accordance with a fixed immutable law, or Principle, which he understood and taught to his disciples, and by which he was able to bring about such marvelous results.

Christian Scientists believe that this Principle which he demonstrated has again been discovered and revealed to the world by Mrs. Eddy in her book, "Science and Health with Key to the Scriptures," and they have proved the truth of its teachings by healing numberless cases of sickness, including the most severe cases of organic diseases, such as cancer, tuberculosis, diphtheria, smallpox, and others mentioned by our critic.

MEMORANDUM.

Because of receipt by the Publishing Society of various requests in connection with the trimming down of the *Quarterly*, the following portion of the notice printed in the *Sentinel* of Sept. 19, on page 52, is republished:—

"Trimmed copies of this size—4¼ x 6½—will be furnished on application, *provided* the request is made at the time of submitting the original order or subscription, or when subscription is renewed. The Publishing Society cannot undertake to cut down returned *Quarterlies* or those covered by partially expired subscriptions."

The following information is given for those who have recently purchased the small *Quarterly* cover:—

To place pocket-size *Quarterly* in the small *Quarterly* cover, slightly clip the pasteboard covers of the *Quarterly* at corners diagonally, so they will slip snugly into the pockets on the inside of the leather cover. The pockets are not intended to hold the pages.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy upon proper subjects *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

NO MODIFICATIONS OF CHRISTIAN SCIENCE.

THE wise saying of a century, that "imitation is the sincerest flattery," is often cited, and when the *New York Evening Sun* says editorially that "indirect testimony to the extraordinary success of Mrs. Eddy's propaganda may be found in the innumerable imitations and modifications of Christian Science which have appeared under other titles in the last few years," we think there can be but little questioning of the fairness of this judgment, except to call attention to the fact that while, strictly speaking, there have been and can be no modifications of Christian Science, we frankly admit there have been a number of imitations. Like many others who have essayed to criticize Christian Science, or to compare it with other systems which may be grouped under the general term "psychotherapy," the writer of the article referred to has failed to grasp the great and vital differences which exist between the genuine Christian healing taught by Mrs. Eddy and these other systems.

Nothing can have a clearer bearing on this point than the statement by Mrs. Eddy in "Science and Health with Key to the Scriptures" (Pref., p. xi.): "The physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness and disappear as naturally and as necessarily as darkness gives place to light and sin to reformation. Now, as then, these mighty works are not supernatural, but supremely natural. They are the sign of Immanuel, or 'God with us,'—a divine influence ever present in human consciousness and repeating itself, coming now as was promised aforetime,

> To preach deliverance to the captives [of sense],
> And recovering of sight to the blind,
> To set at liberty them that are bruised."

The psychotherapeutic systems do not depend upon "the operation of divine Principle," but upon hypnotism, or the control of one human mind over another. Christian Science is practised upon the basis that evil, sickness, sin, and death are not of God's creating, and are therefore unreal; a demonstrable fact utterly ignored by these so-called systems of mental healing. Furthermore, Christian Science has established through demonstration the fact that its successful activity is not confined to the healing of any particular kind or class of diseases; whereas the systems which employ hypnotism confess themselves powerless in the face of everything except a selected list of functional disorders. Nor is the mission of Christian Science limited to the healing of physical disabilities; rather is this simply incidental to its declaration of God's omnipotence, and consequently of the unreality of all evil.

Through Christian Science mankind are learning that they are not in bondage to an unknown and far-off God, who afflicts the race with sin, sickness, and death; but, on the contrary, that they are free to commune at all times with the Father-Mother God,—the God who, as the psalmist sang, "forgiveth all thine iniquities; who healeth all thy diseases."

ARCHIBALD MCLELLAN.

MAKING WAY DESPITE DIFFICULTIES.

THE story of the three Hebrews who were cast into the "burning fiery furnace" gives us a tragic picture of the enmity of material sense toward every manifestation of Spirit, its self-disclosing, self-defeating endeavor to destroy all that is not amenable to its attempted rule. It also brings to our thought the inspiring fact that, when Christianly met, the fires of trial serve only to burn away the fetters which false sense has fixed upon us, and bring us that larger freedom which is always realized when we are defeating asserted material law and human destiny and are companioning with the angels of the divine appearing, a freedom which was most interestingly described by the astonished king when he cried out, "Lo, I see four men loose, walking in the midst of the fire, and they have no hurt; and the form of the fourth is like the Son of God."

In all history the furnace has been heated "seven times" for those who have dared to be loyal to their highest concept of Truth, and in ten thousand instances these have proved that the question whether human experience shall advance or retard spiritual growth is determined not by the nature or the severity of experience, but by the way in which experience is met and mastered. The writer of the epistle to the Hebrews was evidently seeking to impress this thought when he declared that "no chastening for the present seemeth to be joyous, but grievous: nevertheless afterward it yieldeth the peaceable fruit of righteousness unto them which are exercised thereby."

It is safe to say that the humble heroes who stood by their conscience against the machinations of Nebuchadnezzar's courtiers had no idea whatever as to the way their problem was going to be worked out. They had, however, an imperturbable confidence in the ever-presence of God and His power to save, and they proved what every other disciple may prove, namely, that the struggles and sufferings which mortal beliefs bring in some form to every aspiring heart, and which seem to be especially abundant in the path of those who in their loyalty to the ideal offend present-day prejudices,—that all such painful experiences may be made to yield a continuous increment, not only of spiritual gain, but of spiritual joy.

We can easily imagine something of the significance of their overcoming to these Hebrews,—the sense of anointing, of security, and of peace which they experienced when they came out of the fiery furnace unfettered and unscathed; and Christian Science emphasizes the thought that it is ours to possess this calm, uplifted consciousness not only *after,* but before and during every hour of trial. It is ours to know with St. Paul that "neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature, shall be able to separate us" from that realization of the presence and protection of God which means spiritual freedom and sufficiency, and which witnesses to our escape from the long-time shackles of false belief.

To be thus knowing is to profit by every threatening pain and adversity; it is to win from the assaults of the enemy what the clever sailor wrests from an adverse "blow," namely, sure and steady progress toward his goal. He who has acquired a clear apprehension of the possibility of continuous spiritual advance, regardless of trial, and even of seeming defeat, and who has gone on to demonstrate this compensating fact in his own experience,—such an one will manifest that brave and beaming faith which means redemption and victory in every human place, employment, experience, and circumstance. He has found the true basis of rejoicing, and can smile in the presence of what would otherwise dismay, for he daily proves the verity of our Leader's words, "When the real is attained, . . . joy is no longer a trembler, nor is hope a cheat" (Science and Health, p. 298).

JOHN B. WILLIS.

ENDURANCE.

THERE is no grander idea than that expressed in the word endurance, which is defined as "the ability to bear and continue under destructive forces; patient fortitude," etc. It is given great prominence in the Bible, the psalmist declaring that divine truth "endureth to all generations," and Christ Jesus says, "He that endureth to the end [of the error] shall be saved."

The human sense is apt to shrink from the experience which calls for endurance, but James presents the subject in quite another light, when he says, "Behold, we count them happy which endure." After Paul had spent several years as a prisoner in the Roman garrison at Cesarea, he wrote to Timothy, "Thou therefore endure hardness, as a good soldier of Jesus Christ." How he himself had endured for Truth's sake we learn from his own words: "Of the Jews five times received I forty stripes save one. Thrice was I beaten with rods, once was I stoned, thrice I suffered shipwreck, a night and a day I have been in the deep; in journeyings often, in perils of waters, in perils of robbers, in perils by mine own countrymen, in perils in the city, in perils in the wilderness, in perils in the sea, in perils among false brethren; in weariness and painfulness, in watchings often, in hunger and thirst, in fastings often, in cold and nakedness."

When we read these words we should remember that no one has ever accomplished anything of value to the world or to himself who did not "endure," and in many cases the experience has been far more prolonged and severe than that of the early Christian martyrs. The example of all who have endured in order to demonstrate the truth of being should serve to arouse the heroic spirit in us, and make us ashamed of whining over the trial of our faith when complete relief does not come quickly. Impatience may be the very thing which delays our complete emancipation—and this is no plea for submission to evil of any sort, but rather for a calm determination to endure to the end of the error, to win at any cost.

A story is told of some horses which were drawing a heavy load up a very long and steep hill. They at length gave out completely, when their master unharnessed them and drove them to the top of the hill, which had been invisible lower down, and let them rest there a short time. He then took them back to their load, which they brought to its destination without difficulty. Is not this the very thing that we should do when mortal sense cries out that we can never reach our goal? Should we not lay down our burden and go up higher, up to the very hilltop, where in the sunlight of Spirit we behold the allness of God and His creation? We can then go down and take up our problem with the renewed strength of the vision of Truth, remembering all the while that God never requires us to carry aught which is unlike Him.

A familiar hymn says,—

> Could we but climb where Moses stood,
> And view the landscape o'er;
> Not Jordan's stream nor death's cold flood
> Could fright us from the shore.

Christian Science enables us to climb even higher than did Moses when he looked for the promised land in materiality, in that it reveals to us the sinless, deathless life of Spirit. Our revered Leader says, "The spiritual demand, quelling the material, supplies energy and endurance surpassing all other aids" (Science and Health, p. 385). Her own achievements have fully proved the truth of these words, and when she also says (p. 99), "I love mankind, and shall continue to labor and to endure," we may well take heart and press on, knowing that our endurance will help to cheer her and inspire some other pilgrim to go on and "endure hardness, as a good soldier of Jesus Christ."

ANNIE M. KNOTT.

LETTERS TO OUR LEADER.

Anchorage, Ky., Sept. 18, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dear Mrs. Eddy:—It is fitting that to-day I should write and thank you for the wonderful truth you have given to the world in your book, "Science and Health with Key to the Scriptures," for to-day I have addressed a letter to my bishop asking to be deposed from the office of priest in the Episcopal church, relying from henceforth on God, good, in Christian Science, to enable me to grow into a more complete understanding and usefulness. The "little book" is my constant companion, and its marvelous revelation is my meat: it is the angel that strengthened me and encouraged me to come back to Kentucky after two years of hopelessness in searching for health in the West. One of your loyal followers, like an angel of mercy and healing, has renewed my hold on life both for the body and outside of it. The sweetest hope and vision of my life is being fulfilled, namely, that God is a present, available power. The cup of my spiritual joy runneth over; and I shall dwell in the consciousness of divine Love forever.

Accept my thanks and gratitude.

Affectionately,
C. F. C. LONBERG.

West Melbourne, Victoria, Australia, July 1, 1908.

Dear Mrs. Eddy:—At the first Australian Exhibition of Women's Work, which was held in Melbourne, Victoria, December, last year, I had the opportunity given me of photographing the exhibit of your publications. I am sending you, per favor of Miss Burkitt, a photograph of the exhibit, showing how the books were arranged. Your picture occupies the center and the books are arranged around it, Science and Health being open at the tenets of the Church, and "Miscellaneous Writings" at "Love Your Enemies." I am sending you this as a small token of gratitude for the many benefits and blessings myself and family have received through Christian Science.

Devotedly,
W. J. EDWARDS.

San Francisco, Cal., July 15, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dear Leader:—Many years ago I touched the hem of the Christly garment of Christian Science, and was healed. I was one of the great multitude who, with many weary burdens, were walking in darkness, and have seen a great light. This light came into my consciousness gently, bringing with it countless blessings. Through your efforts and your work the way has been opened for me to be unfettered, and to throw off little by little those limitations which do not belong to man in God's likeness. For this I am grateful.

I am thankful for nobler life-motives, for a clearer perception of God's ever-presence and omnipotence, for better health and increased capacity for business, for the abundant supply resulting from work well done; and thankful for those truest of friends who have been instrumental in guiding me to this great blessing,—Christian Science.

Gratefully yours,
W. A. NEWMAN.

Kansas City, Mo., Sept. 22, 1908.

My Dear Mrs. Eddy:—Ten years ago I was healed through reading "Science and Health with Key to the Scriptures," and it has since been the only teacher for me and my little girl of eight.

With much love,
EVELYN LOUISE HUGHES.

Digitized by Google

Los Angeles, Cal., Sept. 17, 1908.

Mrs. Mary B. G. Eddy, Brookline, Mass.

Beloved Leader:—My heart goes out to you in thankfulness for the light that has come to me through the clear revelation of Truth which has come in Christian Science. It has lifted me out of the dark shadows of atheism into the light and the understanding that there is a God, a God who is Love. Words cannot express my gratitude for your Christlike example, but by daily striving to follow in the path you have pointed out, I hope to prove it. I thank God for giving us such a Leader, one who teaches us to obey the command, "Glorify God in your body, and in your spirit, which are God's." In love I send you this feeble expression of gratitude.

KATHERINE BRUNER.

Savannah, Ga., Sept. 16, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dearly Beloved Leader:—I wish the English language could supply words to express my gratitude to God, and to you, dear Leader, for the health, happiness, and the spiritual uplifting which the truth given me through Christian Science has brought into my life. I have waited nearly fourteen years to make this acknowledgment to you in writing, but many hundreds of times have I thanked God for directing you in discovering this divine truth that made me free. My healing surely came from God, through one of your loyal students, and it was instantaneous. I was taken from a bed of pain and placed on my feet, perfectly free and well, both in body and mind, and during the past twelve years and nine months I have not lost a day from my vocation.

Can I ever pay this debt of gratitude? Yes, I can by being obedient to you in helping to build up God's kingdom here on earth, in freeing mankind from the bondage of sin, sickness, and sorrow in which I was held for years. Mrs. Rowe joins me in much love and gratitude.

Sincerely and lovingly yours,

WESLEY H. ROWE.

Lake Charles, La., July 12, 1908.

Beloved Leader:—Just one year ago to-day more than a score of us met together for our first Communion service in this city, and since that time our growth has been steady and our spiritual progress encouraging. We understand that God, good, is All, and mortal sense an illusion. During the year we have grown into a deeper understanding of Spirit, God. We are learning more of love—how to forgive and to forget. Many expressions of thanks to you for the knowledge of the healing power of Truth, are heard in our Wednesday evening meetings. Pulpit and press have had their say; the medical bill before the Legislature has been amended, as proof of the divine power ever present to protect and save. You have shown us the Master, who "swerved not, well knowing that to obey the divine order and trust God, saves retracing and traversing anew the path from sin to holiness" (Science and Health, p. 20). We now resolve for this coming year to live closer to God, divine Love. The seed has been sown here, and the little branch is beginning to bear fruit.

Lovingly yours,

MRS. HATTIE ANDREWS, MRS. MARY E. CHEATHAM,
MISS ORA M. SMITH, *Committee.*

Lyons, Wis., Sept. 14, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dearly Beloved Leader:—Ever since reading your last edition of "Science and Health with Key to the Scriptures,"—issued February, 1908,—I have thought of writing to you. I received great spiritual help while reading and carefully studying the inspired book, comparing it with one of the editions of 1907. This work of comparing was pleasant, and easily done by taking one hour each day. I noted the many changes and additions which do not in any way alter the spiritual import of the whole book, but by a careful and industrious study they help to lift the thoughts of the reader to a clearer insight (understanding) of omnipotent Truth—our Father, "with whom is no variableness, neither shadow of turning."

In the past I have longed to see you personally, but that desire is all gone. I now see you in your writings and in your efforts to raise us from a sense of personality to the understanding of Spirit, to a ceaseless communion with God,—divine Principle, Love. I have had several copies of Science and Health, and have prized each very highly. My first was the fiftieth edition, published in 1891, about which time Christian Science raised me from a dying condition. Lovingly and gratefully,

Your student's student,

MRS. AURELIA C. COLE.

Galesburg, Ill., Sept. 23, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—On last Thursday evening the members of the recently disorganized First and Second Churches of Christ, Scientist, together with other loyal students of Science and Health, met and organized a new First Church of Christ, Scientist. The church has leased Beecher Chapel, formerly a Congregational church but now the property of Knox College. We rejoice greatly in this union, for the coming together has not been forced to serve selfish ends, but has come naturally as the result of growth; many within and without both former organizations have earnestly, faithfully worked and prayed. It gives us great joy to be able to send to you this good news.

For your consecrated life of love, sacrifice, and service, for our inspired text-book which you have given us, and for the many wise and loving provisions made for our help and guidance, we deeply, sincerely thank you; for thereby has our joy of to-day been made possible. May we so water and care for this branch of the Mother Vine that all who come hungering and thirsting may find their need supplied.

Gratefully and lovingly,

First Church of Christ, Scientist.

MISS GRACE KIEFER,
J. NEWTON CONGER,
Committee.

London, England, Sept. 8, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—While attending a Christian Science testimonial meeting, last Wednesday evening, and listening to the songs of gratitude that went up for Christian Science, the second coming of the Christ, I seemed to hear the words of Jesus: "If these should hold their peace, the stones would immediately cry out." Hosanna, "the kingdom of heaven is at hand," the universe of Spirit is revealed, in which "we live, and move, and have our being." The magnitude of the work which God has given you to perform, and the infinite wisdom in which and by which you are doing it, have been dawning on my consciousness more and more. As Science and Health (p. 3) says, "Gratitude is much more than a verbal expression of thanks." My prayer is that I may thank you by keeping my lamp trimmed and burning, humbly watching, working, and striving to enter in by the way which is straight and narrow, thereby demonstrating the power of the Christ and learning the great art of being a Christian Scientist.

Yours with a heart full of love,

GRACE ENSMINGER.

AMONG THE CHURCHES.

FARNBOROUGH, ENGLAND.

Many experiences of physical healing and spiritual help received through the study of Christian Science were related at a testimony meeting held in the Town Hall, Farnborough, on Wednesday afternoon [Aug. 5]. This was the first meeting of its kind; indeed, the first Christian Science meeting or service ever held in Farnborough. A large number of residents in the immediate vicinity were present, as well as a few strangers who came by motor and train from a distance, while Aldershot town was well represented by those who are regular attendants at the services held there every Sunday. There was at least one well-known medical man present who listened with interest to the relation by a lady of how Christian Science had cured a surgical case. To those who were present the testimonies and the service which preceded them were of an impressive character, and served to denote to those who attended out of mere idle curiosity the new reading of the Scriptures which Christian Scientists teach.

The meeting was bright and interesting, and the congregation showed marked attention. The First Reader spoke very briefly as follows: "Christian Science does not put before us a new religion, but it calls attention to that taught and practised by Jesus of Nazareth, who pointed repeatedly to his works as proof of his divinity, and of his at-one-ment with the Father. These works consisted in the main of healing the sick, and he repeatedly commanded that those who followed him should also prove their faith by healing the sick. These meetings are held in order that those who are trying to obey the Master in this respect should have an opportunity of telling others of the health and happiness which they thus obtain, and which they greatly rejoice to share with others." Several interesting testimonies of the healing and saving power of Christian Science followed.—*The Aldershot* (Eng.) *News.*

DES MOINES, IA.

With strong efforts being put forth by all denominations to increase church attendance, it is interesting to note the progress made by the followers of Mrs. Eddy, whose numbers have increased every year and every month. It is estimated that a new society, from which the church edifices spring, is formed every four and one half days. Iowa has witnessed a growth in Christian Science, which was introduced into this State about 1886 by pioneers of the movement. At first its mission was confined to the larger towns, and in Des Moines, Sioux City, Davenport, Cedar Rapids, and other places, meetings were called and later on steps were taken toward establishing churches. At the present time there are substantial church buildings in many Iowa towns, and in other places ground has been purchased and steps are being taken toward the building of church edifices.

The movement in Des Moines had its inception in 1887. Many persons belonging to the most prominent families in the city testify that they have experienced its beneficent results, and have become ardent advocates of its teachings. Meetings were first held in private houses. In 1892 the church was organized, and reorganized in 1900. Apparently its growth has been steady, its prosperity undiminished, and its influences for good are incalculable. In Des Moines the movement has developed into a $30,000 edifice, with prospects of another church building soon. This church seats about seven hundred people. It was built in 1903.

That there are many in Des Moines not members of the church who are interested in Christian Science is shown by the numbers who call at the Reading Rooms, and by the calls for the fourteen copies of Science and Health, the Christian Science text-book, at the public library. All Scientists have their own copies of this work, and its use from the library is therefore by people not members of the church.—*Des Moines* (Ia.) *Daily News.*

COLORADO SPRINGS, COL.

Thinking it may be a help to branch churches that have building projects in hand, we, the board of trustees of First Church of Christ, Scientist, Colorado Springs, Col., desire to state briefly the experience of our church in the erection of its edifice. In the fall of 1906 the erection of a temporary church building came up for consideration. We had already acquired one of the best corner lots in the city, 125 by 190 feet; and though this was but half paid for, after some hesitation it was concluded we could raise twenty-eight hundred dollars, and by borrowing twenty-two hundred in addition to the loan already on the property, erect a temporary building to cost five thousand dollars. Preliminary sketches for such a structure were drawn, submitted, and rejected as inadequate; the board being then instructed to submit plans for a structure to cost seven thousand dollars. These were prepared and submitted only to be pronounced inadequate also, and plans for a structure to cost about twelve thousand five hundred dollars, without seats, were finally accepted.

Here the question arose as to the wisdom of spending so much money on a building that would surely be insufficient in a few years. This difficulty was solved by building on the rear sixty-five feet of the lots, fronting the church on the intersecting street, and leaving the corner proper, of one hundred and twenty-five feet square, vacant. A Reading Room, committee room, auditorium, and Readers' room were all included; also a basement and chimney of more than double the capacity needed, so that a second and larger heating apparatus than that now installed could be placed therein. Thus, when a larger building is needed, it can be erected on the corner, and connected with the present structure, heating system, etc.; so that no money has been wasted, the present structure taking the place of the basement and first floor of the ordinary church building. After careful investigation the church was built by the board, who bought all the material and hired the work done, a large saving and a much better building being thereby secured. The funds kept coming in, so that we were able to meet every bill when presented.

The building is finished and paid for, and the congregation that in 1906 discussed the question of its ability to raise twenty-eight hundred dollars, found in 1908 that it had raised thirteen thousand and four hundred dollars for building purposes, besides meeting all its other expenses promptly. And now, in gratitude for her healing, a beautiful pipe organ has been presented by one of our members. The result of this enterprise is a better standing in the community, a largely increased attendance, a more loving and united membership,—in a word, payment in full and more, for the efforts put forth. From this experience we have learned that God, and not man, builds—that He is the source of all supply, and that when we surrender ourselves as His instruments, He uses us, and we need not fear the outcome. We also conclude that any Christian Science membership, if united and really desirous, can erect a building suitable to its needs. We therefore bring you greeting, and say, "If it is needed, do not be afraid to begin to build a Christian Science church. When the bills are due, the money will be found on hand with which to pay them."

CHARLES D. BENJAMIN, *Clerk,*
For the Board of Trustees.

TESTIMONIES OF HEALING.

Love and gratitude have much to tell, but are often speechless, not knowing how to express themselves; and thus it is that I find myself unable to say what I would. But, as I think of our beloved Leader's unceasing labor of love, her unflinching courage under every difficulty, her patience and endurance, I thank God and go on my way rejoicing. I first heard of Christian Science in 1890, when a friend came from the West to Greensburg, and hearing of my condition, visited me. I told her of my troubles, which were many, and I shall never forget her loving words as she told me that I could be healed and without medicine—that God would heal me. She gave me a copy of *The Christian Science Journal* which she had with her, and I promised I would read it. I have never parted with it, as it was my first reading of Christian Science. My friend also said that she was going to have the Lessons from the *Quarterly* read every Sunday at the home of a lady who had become interested in Christian Science, and she invited me to attend. I went to the meeting, and words fail me to express my gratitude for the truth that I received. I soon procured a copy of Science and Health, and the Bible and the "little book" were my strength and stay day and night in passing through deep and dark waters.

Through the study of Science and Health I am a living monument to the healing power of Truth. By studying this book and applying its teachings as I grasped the spiritual understanding, I was healed after many physicians had failed to help me. I had suffered from heart and lung trouble. I was much reduced in weight, and coughed a great deal; in short, I was a physical wreck. As I studied the text-book I began to improve in general health and also gained in weight, and later I found I had been healed of all my former sufferings, except the extreme fear and the cough, which did not then leave me entirely. Later on, I had class instruction from one of Mrs. Eddy's students; and one day, when the fear was very great, I sent my teacher word. I knew when she received the word, for I was healed instantaneously—all fear and the cough had left me. I arose from the chair and said to a Scientist who was stopping with me, "I am healed! I am healed!" Since I first heard of Christian Science I have never used medicine or material remedies of any kind, but the Science of Truth has been my remedy at all times and under all conditions. I would say to one and all, Come, see, and taste! God is indeed "a present help" in every time of need.

Prior to my healing in Christian Science I went from one physician to another; they did all they could to help me, but the relief was only temporary. One doctor told my husband he expected to hear of my death at any time. Another said that unless I had an operation performed there was nothing more could be done for me. The last doctor I had advised me not to take medicine of any kind, for I had taken too much already. I tried homeopathy, allopathy, electricity, everything I heard of in those many years of suffering. Christian Science has lifted me out of the deepest darkness and suffering that any mortal could come through. I shall never forget the glorious revelation, and the spiritual uplifting that came to me as I studied Science and Health,—the realization that God is our Life and our strength. Since then I have had many proofs of the ever-presence of divine Love, and although the way has at times been steep and rough, my every need has been met. Strengthened with this assurance of the Father's watchful care, I have pressed onward, and I have been able to meet and banish the discords which manifest themselves, for which I am most sincerely thankful. Not only am I able to help myself, but through the understanding of the allness of God which I have gained from the teachings of our Leader, I have been permitted to be the humble instrument of God's mercy whereby many others have been healed of divers diseases.

As for our Leader, I simply say, God bless her! I can only try to follow her example, and endeavor to live up to what a Christian Scientist ought to be,—to obey so far as it lies in my power our Lord's command to heal the sick.

MRS. ANNA E. BAKER, Greensburg, Pa.

Our dear Leader has said, "Who hath not learned that when alone, he has his own thoughts to guard, and when struggling with mankind, his temper, and in society, his tongue?" (Miscellaneous Writings, p. 126). How helpful these words are to us in our daily work, for many times we have a struggle with mankind and need to guard our temper. The world is full of people holding different opinions, and from this has resulted many forms of religion. For many years I was a follower of one of these religions, and received much good, for it taught me many of the beautiful lessons of the Bible, which made me want to know more about God and to obey His commandments. These teachings made me a better boy, for they taught me to do right,—to be honest and love the truth. For all the blessings which I received through this church I am very grateful, but as time went on, my health seemed to fail me, and I was stricken with a disease which brought me to the brink of the grave. I thought much of the beautiful promises of the Scriptures which I had heard read in my church, but they did not give me the health for which I was earnestly striving. I went to a physician, and he did what he could for me, but with no good result; and when, after trying five physicians, I still grew worse, death stared me in the face.

As a last resort I tried Christian Science, and in a very short time my health returned, and all the blessed promises of the Scriptures became a reality to me when I found myself well. This new-old religion did not take away any of the truths which I had been taught in my church, it only gave me a better understanding of them. Christian Science made them a living reality to me; it gave a Principle and rule whereby I could demonstrate with certainty that "God is our refuge and strength, a very present help in trouble." It taught me that "the prayer of faith" does "save the sick;" that we shall know the truth, and the truth shall make us free; that we should not be overcome of evil, but should overcome evil with good; that we should let that same Mind be in us "which was also in Christ Jesus." Science and Health says (p. 426) that "sin brought death, and death will disappear with the disappearance of sin."

As one takes up the study of Christian Science, he finds that he loses nothing good. Because Christian Scientists think differently from the physicians, this does not make them at variance with each other. We all are working for the uplifting of humanity and to relieve suffering and distress. The physician looks to matter for the cause and cure of disease, while the Christian Scientist regards the carnal mind, which is "enmity against God," as the source of disease. We know by actual experience that we have found a better way in Christian Science, and no one would wish to deprive us of this blessing, for we have found that Christian Science heals when other methods fail. I know from experience that I still love the churches for the good they are doing, and also the physicians, and I know that Christian Science is not at strife with either, but is only laboring to relieve mankind of its false beliefs and suffering, and is striving to bring us all into "the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."—AUGUST KRANERT, McGregor, Ia.

Digitized by Google

I certainly have reason to be grateful for what Christian Science has done for me. Since the age of three years it had been necessary for me to wear glasses. One specialist declared me to be totally blind in one eye and the other eye to be very weak, while two others agreed that perhaps by exercising the utmost care of my eyes, and using them no more than was absolutely necessary, they might in time grow stronger. During the last year, in fact, they seemed to be in such a bad condition, and caused me so much inconvenience, that I thought I should have to stop attending school. A few months ago I became interested in Christian Science and resolved to take treatment. After the second treatment I was able to read and study without the use of glasses, and after two weeks under the care of the practitioner my eyes were completely cured, so that no inconvenience was noticed even after the most continued use.—R. M. PARKS, Urbana, Ill.

Five years ago my spine and head were badly injured in a railroad accident, causing me great suffering, and one side was paralyzed. Besides all this I had internal injuries, for which the physician said an operation was required. I tried all kinds of medicines, also massage, electricity, and everything I could think of, but when it seemed as if I could not live an hour longer a Christian Science friend came to see me and gave me a copy of the *Sentinel* to read. I grasped at the paper like a drowning person, and after I had studied it for two or three hours the alarming conditions disappeared. I have never used any material remedy since that time, which was over six months ago. My friend brought me more papers, and in three weeks I went to a practitioner for my first Christian Science treatment, and she asked me to get a copy of Science and Health.

I had been brought up in the church, and taught to be good; but though I tried to do my best, I was not satisfied with myself. When I commenced to study Mrs. Eddy's text-book it seemed like starting a new life. The more I study it and the more I live it, the happier I am and the more I wish to help others. I have had only a few treatments in Christian Science, and now I can keep on my feet all day. I am grateful to God for showing me the way, and to Mrs. Eddy for her book that has done so much for me.—MRS. ANNA JOHNSON, Los Angeles, Cal.

It is impossible for me to express in words my gratitude for the many blessings that have come to me through the study of Christian Science. I did not come to it for physical healing, but after a long search for a God that could and would meet every human need,—an all-powerful, ever-present God. Now, after four years' practical reliance upon this divine Principle as made known by our beloved Leader, I have found the understanding of a perfect God and man in His image and likeness. One great lesson for which I am specially grateful is that given in the following words of Scripture: "Ye shall not need to fight in this battle: set yourselves, stand ye still, and see the salvation of the Lord with you." The realization of this truth has been a never-failing help in many times of trouble, and for this and many other blessings, I am truly grateful.

MRS. H. C. DE WOLFE, San Francisco, Cal.

In love and gratitude to God I wish to express something of what Christian Science has done for me. I was led to study Science and Health by Mrs. Eddy, through the healing of a relative, who had suffered for years from rheumatic trouble and was finally given up as incurable. At first I could not understand the text-book; it seemed to be different from anything I had ever read. I was not looking for, or expecting any physical benefits from the study, but what was most wonderful to me, although my understanding of it was so limited the blessings were manifold. I found that my eyesight was greatly strengthened; bowel trouble of long standing was overcome; disturbed dreams, to which I had been subject for years, ceased to trouble me, and above all is the spiritual uplifting and peace of mind, for which I cannot be grateful enough. After I had been in Science only a few months I was attacked by three dogs while going through a piece of woods. Although I have always been fond of domestic animals, I had a fear of strange dogs, and these bore down on me so quickly and were so vicious that I had no time to defend myself. After kicking at them for a few seconds, in retreating backwards I stumbled and fell, and about this time the owner of the dogs came out and called them off. When I came to examine myself, I found I had two very bad bites, one on my arm and the other on my leg. I treated myself in Christian Science the best I knew, and went that afternoon for a treatment from a practitioner. I was then entertaining feelings of resentment against the dogs, against the owner for allowing such vicious animals to run at large, and against the city authorities for allowing such conditions; but as the practitioner talked with me my whole thought was changed. The swelling went down while I was there, and I never experienced the slightest pain or inconvenience from the injuries afterwards, the one treatment having overcome the trouble entirely. I am very grateful to Mrs. Eddy for the truth revealed through "Science and Health with Key to the Scriptures."—WM. J. BENNER, Indianapolis, Ind.

I offer my testimony in thankfulness to God for His goodness, and trust it may be a light to some one's path. I am indeed grateful to our dear Leader for the understanding of Truth I have gained in Christian Science, as I realize that through this wonderful teaching I have passed from death unto life. My suffering seems beyond description, as for thirty years I had been afflicted with that distressing disease known as asthmatic trouble. Part of the time I was unable to walk, even from one room to another. I also suffered greatly from a severe form of catarrhal trouble, and was much reduced in flesh. In later years an eruptive disease caused me great distress, and though I tried every remedy I heard of, I got no relief. I had given up all hope of ever being well, as I had suffered in one way or another nearly all my life, and only expected to worry along until God saw fit to take me out of the world.

I was (as I thought) trying to live a Christian life. When I felt able I would study the Bible and then wonder why God had sent this affliction upon me. I even prayed Him to take the life which seemed such a burden, for I could scarcely be said to live. About two years ago, however, Christian Science, the messenger of Truth, came to me and healed me. It revealed to me the true God, and I cannot tell how happy it makes me to let others know of this healing Truth. I can truly say, "Praise God from whom all blessings flow." My son was also healed of chronic trouble at the age of thirteen. He had hardly ever seen a well day from the time he was a babe. We have all accepted the truth and make it our daily study. We have had many beautiful demonstrations, and have no need of any material remedies. We have relied on God as our only source of help since our first healing in Christian Science. We are trying to show our gratitude to God by daily watching and praying for that Mind to be in us "which was also in Christ Jesus."

MINNIE LODS, Douglas, Okla.

Digitized by Google

I have waited long for words which would adequately express my thoughts, but now it has come to me that my gratitude can never be given full expression in this way; hence I send in my testimony as it is,—my "mite." I remember reading, years ago, in the *Journal*, "Is thy cup of comfort low? Go share it with another." In obedience to this thought I now write; giving that I may receive.

It is now over six years since I have had the privilege of meeting with any considerable number of Christian Scientists, but we always have our Sunday service and usually the Wednesday evening meeting. Three times, lately, two families who have become interested have met with us on Wednesday evening, and are anxious to attend regularly both services. I know the way will open up, for it is of God, not man. One day I was thinking, "I am doing nothing," when with a beautiful realization came the words, "Truth is ever at work;" and within a few days I heard of several different places where the light of Truth had come. The understanding of God that Christian Science has given me, has enabled me to overcome for myself and others many ailments, among which are burns, bruises, sprained ankle, and a severe cut. Sorrow over the loss of relatives has also been overcome. Many times, when there was a seeming lack, divine Mind has been my source of supply. Sometimes I have had hard lessons, when I have failed to bring out the truth of being, but I have always found that it was because my own mentality was not clear; I had not cast the mote out of my own eye.

If women only knew what the understanding of God, as taught in Christian Science, can do for them in destroying fear, also of the perfect demonstrations possible to them as mothers, they would look only to God for help in time of need, for He is the only creator. I could fill pages if I attempted to give even a fraction of what Truth has done for me during the last ten years.

Away on this western prairie, far from other Scientists, the Lesson-Sermons are a great comfort to me, and my thought often goes out in gratitude to the compilers. It has been my privilege to give away many copies of the *Sentinel* and *Journal;* and we also have four copies of Science and Health loaned out, which are being read constantly, and there are two families that have their own copies. If we were not scattered over such a wide expanse of country there are enough Scientists here to hold services, but as it is we have our home meetings. I feel as if I must at least speak of Mrs. Eddy, but words fail me. God grant that I may be worthy to be called her follower; that I may follow her "as she follows Christ" (Message to The Mother Church, 1902, p. 7).

MRS. SUSIE A. NORTON, Medicine Hat, Alberta, **Can.**

With a heart full of gratitude I wish to acknowledge what the study of the Bible, as interpreted through the teaching of "Science and Health with Key to the Scriptures" by Mrs. Eddy, has done for me and my little family. So wonderful have been the demonstrations that I scarcely know where to begin. I took up the study of Science and Health before I was married, and had many fine demonstrations of Truth's power. After that time, though my husband never opposed me, my progress was slow. I did not work as I should, and something seemed to hold me back. Then came the demand, "Choose you this day whom ye will serve." I responded with a determination to serve God the best I could by daily putting into practice what I had read, studied, and understood. The earnest desire brought many blessings, and Truth has rewarded me most abundantly by pouring into thought the spiritual understanding of His Word as I have never felt it before. These spiritual thoughts of Truth and Love have not come by merely wishing for them, but through an earnest desire and inward striving hourly to know the truth that makes free,—which brings us to a loving Father "whom to know aright is Life eternal" (Science and Health, Pref., p. vii.).

The way has been straight and narrow, and oftentimes so dark that not a ray of light could be seen; but a gentle voice would whisper, "What is that to thee? follow thou me;" and again the way would be opened up. Thus it has ever been all through my journey from darkness into light, and it proves to me without questioning that the loving Father will never leave or forsake us if we will but trust Him as a little child and listen for the "still, small voice." Through Christian Science I have learned how to be humble, have found out who is my brother, and been taught how to love my neighbor as myself.

During all this time I had never discussed Christian Science with my husband. The thought came to me that I should let him alone, and that he would be all right. One afternoon last winter (1907), our little boy had to sense a very high fever; heretofore a doctor had always been called, but this time my husband took the child in his arms, and said, "I will hold him while you write to a Christian Science practitioner in Chicago to treat him." He noted the time of the probable arrival of the letter, and the little one was instantly healed. A sense of the presence of Truth and Love filled the entire house, for we were beginning to live the life that is of God.

A little later our faith was put to a more serious trial. My husband came in one evening suffering intensely with a finger that had been badly crushed, and which presented an alarming appearance. I tried to bathe it, but he could not stand even the touch of water. Mentally I repeated the "scientific statement of being" (Science and Health, p. 468), and in a little while the hand was wrapped in a cloth. When I asked him what he was going to do, he replied firmly, "Try your medicine," and he asked me to help him. It is impossible for me to express my feelings: the sense of responsibility which came upon me. I silently went to work, declaring that "perfect love casteth out fear." My husband retired and I read to him awhile, still holding in thought the perfect child of God, and the teaching of our text-book, that "matter can have no pain nor inflammation" (Science and Health, p. 393). I left the rest with God, and the battle was won. He fell asleep, and there was no further trouble with the finger more than to wrap it in clean linen as required. One day, while he was at work, the covering came off, and he saw that the finger was well. This was another great proof of God's love and presence in time of need. We have two little boys, three and five years old, and their childlike trust teaches us many lessons.

Neither tongue nor pen can express the love and gratitude we feel for Christian Science, and for our dear Leader, who has so unselfishly pointed us to a God who is Love—the fountain of truth where we each and every one as His children may drink and share in blessings untold. May we pray without ceasing, looking inward daily, and casting out whatsoever there may be in consciousness that is unlike Christ.—MRS. A. F. ST. CLAIR, West Point, Ky.

I have received many benefits through Christian Science, the most remarkable being the overcoming of abdominal trouble, from which I had suffered for years. Four different doctors had declared that an operation was my only hope, but no two were agreed in their diagnosis except on that point. Inasmuch as the doctors disagreed, I decided to send for a Christian Science practitioner, and sweeter than any music I have ever heard were her words of reassurance and hope. "Those doctors cannot make laws for you," she said, "you are under but one law—the law of God." A few more declarations similar to the

Digitized by Google

above changed my thought, and my temperature was soon normal, although it had been very high. The 91st Psalm seemed to give me a sense of security from every foe.

Before this time I had not asked God for anything. The God I had been taught to believe in seemed too far away for me to tell my troubles to Him, and for several years I had been glad to get away from the distress I had felt as a child in trying to think about Him. I am grateful to Christian Science for the understanding it has given me that God is Love.—Eva O. German, Kansas City, Mo.

I feel it to be high time that I told others of the blessings I have received through Christian Science. Seven years ago I was healed instantaneously of abscess of the breast through Christian Science, after several operations had been performed and I had endured ten weeks of intense suffering. This was the first healing, but only a small beginning of our blessings. I have been wonderfully helped at the birth of my two children, after the doctor's verdict that I could never have a healthy child. My little girls are both fine, strong children, have had but few troubles and these have been quickly met with the truth, —our ever-present remedy.

I would like to speak of a severe attack when I and my three-months-old baby were away from home visiting relatives. It was a dreaded disease and we were quarantined, but were treated absently in Christian Science. The newspapers misrepresented the case, but divine Love proved, as it always does, that "one on God's side is a majority;" and this was proved with glorious results,—not a scar nor a blemish. Then there were at least a hundred others exposed, but not one person took the disease, proving absolutely that divine Love is the only power.

It takes the "new tongue" to express our gratitude for our dear Leader, Mrs. Eddy, who has shown us how to live so that error misses its mark. I can only hope to prove my love for this dear woman by deeds more than by words.—Ida M. Sperling, Boise, Idaho.

I esteem it a great privilege to testify to the good I have received, and am receiving daily, through a knowledge of the truth as it is taught in Christian Science. Previous to the time that I became interested in this subject I was much opposed to, and prejudiced against what I later learned was a false concept of its teaching. Like thousands of others, I had condemned Christian Science without any reliable or trustworthy knowledge of the subject.

My interest in Christian Science dates from the healing of a daughter, who had been in very delicate health and under medical treatment almost from her birth, and who had been pronounced incurable by several physicians, owing to a serious spinal condition which had supposedly caused numerous physical and nervous troubles. Referring to my own physical experience, at intervals for more than ten years previous to this time I had been a great sufferer from a seemingly incurable case of stomach trouble. My condition was such that I was unable to take even the most delicate food without intense suffering. I had tried many so-called remedies, and almost every system of medicine, but without any permanent relief. Finally the condition became so serious that I was compelled to retire from business, my only relief from suffering being in the use of an opiate, which I used for weeks and months.

This seemed to be my extremity and also God's opportunity, as I finally yielded to the advice of a friend and began Christian Science treatment. The practitioner told me that all God had made was good, and could be used without fear of harm. This appealed to me as being so reasonable that after the second treatment I accepted the truth, and was able to eat anything that I wished without the slightest resultant injury or inconvenience. This healing was more than two years ago, and since that time, with slight exceptions, I have had perfect health, and the spiritual blessings have been even greater than the physical. During these last two years, the consciousness of this truth —of the omnipotence of God, good—has strengthened me and upheld me through what would otherwise have been a sorrow too great for me to bear.

I am convinced that no one can study Science and Health with an honest intention of getting good,—being just to the author and themselves,—without gaining a broader view and a higher concept of life, of heaven, and of God. It is also safe to say that no one can experience this physical healing and spiritual uplifting without a great sense of gratitude to the one who has given this saving truth to the world.—D. A. Williams, Indianapolis, Ind.

Christian Science found me without God, and the Bible was to me a sealed casket, whose jewels I knew not how to possess or enjoy. Science and Health has indeed been the "Key" which unlocked that beautiful casket for me, and now all its treasures are mine to use. Said the Master, "Seek, and ye shall find;" and each time I seek, I find a gem of thought which irradiates my life and brings me peace and joy. My heart is filled with gratitude for this blessed revelation, and with love for our dear Leader, whose pure, consecrated life enables her to walk with God and direct the way. Gladly I follow her guidance, grateful for the revelation of Truth in her teachings, and rejoicing that I may thus serve the Master.

Frances Willard Munds, Prescott, Ariz.

It is now eight years since I became interested in Christian Science, and in that time I have been healed of many ailments. I was completely healed of a severe case of rheumatic trouble, from which I had suffered greatly; and in less than three weeks was healed of a difficulty with my eyes, for which I had worn glasses for some years. I have never used the glasses since that time. For this healing and many more blessings, I am grateful to God.

Elizabeth Garrity, Chicago, Ill.

[Written for the *Sentinel*.]

THE REAL WORLD.

MAXWELL ARMFIELD.

When all the ways were gold with sheaves,
Or green within a patterned tent
(Where the blue came between the leaves),
I sometimes thought myself content.

But soon the golden sheaves were gone,
The green ways withered into gray,
And through the bare brown twigs there shone
The pale sky of a wintry day.

And then I thought, the loveliness
Of gold, and deep green-patterned blue,
Were threadbare places in earth's dress,
With God's real world seen faintly through.

And sometimes, brushed by angels' wings
(Fair thoughts of Truth and Life and Love),
I am made sure of perfect things
No human logic can disprove.

FROM OUR EXCHANGES.

[Charles Johnston in *The Christian Register.*]

To put the matter in a more modern way, Jesus taught, not a dogmatic religion, but an experimental science; and, until one has made the experiments, one cannot come into possession of the facts of this science. Jesus states this truth with equal simplicity: "If any man *will do his will*, he shall know of the doctrine, whether it be of God." As the first experiments, so to say, of this real spiritual science are renunciation and self-sacrifice, it is not to be wondered at, though it is to be deplored, that later generations of disciples found it easier to reason than to obey, and so converted the living, spiritual science of Jesus into a binding and continuing dogmatic theology. The remedy is simple. We must carefully gather and learn the commandments of the Master, and then in love obey them, and we shall soon verify for ourselves the superb scientific accuracy of these teachings of spiritual science. The awakened spiritual will, not the argumentative mind, is the golden key of wisdom.

[*Zion's Herald.*]

God is love—but God's love is neither an arbitrary favoritism nor a nerveless sentiment. Yet many people talk of the love of God as if it were a mere indifference point in religion, where all moral distinctions disappear in a haze of good-nature. God is love, but God does not love everything. He is benevolent, but He cannot show favor to sin. Evil is alien to the nature of God, and foreign to the best interests of man; and if God condoned evil anywhere, He would not be loving towards His creatures who trust in Him. God is truth and justice as well as love. Let no one, then, be deceived by the pernicious error of confounding divine love and benevolence with indifference to moral distinctions and a kind of universal tolerance of conditions which are opposed to the law and rule of right.

[*The Universalist Leader.*]

It is not enough that ministers preach on Sunday the gospel of faith and love and good works enunciated by Jesus, and that they are listened to by a respectable number of respectable men and women. This is well, helpful as far as it reaches, but the gospel demand is that between the Sundays ministers and their congregations shall stand for, in word and act, the truths and duties which are set forth in the Sunday preachments; that they shall conduct themselves as becometh real soldiers of the divine army, whose weapons are not carnal,—the weapons of truth and righteousness,—but still mighty in the pulling down of the strongholds of all classes of iniquity.

[*The Examiner.*]

No life is at its best, no life can inherit its possibilities, no life can know true happiness, no life can attain highest character, no life can rise to great victories that is self-centered in attention, purpose, and conduct. We must lose ourselves in some great and good work in order to attain unto power and efficiency in life and service. For the Christian the life must be "hid with Christ in God." No law in the Christian life is greater than this, and for it there is no substitute.

[Llewellyn Brown in *The Standard.*]

As long as the Church demonstrates its value no one will deny its right to exist, but there is a marked reaction going on against the ideal which the past has presented in the ministry, and a clarion call for a new type. There are many arguments which might be adduced to prove this, but the most convincing is that whenever a man appears with a message from the living God, that man will command a hearing.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All correspondence and orders relative to membership and church tenets should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PUBLISHING HOUSE BUILDING FUND.—Contributions to the Publishing House Building Fund should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

Quarterly covers in black seal leather for sale at the following prices:—

Regular size, 5¼ x 7¾, $1.25 each or $12.50 per dozen.
Pocket size, 4½ x 6½, $1.15 each or $11.00 per dozen.

Leather cases for the pocket editions of the Bible and Science and Health are now made slightly wider in order to provide space also for the trimmed *Quarterly* with or without cover. Price, $1.25 each.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.
Terms of Sale, Postpaid to any Address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, Mexico, and Cuba, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. This pamphlet is also printed in German. 29 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

MISCELLANEOUS PUBLICATIONS

BIBLES. Clarendon Brevier (01483 x), heavy faced, very distinct type, Turkey morocco, size 6 1-2 x 4 3-8 inches, corresponding in size and binding to pocket edition of Science and Health. Price, $3.75.
Morocco cases, to hold pocket Science and Health and above Bible, may be had at $1.25.
Text Bible (01561 x), pica square type, Alaska seal, size 7 1-2 x 6 1-4 inches, 1 1-2 inches thick. Specially adapted for use of Second Readers. Price $7.50.

CHRISTIAN SCIENCE AND LEGISLATION. A pamphlet of one hundred and twelve pages, containing articles by JUDGE CLIFFORD P. SMITH, EDWARD A. KIMBALL, and JUDGE SEPTIMUS J. HANNA, together with testimonies of healing, editorial comments, etc. Single copies, 10 cents; twelve copies to one address, $1.00; twenty-five copies, $1.85; fifty copies, $3.50.

PICTURE OF THE MOTHER CHURCH. A half-tone reproduction, size 12 x 15 inches, mounted on a white mat 21 x 25 inches. Single copies, 50 cents; a dozen copies to one address, $4.50.

SOUVENIR POST CARDS, showing picture of The Mother Church, 25 cents per dozen.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9.00; per half dozen, $5.00. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12.00; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each. Pocket Edition, size 4 5-8 x 6 5-8. Full Morocco. Per copy, prepaid, $3.00; Twelve or more copies to one address, prepaid, each, $2.50.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. One hundred and three pages. Illustrated. One copy, $1.50; six copies, $7.00; twelve copies, $12.00.

MUSIC. Three poems written by MARY BAKER G. EDDY, and used by special permission, have been set to appropriate music by WILLIAM LYMAN JOHNSON:
"THE MOTHER'S EVENING PRAYER." For soprano or tenor, C sharp to A; for lower voices, B flat to E. The arrangement for both high and low voice is printed in the same copy. 75 cents per copy; $7.00 per dozen.
COMMUNION HYMN — "SAW YE MY SAVIOUR?" Published in two keys, G and E, for high and low voice. 50 cents per copy; $5.00 per dozen.
"CHRIST MY REFUGE." Arrangement for high and low voice in same copy. 75 cents per copy; $7.00 per dozen.

REMITTANCES: Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago, or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request. We ask that no money remittances whatever be made to the Editor or Editorial Department. Address all ORDERS and REMITTANCES for literature named above to

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY
FALMOUTH AND ST. PAUL STREETS, BOSTON, MASSACHUSETTS

All orders for the works by Mrs. Eddy should be sent with remittance directly to Allison V. Stewart, Publisher.

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible paper, wide margins, each, prepaid 6.00
Twelve or more to one address, each, prepaid . . 5.75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

CONCORDANCE TO SCIENCE AND HEALTH. This work contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy $5.00
Twelve or more copies to one address, each . . . 4.50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid $2.25
Twelve or more books to one address, each, prepaid 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 50 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents per copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Hartford, Conn., this week dedicated, with festivities lasting three days, its handsome stone bridge spanning the Connecticut River. The bridge takes rank as the finest of its kind in the world, taking into consideration its length, size of arch, perfection of structure, and symmetry of outline. In every respect save one, it is claimed, it surpasses London Bridge, which hitherto has ranked first among stone bridges. It is 1,102.5 feet long, 82 feet wide, and is composed of nine arches, with a maximum span of 119 feet and a maximum clear height of arch of 45 feet. The bridge has taken three years to complete, includes an extensive boulevard at either end, and has cost $3,000,000.

The extent to which the various express and gas companies doing business in New York City are allied through stock ownership is detailed in the first volume of the Public Service Commission's annual report just issued. From this it appears that the Adams Express Company and the American Express Company are holders of stock of the United States Express Company, and that the American Express Company holds nearly all the stock of the National Express Company and of Westcott's Express Company as well. It also appears that the Consolidated Gas Company owns all the stock of the Westchester Lighting Company.

Chief Justice O'Rear, of the Court of Appeals at Frankfort, Ky., in an opinion affirming judgment in a case of the Commonwealth against the Adams Express Company, which had been indicted and fined for carrying whisky from one local option county into another, said that "common carriers ought to obey the law like other persons, not merely in keeping the statute while breaking its spirit, but both in letter and spirit, as others are expected to do."

The second hearing in the suit of the United States Government to break up the alleged anthracite coal monopoly was held in Philadelphia last week. The action was brought by the Government about a year and a half ago. The defendants are the various coal-carrying railroads and a number of smaller corporations. The Government alleges that the defendants have formed a conspiracy to restrain trade in anthracite coal.

It is probable that the Administration will ask Congress to place under one department the various bureaus and divisions of the Government now doing work relating to the public health. This will mean a readjustment and realignment of the public health and marine hospital service, the pure food and meat inspection bureaus of the Agricultural Department, and other minor health bureaus.

The National Association of Cotton Manufacturers was in session at Saratoga last week. "Forest Preservation from the Point of View of the Cotton Industry, Cotton Growing, and Cotton Manufacture," was discussed at some length, and its bearing upon the cheap production by water-power of electricity for manufacturing and other purposes.

An officer of the Government Forest Service estimates the forest fire loss in Minnesota at from five to ten million dollars. The loss in the Northwest is estimated at forty million dollars. More than two thousand acres of the Michigan Forest Reserve have been destroyed and over a million acres of timber land devastated.

Constitution Island, a three-hundred-acre tract of land lying in the Hudson River opposite West Point which the military authorities have long desired to possess, has recently through the joint action of its owner, Miss Anna Bartlett Warner, and Mrs. Russell Sage, been given as a gift to the nation.

Commander Peary, who sailed from New York in July, is now well on his way among the ice fields of the Far North in his search for the pole. The secretary of the Peary Arctic Club has received a report that on Aug. 17 he set out from Etah in North Greenland.

The 34th annual meeting of the Association of American Bankers was held at Denver, Col., last week. Committee reports were unfavorable to postal savings banks and to a bank deposit guarantee fund.

The sixteenth annual session of the National Irrigation Congress convened last week at Albuquerque, N. M., with an attendance of four thousand people.

International.

"I believe that a few years will see the utter abolition of caste lines in India," said Lilavati Singh, the Indian educator, at a reception tendered her by the Women's Foreign Missionary Society in Boston recently. "The force which will accomplish this will be the western ideas, taught in the colleges of India. These western principles are incongruous with caste, and as they are rapidly gaining influence the walls of caste are gradually breaking down. Another result of western ideas in our education is the establishment of the home in India. Owing to the different stations of the husband and wife, home life as in the west is entirely lacking. But as we send out girls from our colleges at Lucknow every year they are instituting more and more the real home life."

The Provincial government of British Columbia will set aside a strip of land sixty feet in width along the international boundary line, which will not be available for preemption and upon which a permanent reserve extending to all mining rights, etc., will be placed. This follows an arrangement with the United States Government by the British Ambassador at Washington. Frequent trouble in the past has been occasioned by the lack of this "buffer strip" in the arrest of criminals and in the application of mining and other laws. The United States Government also sets aside a similar strip, and thus the neutral zone will be one hundred and twenty feet in width.

A large excursion party made up of merchants of San Francisco and other Pacific coast cities sailed Sept. 25 on the Japanese liner Tenyo Maru. The purpose of the journey is to destroy as far as possible the traces of bitterness resulting from the racial trouble of last year. There are forty merchants in the party, and about twenty are accompanied by their wives. They will arrive in Yokohama a few days before the battle-ship fleet reaches that point. They will spend several weeks in the business and industrial centers of Japan.

The Chamber of the Argentine Confederation has approved of the bill authorizing the executive to contract a loan of $17,800,000 gold at interest of not more than five per cent. The government has also resolved to submit to medical inspection immigrants from the Baltic and Mediterranean and to send sanitary inspectors to Genoa, Barcelona, and Hamburg to ascertain where immigrants to Argentina come from.

Notwithstanding the cabinet's efforts towards economy, the Russian war budget for 1909 as submitted to the Douma carries an increase of $20,000,000 in the current expenditures, of which $8,000,000 is assigned to meet a general raise in the salaries of officers of the lower ranks, and $11,500,000 to the betterment of the conditions of the service and quality of the rations.

Lazare Weiller, the French aeroplane promoter, has given an order to Wilbur Wright for the construction of fifty Wright aeroplanes. The amount of this contract is $100,000.

The Prussian Academy of Science has inherited $7,500,000 from a banker named Sampson. The money is to be expended for scientific purposes.

The State Council at Berne, Switzerland, has approved the arbitration treaty with the United States.

Industrial and Commercial.

Work is to begin immediately on a new flour mill of six thousand barrels daily capacity, at a cost of $500,000, for the Washburn-Crosby Company at Buffalo, N. Y. The company, with its present mills, will then have twelve thousand barrels capacity at Buffalo. With its large Minneapolis output, the Buffalo enlargement, and its mills at Louisville, Ky., and Great Falls and Kalispell, Mont., the company's daily capacity will exceed forty thousand barrels, by far the greatest in the world.

Nearly every railroad in the Western Passenger Association has agreed to abolish all low or reduced rates after Jan. 1, 1909, and to maintain a minimum rate of two cents a mile everywhere. This determination has been reached because of anxiety caused by reductions in the net passenger revenues of the Western roads.

According to figures given out by the national chairman of the Prohibition party, there was an astounding decrease in the production and sale of intoxicating beverages in the United States during the months of July and August last. The decrease in production amounted to nearly one million dollars a day.

The number of idle cars on Sept. 16 was only 173,587, a reduction of 40,045 since the report for the previous fortnight. The maximum was 413,000 on April 29.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

[Frederick Dixon in *The Onlooker*, London, England.]

CHRISTIAN SCIENCE AND THE LAMBETH CONFERENCE.

THE report of the Lambeth Conference with respect to the "Ministries of Healing" has been issued over the signature of the Bishop of Winchester. It is a remarkable document, affecting many schools of thought, both within and without the Church, but it is entirely with respect to its attitude towards Christian Science that I wish to examine it here.

There was no compulsion on the bishops to examine "the claims" of Christian Science. Indeed, the bishops, though some of them are men of deep learning, and all of them are men of high character, are very far from forming an ideal judicial assembly. There was, again, no compulsion on them to accept the offer of information made to them from the official quarters of Christian Science, though it might have been imagined that, as they were accepting the assistance of certain members of the medical profession, they would not have ignored this offer. What is remarkable is that they should have been so devoid of the salt of humor as not to have foreseen the inevitable fate of a report arrived at by such means.

The object for which the committee was appointed is stated with admirable clearness in the preamble: "To consider and report upon the subject of ministries of healing: (*a*) the unction of the sick; (*b*) faith-healing and 'Christian Science.'" The conclusion arrived at is stated with equal clearness in the report. So far as healing in Christian Science is concerned, this is set out as follows: "The committee considers that the claim to heal all manner of diseases and organic troubles has not been substantiated, while suffering has been caused, with many deaths, by the refusal to allow the sick, children as well as adults, to profit by medical attendance and care." Now the Bishop of Winchester, who signed the report, is one of the foremost scholars in the country. He knows the value and meaning of words better than most people. It is permissible, therefore, to ask him whether he considers the phrase, "the committee considers that the claim to heal all manner of diseases and organic troubles has not been substantiated," to be a fit one to employ to describe a report compiled after an inquiry from which the evidence of Christian Scientists had been excluded and that only of its opponents accepted. This is the gentlest way of putting it. The wording of the report really suggests, to a public absolutely ignorant of the facts, that evidence as to healing had been tendered by Christian Scientists, and found unconvincing.

Next, the phrase that "suffering has been caused, with many deaths, by the refusal to allow the sick, children as well as adults, to profit by medical attendance and care," can be characterized as nothing better than a frank attempt to create prejudice, and as a piece of reasoning is absolutely childish. To make it anything more than the merest *obiter dictum*, the percentage of deaths under Christian Science treatment would have to be shown in comparison with the percentage of deaths under ordinary medical treatment, and even this would be extremely unfair to Christian Science, as it would leave out of sight the enormous number of cases which are only brought to Christian Science after every other means has failed. To be quite frank, you have in this section of the report a statement founded, as Carlyle would have said, "like the world itself, on nothing."

Furthermore, if the words in this sentence of the report mean anything at all, they mean that the patients of Christian Scientists are in some mysterious manner prevented from receiving ordinary medical attendance. In the case of adults this is manifestly so absurd that the statement refutes itself; no adult ever comes or can come to Christian Science except of his own free will, and no Christian Scientist has the power, much less the desire, to prevent his reverting to ordinary medical practice the moment he has any inclination to do so; while in the case of children Christian Scientists have been among the most careful observers of the law, not because they believe medical attention to be more efficacious in the case of children, but because they recognize the danger of the evils the law was intended to prevent.

No one has ever accused Mark Twain of undue partiality to Christian Science, yet writing on this very question this is what he says: "Isn't it touching? Isn't it deep? Isn't it modest? It is as if the person said: I know that to a parent his child is a possession so dear that he will trust its life in no hands but those which he believes to be the very safest; but it is a burning shame that the law does not require him to come to me to ask what kind of healer I will allow him to call." This only makes the action of the authorities, in the one or two cases in which they have been able to represent parents who were Christian Scientists as guilty of a technical breach of the law, as more than usually intolerant and cruel.

There remains the final paragraph of the report, in which Christian Science is arraigned for being unorthodox. There is really no word in the English language with more edges to it than the word "orthodox." There is probably not a single orthodox religion which has not passed through the period of being unorthodox. The act *"de heretico comburendo"* was passed for the purpose of extirpating the views which the Bishop of Winchester is preaching in his own cathedral to-day. Whatever meaning attaches to the word is one of purely local and temporal significance. It was, I think, a predecessor of Dr. Ryle, in the see of Winchester, who, with a more humorous appreciation of the inconsequence of the word, declared, "Orthodoxy is my doxy, heterodoxy is anybody else's doxy."

There is, however, in the Gospel of St. Mark, a definition of a believer, in the words of Jesus himself: "And these signs shall follow them that believe; in my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink

Copyright, 1908, by Mary Baker G. Eddy.

Digitized by Google

any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." It is, of course, true that a large number of Christian commentators have attempted to prove that these verses are an epilogue by a later writer, but the effort is scarcely worth the trouble, for it leaves untouched the infinitely stronger saying, in the fourteenth chapter of John, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." The Christian Science Church has accepted Jesus' test of what constitutes belief, and is endeavoring to give practical expression to his command, and it is a little curious that it in particular should be singled out for the charge of being anti-Christian.

LAW VERSUS STATEMENT.

BLANCHE HERSEY HOGUE.

ONE who studies the Scriptures is given much reason to ponder the question of law and to think deeply concerning the law of God in its relation to the welfare of humanity. In modern thought the term law is universally used to distinguish the operative force which carries affairs systematically forward from cause to effect, and to define the process of continuous government, unseen by the physical senses, by which all existing things are related, regulated, and adjusted, whether they be universal or individual, moral, mental, or supposedly physical. The uninterrupted passing from cause to effect, the steady unfolding of component elements from a definite beginning to a logical ending, in the mental and moral life of the mortal, and in what are termed the physical conditions of man and the universe, are considered evidences of law which proves its existence by and through its effects.

That which is governed by law is admitted to be governed irresistibly, unfailingly. Law itself involves force, and law must by its very nature carry out the command of that which impels and compels it. Law knows no staying hand, else it would be less than law. Then whence, says the onlooker, arises this which looks like the blighting and blasting and upsetting of law in the natural world, this apparent confusion and tangle in the affairs of men, this chaotic rule which claims to be law, and which to all appearance thwarts the intention and operation of God's law? Or, again, are there not many kinds of law, lesser and greater, evil and good, material and spiritual, each and all struggling for supremacy? Material evidence answers that it cannot account for the origin of this discord, but admits its presence and confirms its claims. Enlightened analysis, however, from the standpoint of Christian Science, shows so-called material or evil laws to have no basis in eternal, divine Mind, and hence to be nothing but statements,—statements of aggregated human belief, so long and so universally believed that they have come to operate in an assertedly logical sequence which simulates law, and to govern wherever they are accepted as law. Divine Mind operates through the action of law, and the counterfeiting carnal mind of mortality very naturally apes the divine method and calls that law which is nothing more nor less than a false statement,—a cleverly constructed and lawful-appearing lie about the truth.

Webster defines law: "In general, a rule of being or of conduct, established by an authority able to enforce its will; a controlling regulation; the mode or order according to which an agent or a power acts." A statement is defined as "that which is stated; a formal embodiment in language of facts or opinions." Hence, much that is generally named law is thus seen to be a mere "embodiment in language" of opinion, rather than of fact. Eternal Truth is stated; God's Word is stated; law is stated; but error, too, finds words for itself, so that the one is a statement of fact, the other a statement of untruth. Christian Science reveals God, good, to be the only power, and law to be that only which carries out the will of God, the will that is good, for man and the universe. From this basis it looks out upon the conflicting elements of evil and challenges as false statement all that would frustrate the dominion of good. Law must be true, and move majestically to establish all that accords with Truth. A statement of the truth is true, but a statement claiming that any power is existent in evil is false, no matter how plausible it may appear, and the only hope such statement has for its claims is its possible temporary acceptance as truth. Furthermore, let it be remembered that any kind of a statement about any existing condition or circumstance, if erroneous, is not at any instant true, even though for generations millions of earth's peoples have believed and still believe it, accepting its procession of suggested causes and effects as the invincible law and fact of existence.

Mortals are under the government, in belief, of an innumerable multitude of statements which have masqueraded as law,—statements time-honored and conservative, statements novel and progressive; statements concerning pleasure and pain, happiness and sorrow, success and failure, sickness and health, life and death. To escape submission to this host, the student of Christian Science is finding shelter in his understanding of actual law, the law of God which ordains and enforces a good and satisfying existence for man. Mrs. Eddy's book, "Science and Health with Key to the Scriptures," is doing mighty service to its every student, for it is enforcing Scriptural teaching concerning that which is law and that which is not law, and in its distinction between the two is inaugurating an understanding of right and might which will eventually grow into a universal and unobstructed reign of righteousness.

As between statement and law, scholastic theology teaches that man is a sinner, and that eternal punishment befalls the unrepentant; superstition states that fate, the stars, the departed, the past, innumerable material influences, may ordain catastrophe and otherwise determine personal experience; *materia medica* states that conditions of matter, involving heredity, contagion, food, exercise, rest, drugs, over-work, over-strain, over- or under-development, can govern health. It is further stated that sin can tempt mortals; that fear can incapacitate them; that grief can crush them; that disease can waste and prostrate them; that temperamental evils can disappoint hopes and wither affections under the action of perpetual misunderstanding. Timidity, self-pity, self-condemnation, lift their voices to restrain honest endeavor and to cripple right motive and action; while law, invincible and incorruptible, resisting all this clamor, advances steadily to the establishment and fulfilment of that which blesses in all its beneficent unfolding, that which is righteous and eternal and true. Needful indeed it is, that we should distinguish law from the network of statements which claim to operate as law! Without the understanding of divine law, thought is left unsheltered, easily persuaded to accept the terms materiality would make in the name of law. With the knowledge of the law of God, a divine conviction abides that only such statements as declare the supremacy of good accord with law, and then experience builds upon a rock, law-governed and law-protected.

Christian Science calls the world to a revealed knowledge of the law of God, and this knowledge exposes the disorderly suggestions of material sense as being in reality lawless, and powerless to govern man. Thus does this teaching become a refuge for the oppressed, a shelter from

Digitized by Google

the storms of sin and sorrow, a highway of deliverance from the shifting accident, the chance and change of mortality's unhappy pitfalls, for it offers immortal thinking, right consciousness, here and now, in exchange for mortality's sin and fear. Evil cannot employ law, for law is harnessed only to the service of good, the will of God. He who lifts his thought to consistent and continued obedience to his highest understanding of God, thinks in accord with law, and ensures for himself and for all whom he is endeavoring to help, law's protection. Christian Science finds the mortal more or less bound by the intricate and interwoven statements of the carnal mind, finds him living in conscious and unconscious obedience to this multiplication of taskmasters, and its mighty work is to unloose and liberate thought from this unholy and unlawful bondage. The revelation of law as upholding only good, uncovers all evil as false statement,—its seeming law merely falsehood about law. Mrs. Eddy urges the Christian Scientist to be a law to himself (see Science and Health, p. 442), for the upbuilding of all that is good and the demolishing of all that is evil; and after her clear teaching concerning law, the way cannot be mistaken.

The student who would obey, discerning somewhat of that divine will which makes for heaven, can face one after another of the statements of earth and refuse submission to their rule,—refuse to be governed by anything less than that divine and infinite law which in its prevailing will accomplish Jesus' prayer: "Thy kingdom come. Thy will be done in earth, as it is in heaven."

THE QUINTESSENCE OF DUST.

WILLARD S. MATTOX.

THERE are many serious misconceptions of Christian Science, and among them must be enumerated the supposition that it teaches that we have no bodies. Many critics have asserted this, and many beginners have worried over it until they saw the truth and realized that Christian Science teaches no such thing. Christian Science is not a doctrine of annihilation. It does not wipe out anything that really exists. It could not if it tried, but it does not even try. Divine metaphysics does not deprive a man of aught that belongs to his real being. On the contrary, our text-book says "consciousness constructs a better body when faith in matter has been conquered" (Science and Health, p. 425). It should be understood, however, that body and matter are not identical, synonymous, or suggestive, the one of the other.

Whatever of denial enters into the statements of Christian Science comes there to destroy a false belief. When the false belief disappears there is nothing left to deny. Truth is conscious only of what is true. Truth's very presence and all-efficiency is the only denial of error which it is possible or necessary for Truth to make. We are accustomed to associate a vigorous denial of error with our affirmations of the concord of being, but this association arises *only* because we still seem to be conscious of some*thing which* needs to be denied.

It may be said, then, that Christian Science is emphatically a religion of affirmation. It affirms that all good is, here and now. It affirms the truth about God, man, and the universe, about Mind and body, about law and government. It declares that whatever is real about our being, God made, and that therefore it must be good, and that what God did not make is not real and has no actual existence. Man's individuality or identity is his true being, and it would be impossible to rob him of his God-given individuality and identity. Christian Science has not come to destroy but to fulfil.

A right understanding of what constitutes man's being involves a comprehension of substance. Material sense accepts only its own concept of substance; that is, matter. It cannot possibly conceive of an idea as substantial. This would be intangible, inconceivable, even absurd, to material sense. So, then, whenever a statement is made concerning man's being, material sense immediately outlines matter, thinks of pounds avoirdupois, and from this erroneous standpoint seeks to quarrel with a statement which was never meant to embrace or designate matter.

The fundamental statement of Christian Science includes the declaration that infinite Mind *is*. The office or function of Mind is to think, to be mentally active. A mind which does not think, which is not active, which is dormant, or stagnant, is no mind. That which characterizes Mind is its capacity to think. We speak of Mind, and immediately we think of Mind's activities, of consciousness. We may say, then, that infinite Mind must express itself; in other words, that it embodies itself, and that its embodiment is to be found in infinite ideas, like itself. This teaching as to Mind and its manifestation is sustained by the spiritual account of creation, as given in the first chapter of Genesis. "And God said, Let us make man in our image, after our likeness." If mortal man, with a diseased and limited matter body, is this image and likeness, then God as his originator must bear the general contour and similitude of the matter body, a thought too shocking to admit for a moment.

Organization and matter go hand in hand. When we speak of one, the other is always suggested to our thought. We do not think of Spirit as organized, or outlined, because organization means limitation, and the basic statement of Christian Science is that Spirit, Mind, God, is infinite; that is to say, without limitation or organization. The material body, then, with its elaborate organization, can give us no correct idea of the reflections of infinite Spirit. The material body is a false sense of being, a material or perverted view of a spiritual reality. When this view is changed, the truth about man will be apparent. Mortals believe in a world made up of organized matter, peopled with personalities. Christian Science reveals a world of spiritual substance, peopled with spiritual ideas. When we exchange "personality" for "individuality," we reach a scientific basis, and begin to get a glimpse of man's true embodiment. Our Leader says, "To scientifically impersonalize the material sense of existence —rather than cling to personality—is the lesson of today" (Miscellaneous Writings, p. 310). Paul says practically the same thing when he pleads with us, "Be ye transformed by the renewing of your mind."

The belief that matter constitutes our selfhood, that material organization is necessary to carry on the functions of being, that man is corporeal and limited, is responsible for human discord and bodily suffering. Christian Science teaches a simplicity of existence and an integrity of individual being which rest upon the declaration that man cannot be separated from God, for "in him we live, and move, and have our being." Speaking of mortal man, Shakespeare says,—

> What a piece of work is a man! how noble in reason! how infinite in faculty! in form and moving how express and admirable! in action how like an angel! in apprehension how like a god! the beauty of the world, the paragon of animals! And yet, to me what is this quintessence of dust?

That seems to sum up the whole of material man. The quintessence of dust! The acme of nothingness! The hope of immortality, which is latent in all consciousness, would be unhappily placed if it had no surer foundation than matter, but there is much consolation and everlasting hope in the reasonable and demonstrable teaching of Christian Science with respect to man's individuality and immortality.

"BY MENTAL, NOT MATERIAL PROCESSES."

CARL HORTON PIERCE.

PERHAPS no other problem has a tendency to perplex the business man to-day as does the money problem,—the question of daily bread. It matters not whether a man has thousands upon thousands of capital in the bank, the conditions are such in the business world that he is being daily driven from dependence upon his capital in the bank to the capital which is in heaven,—the one capital, the understanding of divine Love. A valuable testimony given in the *Sentinel* some years ago, stated that it took three hundred blows of an axe to remove an unsightly stump of a tree, that the otherwise beautiful landscape might be preserved. This article pointed out that the first and the second and every other blow of the axe, even to the last, was as necessary as any other one blow, and that all were directed to the one end,—the removal of the stump. This testimony helped a struggling Scientist to overcome a compound rupture, through this continual blow upon blow at the error which would try to hold him in bondage to fear and inharmony; and it is again offered, in these seemingly strenuous financial days, to help every one who is struggling to demonstrate that the only capital is the truth, and that the call to every one in the Field is to "trust in Truth, and have no other trusts" (*Sentinel*, July 4, 1903).

In the case of the business man, struggling with the fear of limitation, there needs to be more of the quickening, active work done. With his business there is apt to be the almost hopeless hope that conditions will right themselves. They cannot right themselves, but God will right them through the man who thinks righteous thoughts. It is not thinking rightly to entertain fears of the poorhouse, or of the pawnshop, yet that is what one is very apt to fall into, if he listens to the arguments of discouragement which are more and more rife as mortal mind finds its asserted laws failing, and divine Mind is calling to the Scientist to rise higher into the understanding that there is only one power; that "evil is not power" (Science and Health, p. 192); that the silver and gold belong to God, "and the cattle on a thousand hills." Are you discouraged: then "count your many blessings, see what God has done." Are you ill at ease, and seemingly poverty-stricken: remember that it is better to be ill at ease, with your bark launched on the troubled waters of truth,—as our Leader has pointed out (Science and Health, p. 254),—than to rest on beds of ease, with no experience in the demonstration of the Love that meets every human need.

Even faith the size of a grain of mustard-seed removes mountains of doubt and dense fear. "He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty." This promise is only for him that "dwelleth," not for the man who prays one minute and doubts the next. The martyr Sanctus allowed no thought of fear to enter his mind, as they burned him with hot plates, but said, "I am a Christian;" and the martyr of this age may take his stand as firmly, while error defeats itself and business methods are undergoing the purging of Truth. Armed with the truth, we press onward, viewing the overturning of the money tables, and fearing not the separating of the tares from the wheat. To-day, as of yore, aspiring thoughts in the temple are or have been bartered for gain, but Truth's mighty angel is rapidly whipping the usurers from their vaunted positions, and the world is beginning to know "the only wise God," and Jesus Christ, whom He has sent. Time was, perhaps, when we prayed to be delivered from this battle with the demons within ourselves, and to flee as a bird to our mountain, apart from this struggle with false thoughts and money demonstrations, but it is like the spiritual growth of the one who first prayed to be healed for the healing's sake, but later was content to suffer until he should have been completely reformed in thought; so with the business man, there comes the desire even to have the struggle continue until every thought shall have come into subjection to Christ, Truth, and the desire for gain shall have given way to the desire for the heavenly riches which moth and rust do not corrupt.

Underlying our crying need, perhaps, lies the desire for material riches. But Christian Science heralds not the day of great personal gain. Rather does it prefigure the day when all men shall have enough for their needs and to spare; the day of peace and plenty for all, with thoughts for the betterment of mankind, not for money. The old thoughts of selfishness, of keen competitive methods, or unscrupulous ways and of any means to an end as being justifiable, are quickly merging and dissolving into competitive methods wherein men help each other and lift each other's burdens,—a condition wherein the presence and power of Love can be found in Wall Street just as much as in the home, where the capitalist as well as the housewife is, to use Mrs. Eddy's words, "perpetually repeating this diapason of heaven: 'God is my God, and my God is good'" (Miscellaneous Writings, p. 206). There is one thing that every business man ought to know, viz., when his thought is right, everything moves rapidly. It may take years of poverty and hand-to-mouth struggles to get the thought cleared for action, but he learns in time that there are no delays in the divine activity. Jesus declared, "Say not ye, There are yet four months, and then cometh the harvest? Behold, I say unto you, Lift up your eyes, and look on the fields; for they are white already to harvest."

When the business man gathers his harvest "by mental, not material processes" (Unity of Good, p. 15), he turns his clouds inside out, and beholds the golden lining: he sees in this financial depression the elimination of false thinking and erroneous business conduct, and exclaims with the poet,—

> Like the star of Bethlhem shining,
> Love will guide us all the way,
> From the depths of error's darkness,
> Into Truth's eternal day.

"LOVE-IN-A-MIST."

MAXWELL ARMFIELD.

I WAS looking at the blue petals of some "love-in-a-mist," and thinking how well the little flower typified the hope that is seen clearly to be emerging everywhere through the world's discontent, when my friend drew my attention to a belated yellow daffodil that she had found hidden under some thick leaves. To me it appeared a vivid green, and I supposed its strange color to be due to one of those lapses from which no so-called natural law is free. She however assured me that it was a pure yellow, and until my eyes gradually lost the memory of the blue that was clouding its purity, I maintained that my friend should have immediate treatment for her sense of color-blindness!

In a way somewhat similar, I think, we are so convinced of the reality of error that when Christian Science is first presented to us we too often are unwilling to accept the seemingly ridiculous statements of those who know the truth of being, and it is some time before the memory of the belief in sin, sickness, and death ceases to mar the purity of the perfect conception of Life that Mrs. Eddy has so beautifully and clearly explained for us; so that those of us are wise who agree to take a great deal that appears incomprehensible, on trust, knowing that if we persevere, this seeming veil of error which taints our vision must eventually be rent away, for it is but the memory of something that never really existed.

SELECTED ARTICLES.

[Mrs. Livingston Mims in the *Rome* (Ga.) *Tribune-Herald.*]

Paul, that zealous and mighty apostle of our dear Lord, Christ Jesus, admonished the church in Corinth that their minds be not "corrupted from the simplicity that is in Christ," and again, he reminds them that "truly the signs of an apostle were wrought among you in all patience, in signs, and wonders, and mighty deeds." Jesus declared that these signs and wonders should accompany the belief in or understanding of him. He said, "And these signs shall follow them that believe; in my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." May it not be that the creeds and dogmas of a scholastic theology have corrupted the minds of Christendom so that the proofs of discipleship demanded by primitive Christianity seem no longer possible, although there was never greater need of them?

Mrs. Eddy's great mission to humanity is to bring back to the world "the simplicity that is in Christ," with the signs and wonders, and the most prejudiced must admit that many proofs of true discipleship are being given by her faithful followers. Thought is uplifted and spiritualized, sin and disease are banished from the consciousness of many sick and sorrowing ones, as divine Science explains the hidden mysteries of the kingdom, glorious mysteries hidden to the corporeal senses, but clear and open to the spiritual vision. Jesus said to his followers: "It is given unto you to know the mysteries;" and those who follow his command to heal the sick as well as preach the gospel, rejoice in the illumination and the glorious unfoldings of Truth resultant from this obedience.

Now what is "the simplicity that is in Christ" which results in such wonderful manifestations of power? Nothing can so deeply concern this sinful, sick, and suffering humanity as to find an answer to this question. Mrs. Eddy in her revelation of scientific Christianity alone explains it to us. In the small volume, "Rudimental Divine Science," she defines Christian Science as "the law of God, the law of good, interpreting and demonstrating the Principle and rule of universal harmony." In Romans we read: "For the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." It is quite rational to suppose that disease is the intermediate condition between sin and death, as Jesus and his disciples proved.

That God's law (and the Scriptures inform us that God is the only lawmaker, and He is also our Life) must be and is logically and inevitably a law of life and health and harmony, Jesus proved by healing the sick, rebuking the waves, stilling the tempest, and raising the dead. He said, "He that believeth on me, the works that I do shall he do also." The utilization and demonstration of this law must and does bring health, harmony, and immortality on earth as it did two thousand years ago. It is only the recognition and application of this law that is needed. . . .

May not all Christians profit by Paul's declaration of what his ministry was: "My speech and my preaching was not with enticing words of man's wisdom, but in demonstration of the Spirit and power." This is what heals the sick, reforms the sinning, raises the dead, and which must establish the kingdom of heaven on earth. Creeds and dogmas pale before the vision of a new earth and a new heaven, brought into view by this Christianity that is the demonstration of God's spiritual laws, redeeming humanity from its sad illusions by the blazing light from the throne of perfect good.

[John H. Rendall in *The Midwestern.*]

Because God is the creator of all that is, He is also the intelligent Principle by which all reality is governed and controlled. His laws therefore are the laws which govern man's being, and the intelligent application of His laws has always resulted in those conditions of harmony and perfection which constitute man's real being. In a corresponding inverse ratio, do we find that ignorance or repudiation of God's laws, or the refusal to be governed thereby, has resulted in conditions of sin, sickness, disease, and death.

Prophet and apostle have united in the recognition of certain fundamental and indisputable facts relative to health and harmony of mind and body. The thunderings of Mount Sinai found their gentler response in the teachings of the Galilean Prophet, to the effect that all sin, all sickness, all discord, even unto death, may be overcome by the recognition of God's infinite love and power. The teaching that "sin brought death" is met with the truth that "righteousness [rightness with God] tendeth to life." The idea of healing the sick and sinful through prayer and faith in God is taught and was practised throughout all Bible history; it is not therefore a "new idea," neither is it an "experiment;" rather is it a fundamental part of Christianity and of religious experience as explained and taught by Jesus Christ and his disciples and apostles.

A close study of the teachings of the Bible reveals a clear line of scientific reasoning throughout its pages which differentiates between true methods in healing the sick and those which are faulty and inimical to man's welfare. This is illustrated by an experience recorded in Chronicles: "And Asa in the thirty and ninth year of his reign was diseased in his feet, until his disease was exceeding great: yet in his disease he sought not to the Lord, but to the physicians. And Asa slept with his fathers, and died." It is also illustrated in the case of "Naaman the Syrian," who failed to find healing for his leprosy until he complied with God's requirements. It is further illustrated in every case which Jesus healed. An illustration of the difference between true and false mental methods is in the experience of Moses with the magicians of Egypt, of Saul with the "witch of Endor," of Daniel with the astrologers and soothsayers of the Babylonish court, and in many other instances given in Scripture. These illustrations make a clear distinction between the claims of hypnotism, mesmerism, spiritualism, necromancy, etc., as expressed in the belief in "minds many" and the positive power of the one infinite Mind, or God. Jesus Christ in his healing ministry recognized and emphasized true methods of Christian healing, and only those are entitled to be thus designated which conform in every particular to the teachings which he established.

During the first three hundred years of the Christian religion, healing was an essential doctrine of the Church. Because of departure from the high spiritual understanding which made this healing possible, it fell into disuse, and only in isolated cases and under the stress of deep religious fervor have there seemed to be occasional instances of the healing of the sick through prayer. Forty years ago a New England woman, Mary Baker G. Eddy, through prayer and Scriptural research discovered the Principle of Christian healing and made it known to humanity; that God's laws are just as applicable to the healing of the sick and the reformation of the sinner to-day as in Jesus' time. The wonderful growth and success of the Christian Science movement have at last stirred the thought of church people to the possibility of Christian healing. They are seeing that Christianity includes much of great value which their systems have failed to appropriate. Thus we find that movements have been and are being inaugurated under various names for the purpose of endeavoring to heal sick-

Digitized by Google

ness within other churches, and a general discussion of the possibilities and probabilities of healing by prayer has resulted.

Christian Scientists, however, are fully awake to the fact that now as during the past ages there is but one exact, scientific method of Christian healing; namely, the one practised by Jesus Christ and set forth in the Bible. This admits of no admixture with *materia medica*, physical culture, suggestive therapeutics, psychology, mesmerism, hypnotism, phrenology, hygiene, etc., but is separate and apart from all such methods, recognizing but one power, that of Almighty God. True Christian healing requires no aid from a drug or from questionable mental methods; it depends not upon the uncertainties of speculative human hypotheses for the healing of both mind and body, but recognizes as absolutely true the words of the psalmist, "He sent his word, and healed them, and delivered them from their destructions." The word of God is just as potent to-day as in Jesus' time, and Truth, which heals and saves, is with us as promised by our Master.

Christian Scientists are awake to the truth of the Scriptural statement, "Ye cannot serve God and mammon," and they recognize the futility of the effort to eradicate a disease which has been induced by sin or erroneous thought-process, by physical or mental gymnastics. In Paul's epistle to Timothy we read: "For bodily exercise profiteth little: but godliness is profitable unto all things, having promise of the life that now is, and of that which is to come."

During the past forty years Christian Science has healed "all manner of disease among the people:" it has proved itself unlimited in scope, presenting incontestable proofs of its divine efficacy. Its mission is twofold, including the healing of the sick and the reformation of the sinner, thus fulfilling the essential requirements of Jesus' injunction, "Go ye into all the world, and preach the gospel to every creature. . . . And these signs shall follow them that believe; in my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

[R. Stanhope Easterday in the *Indianapolis* (Ind.) *Star*.]

A careful study of the writings of Mrs. Eddy will reveal the fact that they are what their author claims them to be, nothing more nor less than a commentary on the Bible, or a recapitulation of the teachings of Jesus, who frustrated the philosophy of all ages, spake as "never man spake," and "wrought wonders." He who declared fearlessly, "The words which I speak unto you, they are spirit, and they are life," inaugurated the only true philosophy, incomprehensible to material senses, to the carnally minded, because spiritually discerned, and only so. His system of philosophy is entirely satisfactory, inasmuch as in its final demonstration or consummation it conduces to immortality, to the absolute solution of one and all of life's problems. Superficial critics of Jesus' time, unable to discern the source of his authoritative utterances, questioned helplessly, "Whence hath this man knowledge?" but they were wiser than their fellows in this later age of skepticism and doubt, and, as their question evinces, did not attempt to trace his sayings to some humanly philosophical teaching of bygone ages.

[Orison Swett Marden in *Success*.]

One of the most unfortunate things that has come to us through what we call "higher civilization" is the killing of faith in our power of disease resistance. In our large cities people make great preparations for sickness. They expect it, anticipate it, and consequently have it. It is only a block or two to a physician, a drug-store is on every other corner, and the temptation to send for the physician or to get drugs at the slightest symptom of illness tends to make them more and more dependent on outside helps and less able to control their physical discords. During the frontier days there were little villages and hamlets which physicians rarely entered, and here the people were strong and healthy and independent. They developed great powers of disease resistance.

There is no doubt that the doctor habit in many families has a great deal to do with the developing of unfortunate physical conditions in the child. Many mothers call the doctor whenever there is the least sign of disturbance in a child. The result is that the child grows up with this disease picture, doctor picture, medicine picture in its mind, and it influences its whole life. The time will come when a child and any kind of medicine will be considered a very incongruous combination. Were children properly reared, were they trained to right thinking, a doctor or medicine would rarely be needed.

Within the last ten years tens of thousands of families have never tasted medicine or required the services of a physician. It is becoming more and more certain that the time will come when the belief of the necessity of employing some one to patch us up, to mend the Almighty's work, will be a thing of the past. The creator never put man's health, happiness, and welfare at the mercy of the mere accident of happening to live near physicians. He never left the grandest of His creations to the mercy of any chance, cruel fate, or destiny; never intended that the life, health, and well-being of one of His children should hang upon the contingency of being near a remedy for his ills; never placed him where his own life, health, and happiness would depend upon the chance of happening to be where a certain plant might grow, or a certain mineral exist which could cure him. Is it not more rational to believe that He would put the remedies for man's ills within the man—in his own mind, where they are always available—than that He would store them in herbs and minerals in remote parts of the earth, where practically but a small portion of the human race would ever discover them, countless millions dying in total ignorance of their existence?

There is a latent power, a force of indestructible life, an immortal Principle of health, for every individual, which if developed [understood] would heal all our wounds and furnish a balm for the hurts of the world.

[W. E. Brown in the *San Bernardino* (Cal.) *Index*.]

Our critic asks why Christian Scientists heal only those who are willing to be healed. In so doing the Christian Scientists are following the example of the Master and his disciples, whose custom it was to heal those who sought healing. The promise is to him who seeks, "Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you." It is related of Jesus in Matthew's Gospel, that in a certain country "he did not many mighty works there because of their unbelief." . . . Christian Science is daily proving that its interpretation of Jesus' teachings is correct by healing all sorts of diseases, many of them pronounced incurable by *materia medica*. In doing this it is healing the slaves of sin and is transforming them into earnest, consecrated followers of the Master. These are the signs Jesus promised should follow "them that believe."

Our critic cites Jesus' action in anointing the eyes of the blind man with clay and spittle and the instruction to wash in the pool of Siloam as evidence of his belief in their therapeutic value. Christian Scientists gather just the opposite evidence, *i.e.*, that these actions of Jesus showed

Digitized by Google

his contempt for material remedies. Among the Jews it was customary to spit upon that for which they had no regard. In the instance under consideration it is related that Jesus "spat on the ground." Christian Scientists interpret this action of Jesus to show that all earthly or material remedies are of no avail. It will also be noted that before the blind man saw, he had to wash off the clay and spittle in the pool of Siloam, clearly showing that material remedies are useless and that true healing can come only from the understanding of God.

Much of the teaching of Jesus was by parables and symbols, and undoubtedly to this class belong the incidents of spittle and clay and the oil and wine our critic mentions. If these incidents are to be interpreted literally, and if the oil, wine, and spittle really had a therapeutic value and were necessary to healing, why did not Jesus and his disciples use them constantly? If they were efficacious and necessary in one instance, they would surely have been so in all. Furthermore, if a mixture of clay and spittle could cure blindness in the time of Jesus, it could do it now, but we do not hear of the blind recovering their sight in this manner. Jesus and his disciples healed the sick and sinful through their understanding of the power of God, and did not need to stoop to any so-called material remedies. The system of *materia medica* and material remedies prevailing in Jesus' time received a severe arraignment in the story of the woman who "had suffered many things of many physicians, and had spent all that she had, and was nothing bettered, but rather grew worse."

True prayer is the only remedy for sin and disease, and it was this method and this alone employed by Jesus and his disciples. It is this method and this alone that Christian Scientists stand for. Like the disciples of old, they preach that the kingdom of heaven is at hand and that the gospel will save from sin and its consequent sickness. As it was said of the disciples, so also can it be said of the Christian Scientists of to-day, that they preach the glad tidings, "the Lord working with them, and confirming the word with signs following."

[C. R. Munro in the *Hamilton* (Can.) *Spectator.*]

Christian Science heals entirely by a reliance on God, and an absolute faith in His power to cure all manner of diseases, whether functional or organic, and whether in their early or advanced stages. Christian Science accepts fully and unreservedly the teachings of Jesus and follows unswervingly in his methods. He never advocated, by word or example, the use of material means of healing, never employed mental suggestion, and never taught his followers to do so. He knew that God, the "great Physician," is able to heal all things, without recourse to any material means or methods. We can scarcely imagine Jesus as consulting a physician to know whether a disease were safe for him to treat, or whether it should be left to the physician.

There are some Christian teachers who regard disease as being of material origin, and accept the usual medical theories in connection with the body. Their treatment is a combination of medical methods and mental suggestion, while Christian Science heals through an understanding of God and man's relation to God, which understanding, when properly applied, effects as sure and certain results as the working out of a problem in mathematics when the principle of mathematics is understood and adhered to. Jesus worked according to Principle, and to a fixed and definite rule, which he taught to his disciples, and his practice was in no way connected with the medical practice of his day. Jesus in no way resorted to the use of mental suggestion or hypnotism. He said, "Ye shall know the truth, and the truth shall make you free." The truth he taught was not mental suggestion, but the ever-presence and ever-availability of a God who is Spirit—"a very present help in trouble"—and of man, who does not need to be diagnosed or doctored in order to be made perfect, but who is already made "in the image of God."

[J. V. Dittemore in the *Hornell* (N. Y.) *Tribune.*]

Mrs. Eddy has not denied the fact of judgment or punishment for sin. The Christian Science text-book makes it very plain that men suffer for the deeds done in the body. The orthodox Christian church teaches that there will be a final and collective judgment for all mortals who have ever lived and died, that this vast assemblage will be collected at a given time, chronologically, and at a stated place, geographically, to face God on His throne and to be judged for their past conduct.

Mrs. Eddy simply declines to believe in any such scheme. She does not say that there will not come a time when the judgment of mortal man will be ended, but that time will arrive when the individual has been so regenerated and purified that, as Paul says, the old man has been put off and the new man, after Christ, appears. In other words, Christian Science teaches that the judgment of mortals is individual and not collective. It is a progressive purging process and not an event which is to occur for all at one time.

[Frank W. Gale in the *Berkeley* (Cal.) *Gazette.*]

In regard to the "Emmanuel movement," it is said to be "an alliance between medical science and the forces of religion," and a medical diagnosis determines whether a case is a nervous or functional disorder to be treated by the minister by suggestion and religious influence, or an organic disease to be given regular medical treatment. Under these circumstances what hope has it to offer to the one with an organic disease who has already been pronounced incurable by skilful physicians? Christ Jesus made no such distinctions, and used neither "suggestion" nor drugs in his healing work, but cured "all manner of sickness and all manner of disease among the people," "by the Spirit of God," and instructed his disciples to do likewise. Christian Science fulfils the Master's injunction by healing both functional and organic diseases and giving a spiritual understanding of God that is demonstrable in every-day life.

[From the *Cleveland* (O.) *News.*]

America's winner in the running high jump in the Olympic games, Harry F. Porter, who was credited with a record-breaking jump of six feet three inches, is known among his associates in the Irish-American A. C. of New York, of which he is a member, as the "Christian Science athlete." This title Porter gained through his queer methods of training and his belief in the teaching of Christian Science as applied to athletics. In his entire career as an athlete Porter has never undergone the same training routine as other athletes. He does not believe in it, and his trainers, both at Cornell, where he first gained fame, and later at the various clubs in New York, always indulged what they at first regarded as a mere whim, but which they later came to regard with respect. Porter's belief is that he is always in perfect condition; that no special preparation is necessary for competition in athletic contests, and that an athlete need only consider himself fit to do his best. This rule might not apply in many cases, but in the case of Porter it has never failed.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy upon proper subjects *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

CHRISTIAN CITIZENSHIP.

A GOOD many Christian Scientists appear to be at a loss to decide what is their duty in regard to politics,—what they should do and how much they should do as individuals in the way of taking part in national, state, and municipal elections; but it would seem that these questions should not be difficult of answer.

Plainly it is the duty of every citizen to participate in the government of his country, and he is the best citizen who most carefully, prayerfully, and punctually exercises his right of suffrage. This does not mean that the admittedly undesirable in political methods shall be perpetuated, nor that blind and unreasoning partisanship should govern the actions of any one. Right thinking and right acting must be paramount in the domain of public as well as personal affairs; and in order to bring about this condition, rightly directed individual effort is required. The people who stand for civic righteousness and just and equitable laws and their impartial administration, cannot delegate their duty in this regard to those who are not actuated by unselfish motives.

It is incumbent on every good citizen to do his share toward the election to public office of men of unselfish motives and sterling integrity, for just and wise laws and their fearless administration are essential to the general welfare. Consistent Christian Scientists are well qualified to perform this duty, and the plea that they do not approve of methods now in vogue, or that the heat and turmoil of the ordinary political campaign is distasteful to them, is not a valid excuse. To stand aloof will not cure the evils of the partisan and corrupt methods which have so often been justly criticized. If practical politics are not what they should be, the blame lies largely with those who decry present methods without taking active steps to correct them. Ambition and selfish desire for private gain have no place in the ideal social condition, and there must be individual and concerted effort on the part of public-spirited citizens to secure their elimination from civic affairs,—a condition which can be accomplished not only through casting one's ballot for the best men who have been nominated, but also through active participation in the "primary" processes by which the nomination of the best men can be secured.

If political methods and conditions are to be improved, the change must come through the individual whose ballot is cast unselfishly, whose every thought is one of love for his fellows, and whose every desire is for the establishment of Christ's kingdom. ARCHIBALD MCLELLAN.

"MAKING MUCH OF MATTER."

CHRISTIAN SCIENCE is often criticized on the ground that it "makes so much of matter,"—has so much to say about the physical senses, etc.,—"when in fact," declare the critics, "sin inheres not in matter but in motive. There is no occasion to condemn matter nor to wish it out of existence; what we need is right thought about it."

The plausibility of this statement grows out of its partial truth. No one will question that wrong thinking makes the sinner, or that we need a right thought about everything; but the critic would have us believe that "right thought" about matter is that it is real, and that it serves as a vehicle for Spirit, both of which assertions are proved, in Christian Science, to be untrue. Here it is seen that false sense constitutes both the sinner and the sin, the materialist and his material. It is also seen that thought and purpose as well as action are for the most part immediately related to and determined by desire, and that to human sense the bulk of the objects of desire are material. It is the satisfaction of sense by the possession of material things, the attachment of every estimate and anticipation of happiness to certain material conditions, which establishes the interaction between the objective world of material belief and the gross selfishness and sin of the believer. Mortal sense first, and in large part unconsciously, declares for the objective validity of the products of material belief, and is then influenced and controlled by these products in a way which renders the consideration of materiality so absolutely necessary to the elimination of wrong desire, and thus of wrong-doing.

To the Christian Scientist it is clear that the belief in matter—that it has substance and life—is the tap-root and explanation of all sin, for it gives rise to all those false concepts about the desirable, about happiness and the way of securing it, which lead directly to selfishness and sensualism. This Mrs. Eddy has seen and stated with a frequency and force which is awakening and transforming the thought of all Christendom. It is being realized that sin cannot be eradicated so long as material belief remains; that matter is the final retreat for every unspiritual thing and thought, and hence that belief in it must go. There is none other name than Spirit and the spiritual "whereby we must be saved."

This radicalism of Christian Science respecting the unspeakable wrong to the race involved in the acceptance of the theological teaching that God created matter and called it good, constitutes one of its greatest distinctions. Here it takes its stand against that mortal belief in material substance which is the greatest deception and deceiver of human thought, since it can but vitiate every concept and judgment which is grounded in it. This is the evil which St. Paul declared to be always present with him, and when we remember that the Christian theology of the centuries has not only raised no objection to its dominion, but has insisted upon the legitimacy of its place and authority, we begin to apprehend something of the need of the vigorous denial of this claim which Christian Science is making. Said Jesus, "If thy right eye offend thee, pluck it out, and cast it from thee." In this he condemned not the eye of God's creating, but the eye of material sense, the eye through which "offenses come." The "old man" must be put off. Moreover, what is true of our so-called "members" is true of every projection of material sense. All are to be denied, put off, that the new heaven and new earth of John's vision may appear.

However sound its logic, material philosophy has ever failed, and must forever fail, because of the colossal fallacy of its major premise, the belief of substance and intelligence in matter; and in centering its fire upon this belief, Christian Science is simply adhering to the main contention. It is bearding our chief enemy in his den.

JOHN B. WILLIS.

DISCIPLINE.

THE word discipline is very generally taken to mean punishment, or is at least closely associated with it, though the dictionaries give this word as a secondary definition, the first being "systematic training or subjection to authority; especially the training of the mental, moral, and physical power by instruction and exercise."

Digitized by Google

It should be self-evident that where discipline is submitted to, punishment is unnecessary. The difficulty with most mortals, both children and adults, is that they fail to recognize the value of discipline—its absolute necessity to their progress in every direction. They therefore disregard law and order, and find themselves the subjects of punishment; which is always humiliating, whether it be mental or physical. Now discipline, no less than punishment, is imposed by an authority other than one's self, and in most cases it is submitted to for no better reason than to avoid unpleasant consequences, but from such a basis its results are very unsatisfactory.

In Christian Science we soon learn that we need not submit to any authority which is not good,—that we owe obedience only to divine Principle and to that which is nearest to absolute right in all things. Obedience to material health laws (really disease laws) gives neither health nor freedom. What is more, it distracts attention from the mental and moral discipline essential to the working out of every human problem. In Christian Science entire obedience to spiritual law and order is required to subjugate the mortal sense of selfhood and to establish instead the rule of the Christ, and the discipline thus demanded is well defined in Paul's words, "Casting down imaginations, and every high thing that exalteth itself against the knowledge of God, and bringing into captivity every thought to the obedience of Christ."

Our revered Leader says, "The guerdon of meritorious faith or trustworthiness rests on being willing to work alone with God and for Him,—willing to suffer patiently for error until all error is destroyed and His rod and His staff comfort you" (Miscellaneous Writings, p. 118). This surely means trusting God absolutely and desiring Him to have His will with us, whatever the cost to our human sense. It also means the knowing of the difference between discipline and punishment. If divine Love is working to make us perfect, why should we shrink from the high demands of Truth and be sorrowful, when we should be going "from strength to strength." It may be that the effort called for in Truth is

> Just the one note the great final harmony needs,

and when we welcome the opportunity to have a part in this harmony, we shall not walk in darkness but will have the light of Life.

In Science and Health (p. 4) Mrs. Eddy speaks of the striving which is necessary to "mold and fashion us anew, until we awake in His likeness." In thus striving we see each day more clearly wherein our mortal sense differs from the divine model, but we at the same time come to understand something of man's true selfhood, and we welcome the discipline which corrects every mortal fault and flaw. We also become conscious that Truth's processes are not painful to Truth's ideas. The one who strives to express the divine idea will come to admit that Tennyson is right when he says,—

> O well for him whose will is strong!
> He suffers, but he will not suffer long;
> He suffers, but he cannot suffer wrong.

No, when the purpose to do right "is strong," sorrow is turned into joy, as the Master said.

ANNIE M. KNOTT.

In the *Sentinel* of Sept. 5 we quoted from an address delivered by Rev. E. J. Craft, as reported in *The Standard*, Bridgeport, Conn. We have since been informed that Mr. Craft states that he was incorrectly reported in *The Standard*, and we regret that we should have quoted him as saying something which he did not actually say. The words which *The Standard* attributed to Mr. Craft might, we think, have been uttered by him with entire propriety, but if they were inaccurately reported, he should not be held responsible for them.

LETTERS TO OUR LEADER.

East Aurora, N. Y., Aug. 29, 1908.

Mrs. Mary Baker G. Eddy, Chestnut Hill, Mass.

Beloved Leader:—Through Mr. Dickey I have just received notice of your favorable judgment of my drawing, and the request for permission to use the portrait in Science and Health. Surely this is a splendid crown for my effort, and I am at loss how to express my satisfaction in this unlooked-for result of my work.

Although the drawing was not made with this end in view, you have recognized in it a labor of love. The desire and purpose to make as good a portrait as I could, have indeed been mine ever since my recognition of the truth and beauty of Christian Science and of its bounty and benefit to me: so that, in a small measure at least, this drawing testifies to my gratitude and love.

Devotedly yours,

JULES MAURICE GASPARD.

Seattle, Wash., Sept. 13, 1908.

Dear Mrs. Eddy:—I want to thank you for the verse that you have given us on the page following the title-page in the recent edition of Science and Health. It was such a sweet surprise when I turned to that page yesterday, to read to a dear patient who seemed burdened with a sense of personality the verse beginning, "I, I, I," etc., to find instead the beautiful words which eliminate all personality and give so clear a realization of God's presence.

Lovingly yours,

LILLIAN HARDING.

Le Hurel, Guernsey, Channel Islands, July 7, 1908.

Dear Leader:—Recently, accompanied by two little children, I stood on the deck of a tossing steamer. The three of us were free from fear and consequently from discomfort. Often had I wondered whether it would ever be possible to enjoy a sea voyage, yet here we were, watching the sunlit waves and talking delightedly to some friends of the great things of God as revealed in Christian Science. These dear friends have since become earnest students of our wonderful text-book. It is impossible to speak of the gratitude which filled my whole being as I silently praised God for your life and works, and the unutterable sense of beauty and of joy which your teachings have brought to me and to my family.

Allow me to thank you for the new By-laws. The entire Field need no longer waste one lingering thought as to the desirability of being in a "place" every third year. You have, however, made it incumbent upon your followers to seek, until found, our rightful places as "lively stones" in the "spiritual house" of our God. The little church here unanimously decided to invest its building fund in the publishing house. Mrs. Le Messurier joins me in heartfelt gratitude and loving thoughts.

Your grateful and humble follower,

ALBERT W. LE MESSURIER.

Brooklyn, N. Y., Sept. 8, 1908.

Mrs. Mary Baker G. Eddy.

Beloved Leader:—Through your teaching we have been awakened to see the fascination, selfishness, and idolatry which play so great a part in the emotions of mankind. We are also able to recognize the error of clinging to individuals and to material systems for aid, to the love of fame and power, and the pride of great possessions. As I progress, the better do I realize how little I know, and through my own struggles I catch a glimpse of the "passage from sense to Soul" (Science and Health, p. 566) which

Digitized by Google

you have so patiently, lovingly, and courageously shown us in this age.

In grateful recognition of the blessings you are bringing to mankind, I endeavor to "rejoice all the rugged way" (Miscellaneous Writings, p. 397), knowing that all who will may prove the omnipotence and omnipresence of God.

Gratefully yours,
FANNY S. FERRIS.

Newburgh, N. Y., Sept. 30, 1908.

Mrs. Mary Baker G. Eddy.

Dear Leader:—We have just completed the third year of our existence as a Christian Science organization in Newburgh, N. Y. Each year has marked a distinct stage in our understanding of your life's mission and what it means to be a Christian Scientist. On this third year of our ascending thought, the dead beliefs of the past are falling away and the "certain sense of eternal Life" (Science and Health, p. 509) seems surely dawning upon us. We welcome each new By-law, knowing it is a clearer revelation of Truth that you feel we are capable of understanding. You were the first to expose error's hidden ways, which are "the source of all error's visible forms" (*Ibid.*, p. 559), and the influence of your life and example will be a never-failing source of high inspiration to your many faithful followers and to the distant generations of posterity.

We are personally striving not to "entertain a false estimate of any one whom God has appointed to voice His word" (*Ibid.*, p. 560), and we deeply appreciate your labors to expound the power of divine Love.

Lovingly your followers,
First Church of Christ, Scientist.
ALIDA PHILLIPS, *Clerk.*

Melbourne, Australia, July 15, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Revered Leader:—In sending you, as representing and on behalf of First Church of Christ, Scientist, Melbourne, renewed greetings of love and steadfast loyalty, we desire to convey to you our appreciation of and deep thankfulness for the privilege which the church here has recently enjoyed in having for the first time a lecturer in this distant part of the Field. The lectures given by Bicknell Young in the Melbourne Town Hall, on June 22 and 23, were very largely attended, and we are conscious that much general good has already resulted therefrom; while as a church, and as the individual members thereof, we have been greatly strengthened, assisted, and encouraged by Mr. Young's visit.

We wish also to take this opportunity of expressing to you our gratitude for the continuance of your patient, constant, and self-sacrificing labors for the advancement of the Christ-kingdom on earth; and we assure you that here in distant Australia our endeavors will unceasingly be to bring forth the fruits of Love.

J. R. GEORGE, *President.*
DAVID ANDERSON, *Acting Clerk.*

Cambridge, Mass., Sept. 11, 1908.

Dear Mrs. Eddy:—For a long time I have wanted to tell you of the work I have tried to do among the negroes on my plantation home in Alabama, but the feeling of my own unworthiness and little knowledge of Truth has thus far kept me silent. But if I wait to be worthy, I am afraid I shall never be able to thank you for all the good that Christian Science has brought to me. From childhood I longed to know about God, and once when a schoolgirl I cried out like Jacob, "I will not let thee go, except thou bless me." Though many years passed before my cry was answered, yet at last it was answered when I found the truth, as taught by you in Science and Health.

When I first came into Science, those around me cared nothing about it, and with the thought, "He came unto his own, and his own received him not," I began to help the negroes. No one knows the battle I had with self when I first started this work; pride, tradition, environment,—everything, as it were, shrieked at me, but no one can know what a blessing has come to me through what I have seen Truth do for them. Their beautiful faith and child-like trust in God is a constant rebuke to me. One girl especially is remarkable; she cannot read or write, but her understanding of Science is wonderful, and she does beautiful healing. Of course I was grateful for the healing that came to them, but what I wanted was to lift them out of their gross darkness and ignorance, and it has been beautiful to see how some of them have blossomed out under the touch of Truth. Knowing their superstition, I have tried from the first to make them see that the healing came from God.

Gratefully and lovingly your follower,
UNITY D. DANCY.

Washington, D. C., Sept. 26, 1908.

Mrs. Mary Baker G. Eddy, Chestnut Hill, Mass.

Dear Mrs. Eddy:—Thinking that another joy may be added to your already brimming cup of reward for Christly labor, I take pleasure in informing you that the Sunday School of First Church of Christ, Scientist, here in the national capital, is thriving and rapidly increasing in membership. We endeavor to take each advancing step as pointed out by you, dear Leader, and the last important move which we considered in accordance with your wish was to cease counting our membership. Therefore we may not say how many members are enrolled, but we can speak gratefully of an efficient corps of officers and teachers, and of full classes, ranging from little ones as yet unable to lisp their own names, to young ladies and gentlemen nearing the Sunday School age limit of twenty years. The school responded joyfully to the call for funds for the publishing house, and our watchword is obedience,—obedience to the teachings of Christian Science as found in Science and Health and to the precepts of the Church Manual.

With expressions of personal gratitude for the privilege of being a worker in this vineyard of your planting,

Thankfully your follower,
ARTHUR L. HITCHCOCK, *Superintendent.*

White Plains, N. Y., July 15, 1908.

Beloved Leader:—First Church of Christ, Scientist, of White Plains has sent its Communion Sunday collection to the building fund of the publishing house, and we take this occasion to express our deep appreciation of the great good which is being brought to human thought through the world-wide circulation of our periodicals. For this "table in the wilderness" and for your wise and watchful leadership we tender to you our loyal and loving gratitude. Our wish is to follow, so to prove our obedience and utility.

Lovingly yours,
ELLA E. PERRY, *Clerk.*

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be Nov. 6, 1908. Applications should be in the hands of the Clerk of The Mother Church on or before Oct. 21, 1908. Application blanks may be had by addressing William B. Johnson, C.S.D., Clerk, at the church edifice, Falmouth, Norway, and St. Paul Streets.

THE LECTURES.

DULUTH, MINN.

Clarence C. Eaton of Tacoma, Wash., lectured Aug. 30 at the Lyceum Theater, under the auspices of Second Church of Christ, Scientist. The lecture was attended by about fifteen hundred people. The introduction by W. D. Bailey, a prominent attorney of the city, was in part as follows:—

The last twenty-five years have witnessed a wonderful growth in science and industry. The advance in religious thought has been no less marked. Men are learning to emphasize those things on which they agree rather than those on which they differ. With a clear statement of the points on which they agreed, they have often found there were few left on which they differed. Every creed that attains and keeps a considerable following rests on some essential truth. No organization can long flourish which is founded wholly on error. Truth is for universal appropriation by mankind. That church is narrow which emphasizes a single truth to the exclusion of all others. That church is broad which does emphasize its particular truth and yet is receptive to others. To-day the word denomination does not necessarily signify a point of difference, but only an emphasis of some point of agreement. So to those of us who are not Christian Scientists an examination discloses not so much a difference as an emphasis of certain teachings overlooked or neglected by other churches.

Christian Science does not seek to interfere with those who are satisfied with their religion; it does not proselyte; it does not appeal to the emotions; it holds no revivals; it produces no sensational sermons, such as attract vast metropolitan audiences. Its churches do not even employ personal pastors, and this rule is observed with a view of emphasizing truth rather than personality. Christian Scientists do not believe in pressing their views upon others, and only state them when information is sought. These being their tenets, it is a rule that each church shall provide at least once a year a lecturer who shall set forth their beliefs for the benefit of those who are seeking information.—*Correspondence.*

AYER, MASS.

On Sunday, Sept. 13, Frank H. Leonard lectured on Christian Science. He was introduced as follows by Rev. G. A. Kratzer of Fitchburg:—

I doubt not that many of you have come here to learn what Christian Science is, and what adequate reason there is for establishing churches and propagating the gospel of Christian Science. It will be the province of the lecturer to tell you many things in answer to such questions; but, before introducing him, I am going to say a word as to what I have found in Christian Science that I did not find in any other form of religion which I ever investigated, although several years of my life were given more or less to the earnest investigation of the teachings of various forms of religion. A Christian Scientist, in his thinking and in his declarations about himself and about all things, stands with God, Spirit, against the testimony of the physical senses; for he knows that "the carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be;" and that "the flesh lusteth against the Spirit, and the Spirit against the flesh: and these are contrary the one to the other."

The materialist stands with the testimony of the physical senses against God, often even to the extent of declaring that there is no God, or to the extent of declaring that, if there be a God, He can and does exercise no control, either directly or indirectly, over the phenomena of the physical universe. However, the various churches other than the Christian Science church have tried and are trying to construct a theology and a philosophy of life which shall square with so-called physical science and with the testimony of the physical senses on the one hand, and with Spirit, God, on the other. As it seems to me, this course is logically loyal neither to Spirit nor to matter, "neither cold nor hot." He who is not loyal to Spirit, but unwittingly renders service to "other gods," surely cannot hope to be able to heal the sick by spiritual means; indeed, he is impelled to believe that those sick with organic diseases cannot be healed by this method. There is so much of materialism in such theories, that those who accept them practically stand with the materialist in thinking that the power of God cannot be applied to produce so-called physical changes in such a way as to heal so-called organic disease.

Christian Scientists know that the various states and forms of matter are but the objectifications of mortal mind; and they know that the untrue and inharmonious assertions of false sense can be destroyed by the knowledge and declaration of Truth, God. Hence, the Christian Scientists confidently deny the testimony of the physical senses when they make troublesome or inharmonious assertions about conditions of the body or about any of the outward affairs of life. They confidently affirm that God created all reality, that He made all good, and that His all-power preserves all in the perfect condition in which He made it; and they deny that there is any real evil, sense testimony to the contrary notwithstanding. By doing this, the physical senses are compelled to cease testifying to evil, whether in the form of sin, disease, poverty, or discord; and in the end they will be compelled to cease from all such testimony. I have found that various phases of evil disappear from our personal experience in proportion as we are loyal to Truth, Spirit, and faithful in the declaration of the all-power thereof.

Correspondence.

KEWANEE, ILL.

In the Kewanee Opera House, Thursday evening [Sept. 17], a lecture on Christian Science was given by Mrs. Sue Harper Mims of Atlanta, Ga. Mrs. Mims was introduced by Mrs. S. E. Bone, one of the pioneer Christian Science workers of Kewanee, who said in part,—

Very many are insistently asking, What is Christian Science? What is it that is turning thousands of men and women to search the Scriptures for health and happiness? The answer is this: The Christ has indeed come. Twenty years ago I was a hopeless sufferer. No hope of heaven had I, until I found this little book, "Science and Health with Key to the Scriptures," written by Mary Baker Eddy, through which I have learned to love the Bible and demonstrate its teachings.—*Kewanee Star-Courier.*

THE MANUAL.

The 74th edition of The Mother Church Manual, containing all of the recent changes, has been issued and is now on sale.

Subsequent editions of the Manual will be issued when new By-laws are made or when important changes are made in By-laws already in effect; and due notice of each new edition will appear in the *Sentinel.*

Address all orders to Allison V. Stewart, Publisher, Falmouth and St. Paul Streets, Boston.

TESTIMONIES OF HEALING.

A little more than one year ago a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy was placed in my hands, and being attracted by the title of the book I opened it and read the chapter on Prayer. On my expressing a desire to read the book, it was kindly loaned to me. I fairly devoured the volume, reading every spare moment during the day, and late into the night, something I had not done for years; in fact, I had not read any book through for more than five years, on account of a serious eye trouble with which I was afflicted. When I began reading this book I was wearing glasses that had been fitted to my eyes by an eminent specialist, and my eyes had been examined by three other specialists, all of them declaring that I would always be compelled to use glasses while reading or doing any work which required close application. I was also using, two and three times daily, a medical remedy which had been prepared especially for my eyes. Before I finished reading Science and Health the first time, I realized that my glasses had been left in their case and that the medicines were left untouched. I have used no material remedies since that time, and have not worn glasses for months, although I am using my eyes for bookkeeping work day and night, work which I had been obliged to give up entirely on account of my eyes, even while wearing glasses. Since childhood I had been almost a slave to medicines, but while reading this wonderful little book I realized that I was cured of a bowel trouble which was supposed to be a hereditary disease, and I have stayed cured. With the little understanding I have gained in Science I have been able to overcome many minor ailments during the past year. I have also had some financial demonstrations that have been very helpful to me, and they have enabled me to realize more fully than ever before that in God is our only supply, and that with Him there is no lack.

Since beginning the study of this Science a great sorrow has come to me and to my home, but the understanding which I have gained in Christian Science,—that God is our Life and our All, and that our loved ones do not die when they pass from our sight,—this has lifted me out of the depths of sorrow and despair and placed my feet upon a firm foundation, even the rock, Christ Jesus; and I can truly look up to our great and loving Father-Mother God and say, "O death, where is thy sting! O grave, where is thy victory!" Our Leader says, "Glory be to God, and peace to the struggling hearts! Christ hath rolled away the stone from the door of human hope and faith" (Science and Health, p. 45), and our crucified and risen Christ has not only ascended to the Father, but has come the second time to all those who are ready and willing to accept and receive Christ, Truth, in their hearts.

The gratitude for the spiritual uplifting which I have received I am unable to express in words. At times that "peace of God, which passeth all understanding," comes to me, and I have sweet communion with God. I had never appreciated or understood a great deal of my Bible reading, but with our text-book to guide me and give me the spiritual interpretation, the Bible has become a new book, the Scriptures seem to be illumined, and a new meaning is gotten from every page. The promises are full of sweet assurance and hope, as never before, and now I love to read the Bible more and more each day. I had been a church member for about thirty years, and tried to live a consistent Christian life, but it was left for Christian Science to point out to me many errors into which I had fallen, and to-day I am happy to say that they have been overcome through the knowledge of this Science. I wanted to stay in my old church and conform my life to the higher ideal of Christianity as set forth in our text-book, but as our Leader says, "We cannot hold to beliefs outgrown" (Science and Health, p. 28), so I withdrew from my church and have become a member of The Mother Church. To say that I am thankful for the physical help that has come to me is but a faint expression of my gratefulness, but for the spiritual healing and uplifting that have come into my life mere words fail to express even faintly the gratitude which I feel. Only those who have experienced help from the same source can realize my feeling.

I am thankful to God for all the spiritual blessings and the physical healing. I am deeply grateful to Mrs. Eddy, our revered and beloved Leader, who through her life of self-sacrifice, devotion, and consecration has been enabled to again acquaint this sin and disease-stricken world with the glorious gospel of the healing of sickness and the destruction of sin. May God continue to shower His blessings upon her devoted head. It is my humble and fervent desire to follow her even as she follows Christ, and with the apostle Paul I can say, "This one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus."

JAMES GATTIS, Charlotte, N. C.

I have wished for some time to send my testimony to the *Sentinel*, to tell of the healing of my son of a dreaded fever. I do this hoping it may encourage some other mothers who are in trouble as I was. I got a message that my son, who was in a distant town, was ill. I left home at once, and when I got to him I found that friends had sent for a physician and that he was taking medicine, so I nursed him under the doctor's direction for four weeks. The doctor then told me he had done all he could for my boy, but that his stomach had rejected everything and he was almost a skeleton. I told the doctor that my son wanted Christian Science treatment (he had asked for it several times). The doctor became very angry, calling me "a crazy woman." A dear Scientist was with me, and she went to the office at nine o'clock at night and sent a telegram to a Christian Science practitioner in Baltimore. It was received at ten o'clock and my son slept well and took nourishment through the night. He was much stronger the next morning, and kept on improving so that in one week I took him home; and in two weeks after getting home he was able to go back to his work. None but a mother can know how happy and thankful I am that I had Christian Science treatment for him. I get good letters from him and I know I am living nearer to heaven (harmony), than I ever thought I could on this earth. I study the Lesson-Sermon each week, and Science and Health with the Bible is my daily companion.

MRS. H. B. MOORE, Rocky Mount, N. C.

Most persons come to Christian Science through physical suffering. I accepted it through conviction, nearly twenty years ago. When first I heard of Christian Science my mother was investigating it, and it seemed to me a very beautiful theory. The practical side of it did not appear to me until a year later, when the subject was more fully explained to me by one who had just begun to practise in this city. I saw at once that this was the truth, and I have never changed my opinion. This new-old knowledge so absorbed my thought for many months that I could read nothing else, not even a novel or newspaper. I read everything I could find on this subject, and the Bible became a new book to me. What held me was the wonderful fact that the same healing performed in Jesus' time could be done in ours, although the Church had

Digitized by Google

neglected this work of the Master for fifteen centuries. Instead of there being two distinct periods, the time in which Jesus lived and our time; instead of his being a remote divinity whom we had been taught to worship, the Christ now bore a personal relationship to me. My first healing was an added wonder to me, further intensifying this relationship.

There being then no organized Christian Science services where we lived, we remained in our church until the clergyman denounced Christian Science from the pulpit because some of the members were investigating it. Then we left. I stayed at home Sunday mornings and read the Bible and "Science and Health with Key to the Scriptures." It has been interesting to observe the development of Christian Science in St. Louis in these years, from the meager gatherings in private houses to the occupancy of the new First Church edifice in July, 1904. It was said that we would not retain those large congregations after the Exposition. As a matter of fact, it has become one of the problems of this field how to handle conveniently the increasing numbers at services and lectures,—three flourishing branch churches having left First Church since that time without being missed.

I have seen many proofs of the truth of Christian Science in physical healing; having been myself healed of malarial trouble with two weeks' treatment. One summer, while traveling abroad, a tooth began to give me great pain. I was leaving Paris with friends, doing the regular sight-seeing every day till we stopped at The Hague. I got little relief, being on the go all day and getting no sleep because of the pain till after midnight. I was using my best understanding of Science for it; but had no privacy for reading, my friends not being Scientists. After two weeks the rest of the party left for home, and I settled down to sketch in a little village near Amsterdam. But the first day I was in too nervous a state to do anything. I made an engagement with a well-known dentist in The Hague; also writing to a Christian Scientist in Paris for treatment, there being no practitioner in Holland at that time. The treatment was given on receipt of the letter, and that night I slept normally for the first time in two weeks. The next morning all pain had vanished, so that when I appeared at the dentist's and told him this, he looked greatly surprised. The pain did not return. As well as receiving help myself, I am thankful to be able to help others. A sister asked for help for a trouble of three months' standing after the birth of a child, the doctor failing to give relief. The result was not only physical healing in two days, but a changed mental attitude towards Christian Science, and to-day she is an efficient worker in her own family.

I am also grateful for the benefit received in my work. It has been my privilege to spend some time abroad in the study of art, devoting a good part of that time to the pictures in the great galleries,—and among various new ideas brought to the student's notice, one fact impressed itself very strongly; that is, the expression or manifestation of the one Mind. It was to me a special proof: because I realized that no human intellect, unaided, could possibly have accomplished those marvelous results. If the religious thought of the old painters, such as Albrecht *Dürer, Holbein*, and Fra Angelico, had not been so strong, *and if they* had not done their work with the guileless sincerity *of children*, they would not have held the admiration of succeeding generations of artists nor inspired them to individual effort. Our gifted contemporary, St. Gaudens, like them, possessed that primitive sincerity.

No career is so bound by human restrictions as this of art. There is first the limitation of talent and temperament; then of power, and age. Even sex will enter into it. To these, Christian Science has a complete answer—a rule to combat this falsity of argument. For, to the student of Christian Science, admitting the necessity of a distinct bent for expression along a special line, how can there be limitation to the one creative action, annihilating, as it does, the sense of lack, the ban of years, and all discrimination between masculine and feminine ability? Another obstacle is criticism,—not alone that from our fellow-artists and the lay brother, but that which we load upon ourselves. This is fear—and one of the strongest opponents to progress. To this, Christian Science offers a panacea of surety for fear; power, for the feeling of incapacity; union, for separateness of the masculine and feminine qualities. Whatever bearing Christian Science may have on the art of the future will be evidenced first by sincerity; and secondly, by omission of the competitive spirit which is specially generated in the business side of this profession.

Christian Science is of inestimable value to workers in any branch of art. I wish all might avail themselves of the open fount. As for myself, the study has changed a natural inclination to discouragement and self-limitation to more confidence that in infinite Love there is supply of ability, strength, and insight into the truth which I wish to portray; and, keeping hold of this thought, after some years of simultaneous study of art and Christian Science, in the face of obstacles and apparent failure, I succeeded in finding myself in my work. Fear has also been reduced —the fear of not achieving my place. The interest in competition has been destroyed, knowing that there is abundance for all, and that just credit will be given my own work without crowding out another. Then, the spirit of criticism has been much modified, so that some good may be seen in work which formerly I condemned as hopeless. If every work attempted, every picture painted, were handled mentally in this way by artists, there would be more general success.

In one respect, particularly, we have Mrs. Eddy to thank, for breaking that mortal spell upon the world—the inequality of the sexes. This one point has given special freedom to the artist, and expansion never experienced before. If she had done nothing else, this alone would make her what she is to-day—the world's foremost citizen.

CORNELIA F. MAURY, St. Louis, Mo.

For forty consecutive years I was addicted to the use of tobacco in all of its forms, even to the vile habit of cigarette smoking. I did not consider the use of tobacco injurious to my health, as I was always apparently healthy, and had no desire to discontinue its use. About six years ago I became interested in Christian Science, and purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. The first time I opened this book I read until one o'clock in the morning. It appeared so marvelous to me, and was so different from anything I had ever heard of, that my attention was held with the greatest interest. The following evening I again took up this book, and so continued until I had read it through. During its reading the desire for tobacco left me completely. A member of my family noticed that I had discontinued smoking and inquired why. My answer was that I had no desire to smoke, as I had lost the taste for it. From that time I have never had the least desire to use tobacco, although daily thrown in contact with friends who use it and who frequently invite me to join them.

Having always been physically robust, demonstrations for me in that respect have been limited, but I may speak of an accident which befell me recently: I arose one night to go to the room of an invalid nephew. I had only a few nights before changed my room, and instead of going directly to his room I mistook the way and walked to the head of the stairs and fell headlong down twenty steps to the landing. I immediately realized God's protecting power, got up and went back up-stairs, and although I

Digitized by Google

weigh over two hundred pounds I had not sustained the slightest injury. Surely divine Love does protect us by night as well as by day. I have also received many other blessings from the knowledge which I have received of Christian Science, for all of which I am indeed grateful.

GEORGE R. BRINGHURST, Houston, Tex.

Hoping that this testimony may help others, as we have been helped, we joyfully send it to the Field. When we think of what our lives were without Christian Science it seems as if we never really lived until we were born into the understanding of Christian Science. All her life my wife had been a sufferer and in very poor health, which in later years developed heart, liver, and stomach trouble, etc., besides a very severe form of female complaint; and at the age of forty-three years she was given up to die by our three local physicians, also by four physicians of Colorado and one specialist of Missouri. With all of her former diseases in aggravated forms, a dreaded disease of the kidneys appeared, and when practically on her death-bed Christian Science was recommended to us through a friend whose wife had been healed three years before. Having exhausted every available means in *materia medica*, we took up Christian Science, as soon as arrangements could be made with a practitioner, and it was not very long before its healing influence was made manifest. My wife began to lose one ailment after another, until all had vanished into their native nothingness, through the power of Truth.

It is now over three years since we took up Christian Science, and I must also say for myself that I was healed of a very severe case of stomach trouble, of sixteen years' standing, which had developed into a case of gall-stones, from which I suffered, many times nigh unto death, for seven years. Kind physicians did all in their power, but at last the verdict was the knife or death. All of our business tangles have been unraveled, and many beautiful demonstrations have been made in our family of seven. Our prayers are that infinite wisdom, Truth, and Love may make and keep us ever worthy to be found in the upward and onward march of the true Christian Scientist. We realize that we owe endless gratitude to divine Love for having thus helped us, both physically and spiritually. Now we see what Jesus meant when he said, "Come unto me, all ye that labor and are heavy laden, and I will give you rest." Our hearts go out in gratitude to God, to the great Wayshower, and to Mrs. Eddy for the work she has done and is still doing for the human race, for the betterment of the world. We are more than grateful that God guided us to the truth, that we may have life and have it "more abundantly."—A. OTT, Concordia, Kan.

For me to attempt to tell all the good that Christian Science has done me would be impossible. It is about nine years since I had my first severe attack of rheumatic trouble. I was confined to my bed sixteen weeks, and when again able to sit up I was little more than a shadow. I began mending very slowly. I cannot enumerate the different remedies I used, but I gave them all a fair trial. I was treated by the best physicians in Ohio and Indiana; was at a sanitarium for weeks; in fact, I did everything and used everything that was said to be a sure cure or that it was hoped would restore my health, but all to no avail. I was also said to have a very bad case of kidney and heart disease. I had a second attack of the rheumatic trouble in April, 1900, which confined me to the bed three weeks, and I lost the use of my limbs entirely. My shoulders had been stiff for six years, in which time I never could put my arms to my head. My fingers, wrists, toes, and ankles were all in a terrible condition. I could not turn my head, and sat in a chair for fifteen months. I had not been up-stairs for even longer.

I first heard of Christian Science through a dear friend, who had been similarly afflicted. She had been taking Christian Science treatment, and was being benefited. I took my last dose of medicine Sept. 27, 1906, and my first treatment in Christian Science in October. I began to improve at once, and the following December my sister gave me a copy of Science and Health. I began a diligent perusal and study of the book, and found in it "the pearl of great price." The same month I got my book I lost my appetite for coffee, which I drank to excess. I used crutches for about two months, but now I have discarded them. I go up-stairs whenever I like, dress myself, and I can play the piano again. My fingers are getting straight, I can lie in any position, and have perfect use of my arms. My health is perfect,—I have been healed of the heart trouble, and never feel bad or get tired. I have also a clearer view of the Bible.

Christian Science has been a wonderful blessing to our home. I am indeed more than glad to tell the world of my healing in divine Science. I tried all material remedies without being helped, and my extremity was "God's opportunity."—MRS. LUCY E. STALEY, Englewood, O.

It is with great pleasure that I send this testimony, hoping some one will receive help through my experience. When I came into Christian Science I had been under medical treatment fourteen years. Two months before my first treatment in Christian Science the attending physician told me I would never be well. It is now two years since I began reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, and with the aid of a Christian Science practitioner nearly all of the numerous ailments have disappeared,—not only the old troubles, but many others which came up; and one by one they have been overcome through the understanding as given us in the writings of our revered Leader, Mrs. Eddy. To benefit those seeking the healing, I will mention in brief some of the physical ills that held me in bondage,—paralytic trouble, and a supposed growth on the brain; liver, bowel, ovarian, and bladder trouble, all of which have been destroyed.

This healing is truly wonderful, but the overcoming of sin is the most beautiful, and I am striving each day to overcome evil with good. The Bible, with Science and Health and the Lesson-Sermon, is my daily study, and now I am able to help myself and others. Only by living this truth in thought and deed can I show my gratitude to God, and to our meek and gentle Leader, Mrs. Eddy.

BLANCHE DAVY, Chicago, Ill.

About five years ago, when Christian Science was but a name to me, I began questioning as to what Christ Jesus meant by the "Spirit of truth" which he said he would send to us. I prayed earnestly about it, and began searching the Scriptures for enlightenment. I could not understand why the beautiful promises which the Bible contained were not for this day and age. I was at this time an active church member, part of the time able to attend to my duties, but more often unable to do so, having been a sufferer for many years from stomach, bowel, and nervous troubles, also from a bronchial affection which was supposed to be hereditary, although I had tried every remedy that I could hear of, to no avail. I had also had experience, as it seemed, with almost every disease that flesh is heir to, as every member of my family had passed on, afflicted with some dread sickness. While in the midst of this overwhelming sea of despair and discouragement, I was led to Christian Science through the statement of a

Digitized by Google

friend whose wife had been wonderfully healed, although she had gone to church from mere curiosity. I began to make inquiry, and one day, about two and a half years ago, I found myself in the Christian Science Reading Room. I asked some questions of the lady in charge, who advised me to get a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, read it, and see what it would do for me. I purchased the book with a great deal of trepidation, but by getting some understanding of its teaching, the bowel, stomach, and nervous troubles were healed, also a very pernicious habit of worry. Then I indeed learned what the blessed promises in the Bible meant, and what our Saviour meant when he said, "I will send you another Comforter."

Words are inadequate to express sufficiently my gratitude to a good and loving Father, who sent His beloved Son to be the Wayshower to us; and later on, our dear Leader, whose spiritual illumination has again brought to light the teachings of the Master. It is through a clearer understanding of the Bible that I can best show my deep gratitude, consecrating myself to God and striving each day to live nearer and follow closer the truth that makes free.—SARAH C. LOCKWOOD, Indianapolis, Ind.

Recently I was asked if Christian Scientists had any religion. To this I would say that three years prior to coming into Science, I had joined an orthodox church. The preacher asked me to read a chapter from the Bible every day, to which I agreed, saying that it would be no difficult thing to do; but at the end of two years I found myself looking for the shortest chapters. I did not wish to break my promise, otherwise I think I would have given up the reading altogether. After coming into Christian Science, however, the Bible became a new book to me. Often eleven and twelve o'clock at night still found me up and reading, whereas before I would not have been able to stay up even had I wished to.

We are a family of nine, and yet I have less worry and care than in the old thought. Then, though we were fewer in number, there was always more or less sickness, but all this winter, with only one exception and that of short duration, the children have been entirely free from illness. To me Christian Science means even more as a preventive than as a curative. For one thing I am especially grateful, and that is for having all fear of storms and of contagious diseases taken away.—ROSE CRUEY, Rantoul, Ill.

[Translated from the German.]

It is now nine years since I became an adherent of Christian Science, and in these long years I have had ample opportunity to receive its blessings. It was through my good mother I became interested in Christian Science. She had been healed of trouble with her limbs, which had distressed her for a long time. I regularly attended the Christian Science services with her, and became an ardent adherent of this blessed teaching. To-day I feel impelled to express my gratitude for several healings.

In the year 1899 I had a severe attack of illness, with a high fever. I asked for Christian Science treatment, and in a fortnight I was so far recovered that I could go out. Some time afterwards, feeling indications of an intestinal disturbance, I again went to a practitioner, and was healed. Although these were to me wonderful proofs of the blessings of Christian Science, yet I experienced still more at the birth of my child, which was harmonious and without medical assistance. Our child is healthy; all ailments which have appeared having been overcome readily. At the appearance of a serious throat trouble I had another opportunity to realize the great blessing of Christian Science. The child was suddenly stricken with a high fever and did not even recognize us; but after a few treatments he was better, and in a week this treacherous disease was gone. I have only spoken of some of the main points, but we have had many more helpful experiences. Our child is now six years old, and has never taken any medicine or used any material remedy.

Christian Science is not only a help in sickness, but also in business. Although my husband was not opposed to it, he was indifferent, but now he is attending our church. He had been a great smoker in former years, but he does not use tobacco now. We certainly have experienced in our business that trust in God leads us to victory, and although we have not overcome all error yet, we know that with firm reliance upon God, divine Truth, we shall constantly progress. Our business does not give me much spare time, but I never miss the Wednesday meetings, and often attend the Sunday services. Next to God I wish to thank Mrs. Eddy, the Discoverer and Founder of Christian Science, for this healing and saving religion.

FRAU AGNES MEYROSE, Dresden, Germany.

Every day I feel more grateful for what Christian Science has done for me. For many years I was a great sufferer from a complication of diseases said to be incurable. I was treated by many physicians, and tried every kind of remedy that I thought would help me. I often wondered why I was sick so much of the time, and if it was God's will. I felt that I could not live in the eastern climate, so we decided to go to California, thinking that the change might cure me. I had never heard of Christian Science until after reaching California. The first winter we were here I met a friend, a Scientist, who loaned me her copy of Science and Health. I read in it for a few days, and thought it was very good, but did not think it could do anything for me. I yet clung to the thought that the milder climate would help me, but the second winter came and I was no better. I was then ready to take up again the reading of Science and Health. To me it did not seem like the same book I had read before, and I became so interested that I spent all of my spare time in studying it. For a number of years I had not been able to see to read or sew without my glasses, but after reading Science and Health for about a week something seemed to tell me that I did not need glasses, so I took them off and found I could read without them. I read that day and until late that night, and then I realized it was the voice of Truth that had spoken and healed my eyes. I have also been healed of headache in its worst form. Gradually all my so-called incurable diseases have been overcome, and I can do a big day's work without even feeling tired.

Christian Science has not only helped me in a physical way, but most of all spiritually, and I am very thankful for even the little knowledge I have of this truth. It is everything to me, and for all these blessings I am truly grateful to God, and to our dear Leader, who has made it possible to demonstrate this blessed Christ-healing.

MRS. KATIE M. FIKE, Pasadena, Cal.

To be a fellow-citizen "with the saints, and of the household of God," is surely a blessed privilege, and Christian Science confers it upon every earnest seeker for Truth. For twenty years Christian Science has been the light of my life; my only physician; my unfailing comforter and guide. I am deeply grateful to Mrs. Eddy, the peerless woman who has restored to us this light of Truth. I pray that the understanding of Life, Truth, and Love may so abound in our lives that strength, courage, and unity shall bring forth abundant fruit to gladden the heart of that tireless watcher, our Leader.

MRS. HARRIET E. T. GILES, New York, N. Y.

FROM OUR EXCHANGES.

[*The Independent.*]

Nothing finer has been said or can be said on the subject than this which Mr. Taft has written for a missionary meeting. He admits that there was a time when, "enjoying a smug provincialism," he did not appreciate the importance of mission work, but experience in the Orient taught him better. He writes: "No man can study the movement of modern civilization from an impartial standpoint and not realize that Christianity and the spread of Christianity are the only bases for hope of modern civilization in the growth of popular self-government. The spirit of Christianity is pure democracy. It is the equality of men before God, the equality of men before the law, which is, as I understand it, the most Godlike manifestation that man has been able to make. . . . It is my conviction that our nation is just as much charged with the obligation to help the unfortunate people of other countries that are thrust upon us by fate on to their feet, to become a self-governing people, as it is the business of the wealthy and fortunate in a community to help the infirm and the unfortunate of that community."

[Rev. Benjamin S. Winchester in *The Outlook.*]

The minister of to-day must know human life, in all its manifold conditions and with all its variety of disease and sin. He must also know God, and know how to bring to every kind of human need the infinite strength and healing power of the divine Spirit. The seminary which seeks thus to adapt means to end has before it a great opportunity. By the time it is ready for students they will come. By the time students are graduated, churches will be begging for such service as they can render. And business men will be glad to invest their money in an institution that is "practical."

[Edwin Markham in *Success.*]

There is no miracle, if by miracle is meant the abrogation of the law. The natural law never has been and never will be broken. So when Jesus performed his wonders he simply laid his wise hand on the lever of the unknown law. In this law all things are circling to their destinies. This does not mean that God is ever balked in the final achievement of His purposes, for in the all-wonderful law all things are possible. Men, as they rise toward the arch-natural, or higher, degree of life, will rise into the realm of miracle. "Greater works than these shall he do," said Jesus.

[*The Christian Register.*]

When a church or a denomination is really alive and is set in motion by worthy impulses bred of noble sentiments, little heed is taken of the external forms of expression. The spirit of all truth can speak in any language and express itself through any form, and out of things old and new shape for itself, without thought or effort, the form of speech or the mode of action which best suits the inner life which is striving to express itself. They who have life, and have it abundantly, must acquire the active habits of well-doing. For well-being seeks to express itself in action.

[*The New York Observer.*]

That which travels by the avenues of the ear or the eye into the mind advantages nothing unless it be properly assimilated into character and spiritual fiber. We all take in much more of Christian teaching and exhortation than we actually absorb into our being.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel.* Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All correspondence and orders relative to membership and church tenets should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PUBLISHING HOUSE BUILDING FUND.—Contributions to the Publishing House Building Fund should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

Quarterly covers in black seal leather for sale at the following prices:—

Regular size, 5¼ x 7¾, $1.25 each or $12.50 per dozen.
Pocket size, 4½ x 6½, $1.15 each or $11.00 per dozen.

Leather cases for the pocket editions of the Bible and Science and Health are now made slightly wider in order to provide space also for the trimmed *Quarterly* with or without cover. Price, $1.25 each.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

Terms of Sale, Postpaid to any Address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, Mexico, and Cuba, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. This pamphlet is also printed in German. 29 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents per copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The resolutions passed by the recent National Irrigation Congress at Albuquerque, N. M., strongly favor liberal grants of the use of public lands for the development of electric power, a census of the standing timber in the United States, the general conservation of waste water through reforestation, and other means, giving sweeping endorsement to the work of the reclamation service and the geological survey, and an increased appropriation for the support of these bureaus, the speedy cession of the Southern Appalachian and White Mountain national forests, an international congress on irrigation in Washington in 1910, and the placing of sugar on the free list.

The Country Life Commission, which was appointed last August, is expected to make a report in time to be available for the President in his message to Congress in December. Many facts desired were already at hand in various governmental departments, and these will be supplemented by correspondence along special lines. Its investigations will relate mostly to business and social conditions in the open country. The Commission will meet Dec. 8 in joint session with the National Conservation Committee.

The Massachusetts Railroad Commissioners, to which body the Merchants' Association and others of Boston and vicinity referred their complaint, have found that, based upon the facts relating to intrastate business, the rates of the American Express and the National Express Companies, within a radius of fifty miles of Boston, are "excessive and unreasonable."

The Atlantic battle-ship fleet, homeward bound, leaves Manila Dec. 1, stops from Dec. 14 to Dec. 20 at Colombo, and arrives at Suez Jan. 5. After passing through the Canal the fleet splits into four divisions, each division visiting a different Mediterranean port, reassembling at Gibraltar on Feb. 3. They will proceed thence direct to the United States, where they are due to arrive Feb. 22.

Through the operation of the Government powder factory at Picatinny, N. J., release from the high prices of the Powder Trust is promised, the plant there having a capacity of one thousand pounds a day. The success of this experiment may lead to the establishment of other plants at different points in the country.

The cause of the Chelsea, Mass., fire of April 12 last, which destroyed millions of dollars worth of property and rendered thousands homeless, is attributed by a court finding to careless cigarette smoking.

Prof. Harry A. Garfield of Princeton University on Oct. 8 assumed the presidency of Williams College, his own *alma mater*, as it was also of his brothers and of their father, the late President Garfield.

Wellesley College opened last week with the largest freshman class in its history, over four hundred; Cornell University also enrolled its largest freshman class, over one thousand.

Work on the new airship for the Wellman polar expedition is being carried out in France, and it is expected that the start for Spitzbergen will be made next May.

Thirty days in the city prison, with no alternative of a fine, was the sentence imposed by a New York justice last week upon a chauffeur convicted of overspeeding.

The National Anti-Vaccination Conference meets in Philadelphia Oct. 19.

International.

Wilbur Wright, in a recent flight at Le Mans, France, in his aeroplane, accompanied by a passenger, remained in the air 1 h. 4m. 20s. He has now fulfilled the conditions of the contract signed by him and Lazare Weiller, representing a syndicate, whereby he was required to make two flights within a week of fifty kilometers (thirty-one and a fourth miles) each, with a passenger or equal weight. The contract calls for the payment to Mr. Wright of $100,000 by the syndicate, in return for which the syndicate obtains the patent rights of the machine in France and the colonies. M. Weiller has already given an order to a French manufacturer for fifty aeroplanes on the Wright model.

The second conference of the International Tax Association was held in Toronto, Canada, last week. Representatives were present from practically every State of the United States, from all the provinces of Canada, and from many of the leading universities of both countries. The list of subjects for discussion covered almost every phase of the question of taxation, national, state, municipal, land, personal property, and franchise. The first international conference was held in Columbus, O., last November.

The political map of Europe during the past week has been greatly changed. Bulgaria has proclaimed herself free and independent of Turkey, Austria-Hungary has annexed Bosnia and Herzegovina, and Crete has announced her union with Greece. The territory lost to Turkey in these changes amounts to over sixty thousand square miles, an area nearly equal to all the New England States, or about twice that of Scotland or Ireland. The population of the different states numbers about five million people.

Russia's naval budget, just submitted to the Douma, amounts to $44,067,500, an increase over last year of $616,000. The construction account is $8,155,000. The present program includes the building of four battle-ships of twenty-three thousand tons each, five torpedo boat destroyers, to have a speed of thirty-five knots an hour, and three submarines.

A proclamation has been issued at Teheran, Persia, fixing the date of the elections for the new National Assembly and Senate Oct. 10, and the Shavval, or convening of Parliament, for Nov. 4. Conditions are imposed: for the new National Assembly will not be free to initiate any legislation, but must only accept or amend any legislative measures sent to it by the government.

The national industrial exhibition, the greatest of its kind ever held in South America, is now open in Rio de Janeiro. The Brazilians are particularly proud of the educational department, showing the advancement in the school and college systems, wherein they have incorporated many American ideas.

Japan is planning to give the American battle-ship fleet a sincere and generous welcome upon its arrival at Yokohama Oct. 17. The occasion is fraught with great international and political significance and Japan plans to make the most of it in allaying unbased suspicions.

Holland, in a letter to President Castro of Venezuela, admits the offensive character of the letter written by her minister at Caracas, who was given his passports and dismissed summarily from Venezuela.

Industrial and Commercial.

A comparison between the work done on the Panama Canal and the Erie Canal, which is being reconstructed, shows that the excavation the first year at Panama was 243,472 cubic yards and in the Erie Canal 716,676; the second year 1,700,227 at the ship canal, and 1,460,705 in the barge canal; the third year, 4,948,497 and 4,500,450 respectively; the fourth year at Panama, 15,764,098; the fourth year at the barge canal, which will be the calendar year, thus far, month by month, approximates the totals at Panama.

New photographic plates, which make possible good snapshots in a half-light with an ordinary lens, have been produced in France.

General.

Attempts recently made to map out weather charts of the high seas between Europe and the United States are said to have proved entirely successful. The systematic experiments undertaken by the director of the Aix-la-Chapelle meteorological observatory, in conjunction with the Hamburg-American Line on their steamship Kaiserin Auguste Victoria, have been prepared carefully, telegrams relating to the weather condition on the coast of Europe being transmitted daily by wireless telegraphy from the observatory to the steamship on its way to New York throughout its voyage. It is hoped that the American and European governments and other authorities will cooperate, so that the weather conditions from the western boundary of the United States to the eastern boundary of Europe may be surveyed daily. It is believed that this would result in more accurate weather predictions.

Visitors to California will have access to a third forest of giant redwoods when the counties of Tulare and Fresno complete the construction of twenty-five miles of highway between Visalia and Redwood Canyon, in the Kings River country, where there is a grove of over fifteen thousand magnificent specimens of the *Sequoia gigantea*, many of which are said to compare in size and beauty with the trees of the Mariposa and Calaveras groups. It is probable that the property, which is as yet untouched by lumbermen, will be recommended to Congress for purchase as a national park. One tree in the redwood grove, recently measured by a government ranger, is one hundred and ten feet in circumference and is estimated to contain eight hundred thousand feet of lumber.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

WORKING OUT ONE'S SALVATION.

PROF. JOEL RUFUS MOSLEY.

IN the light of the Science of being,—that God is Spirit and perfect, and that man and the universe are spiritual and perfect,—the meaning of human life is realized only as we bring into consciousness, activity, and expression this perfection of God, man, and the universe. The bringing of this perfection to light in terms of human life and experience is the working out of our salvation. The complete coming of heaven to earth—the spiritual sense of being, or the consciousness of the allness and goodness of God, of Spirit, of Life, and of Love, here and everywhere, and of man now and forever spiritual and perfect as His image and likeness—this is the fulness of salvation for man and the universe.

Every thought and activity that gives recognition and response to the nature, unfoldments, and promptings of God and of our own spiritual and real selfhood, not only purifies the inner life from sin, fear, and discord, but also improves external human conditions. Everything that is thought and loved as well as done in secret, is always proclaimed on the housetops,—is made manifest in and on our bodies and environments, as well as actually confessed by us or found out by others. And this law by which the inner becomes the outer is a law of Love as well as of justice. It is just as loving to us that our errors should come to light as that our virtues should manifest themselves in terms of our whole being and environment. It is one of God's wise, kind, and effective ways of discouraging and destroying sin and of rewarding and encouraging virtue. It is as much to the glory of God as it is to our highest good that the evil comes to the surface to be destroyed, while the good comes to light to remain. The evil is punished and the good is rewarded not because God hates us, but because He loves us; not because He means for us to be lost, but to be saved, and saved through our own choice and efforts as well as His.

The law by which the inner takes form in the outer, by which our mental and moral and spiritual nature and activities manifest themselves in and on the body and the whole external environment, is best explained, and so far as we know can only be explained, on the basis that "all is infinite Mind and its infinite manifestation" (Science and Health, p. 468). If this fundamental concept of the idealism of Christian Science is seen and accepted, then it becomes clear how it is that all false thinking and living become manifest as undesirable conditions of body and environment, and how it is that all right thinking and living manifest themselves in desirable conditions. It is seen why and how it is that the very nature of all error is to obscure our sense of the real, the true, the beautiful, and the good, while the perception and the love and all of the activities of good uplift and heal and beautify one's whole being and surroundings. The Science of the sciences is seen to be right thinking and living. The Principle of right thinking as well as of right living is revealed to be ever-present and omniscient Mind or God.

Even those who have not grasped an understanding of the law by which all mental, moral, and spiritual activities manifest themselves to our external senses, avail themselves of the beneficence of this law every time they think upon, desire, hope for, have faith in, love, and do whatsoever things are true, honest, just, pure, lovely, helpful, and of good report. All alike are transformed by the renewing of the mind. All who turn to God, to His perfect Christ and His perfect creation as present and as All-in all, find the veil of evil taken away. All who hope for salvation or freedom from all evil, and perfect union with God, with man's spiritual selfhood, and with God's whole creation, are by this very hope coworkers with God in working out their own salvation. All who have faith in a perfect God and Father, and Saviour, faith in the best within themselves, faith in the best that is in others and in the universe, by this very act of faith are coworkers with the divine Mind in working out universal as well as individual salvation.

To know God aright, and to know ourselves as His children and the universe as His reflection, and to love God with all the heart, might, mind, and strength, and our neighbor as ourselves, is highest of all. Such knowledge and love are not only the means by which we work out personal and collective salvation, but the states of mind and the activities of good which constitute the very essence of salvation. We cannot even look upon the glory of God and the perfection of His ways and works without reflecting something of the glory and perfection of what we behold; as Paul says, "We all, with open face beholding as in a glass the glory of the Lord, are changed into the same image from glory to glory, even as by the Spirit of the Lord." Indeed, we become like whatever we look upon with approval, whatever we most believe in, hope for, and love.

God has not only provided all good for each and every one of us, but Christian Science shows that He has also given us the faculties which enable us to see, to know, and to enjoy this good. We can look upon the "glory of the Lord" because this glory exists and is reflected everywhere, and because we are given the faculties to perceive it, even if we do not at present see it "face to face," but "through a glass darkly." We hope in God, both because He exists and because we are given the capacity to become aware of His existence. We know God because He is, because He is knowable, and because we are given the ability to know Him. We love God because God is Love; because He loves us, and because He has made us capable of loving whatever is lovable. Indeed, God and the Son of God within us require nothing which we are not endowed and capacitated to think, do, and be. In the deepest sense it is God Himself who is "closer than breathing and nearer than hands and feet," and in whom we literally live, move, and have our being; who enables us to do, and to do well, whatever He wants us to do.

Copyright, 1908, by Mary Baker G. Eddy.

Digitized by Google

God, from the very nature of His perfect being and allness, is not only the author and perfecter of our salvation, but also of the very faculties and activities by which we are enabled to become coworkers with Him in realizing our salvation from all evil and our unity with all good. And unity with God, with Christ, with one's ideal selfhood, with the children of light, and with all things beautiful, true, and good, is something even much higher and more desirable than a release from the sense and burden of evil. It is something so gloriously positive, so rich in content, that it means not only the completest activity and development of all of our capabilities, as sons of God, but also the fullest and worthiest satisfaction, joy, and bliss that it is possible for God to give and for us to receive; and our power to receive, being from God, is correlated with His power to give. We can work out our salvation because "it is God which worketh" in us "both to will and to do of his good pleasure."

SCIENTIFIC CHRISTIANITY.

C. A. QUINCY NORTON.

THE age in which we live, beyond any other period in the world's history, is rich in achievements for good and grand in its profound aspirations for real advancement. In whatever department of human activity we look, we shall find marked improvement over preceding ages, and when we contemplate mankind as a whole we can certainly note a steady advance in the human recognition of the supremacy of the ideal presented by the Master when he said, "Be ye therefore perfect, even as your Father which is in heaven is perfect." Humanity has heard the marvelous rhythm of heaven's sublime harmonies as revealed in Christ, Truth, and is rising above the mists of mortal fears and doubts. With a clearer understanding of the possibilities of man's God-given endowments, men are learning to refuse to be enslaved by conditions evolved from mistakes or to be fettered with shackles forged by ignorance.

Less than half a century ago a servant of God, who through suffering and bitter trials had slowly climbed to the heights above the fogs and mists of the world's narrow conception of the real, who had thrown aside the grave-clothes of a dead belief and had come to a realization of the need of a better understanding of ever-present divine Love, heroically proclaimed to the world the omnipotence of God in the omnipresence of good. Touched by an inspiration that came as a reward for loving obedience, Mrs. Eddy realized that her own wonderful restoration to health was the result of a divinely appointed law, and that this law was truly scientific; therefore unfailing, without "shadow of turning." As the great expounder of this divine law was the Founder of the Christian religion, she wisely designated her profound discovery Christian Science.

Standing as we do now, on the very fields where already numberless victories have been won through an understanding of the teachings of Christian Science, it is in a measure difficult to grasp in its fulness the great significance and grandeur of the work accomplished through the heroic devotion and unflinching self-sacrifices of our revered and loved Leader. Erect and fearless, amid a storm of abuse and condemnation that would have discouraged and disheartened one less brave and faithful, always returning love for hate, and only good for evil, she has stood unmoved and unshaken in her sublime faith,—her absolute trust in divine Love. Her inspired writings have given to many words of our language a deeper and clearer meaning than their merely material significance would indicate. Through her deep spiritual insight, she has made plain the seemingly hidden truths of the Bible, and by the clearness of her vision has penetrated the clouds of mystery that creeds and dogmas had thrown over the glorious promises of the sacred writings. Through her tireless labors she has given to the waiting world, in "Science and Health with Key to the Scriptures," a safe, sure, and satisfying guide, founded alone on the inspired Word of God, that will, when understood, overcome sin and heal all manner of disease.

Mrs. Eddy fully realized that if the discovery she had made was true it must be demonstrable, not alone in one case or condition, but in all cases and conditions. She clearly recognized the fact that a truth could not be wholly demonstrated until the Principle governing it was understood. With this purpose in view she earnestly applied herself to a deep and profound study of the Bible, and with Truth as her only guide she was able to solve the great problem before her and give to the world the proofs that Christianity is scientific. At first she labored with at human help or cheer. Intuitively grasping the full meaning of the freedom promised through the understanding of the truth, she saw that the world was, in belief, shackled to sin and fettered by sickness, and that freedom from these relentless foes was the great need of mankind. She realized that emancipation from all false belief would follow compliance with the law of divine healing; she saw that depravity was not natural, that disease was not necessary, that sin is the result of ignorance; that evil is not real, and therefore not a power; that God is the only power, and that His power is good.

Unnumbered thousands of cases of successful healing have proved that her concept of the divine Principle of healing was right. These cases include every known abnormal physical condition that medical writers have classified, both organic and functional, acute and chronic, many of which had been pronounced incurable by physicians. Besides these, liquor and drug habits have been overcome, and the victims completely restored to normal conditions; infidels and atheists have been brought out of the darkness of doubt and gloom through a realization of liberty in divine Truth. A large proportion of the cases brought to Christian Science practitioners are those who, like the woman healed by Jesus, have "suffered many things of many physicians," and though they spent all they had in their efforts to find relief, they were "nothing bettered, but rather grew worse." From this class of patients Christian Science rescues many, restoring them to perfect health; and all are benefited and made better, both in mind and body.

If human testimony is worth anything, if the evidence of innumerable witnesses prove a fact, surely the Discoverer and Founder of Christian Science has fully and completely proven that Christianity is scientific, and therefore divinely true.

REGRET OVERCOME.

ADA J. MILLER.

ONE of the most subtle phases of error that comes to hinder the advance of any one is regret. Every moment spent in regretting error is time spent in substantiating error's claim as a reality. Mrs. Eddy says in Science and Health (p. 355), "As for sin and disease, Christian Science says, in the language of the Master, 'Follow me; and let the dead bury their dead.' Let discord of every name and nature be heard no more, and let the harmonious and true sense of Life and being take possession of human consciousness."

Regret is obstruction to progress; it is not of Life, and is not a quality of Mind, therefore its indulgence is the indulgence of sin in a subtle form that would call itself good. Whatever impedes our progress out of the wilderness of mortal beliefs should be summarily dealt with.

Digitized by Google

With Paul, we too must leave the things that are behind and press forward toward the mark of our high calling, —the demonstration of the truth of being, wherein we find man spiritual, not material; harmonious, not discordant; upright, not fallen; and see in him the image and likeness of God. If we deviate from Principle and find that we have an incorrect answer to our problem, regret will never correct the mistake; calm, clear study of our work will lead to the point where the error crept in. Even here there is occasion for rejoicing rather than for regretting, because a mistake discovered is easily rectified, and thereafter similar problems are more readily solved.

The strong character, even on the mortal plane, scorns the weakness of regret: he may not know how to review his work scientifically until the error is discovered, but he has the virtue of wasting no time in vainly dwelling upon what is irremediable. In Science we should rejoice in error uncovered and destroyed, because this is proof of progress and "progress is the law of God" (Science and Health, p. 233). In the light of Truth the words of Abigail to David become a direct message to us. No matter how slight or great our departure from Principle, if we see our mistake and turn from it, "this shall be no grief unto thee, nor offense of heart unto my lord, either that thou hast shed blood causeless, or that my lord hath avenged himself." Our direct call each moment is this, "Let the dead bury their dead" and "follow thou me."

OUR LESSON-SERMONS.

FRANK B. HOMANS.

JESUS said, "Search the Scriptures; for in them ye think ye have eternal life: and they are they which testify of me." Mrs. Eddy says, respecting our text-book, "Although this volume contains the complete Science of Mind-healing, never believe that you can absorb the whole meaning of the Science by a simple *perusal* of this book. The book needs to be *studied*" (Science and Health, p. 147). Christian Scientists are sometimes asked regarding their Sunday services: "Do you continually repeat the same subjects in your Lesson-Sermons?" "Do they not grow tiresome?" "Do you ever expect to have them changed?" We do not know what to-morrow may bring forth, but we are very positive that our Lesson-Sermons are never "tiresome," and that they never will be. They are always new, always different, always exceedingly interesting. To those unacquainted with Christian Science this may seem an incomprehensible statement, and be received with some doubt; but its truth can be established and good reason shown for making the claim.

The well-known combination lock in general use on vault and safe doors may assist in illustrating our position. The little circular knob which serves as a key has one hundred numbers, more or less, stamped on its rim. The lock is adjusted to work on a certain set of these numbers, and by turning the knob from left to right and right to left until each given number has touched the starting-point, the bolts are released and the door can then be opened. Because of the many figures on the flange the combination can be changed over a hundred thousand times, and in every case one has a new and different combination, each being as good and secure as its predecessor. This rule applies to our Lessons, and shows how the same subjects can be used year after year, yet each Lesson be unlike a former one, though equally good, strong, and convincing. There are so many beautiful passages in the Bible and Science and Health which all bear specifically upon our Lesson subjects, that by using a different arrangement of Bible verses, with varying readings from Science and Health, the Lessons are always dissimilar, always fresh, and always bring out new thoughts. Thus a reference from the Bible in connection with a sentence from Science and Health which would elucidate the subject "God" could be used in conjunction with another paragraph from Science and Health with equal effect on the subjects "Life," "Truth," and "Love;" and this interchange of readings could go on indefinitely, even as the combinations on the safe door, and still be always diverse.

As another reason which adds to the varied qualities of these Lessons, I would call attention to the six subdivisions, which are distinctly separate one from the other, each bringing out a different idea regarding the one subject; hence it is most important that students should grasp the leading thought in each section in order to get the full benefit from the Lesson. The subject "Life" might be brought out as follows: First, Life is God; second, no life in matter; third, the perfection of spiritual Life; fourth, the belief of life in matter brings sickness and sorrow; fifth, the allness of Life demonstrated by Christ Jesus; sixth, Life is eternal. Every idea thus brought out is sustained by the Bible reading and verified and explained from Science and Health. In a *Sentinel* editorial, published some time ago, it was stated that the first reading from Science and Health in each section is usually an index to the subject of that section. The student of these Lessons who applies himself regularly to them every day, not only derives great benefit therefrom but is in a more receptive frame of mind, better prepared to listen, and absorbs more of the truth on Sunday, than one who neglects the thorough study of all six sections each day.

There is still another explanation of the statement that the Lesson-Sermon is never tiresome nor the truth exhausted, although the same subjects are used. The following instance will help to show how this is possible. A friend of the writer is one of the most advanced mathematicians in the country. All her life she has devoted her entire time and energy to this study, progressing steadily. When asked if she could still find anything new and interesting in it, she replied, "Oh, yes! My thoughts are enlarging, taking in broader ideas, and I can see that the research is endless." Now if this is true regarding anything material, how much more is it possible with spiritual development. Even if the identical Lessons were to be repeated year after year, our growth in spiritual understanding would enable us to see them each time from an ever-advancing view-point, and they would mean more and more to us, become more beautiful, and contain more spiritual nourishment.

This proves the great wisdom of our dear Leader in giving us these subjects and the methods of using them for our instruction, rather than leaving the interpretation of the Word to differing thought and opinion. The wise Scientist will always be grateful for this grand supply of daily as well as Sunday food, and for the great amount of thorough and intelligent work which is bestowed upon the preparation of our Lesson-Sermons.

SUPPLY THROUGH RIGHT THINKING.

GENEVA MARY CLIPPINGER.

CHRISTIAN SCIENCE, in lifting mankind out of the bondage of belief in matter into the freedom of Mind, is overcoming that which has been one of humanity's most cruel taskmasters, namely, the belief in poverty. It is scientifically destroying poverty by revealing the fact that the only true substance is Mind, and that this substance is brought into demonstration through right ideas, through right thinking. This fact is clearly indicated in the 1st Psalm: "Blessed is the man that walketh not in the counsel

Digitized by Google

of the ungodly, . . . But his delight is in the law of the Lord; and in his law doth he meditate day and night. And he shall be like a tree planted by the rivers of water, that bringeth forth his fruit in his season; his leaf also shall not wither; and whatsoever he doeth shall prosper."

Science shows to us that because man is the likeness of Mind, the real man always reflects right ideas, therefore he always possesses unlimited substance. It follows, then, that whatever causes the belief of lack of substance is some form of denial of the First Commandment, some argument which declares that there is more than one creator and that man is not the image of God—of Mind. But what can an argument do that is based upon a false assumption? It can do nothing more than deceive so long as it is believed in. It can never change an actual fact. Millions of mortals may be banded together to uphold the argument that there are two opposing powers, one good, the other evil; but such a union cannot produce the slightest effect upon the eternal fact that there is only one power, God, good. The whole world did at one time believe and argue that the earth was flat, but the argument had not the slightest effect upon the real fact of the earth's rotundity; it merely held men under a sense of deception for a while. Because the argument was not founded upon truth, it was inevitably destined, like every false argument, to be discovered as untrue and every vestige of its effects destroyed. It was knowledge of the truth about the earth which destroyed this argument, and it is knowledge of the truth that always has and always will destroy every false argument to which it is applied. The knowledge and assimilation of the truth that man reflects the one perfect Mind reverses and destroys the argument that any man of God's creation is limited in right ideas or in substance.

Those uninstructed in the Science of Mind may ask at this point, How can you prove that a man who has right ideas has substance? Is it not true that some brilliant and some very good men do not possess abundance? This shows that it is necessary to be clear as to the definition of what constitute right ideas. Christian Science affirms that the only right ideas are those which originate in the one Mind; in other words, God's ideas. An idea may always be judged as to its source by its effect. A right idea, or a God idea, always operates to produce a good effect; as, for instance, the reflection in an individual's consciousness of the idea that man as God's creation is absolutely lovable, will cause the individual to see the real man, at least in a measure, and love him. On the contrary, any so-called idea, based upon the assumption of a human intellect,—a belief that the individual has a bright little mind of his own, quite apart from the one Mind,—is a belief harmful in its effect and apt to operate for deprivation. So, too, the individual who believes that he has any righteousness of his own which is not also common to every child of God, is not fostering a right idea but a mistaken belief. Such beliefs reveal themselves in many ways and cause a more or less conscious feeling of separation from other men, thereby limiting the individual's opportunity for service.

These exceedingly simple illustrations may help to show the difference between a right idea and a human concept, but every student and practitioner of the truth contained in Science and Health is learning more and more of the deep metaphysics of right ideas, and of the great importance of guarding against holding mere human opinions. As each member of the Church of Christ, Scientist, works to gain the true sense of supply, strives to gain daily more understanding of man's likeness to the one Mind and a clearer recognition of the power of Truth,—the sense of poverty and of separation from good is lifted somewhat and made less formidable. The Christian Science Church is therefore the greatest charitable institution in the world, for it is scientifically overcoming the universal belief in poverty by a right understanding of God, and of man as the perfect expression of God—Mind; thus proving, by a knowledge and demonstration of the fact, that because abundance comes through the understanding of right ideas, man has unlimited supply.

CONSECRATION.

L. T. EADY.

It is very interesting to notice, according to Young's Concordance, that in the original text of the Bible the word "consecrate" has a different meaning in the Old Testament and in the New. In the Old, the word means to devote, to separate, to set apart. In the New it occurs only twice, and then means to make new and to make perfect. This is surely significant, and typical of the manner in which mankind have regarded the thought of consecration as detailed in Bible history and in religious life.

In times past certain days were devoted to God, certain people separated for God's service, certain animals, vessels, etc., set apart for God. As in the community, so in the case of the individual,—one's first idea was that it was enough to set apart, consecrate, special days, one day a week, and of that only a few hours in which to think of God and higher things. Again, five minutes more or less were to be devoted to God. Gradually, as one grew spiritually, more time, more money were to be given and we were to separate more from the world. But what a deep and searching meaning is given to the word as we gain its higher meaning. If we are consecrated, we are to be perfect. Every day, every hour, every minute, is to be consecrated to God, good! This does not mean that we are to be physically separated from the world, or that we are to be engaged only in the orthodox conception of "Christian work," but that we are, as Paul tells us, to "walk in the Spirit," see the spiritual reality always and not the seeming discords; that we are to "abide" in Christ, Truth, and hold to the truth of being, whatever the lie of mortal sense may tell us.

Mrs. Eddy says in Science and Health (p. 428), "We should consecrate existence . . . to the eternal builder, the everlasting Father, to the Life which mortal sense cannot impair nor mortal belief destroy." If we consecrate every thought to God, good, Love,—"bringing into captivity every thought to the obedience of Christ,"—then the deeds and words, yea, the whole life will become consecrated, as the inevitable result; until spiritual sense has "quenched all earthly yearnings" (Science and Health, p. 314), and we become consciously one with God, even as Christ is one with the Father.

[Written for the *Sentinel*.]

THE RIVER OF TEARS.

EVELYN GAGE KNIFFIN.

The river of tears is a phantom stream,
That is fed by the springs of woe:
It flows through the valley of broken hearts,
Where the weeds of sorrow grow.

Its waters are bitter with human cares,
Bright hopes by its waves are tossed;
But it onward flows to the sea of Love,
Where the river of tears is lost.

Then the sun of Truth, with its rays of joy,
Bursts through the clouded sky,
And shineth down on the springs of woe,
Till the river of tears is dry.

SELECTED ARTICLES.

[Marion Howard Brazier in *Marsh's Magazine*.]

Whatever may be said of Christian Science, for or against, the one indisputable fact remains—that of its quiet, unseen influence in our communities. Its most strenuous critics admit that "there's something in it," when they encounter on all sides those who have unmistakably been "made over," as it were,—who see the "silver lining," who are no longer pessimistic, who no longer bore everybody with their tales of woe, and who have learned, like Mark Tapley, to be "cheerful under all circumstances."

The "doubting Thomas" may well look into this phase of the question, study it, think about it, and then practise a bit of it. Is it worth while? Try it, and see if your path is not smoother, the outlook brighter. This is one step toward becoming better morally, it gives food for thought, it puts you on better terms with yourself and every one around you, it makes you most desirable as a companion, friend, and comforter. A case in point is that of a Boston woman, a professional writer, brought up in the Unitarian faith, but who did not pose as a Christian; in fact, she was not a regular attendant at her church, going rather just when the spirit willed. She was of a high-strung, supersensitive temperament, impulsive, critical, more or less fault-finding, partly owing to the lack of a guiding hand when young, and to the absence of home influences.

When the new church in Boston was completed, in June, 1906, she was delegated by her newspaper to write up the dedicatory exercises; and she rebelled, having at the time no personal interest in Christian Science. It was a hot day, and she had to rise at half past five in order to attend the first service. On reaching the scene and finding herself too late to get in, she began to scold and fuss; then she looked at the long line of men and women, reaching as far as the eye could see. She noted first the serenity of their faces, their repose and patience, their well-bred and prosperous appearance, their absolute coolness. All this acted like an antidote; she suddenly felt herself humiliated, humbled, rebuked, and so she took her place in line, catching instantly the right thought, vowing to curb her selfishness and cultivate a better frame of mind.

From that hour this woman began really to live. She got her lesson, not from any word spoken or reproachful glance, but simply through the silent example of the twenty-five hundred Christian Scientists before her very eyes. They were from various parts of the world, gathered there with one purpose, and of one mind regarding the great benefits derived through divine Love. Within the edifice were five thousand others, and four times that day the scene was repeated within and without.

Well, the woman entered, followed the service, sang the hymns, was deeply impressed with the silent prayer, and came away a far different being from the one who left her home out of sorts three hours earlier. She adopted the church, and in two years she has done wonders with herself,—has grown younger in looks and feelings, has abandoned all moody thoughts, is able to do splendid work, has overcome her sensitiveness, having learned that it is mere vanity and selfishness. Her friends marvel at the change, and seek her company nowadays, as they get a bit of an inspiration and a little stiffening of their spinal column.

Now, on that first day, nobody spoke to her except an usher, nobody urged her to "come again," and nobody preached Christian Science to her; but an unseen influence permeated the atmosphere that has made this woman's life brighter. It caused her to do better work, thereby increasing her income; it made new friends, it drove away from her mind all thought of disease which she had fancied possessed her, until now she is a perfectly well woman and in a quiet way is helping others to enjoy the same blessings.

There was an interesting scene in a Boston shop the other day between a purchaser and a woman clerk. The former desired to match something a bit difficult as to shade. The clerk took special pains, showing a vastly different temperament from one whom the purchaser had encountered a few moments previously in another shop, so she said, "I am sorry to trouble you on such a hot day," whereupon the girl looked up with a radiant smile and said, "Nothing troubles me, madam; it is a pleasure to serve you, and I do not mind the heat." What happened? Two hands clasped, that's all; but there was the Christian Science bond between them, and no words were needed. It is hardly possible to go into any of the large shops of Boston, for instance, without being able to pick out the ones who have been aided by Christian Science, if only in a small way. They do not advertise themselves, but there is something that radiates and reaches out, and when once found proves a lasting benefit. Such clerks are invaluable to their employers, and we often hear of increase in salaries in consequence. Prosperity follows in the wake of a desire to become better men and women, and when Christian Science becomes more universal there will be less poverty and fewer charities to maintain.

Perhaps to no other profession does Christian Science so distinctly appeal as to the theatrical. Actors and actresses are emotional beings, usually high-strung, sensitive, and many of them erratic. Here and there we find them philosophical, receptive to religious influences and teachings. They are all of them hard and conscientious workers, with many to please, and as a rule they have little time to theorize. Those who have made ever so slight a study of Christian Science, however, are quietly spreading the gospel. Stage managers rise up and call them blessed, for where the devotees of this—to them—new faith are, harmony reigns.

It is generally known that Charles Klein, America's most successful playwright, set the example some years ago, when he wrote "The Music Master," "The Lion and the Mouse," "The Daughters of Men," three of the strongest plays of this generation, plays that tell forcibly some plain truths and which point good morals. Mr. Klein inherits his taste for metaphysics from his father, and he found in Christian Science just what he needed to give him courage to overcome obstacles. Mr. Klein is an enthusiast on the subject, and frankly says he owes much of his success to its teachings.

Lindsay Morison, actor and recent manager of the Boston Theater, is a regular attendant at The Mother Church, and he radiates cheerfulness. It is always a genuine pleasure to meet him, and one feels that all is well in his relations with the world at large. His attractive wife, Rose Morison, shares in the prosperity and happiness which comes into the lives of those who are sincere in their belief that Christian Science is a panacea for all ills of mind and body. Every Sunday in any Christian Science church in a large city you will find members of the profession in large numbers. This is particularly true of New York and Boston. In the latter city are many regular attendants like Mr. and Mrs. Morison, among them Mr. and Mrs. Charles Miller and their young daughter, Doris, Mr. Miller having found the service and teachings of great comfort to him in "facing the music" when emergencies arise. Petite Ida Müller, who recently spent several weeks in Boston, went regularly to the service, always finding some congenial sister actress there. Lucille La Verne is another devotee of The Mother Church, and never missed a service until called away to go *en tour*, and then she followed carefully the Lesson-Sermons. Lina Abarbanell puts her study into practice and is a silent power in

Digitized by Google

the company, buoying them up while on the trains and during rehearsals just by her example of cheerfulness and loving thoughts. Many members of Mr. Klein's companies have adopted Christian Science as a "cure for all ills." They are happier in their work, which is no longer irksome, and they effectively and silently smooth out many alleged troubles. Others see the influence exerted and soon follow suit. Communities are benefited, and the great world must needs be better in every way for the advent of this great power for good, for mental uplift, for that which keeps us on our best behavior and gives us grace for the day.

[Editorial by A. E. Piercy in the *Saturday News*, Watertown, S. D.]

The contemplation of death and its seeming inevitability need not make us utterly despondent. Mankind in all ages have been face to face with the impossible, and have triumphed over it. In myriads of cases we enjoy to-day the victories of science which at one time were considered mere chimeras and declared absolutely impossible of attainment. Man is continually triumphing in the material sphere; he is proving himself master of the multitudinous manifestations of force, and science teaches that all things are the result of force. The earth is a mass of manifested forces. In his study of material things and their origins, he is continually coming face to face with the spiritual forces that lie behind them and give them birth and substance. As he faces and studies these forces that lie back of all things which are or seem to be, is it not reasonable to believe that he will bring these causes, as he is slowly harnessing their results, within the grasp of his comprehension and dominion? The conquest of the spiritual lies through the overcoming of the material.

Men have ever dreamed of the possibility of the conquest of death. Every great mind has dreamed of it, has looked for the day when men shall die no more. When men attack death on the spiritual plane as persistently and sincerely as they now study life on the material plane, the conquest of death will follow as a natural sequence; it will be the final victory proving man's divine origin. And are we not overcoming some of the causes of death, and bridging imperceptibly the gulf that lies between us and the power that lies dormant in every one of us? Was the great Nazarene an idle dreamer, a teacher of fantastic but beautiful impossibilities, as Renan would have us sorrowfully believe, when he declared with all the divine vehemence within him that men would not die who believed in him? The Church throws the proof of his teaching into the future world, after death. Does not this make his statement thus: that if men die, they shall not die? Is not the essence of his teaching that men, some day, in some age of spiritual advancement and transcendental enlightenment, according to laws but dimly perceived as yet, such as we poor mortals scarce can dream of, shall have eternal life without passing through the grim portals of the kingdom of the arch-enemy, death? If men are gradually overcoming the causes of death, and thereby are lengthening the span of life to some mortals, it is within the bounds of possibility that in time even death itself may be overcome and life eternally lengthened for all.

The world is passing from under the dark cloud of skeptical materialism into the light of a better day of spiritual development and growth. The study and progress of the future will lie along the line of mental development and the conquest of the causes of things. Man is proving himself master of his environment; he is groping forward to the day when with higher vision he will gaze with open and unfaltering eye upon cosmic causes. Earth, fire, and water, with the grosser things, have been harnessed to his chariot. The more ethereal elements are more slowly answering to the imperious call of his dominion. His desire for mastery is reaching out to the more intangible, unseen forces which are the controlling powers of all things visible. His desire to invade the air for the purposes of aerial navigation will as surely result in success as his desire to harness the forces of steam resulted in the steam engine and its wonderful adaptations. When man seriously contemplates the conquest of any object, the first steps toward ultimate victory over that object are already taken, and its complete subjugation is only a matter of time,—of days, of years, of ages.

Death comes to all, we say, and no one has yet overcome the dread visitant. The churches tell of one—only one among the myriads of men—who succeeded in destroying its power, and set an example which no other has yet followed. Is his conquest the prophecy, the foreshadowing, of the ultimate overcoming of death by all men? Christian teaching points with no uncertain aim to that day when death, the last enemy because the strongest, shall be utterly vanquished. All pagan legend and Christian parable foretell the ultimate triumph of right over wrong, of health over disease, of life over death. Therefore we may hope and dream, even as we smile into the face of the grim reaper men know as death, of those golden days when death shall be unknown.

[Frederick Dixon in *The Mystic*, London, Eng.]

I wish to protest against the bad habit to which the press seems to have succumbed, of pitting various other healing methods against that of Christian Science. Time will show, without any room for question, which method is the nearest to truth, and consequently the most efficacious. Meantime may not these others and the Christian Scientists go their separate ways, in the words which Abram spoke to Lot, in the centuries that are passed, in the land between Bethel and Hai: "Let there be no strife, I pray thee, between me and thee, and between my herdmen and thy herdmen; for we be brethren." Furthermore, no one who comes to Christian Science for help is "called upon to subscribe" to any of the doctrines of Christian Science. Christian Science is healing sickness and sin all over the world without insisting on anything of the sort. I should say that in the enormous majority of cases those who are healed do not accept the teachings of Christian Science until their healing is complete, certainly not until it has begun. Christian Science leaves every man quite free to choose, and Christian Scientists know that unless a man has seen for himself, his adherence to the movement would be very far from being a cause of strength to it. For this reason they never attempt to persuade people to become Christian Scientists.

Finally, it is not quite fair to say that a certain church in Boston claims to accomplish all that Christian Science does. The rector of this church draws a hard and fast line between the healing of functional and organic disease, and declares emphatically that the latter is incurable, while Christian Science insists that "the Lord's hand is not shortened, that it cannot save." Jesus, it is quite certain, drew no such line. He healed deafness and blindness, leprosy and lameness, the withered hand and the issue of blood, the demoniac boy and the paralytic man, quite indiscriminately, just as he raised the dead; to say nothing of stilling the tempest, walking on the water, feeding the multitude, and finding the tribute money. The very words in which he defended his claim to the Messiahship put the question at rest for ever: "Go your way, and tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised, to the poor the gospel is preached."

[Luther P. Cudworth in the *Portland Oregonian.*]

The history of the Christian Science movement and of its Leader plainly shows that she had to blaze the trail for herself, relying solely upon the guidance of the Scriptures and the teaching and demonstration of Jesus the Christ in giving this Science to the world. Faith-healers have appeared from time to time, wrought miracles, and disappeared, together with their works. Christian Science, however, founded as it is on an exact and demonstrable Principle, has nothing in common with such ephemeral phenomena of human belief, but gives to its beneficiaries not only the physical healing which they seek, but also a working knowledge of its Principle, which they can in turn apply for themselves and others in the healing of sickness, sin, and all discordant human conditions.

[A. W. Mainland in *The Tribune*, Winnipeg, Man.]

Christian Science, as the name implies, is a system of healing which uses the spiritual means employed by Christ Jesus in his healing work. There is no evidence in the accounts of his work that the cures effected by him were brought about by "suggestion" or "concentration" of thought. He said, "The Son can do nothing of himself, but what he seeth the Father do;" and, "Ye shall know the truth, and the truth shall make you free." Christian Science heals through the understanding of Truth and Love, operating in the human consciousness and destroying all erroneous beliefs of fear and sickness and their consequent effects on the body. In Science and Health, page 144, Mrs. Eddy says, "Human will-power is not Science. Human will belongs to the so-called material senses, and its use is to be condemned. . . . It produces evil continually, and is not a factor in the realism of being. Truth, and not corporeal will, is the divine power which says to disease, 'Peace, be still.'"

[Frank W. Gale in the *Madera* (Cal.) *Tribune.*]

When Christ Jesus healed one who was blind and dumb, the Pharisees said it was done "by Beelzebub the prince of the devils;" but Jesus declared it was "by the Spirit of God" that the healing was effected. He also said, "The words that I speak unto you I speak not of myself: but the Father that dwelleth in me, he doeth the works. Believe me that I am in the Father, and the Father in me: or else believe me for the very works' sake. Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

This shows plainly that Christ Jesus did his healing works through the power of God, the one infinite Spirit, and said that those who believed on him should do the same work. When Jesus sent the disciples forth on their mission, "he sent them to preach the kingdom of God, and to heal the sick," and it is recorded that "they departed, and went through the towns, preaching the gospel, and healing every where." But one case is referred to that they could not heal, that of the epileptic boy. Jesus at once healed him, and when the disciples asked why they had failed, he replied, "Because of your unbelief." He did not consider the case incurable because the disciples could not cure it, nor did he recommend drugs, suggestion, or any material means for healing, but applied a higher understanding and faith in God than the disciples possessed at that time, and so healed the boy in accordance with his own saying, "Ye shall know the truth, and the truth shall make you free."

Christian Science follows this method of the Master and depends upon the power of God, rightly understood, for healing every kind of sickness and disease, both functional and organic.

AMONG THE CHURCHES.

CRANFORD, N. J.

With simple but impressive ceremonies the corner-stone of the new edifice of First Church of Christ, Scientist, was laid Tuesday [Sept. 29] at dawn. The services were under the direction of the board of trustees, and were conducted by Charles G. Bliss, First Reader of the church. A copper box, containing the Bible and Christian Science books and literature, was sealed in the stone, which bears the simple inscription, "First Church of Christ, Scientist, A. D. 1908." After the stone was in position Mr. J. B. See read the poem "Laus Deo," which was written by Mrs. Eddy for the laying of the corner-stone of The Mother Church in Boston in 1894.

Work on the edifice for First Church is progressing rapidly and the frame will soon be ready for the outside stone and stucco. The interior decorations and furnishings will be very beautiful.—*Cranford Chronicle.*

PORTLAND, ORE.

Work was begun last week [Sept. 7] on the excavation for the basement of the new First Church of Christ, Scientist, to be erected on the half block bounded by Everett, Eighteenth, and Nineteenth Streets. The present operations will be completed about Oct. 1, when the foundations will immediately be put in. When completed the structure will be one of the most imposing in the city. At the present time it is not known whether the building will be constructed of stone or of brick. This matter will not be determined until the foundations have been completed. The building committee has announced no date on which the building is to be completed, but it is presumed it will be some time during next summer. The cost of the structure will be between eighty and ninety thousand dollars.—*Portland Oregonian.*

WATERTOWN, S. DAK.

The laying of the corner-stone of First Church of Christ, Scientist, of this city took place at half past ten o'clock this morning [Sept. 23]. The ceremony was very quiet and unostentatious, so characteristic of the doings of these people. Most of the material for the structure has been purchased and paid for, and the work can now go on without further delay. It is expected that the roof will be finished before severe weather sets in and the first floor prepared for services this winter. The dedication will probably take place early next year.

Watertown Public Opinion.

YOUNGSTOWN, O.

The contract for the erection of the Christian Science church at Bryson and Spring Streets has been let. The edifice will be fifty by eighty feet, of brick and stone construction, with steel girders, and will be semi-fireproof. The interior will be entirely of natural wood finish, and it is thought that when complete it will be one of the handsomest of the Christian Science homes.

The Youngstown Vindicator.

NOTICE.

Christian Scientists who are connected with the newspaper business in any capacity are requested to send their names and addresses, also full particulars as to training, experience, and present employment, to the Trustees of The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, without delay.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy upon proper subjects *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

THE CHRISTIAN SCIENCE MONITOR.

We are pleased to announce that, with the approval of our Leader, Mrs. Eddy, The Christian Science Publishing Society will shortly issue a daily newspaper to be known as *The Christian Science Monitor.* In making this announcement we can say for the Trustees of the Society that they confidently hope and expect to make the *Monitor* a worthy addition to the list of publications issued by the Society. It is their intention to publish a strictly up-to-date newspaper, in which all the news of the day that should be printed will find a place, and whose service will not be restricted to any one locality or section, but will cover the daily activities of the entire world.

As to the motive which has led to the establishment of a daily paper of this character, there is nothing we could say that would be so forceful or so timely as the announcement made by Mrs. Eddy when she established *The Christian Science Journal.* We quote as follows from her article, "A Timely Issue," as it appears in "Miscellaneous Writings":—

"Looking over the newspapers of the day, one naturally reflects that it is dangerous to live, so loaded with disease seems the very air. These descriptions carry fears to many minds, to be depicted in some future time upon the body. A periodical of our own will counteract to some extent this public nuisance; for through our paper, at the price at which we shall issue it, we shall be able to reach many homes with healing, purifying thought."

The last clause of the above quotation strikes the key-note for the *Monitor,* and what it will stand for. It is this "healing, purifying thought" that not only Christian Scientists but the better class of people everywhere are demanding to-day. The tide is "at the turn;" the current of human thought is setting in the direction of that which alone is real—the good that men do, and not the evil. All over the land there has been and is a call from the fathers and mothers who feel their responsibility in this direction, who are asking for a paper that will supply vital current news, the things we want to know and ought to know about our fellow-men, but which are submerged in the daily tidal wave of crime and disaster which the ordinary newspaper would have us believe sweeps over the world. There is a field, and a wide one, for a clean newspaper, and it is this field which the *Monitor* is entering.

It will be the mission of the *Monitor* to publish the real news of the world in a clean, wholesome manner, devoid of the sensational methods employed by so many newspapers. There will be no exploitation or illustration of vice and crime, but the aim of the editors will be to issue a paper which will be welcomed in every home where purity and refinement are cherished ideals. It is intended that the *Monitor* shall contain, in addition to the usual news features of the best city papers, such special departments as will make it a home paper of the highest grade,—one which will appeal to good men and women everywhere who are interested in the betterment of all human conditions and the moral and spiritual advancement of the race. From the "news" standpoint the *Monitor* will be of far wider scope than a merely local daily would cover, and will be read with interest from Maine to California and from Canada to Mexico. Even our friends across the sea will find the *Monitor* interesting from this standpoint.

While all Christian Scientists are requested to subscribe for the *Monitor,* for we believe it is only by their support that the success of an absolutely clean and unsensational newspaper can be assured, it is not believed that they alone are interested in a paper of this character. Indeed, it is hoped and believed that all others who have seen the need of a reform in journalism will find in the *Monitor* the ideal newspaper for which they have longed, and that they too will support it on its merits.

The sale price of the *Monitor* will be two cents each copy, and the subscription price in the United States will be five dollars for one year, or three dollars for six months. In Canada and Mexico the subscription rate will be six dollars and fifty cents for one year and three dollars and seventy-five cents for six months; in all other countries eight dollars and four dollars and fifty cents respectively. Subscriptions may be sent to The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Mass., or through local Reading Rooms.

Archibald McLellan.

WHICH IS THE REAL?

A number of years ago, a distinguished philosopher, Sir William Hamilton, discussed at some length the assertion that pain is possibly the real, and peace and pleasure merely negative,—its absence. The ordinary thinker would at once scout such a proposition, and yet when we come to present-day medical theory and practice we find a strong belief in the certainty and reality of evil, and deep-seated doubt as to the reality and permanence of good; nor is this to be wondered at, when we remember that the most advanced courses in medical schools are devoted almost entirely to the study of disease in its most dreadful forms. The result of such study seems to be to impress the students with a conviction that certain diseases are incurable, a belief which is being shaken to its unreal foundations by the teachings and demonstrations of Christian Science. As a proof that this subject is being widely discussed, we have the following, from the *New York Times* of recent date:—

That curious resentment which doctors have so often shown to members of their own profession who announce the ability to cure diseases hitherto held incurable, is now directed from many and "authoritative" quarters against Dr. Denslow, as a penalty for saying that he has found the cause of locomotor ataxia and has learned how to remove it. Whether he has or has not achieved this triumph over one of the most terrible of maladies is not, of course, a question for our decision, or even one on which it would be seemly for us to express an opinion, but we cannot help seeing the similarity of the reception accorded his announcement and that which has been given to many a like disputant of accepted theories in the domain of medicine. . . . The fiercest of Dr. Denslow's foes dismiss his plea for consideration with the statement that locomotor ataxia is "known" to be incurable—than which nothing could be more rash, not even the statement made after applying the new treatment for a few months, that the disease is curable and has been cured. . . . We cannot ourselves see the danger of giving hope, even illusive, to the man or woman burdened by a deep despair. The reaction of disappointment may come, but it is not such a heavy price to pay for days or weeks or months of expectation of a happier fate.

In Science and Health (p. 130) Mrs. Eddy asks, "If thought is startled at the strong claim of Science for the supremacy of God, or Truth, and doubts the supremacy of good, ought we not, contrariwise, to be astounded at the vigorous claims of evil and doubt them, . . . Truth should not seem so surprising and unnatural as error, and error should not seem so real as truth. Sickness should not seem so real as health." It is easy to show, on a scientific basis,

Digitized by Google

that evil is unreal because it has no Principle, and also because it always tends to self-destruction. Further, if all of evil were removed from human consciousness, men would not be robbed of anything which contributes to the well-being of either mind or body.

With respect to the opinion that any disease is incurable, we might as well insist that certain kinds of darkness are impenetrable by light. We should never forget that darkness cannot radiate, and that it can never be conveyed from one place to another; while light expresses entity and always dispels darkness, and is thus a fitting symbol of the divine activity, illuminating human consciousness and displacing all sin and disease. It may not be so very surprising that doctors, who devote so much time to the study of disease, should come to believe in its reality, but that any who study the words and works of Christ Jesus, as found in the four Gospels, should attempt to put the candle of spiritual truth under the bushel of material belief, is passing strange. Happily, all belief in the reality of evil is being challenged by the ever-present healing Christ, as in Jesus' time, and asked to "give place" to the understanding of the divine power which "healeth all thy diseases."

ANNIE M. KNOTT.

THE DISPLAY OF DISEASE.

THE desire to know about things is a very spontaneous and fundamental impulse of human nature, and when it is educated into a lively interest in everything that is good and beautiful, it becomes a pilot of discovery, a prophet of growth. When, however, it degenerates into an attraction for the gruesome and the distorted, it is both an evidence and an occasion of moral degradation. One is led to think of all this by the fact that never in the history of the press has so much space and display-type been devoted to events that are tragic and unclean. Not only do papers openly cater to the demands of a depraved taste, but one frequently finds editorial expressions of self-gratulation that some dreadful event or some slanderous suspicion has been placarded by their organ hours in advance of other publications!

Further evidence of this sense of degeneracy is presented in the ever-increasing public exploitation of disease, its laws, likelihood, and phenomena. Whatever the justification of such a course, from their point of view, by physicians who are seeking, as best they know, to lessen humanity's suffering, to turn this tide of thought about disease into all the channels of human consciousness is to prepare the soil and plant the seed of every earthly ill, and for this offense there is absolutely no palliation. In the fields of art and literature also the picturing of degraded types has reached a point which leads Stopford Brooke to say, "We are flooded to-day with poems of despair, verse which boasts that it describes the real when it describes the base, which takes the vulture's pleasure in the corruptions of society."

Yet more sadly significant is the fact that Christian educators and leaders so far fail to recognize the causal relation of general thought upon disease to the increase of susceptibility to disease, that they commend its study to all the people! Every intelligent man knows that a public hanging, whether by a mob or by the constituted authorities, tends to demoralize the onlookers and to multiply crime. He knows that the rehearsal of obscenity, whether in books or at the loungers' corner, conduces to an ever-deepening pollution. He knows, too, that to picture disease is to excite the imagination and quicken the fear of the sensitive, until a sporadic case of illness ofttimes develops into a sweeping contagion. Nevertheless, even religious periodicals are still lending themselves to the perpetuation of this wrong. A New York Christian weekly recently detailed the ravages of a dread disease, and bespoke "universal interest" in the "novelty" of country fair exhibits of its frightening facts!

These things seem no less saddening than inexplicable, and they give an added emphasis to the importance of that war upon the fallacies of material sense which the truths of Christian Science are making. Its appeal to all men to-day was voiced by St. Paul when he said to the Philippians: "Brethren, whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things;" and one of the striking differences between the atmosphere of the sick-room where medical treatment is being administered and the atmosphere surrounding those under Christian Science treatment is found in the fact that this wholesome injunction is being honored in the latter case. Christian Science pungently rebukes that very general and very harmful habit of thinking that it is entirely legitimate to enlarge upon disease and error in the interest of their restraint.

For the Christian Scientist this apostolic injunction means further that he should guard against coddling evil in his own thought by making it a reality in the thought and conduct of others. We are called to know God, good, and to acquire thereby the ever-increasing ability to unknow evil, wherever and in whomsoever its claims are presented. It is ours to fill out in this regard the measure of the Christ-man so poetically and so fittingly described by the prophet when he sang, "How beautiful upon the mountains are the feet of him that bringeth good tidings, that publisheth peace; that bringeth good tidings of good."

To uncover error that it may be banished, not displayed, is the business of Truth, and of Truth's every representative.

JOHN B. WILLIS.

LECTURE IN THE MOTHER CHURCH.

The semiannual lecture on Christian Science in The First Church of Christ, Scientist, in Boston, Mass., will be delivered by Bliss Knapp, member of the Christian Science Board of Lectureship, Thursday evening, October 22, at eight o'clock. The lecture will be free, and the public is cordially invited.

LETTERS TO OUR LEADER.

Boston, Mass., Oct. 9, 1908.

Reverend Mary Baker G. Eddy,
Chestnut Hill, Mass.

Beloved Leader:—Informally assembled, we, the ushers of your church, desire to express our recognition of the blessings that have come to us through the peculiar privileges we enjoy in this church work. We are prompted to acknowledge our debt of gratitude to you for your life of spirituality, with its years of tender ministry, yet we know that the real gratitude is what is proved in better lives.

It is our earnest prayer that we may so reflect in our thoughts and acts the teachings of Christian Science that our daily living may be a fitting testimony of the efficacy of our Cause in the regeneration of mankind.

THE USHERS OF THE MOTHER CHURCH.

MRS. EDDY'S REPLY.

Oct. 12, 1908.

Beloved Ushers of The Mother Church of Christ, Scientist:—I thank you not only for your tender letter to me, but for ushering into our church the hearers and the doers of God's Word.

MARY B. G. EDDY.

Digitized by Google

Fairbanks, Alaska, Sept. 5, 1908.

Dear Mrs. Eddy:—I have been spending the summer in Alaska, and I believe it will give you great pleasure to know of the little band of faithful Christian Scientists here in Fairbanks. They are not organized as a church, but the society is composed of sincere, earnest workers and the truth is spreading rapidly. The little log building is being enlarged, and the practitioners are meeting with wonderful success.

Very sincerely,
LILLIAN COLE.

Kansas City, Mo., Oct. 3, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—My gratitude to you increases as the evidences of the practical beneficence of Christian Science come into my experience. Only a few months ago the decision was made to devote my entire attention to the practice of this divine Science into which your spiritually directed efforts have led me. As the expressions of gratitude for benefits received come to me, I feel they are all due to your consecrated, patient endeavor as the pioneer in the path you have shown us, and which, as you are still so earnestly telling us, inclines ever upward and onward before you. It seems that the oftener I apply the healing declarations of Christian Science, the more consecrated seems the privilege and duty of doing so. The thought often comes in Bible language, "Put off thy shoes from off thy feet, for the place whereon thou standest is holy ground." Some very convincing cases of healing have come into my experience—quick and complete.

In deep sincerity permit me to thank you for all you are giving us in Christian Science,—its literature and all its institutions. My gratitude for your prayerful work on the text-book, "Science and Health with Key to the Scriptures," in the past twelve years, is beyond expression. God bless you. Sincerely,

ALBERT L. MCBRIDE.

Westerly, R. I., Oct. 5, 1908.

Beloved Friend and Leader:—Our little society is very happy over Judge Ewing's lecture, delivered here yesterday afternoon to an audience of between four and five hundred people, who listened with rapt attention to his loving presentation of the truth. The Scientists came from surrounding towns and cities, but by far the greater number of the hearers are not yet Scientists. One clergyman and three physicians were in the audience, besides many other representative people of the town. Behind me sat a member of the Lyceum Club which called you here thirty years ago. He said he wouldn't miss hearing the lecture for anything. This is our first attempt to have a lecture, and we thank God, and you, dear Leader, for making it possible. Judge Ewing's tribute to you was sublime, and I know changed the thought of many, by pointing out that you discovered, uncovered, and found the method of the Christ-healing, and gave it to the world.

And now, "leaving the seed of Truth to its own vitality," knowing that it will propagate, "the tares cannot hinder it" (Miscellaneous Writings, p. 111), we press on joyfully.

Ever lovingly and faithfully yours,
GRACE R. KNAPP.

Paterson, N. J., Oct. 5, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dearly Beloved Leader:—Christian Science, or the Christ-teaching which you have given to the world, is to me as the star of Bethlehem, leading me step by step up to man's rightful inheritance as a child of God, good. Studying alone with your books, "Science and Health with Key to the Scriptures," and "Miscellaneous Writings," together with your many other writings, I have been enabled to remove that which to the human sense has seemed mountains. It is with a great sense of humility that I am writing you, for it seems that by so doing I may appease somewhat the overwhelming desire which comes to me so often to thank you from the depths of my heart for this wonderful message which has come to material consciousness through your purity of thought and willingness to obey God. Most sincerely and affectionately,

MARGUERITA W. SMITH.

Caibarien, Cuba, Oct. 3, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—I wish to express my gratitude by writing to you a few sentiments prompted by the study of your life and Christian Science. I have begun to realize the manifold blessings flowing to a sin-stricken world by the honest application of the Principle you so well teach by proof. Pardon me for calling you the scribe of modernity, whose pen and living example reveal the sweetest essence of the life and teachings of our dear Master. No doubt exists in my mind that Christian Science is "the truth, the whole truth, and nothing but the truth." It is my hope to finish this worldly contest on this line, and thus prove to be a worthy servant in the arena of my calling. True independence is gained as we all cease to do evil and learn to do good, and as we realize the power of Love, good, and the futility of the hopes and expectations of material and selfish means. This grand verity is being impressed upon mankind through Christian Science as revealed to you and your followers in honest work.

I thank God for this epoch in which the light of His morning sun is being renewed to shine for all in the zenith of heavenly love, where "nation shall not lift up sword against nation, neither shall they learn war any more."

Sincerely yours in Christ,
J. E. MCDONALD,
Lieutenant, United States Army.

Uniontown, Pa., Oct. 8, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dear Mrs. Eddy:—Human language cannot express my gratitude to you for giving us this healing truth which has shown me what man is. As you tell us in "Unity of Good" (p. 18), "What is in eternal Mind must be reflected in man, Mind's image." I was healed of lung trouble, eight years ago, by reading your book, Science and Health, and I know that the only way in which I can express my gratitude to you for this blessed truth is to be obedient to the command, "Thou shalt have no other gods before me." Lovingly yours,

MRS. EFFA L. MURPHEY.

Baltimore, Md., Oct. 4, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—My attention has just been called to the new "sketch" of yourself appearing as a frontispiece in the last edition of "Science and Health with Key to the Scriptures," and I thank you very much for giving it to us. While I do not believe it possible ever to secure what I would consider an "A1" photograph of you, or succeed in reproducing your wonderful expression in oil or ink, —for there is that in it which is not of matter nor made manifest through matter,—the present picture is far superior to the one that has been appearing for the past fourteen months. Gratefully yours,

WILLIAM M. GOODWIN.

THE LECTURES.

RANDOLPH, VT.

An audience of over two hundred assembled in Bethany Church last Thursday night [Aug. 20], to listen to an able exposition of the theory and practice of Christian Science by Frank H. Leonard of Brooklyn. The speaker was introduced by the pastor of the church, Rev. Fraser Metzger, who said,—

Bethany Church, in opening its doors to a Christian Science lecturer, makes no pretension of sympathy with the teachings of Christian Science. Believing, however, that Scientists are sincere in their contention, the church offers the use of its building as a courtesy. The church stands in the community as an institution that should welcome the truth, let that truth come from any source it will. Though radically disagreeing with much that Christian Science teaches, it is willing to stand on the ground Gamaliel pointed out to the Jewish Sanhedrin —"If this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it." As pastor and as an individual, I am unable to introduce the speaker of to-night in the spirit of a man who can commend the message *in toto*. None of us is infallible, therefore it is always well to concede that he who differs from you is in possession of some truth. It remains only for each of us to walk in the light he has, and not be afraid, for the truth will hurt no man, and no institution will suffer from its espousal. Believing that the speaker comes in sincerity, he is welcomed to this pulpit, and I fraternally introduce him to you.—*Herald and News.*

SHEBOYGAN, WIS.

An audience which well filled the Sheboygan Opera House listened with much interest to the lecture on Christian Science, Sunday afternoon [Sept. 20], by Hon. Clarence A. Buskirk. He was introduced by Miss Emma Hahn, First Reader of First Church, who said in part,—

The world is seeking to-day, as it has always sought, primarily, one thing—a solution of the problem of life. Jesus taught that the essential thing is to have faith in God. In the 17th chapter of John he said, "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." In Matthew Jesus invites us all to learn in these words: "Come unto me, all ye that labor and are heavy laden, and I will give you rest. Take my yoke upon you, and learn of me." Jesus indicated that his teachings were founded on a divine Principle, which, when understood, is available throughout all time. Christian Science to-day rests on the promises of the Master, and offers as its most convincing proof the many thousands of lives freed from sin, sickness, and sorrow through its ministrations. You must admit the pleasure you feel in making known to your friends anything which has brought you joy and comfort. It is therefore our pleasure to share with you some of the knowledge which has blessed us.

The Sheboygan Herald.

MARQUETTE, MICH.

Bicknell Young addressed a good-sized assemblage at the Opera House last evening [Sept. 21] on the Christian Science faith. The speaker was introduced by Professor Lautner, of the Northern State Normal School, who said in part,—

Christian Science has certainly to be designated as one of the great religious movements of modern times. Whatever we as individuals may think of it, it has had a most marvelous growth. Its active membership in the United States now numbers many thousands, and it is not possible to count the people outside the Church who are interested in this great movement. It is more than a religious movement; it is also a philosophical and a scientific movement. As a philosophical movement it claims to deal with the fundamental problems of the relationship of mind to matter that are vexing the world and affect us in many ways. I am not here to tell you about Christian Science, because I must confess that I know nothing about it. I am not a Christian Scientist, but from what I have myself seen of the people who profess it, and my intimate acquaintance with some of them, I should like to be one of their best ones. If the harmony manifested in their lives is any indication of their theory, it is something that this world needs and we all need, and it is as an earnest seeker after truth that I am here to-night."—*The Mining Journal.*

HUDSON, MASS.

The Christian Science lecture given in the Town Hall Sunday night [Sept. 13] was largely attended, and the speaker of the evening, Frank H. Leonard of Brooklyn, made a deep impression upon his hearers. Charles H. Welsh of Boston introduced the speaker, saying in part,—

Christian Science is a religious movement which is attracting the attention of the thinking people of the whole world because it is a healing religion and founded on the teachings of Jesus and the Holy Bible. Christian Scientists believe that Jesus' command to heal the sick was just as imperative as the one to preach the gospel. These lectures are for the purpose of correcting existing misconceptions of Christian Science, and of affording the public an opportunity to learn somewhat of its meaning. The lecturer may tell you of his own healing and something of his long experience in proving to his own satisfaction the truth of this teaching. And I am very sure he will tell you something of his personal knowledge of the pure, holy, consecrated life and sterling character of the Discoverer and Founder of Christian Science, Mrs. Eddy.

The Hudson Enterprise.

[Written for the *Sentinel.*]

OMNIPRESENCE.

JOHN M. DEAN.

O BROODING Spirit, hovering ever near,
In every clime and time still, still the same,
Thy loving benediction calms all fear
And checks intruding error's subtle claim.
Bowed heads, lift up! Away, ye beds of pain!
The prayer of knowing wakes to life again.

No separation can we ever know,
The torch of Truth eternal guides our way;
Thy peace attends our path where'er we go,
And promised manna feeds us day by day.
Nor death, nor hell can cleave us from Thy love,
Nor storm-clouds hide the sunlit peaks above.

No gloom of night can close our eyes on Thee,
No clamoring din can drown Thy still, small voice;
The lowering shadows bid us watchful be,
Till morning breaks and waiting hosts rejoice.
Come weal or seeming woe, from faithful hearts
The sunshine of Thy presence ne'er departs.

TESTIMONIES OF HEALING.

I wish to make grateful acknowledgment to God, and to our Leader, Mrs. Eddy, for the many blessings that have come into my life through Christian Science. At the same time I hope my testimony may be the means of leading some needy one to seek relief from sin or sickness through the same means which has proved so efficacious in my case. Though a strong and vigorous youth, I had since boyhood been subject to severe bilious attacks and headaches, and as I grew older they became more frequent and more severe. I tried dieting, exercise, medicines of various kinds, and consulted many physicians, but all to no purpose. Physicians who were personal friends told me they could do nothing for me, as my trouble was inherited. By the exercise of will-power I would keep myself to my work during the continuance of these attacks, but suffered tortures at the same time. In 1901 I was told by the examining physician that I would have to wear glasses to correct my vision. I did so, but received little benefit from them, and about two years later I was compelled to go to a noted specialist in Seattle and have my eyes fitted with new and more powerful glasses, which magnified the vision, but did not remove the pain and trouble in my eyes.

My mother had been interested in Christian Science for many years. I knew that she had been greatly changed after taking up this study, having become more patient, kind, loving, and uncomplaining than ever before, but I failed to see the relation between cause and effect. I considered Christian Science a new and harmless fad, and let it go at that. From time to time I received a copy of the *Christian Science Sentinel* from my mother, but I seldom did more than glance at the paper, thinking it could not possibly be of any use to me. One day in February, 1905, however, while at a remote military post, I received a copy of the *Sentinel,* and as I opened the paper I noticed several articles were marked with a blue pencil. I read one, and saw it to be an account of the healing, through the reading of "Science and Health with Key to the Scriptures," of a man who had been afflicted with the same kind of attacks which had been the bane of my life. I read on, and found testimonies of the healing of all kinds of diseases by the same means. A new hope sprang up in my breast. I said to myself that surely these people must be telling the truth; they could have no object in deceiving others by false representations of this kind, and that if the reading of this book had cured them, it might cure me also. I made up my mind that it was worth trying anyway, so I wrote to Boston that same night for a copy of Science and Health and ordered the *Sentinel* for a year. I was determined to give Christian Science a fair trial and wanted the *Sentinel* as a help.

At length the book came, and the paper. I knew Christian Science was the truth as soon as I commenced to read the text-book, although its teachings were so contrary to what I had been accustomed to believe that it was with difficulty I was enabled to see clearly its true meaning. All my preconceived opinions of God and man were here reversed—turned upside down, as it were. I saw that my false pride and ambition had to have a fall. Their nothingness began to appear. I had always believed in God, and had been a church member for many years. I had long been accustomed to pray to God regularly, but seemed to get no answer to my prayers. I was grossly material, having many other gods besides the one true God. I was a victim of pride, ambition, selfishness, and a belief in the efficacy of human will-power to overcome adverse bodily conditions.

I read the book faithfully, and one night, about two weeks after I had received it, I found myself, much to my surprise, reading it without the aid of my glasses. My vision was good and my eyes did not hurt me. It dawned upon me at once that Truth, as revealed in Science and Health, had healed my eyes. I then put my glasses away and have not used them since. My eyes have not failed me nor given me any trouble, though put to the most severe tests, as I have spent eleven months in the hardest kind of study at one of the army service schools, where it is the usual thing to sit up till eleven or twelve o'clock nearly every night preparing the lessons. My healing of the bilious attacks and headaches came slowly, but the frequency of their recurrence lessened with my growth in the understanding of Christian Science, and I can truthfully say that it is rare now for me to have a bilious attack of a serious nature. I know that as I continue to grow in the understanding of infinite Truth, and the Science which never fails when rightly understood and applied, all error will disappear into the nothingness from whence it came.

Like many others, the spiritual uplifting which came to me through Christian Science is of more value than the physical healing, though I see now that they came together and are in truth inseparable. In the study of this Science a new heaven and a new earth were revealed to me, and I experienced a joy unspeakable. I found a God who is infinite Life, Truth, and Love, who is unchanging good and knows not evil, sin, and death. I found that to secure the blessings of Christian Science, I must reconcile myself to this infinite God who is good and must place myself in harmony with Him who is infinite Love. My wife has also come into Christian Science, and one of her sisters was healed of a sickness of many years' duration by reading Science and Health. I know from my own experience that Christian Science heals sin as well as sickness. It has helped me to overcome selfishness, envy, jealousy, sensitiveness, pride, and many other evils. The result has been that since coming into Christian Science I have been happier and healthier than I have been since I was a child. I have been literally transformed by the renewing of the mind. Jesus said: "The truth shall make you free," and I know that Christian Science is the truth because it has made me free from many evils in thought that formerly encompassed me about. It has made me a better army officer, a wiser and better disciplinarian, a kinder and more loving husband, son, brother, and friend, and a better citizen. It has enlarged my understanding, increased my capacity for work and study, and benefited me in every way.

I am deeply grateful to our dear Leader, Mrs. Eddy, through whose pure and spiritual nature this great truth was revealed to the world. Should I not be grateful for all these blessings? Should I not love and revere her through whom they all came and without whom Christian Science would not have been known? Christian Science is the religion of Christ Jesus and it has always existed, although it was for many centuries lost to human sight, buried in the grossness of human, material beliefs; but Mrs. Eddy rediscovered it, illumined it, and made it plain to the world, so that all who will may learn of it and receive its blessings. My earnest desire is so to live that I may be able to help others to understand this great truth, that they may be glad to partake of it and enjoy a portion of the same spiritual blessings that have come to me.

PERCY WILLIS, Captain Coast Artillery Corps, U.S.A.

[Translated from the German.]

I am sending my testimony as an expression of sincere gratitude. For about twenty years I had been afflicted with severe bowel trouble, so that I was often confined to my bed, and the attending physician said that an operation might be necessary. In order to avoid this I turned to

Digitized by Google

Christian Science, of which I had heard a short time before. A practitioner gave me such convincing information on the subject, that I asked for treatment with the greatest confidence; and a blessed result was effected. After several weeks' treatment all the old trouble vanished, and since then (about two years ago) I am able to do whatever I wish. I desire to make special mention of the refreshing sleep which I now enjoy, and I am most grateful for the smaller and greater demonstrations of the truth which I have been able to make in our own home. My sense of fear has left me since I knew God through Christian Science.

FRAU LINA FEDELE, Stuttgart, Germany.

I should like to testify to the healing of two little girls of a dreaded disease, one of them being thirteen, the other ten years of age. I have heard several people say that slight ailments can be healed with Christian Science, but that it could not cure a case of smallpox. About five or six years ago, I had the chance to prove what Christian Science could do in such a case. My sister went to St. Louis and left her two little girls with me. She and the children were interested in Christian Science, but as we were alone at night I had another sister, who was not in Science, come to stay with us. The mother of the children left on Sunday, and on Wednesday morning the youngest girl asked me to treat her. I did so and she went out to play. The next morning there was an eruption on her forehead, and that night the older child awoke me and said that her sister was crying, and wanted me to treat her. I did so, and she went to sleep. She played out of doors all the next day, but on Saturday morning she did not get up, and when I went to her bed, her appearance was very alarming. I sent for a Christian Science practitioner, and she said that it looked like a contagious disease. Remembering that Mrs. Eddy advises us to call in a doctor in case of a contagious disease, I sent for my old family physician. He came, looked very frightened, and said he would go for the health officer. When they came the health officer examined the child, and said it was a very bad case, and that he would have to get the flag to put on the house. When he went away the child began to cry, and said she was afraid they would take her away from home. I told her that God's children have no diseases; and she was soon as happy as could be.

When the officer came back, about four o'clock, the little girl was up and dressed. He seemed to be surprised, and said to her, "Have you had some kind of treatment?" She replied, "Yes, sir; I had Christian Science treatment." He said, "Well, my child, you are all right, but I shall have to put up this flag." She begged him not to do so, but he said that he would be arrested if he did not. So he put up the yellow flag and we were quarantined, and that night the daily paper reported the case. It was Saturday, when we always bought our supply of groceries and such things, but we had no telephone and were shut in from every one.

I shall never forget the Lesson-Sermon for the next day. It told of where Jesus was led into the wilderness to be tempted of the devil. As I read on, I came to the words, "It is written, Man shall not live by bread alone, but by every word that proceedeth out of the mouth of God." How clear it all was to me then. The angels did truly minister unto us, and we lived, not by bread alone, but by the Word of God. We were quarantined thirty days, though the little girl was healed at once. Her mother came home when she saw the paper with the notice in it, but she could only stand outside and see her children through the window. Every day baskets full of nice things came from our friends and the Scientists. The Christian Science society wrote me letters of encouragement, every few days, and sent me money, saying that as I did not have a physician I should not accept anything from the city. We had plenty of money, but we could not get out to do anything. I made the remark to the children one night that we had had everything sent to us except flowers, and next morning there was a large bouquet on the porch. In about twelve days, in the case of the little girl, every bit of the manifestation was gone except a little mark over one eye. My sister, who was staying with us, not being a Scientist, had fear and mortal beliefs to combat, and she said it was impossible for the other child not to have the disease; and she did have it, though she suffered only one night. The doctors did not come near us again until it was time to take the flag down.

I never lived so near to God as while we were passing through this experience. We did not have any gloomy, fearful time, and neither of the children suffered except the one night, and they were as happy as could be. They now live in St. Louis, and are both nearly grown, and make good demonstrations for themselves. I learned many things while we were shut in, and one was that disease is only a name for error, and people fear the name. Christian Science also healed the older girl of a condition of the mouth and throat which the doctor said could not be cured. It would take a long time to tell all of our month's experience. We lived in the center of the city, but not one of the children who had played with ours had the disease, and no one in the neighborhood. I have not given details, just enough to let others know that every kind of disease can be healed in Christian Science.

MRS. RUTH SMITH WILLIAMS, Paducah, Ky.

I was first attracted to Christian Science about two years ago by having our little girl treated for a stomach trouble. The results obtained appeared so wonderful that I made up my mind to give it careful investigation. I secured a copy of Science and Health, and during spare moments read it. As it appeared to me, at first, to contradict the Bible, I was forced to refer to the Bible very often, and in this way I learned that Science and Health is indeed a "Key to the Scriptures." During the two years in which I have been interested in Christian Science I have been treated for and relieved of several very bad habits, among them whisky drinking, excessive profanity, and the use of tobacco in every form, a habit of twenty years' standing. I was also healed of a cough which had annoyed me for nearly two years. Before knowing of Christian Science I was constantly taking remedies for first one trouble and then another. I am now enjoying much better health than ever before, and have not missed a day from my business in two years.

We have four children, the oldest of whom is five years, and since learning of the efficiency of Christian Science we have depended upon it entirely in the care of them. They do not know what medicine means.

I am indeed grateful to Mrs. Eddy for making all these blessings possible for myself and family.

W. G. STEPHENS, Baltimore, Md.

I had suffered for years with an affliction in the form of a skin disease which often greatly annoyed me. Many specialists had been tried, but they had given the case up at the time I was told about Christian Science. A practitioner lived not very far from my home, and I at once started to take treatment and to study Science and Health. In a very short time the eruption had disappeared. I had also worn glasses for three years previous to that time, but have not needed them since I have taken up the study of this truth. Christian Science has also taught me to be more loving and less selfish, and it has helped me in a great

Digitized by Google

many ways. I cannot sufficiently express my gratitude for all that this truth has given me.

CORA MARGARET ROSSBACH, Oak Park, Ill.

I have long felt a desire to express my gratitude for Christian Science, but can never tell half of what it has done for me. I appreciate so much the testimonies of others in the *Sentinel* and *Journal* that I shall feel glad if mine may be helpful to some one. From my earliest remembrance I was afflicted with rheumatic and heart trouble, etc., in their worst form. My parents did all they could for my comfort, but were told by the physicians attending me that I would never be any better unless my teeth were extracted. They were taken out, but this was followed by spinal trouble. After suffering for nearly two years, I got up, but on crutches. I seemed to get better in some ways, but the heart and lung trouble remained with me,—we supposed it was inherited. Finally my health gave way entirely; and by this time I had no loving parents to look to for comfort; no home, no money, and I had four small children to support.

In this condition I turned to Christian Science for help. Truly "man's extremity is God's opportunity," for I received all and more than I ever dreamed of, and I was healed of every symptom of disease in less than one week's treatment. The practitioner to whom I went explained the Scriptures to me so clearly that I understood for the first time that the blessed promises Christ Jesus made so long ago were really for me if I would only accept and use them. "Come unto me, all ye that labor and are heavy laden, and I will give you rest," has been fulfilled in my case. When I think of our dear Leader I cannot find words to express my gratitude for what she has done and is still doing for me and mine and for all mankind.

MRS. ELIZABETH RUSSELL, Arkansas City, Kan.

Believing that we should let our light shine according to what we have received, and realizing that I have to a great extent been in darkness, although brought up in an orthodox church, where I was led to believe that Christian healing had been done only to establish the Church nineteen hundred years ago, and that it had then ceased, I desire to give my testimony. After suffering for almost a year with what three physicians pronounced severe stomach trouble and gall-stones, and receiving no permanent benefit from medicine, having fever and being in bed a great portion of the time, I began to read and study Christian Science, and had treatment for two weeks. I improved somewhat, but became discouraged and tried drugs again for three weeks. I, however, became worse, and my wife called in another practitioner, who gave me one treatment, and I have been perfectly well ever since, having no fever at all and doing my farm work every day. I have been attending the services at the Christian Science church and enjoy them very much. I am very thankful to our Leader for directing us to "the true Light," and I hope this statement may encourage some who are seeking a better knowledge of the way of Life.—JULIUS HART, Ashland, Ore.

I want to tell of some of the healing that has been done for me through Christian Science. The blessings have been many, but I will tell of one which seemed remarkable to me. While working in a box mill my hand got caught by a saw and was badly lacerated. I went direct to a Christian Science practitioner for help. She told me to go to a doctor and have the hand dressed, but that she did not wish me to have any of the fingers cut off. The first thing the doctor told me was that one of the fingers must come off, but I told him I wanted the fingers saved and asked him to dress it the best he could. He said he did not admire my judgment, and he added that I would come back in a short time and have the finger removed. It was in a bad condition, and the doctor said that if we should save the finger it would be stiff; but thanks to God and to Christian Science it was healed. The kind practitioner took me to her home and cared for me as she would one of her own, for I had no home. I never suffered any pain to speak of, and the finger is not stiff. I do all kinds of work with that hand. All that I am I owe to Christian Science. I hope that this may be a help to some one. God bless Mrs. Eddy and her faithful followers for the good they are doing.

SELDON E. RICHARDSON, Auburn, Me.

Fifteen years ago the world looked very dark to me, as I was then taken to a hospital. I had for fifteen years previous suffered from many ailments, but most severely from what the doctors pronounced a chronic stomach trouble. At last I could not eat anything without causing distress, and as I had to work hard to support myself I completely collapsed, and I felt that death would be my only relief. I had some relatives visiting in Denmark at that time, and they urged me very much to come to this country. I asked the doctor if he thought I could do it, and he said, "Why not stay here and die, as you may never get there; but at any rate you must not go to work."

I came to this country in May, 1893, and during the summer went to work for a friend of my relatives. She was a Christian Scientist, and when told of my poor health she talked to me about Christian Science. I could not understand much English, nor could I believe that praying to God would heal me, as I had always prayed to God and very earnestly, but the lady's words did not return to her void. I was completely healed during my stay in her home, without any regular treatment, but by the power of divine Love which is always recognized in a true Scientist's home, and through the declaration that nothing unlike God can abide there. Life became a joy to me, and I could eat everything set before me and do my work with pleasure.

In 1895 I was married, and next year a baby girl was born in our home. I had by this time taken up the study of Christian Science, and relied on it entirely, and I did find God an ever-present help. The baby was born at seven o'clock and an hour later I partook of the family supper. This was Sunday, and on Tuesday I got up in the morning and attended to my regular duties all day, and have not been in bed one day since from any ailment.

When the baby was eight months old I had to prove the ever-presence of divine Love. One day she became very ill, and the symptoms were most alarming. My first thought was, "If I could only get some one to help me," but being alone I felt that I must rely on God. I then realized that God is Life, and that He was with me in my need, and in a short time the child was relieved. I cannot tell the joy and peace I felt; my heart was full of thankfulness to God. When this child was two and a half years old the symptoms of a dreaded cough appeared, and the fear of eighteen weeks of suffering (according to mortal law) came to me; but I immediately declared the truth, and she had only one day of severe coughing and in two weeks was entirely well.

While for the last thirteen years I have relied on Christian Science, the road has not always been smooth; but I have overcome all obstacles with the truth as found in Christian Science, and I can never be thankful enough to Mrs. Eddy for rolling away the stone and opening wide the door for Truth and Love. With the new light on the Bible which I have received by studying "Science and

Digitized by Google

Health with Key to the Scriptures," the 91st Psalm has proved a strong shelter to me in time of storm. I am indeed very grateful to Mrs. Eddy for this healing truth.

MRS. CHRISTINE HANSEN, Chicago, Ill.

Four years ago I was sick and very unhappy. I wanted to be well, was taking medicine prescribed by a doctor, but was getting worse instead of better. I knew about Christian Science, but had no thought of accepting it for myself until one afternoon when I went to visit my sister-in-law, who is a Christian Scientist, and there I met a practitioner. I was healed that afternoon, just by listening to the truth as voiced by her, of severe stomach and bowel trouble of long standing. I at once began the study of Christian Science, and I feel that life would not be worth living without it. I feel very thankful to God that He led me to accept the truth, and I am glad that "whosoever will" may know the truth and be free.

MRS. NEIL WARNER, Mayfield, N. Y.

It is with a heart full of gratitude that I tell what Christian Science has done for me. Over ten years ago, I received my first help in Christian Science. I had suffered more or less for years from many physical troubles, extreme nervousness, weak heart, a cough, and a bronchial trouble which was fast settling in the lungs. I was supposed to have inherited the lung trouble from my father, as the entire family had passed away with it. In the fall of 1897 a friend of the family was healed, in Christian Science, of a serious eye trouble, and then soon after a dear sister was healed of a throat disease. I had been inclined to scoff at first, but I soon found that there was something in Christian Science after all. I then asked for help for myself, and I remember that the first day I talked with the practitioner I said, "I never expect to be well, but if I could live to be with my little ones a few years longer I would be satisfied." My healing was rapid. I visited the practitioner every day for one week and every other day the following week. The third day I bought a copy of Science and Health and began studying the Lessons, and that day I found myself healed of bowel trouble of many years' standing. I visited the practitioner often, when perplexing questions would arise, as I grew very slowly in my understanding of Truth. I had been a church member since I was twelve years of age, and found some things hard for me to accept at first.

Previous to this healing my physicians had urged me to go to southern California, and one of them had brought me the time-cards of the southern routes of travel, for they said I must avoid high altitudes, because of my heart and nerves. Two years after my healing, owing to a change in my husband's business, we went to Denver, Col., to live, and I soon found that I could go up into the mountains to an altitude of between nine and ten thousand feet above sea-level, with no unpleasant results, which proved to me the truth of what St. Paul says, that neither "height nor depth, . . . shall be able to separate us from the love of God." The nervousness was the last to yield. I find now, in looking back over these ten years, that just in proportion to the amount of faithful reading and putting into practice, daily, of what I learn from the study of the Bible and Science and Health, do I gradually rise above error. The unreality of sickness and sin is more clearly discerned, and the allness of ever-present Life, Truth, and Love.

It was my privilege to go East to the dedication of the completed Mother Church, in June, 1906, and to visit my native city, Providence, R. I. I have so much to be thankful for that words cannot express my gratitude to our dear Leader, Mrs. Eddy, for giving us Science and Health, each edition making the way clearer; and for all the literature. I am grateful to all who have helped me to gain a better understanding of this truth, of which Jesus said, "The truth shall make you free."

MRS. ISOLA J. MACDOUGALL, Lincoln, Neb.

Words fail me when I try to tell what Christian Science has done and is still doing for me. It has been the only remedy for every ill in my family for about four years, and I have through its teachings been able to demonstrate that "God is a very present help in trouble," and that He is available under all circumstances. Last fall I was taken with chills and fever in an aggravated form, accompanied by other complications. I had Christian Science treatment, but my healing seemed slow and I found myself wondering why this attack did not yield as quickly as other ailments had done. I soon realized, however, that I must be patient and learn my lesson. The healing came, and with it a clearer understanding of the Bible and of our text-book, Science and Health, by Mrs. Eddy. I have also within the last few months been enabled through the teachings of Christian Science to rise above a great grief which otherwise would have crushed me. I am thankful to God, and to our Leader, for this healing truth, and my prayer is that I may rise each day into a higher sense of Life and Love.

MRS. MATTIE SCHNESSLER, Talladega, Ala.

It is with a very thankful heart that I give this testimony of my healing through Christian Science. I had been running down in health for some years, and the doctor said I had a growth, which caused other troubles. No pen could describe what I suffered physically and mentally. Although my husband's father is a physician, he gave me no hope of relief except through an operation. Finally, my mother, who had been helped through Christian Science, came to visit me, and persuaded me to try it. On her return she had a practitioner at her home treat me for a short time. She then wrote to me and enclosed the address of a practitioner here, and advised me to go to her, as it would be better for me to be under the care of one near at hand. She also kindly wrote a letter to this lady.

I was in a dreadful condition when I went to her for help, but the truth brought me relief very soon. I only took treatments for a short time at first, but the practitioner came to my home and talked with me, lending me her books until I got some of my own, and I soon began to understand and was able to help myself in many ways. I joined the Christian Science church last January, and although some of the ailments have seemed to hang on, I am thankful to say that my remedy is always at hand, and that Truth conquers every time.

For this great truth, which is such a blessing to me in so many ways in my household and in my every-day work, I am grateful indeed to Mrs. Eddy, for giving to us in such clear statements something that all can grasp and use in their daily life. Christian Science makes the Bible a more precious book than ever before.

MRS. RHODA M. JOHNSON, Bay City, Mich.

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be Nov. 6, 1908. Applications should be in the hands of the Clerk of The Mother Church on or before Oct. 21, 1908. Application blanks may be had by addressing William B. Johnson, C.S.D., Clerk, at the church edifice, Falmouth, Norway, and St. Paul Streets.

FROM OUR EXCHANGES.

[*The* (London) *Christian Life.*]

We are living in an age of religious transition and ethical awakening, and we cannot help feeling that under some subtle influence the rising democracy of the day, better informed than the millions in any previous age, is thinking thoughts on the subject of institutionalized religion. The civilized peoples of the world, the masses included, seem to have simultaneously arisen in their might and made a demand for a reform of antiquated creeds and systems of faith. There has somehow arisen in their minds a vivid consciousness that the average theology does not harmonize with reason and common sense. They have ceased to believe in "plans of salvation" which are to give you a safe passport to heaven by some magical device which operates quite independently of your goodness or your badness. Their own hearts tell them that such "plans" are absurd and delusive. Religion is now, as it always has been, the paramount interest of humanity, and thoughtful observers have anticipated that the next great reformation of religion will spring from the lives of the people. The anticipation is being fulfilled; we are now at the beginning of the reformation.

[Rev. P. Gavan Duffy in *The Churchman.*]

It is quite beside the mark for any to fall back upon the stock cry of most Christian apologists, that the power of healing the sick was given to the Church only for a time, when signs and wonders were needed to convince and convert the people. The average Christian of to-day has long since come to the conclusion that that form of apology is simply one invented to cover the Church's faithlessness. . . . Never was there a time when "signs and wonders" were more necessary in the Christian world than to-day. That the power to heal is with the Church is manifest to all who will see; and if only we had that essential—a corporate faith restored instead of faithlessness—that strange, mysterious, silent influence which is now a sort of *pull* one experiences rather than defines (the result of corporate faithlessness) in restricting the results of the faithful few, I verily believe we should have in its place an immense, immeasurable, spiritual force at work that would mean a speedy return of the day when the Church met and triumphed over physical as well as moral ills.

[Edward B. Pollard in *The Standard.*]

That there is much difference in the apprehension of truth from age to age; that truth appears in new forms and combinations; that light once undiscerned breaks new upon the consciousness of men, cannot be doubted except by one who simply closes his mind to all living influences. . . . To fight all change is to put one's self at issue with life. Arrested development, stagnation, mental and spiritual death would surely follow in the wake of this porcupine attitude of bristling antagonism to all which may differ from the accepted views of the past.

[*The Examiner.*]

Ministers who study their Bibles, not to find out how many Isaiahs there were, or who wrote the Gospel of John, but to bring forth things new and old for the edification of the saints and the conversion of sinners, will have no difficulty in believing it to be the Word of God, for they will discover the divine quality of it by the effect it produces upon the hearts and lives of men—their own included.

[*The Universalist Leader.*]

The more one seeks to do specific things for the improvement of the world near-by and the world at large, the greater is his increase in moral power and Christian stature.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All correspondence and orders relative to membership and church tenets should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PUBLISHING HOUSE BUILDING FUND.—Contributions to the Publishing House Building Fund should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

Quarterly covers in black seal leather for sale at the following prices:—

Regular size, 5¼ x 7¾, $1.25 each or $12.50 per dozen.
Pocket size, 4½ x 6½, $1.15 each or $11.00 per dozen.

Leather cases for the pocket editions of the Bible and Science and Health are now made slightly wider in order to provide space also for the trimmed *Quarterly* with or without cover. Price, $1.25 each.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

Terms of Sale, Postpaid to any Address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, Mexico, and Cuba, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. This pamphlet is also printed in German. 29 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.00; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.00; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents per copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The convention of the Lakes-to-the-Gulf Deep Water Way Association has just been held at Chicago. Among the papers read were, "The Future of Rail and River Transportation" by Theodore P. Shonts, formerly chief engineer of the Panama Commission; "What Europe is Doing with Waterways" by John Ockerson of the Mississippi River Commission; "Conservation of our Resources" by Gifford Pinchot of the Forestry Service. The Trans-Mississippi Commercial Congress was in session at San Francisco at about the same time and also considered relative problems.

The new term of the United States Supreme Court began last week. On the docket are many matters of interest. Among these is the appeal from the decision of the Circuit Court concerning the "commodities clause" of the Interstate law as affecting the relation of the Pennsylvania railroads to the control of anthracite properties; also the decision of the Texas courts ousting from the State the Waters-Pierce Company, identified with Standard Oil interests. Another case is that to test the validity of the Bank Guaranty law of Oklahoma as applied to national banks.

Comptroller of the Currency Murray has decided to increase the number of national bank examinations in many cases from twice to three or four times a year. The new rule will be made to apply especially to all national banks which have in the past shown a disposition to violate or evade any of the provisions of the national banking laws or the regulations prescribed by the comptroller of the currency. He will also put into immediate action a plan for the formation of eleven districts of national examiners.

The National Paint, Oil, and Varnish Association, recently in session in Boston, plans through a joint legislative committee, representing also the Eastern Paint Manufacturers' Association, the Dry Color Makers' Association, the Varnish Manufacturers' Association, and the Middle Atlantic Paint Manufacturers' Association, to safeguard its interests in all laws laid before the national and state Legislatures. Revision of the tariff was favored by the meeting.

The building code revision commission of New York city has recommended a restriction to three hundred and fifty feet as the maximum height for future buildings in that city. This limit is to be permissible only for structures facing on parks and plazas. On ordinary streets the limit is to be three hundred feet, and on streets only forty-five feet in width the height cannot exceed one hundred and thirty-five feet.

The gas and electric light commissioners of Massachusetts on a gas case at Chicopee condemned the common system of differentials based upon the amount of gas or electricity consumed by the customer. By this decision the small consumer is entitled to his service at as low a rate as that given the larger user, other conditions being equal. The principle of wholesale rates in regulated public service is not favored.

A new record in wireless telegraphy is claimed by the United Wireless Company, which from its San Francisco station on Russian Hill last week established communication with the Kuhuku station on the island of Oahu, one of the Hawaiian group. It is said that communication during the two and a half hours was uninterrupted. The distance to Honolulu is twenty-two hundred miles.

A brief has been filed with the Interstate Commerce Commission sustaining the claim of Philadelphia interests that the "cartage" and "literage" allowances made by the railroads to the Sugar Trust on shipments of sugar from New York are rebates, and therefore are in violation of law.

The arbitration treaty between China and the United States has just been signed at the state department, Washington, Wu Ting Fang, the Chinese minister, acting on behalf of the Chinese government, and Secretary Root on behalf of the American government.

The meat inspection laws were heartily supported in the report of the executive committee of the American Meat Packers' Association at its third annual convention at Chicago last week.

The temperance movement which has been sweeping over the country has caused the hop industry to wane. Land formerly used for hops, is now profitably devoted to growing berries.

The Presbyterian Hospital of New York city has received a gift of one million dollars from a local banker. The money is to be used in construction of buildings.

The Pacific fleet, towing as an experiment torpedo boat destroyers, commanded by Rear Admiral Swinburne, arrived at Honolulu last week on its return from Samoa.

The University of Illinois, Urbana, has eleven Chinese students in attendance, nine of whom are sent by the government at Pekin.

The Agricultural Bank, Manila, founded by the government with a capital of one million pesos, has begun operations.

International.

At a conference at West Hartlepool, England, between capital and labor, Sir Christopher Furness, head of the shipbuilding firm of Furness, Withy & Co. and also of the Furness line of steamers, invited the representatives of all the trades unions connected with the industry to meet him to hear certain proposals which were in substance that strikes must cease or the works would be closed; that if the trades unions thought they could carry on the business themselves, the firm was willing to sell out at a price to be fixed by assessors; if the unions would not buy, the firm was willing to admit its workmen as partners on a profit-sharing basis; that a council be formed to settle all disputes or refer them to accredited arbitrators.

A loan of $25,000,000 for the redemption of the bonds of the Pekin-Hankow Railroad has been provisionally decided upon by the Chinese Imperial government. The Throne has issued two edicts regarding this loan, and has authorized a domestic loan of $10,000,000.

The International Road Congress opened its first official session in Paris last week. The delegates represented twenty-four countries, including the United States, Brazil, Mexico, Chili, India, and Japan. France took the initiative in summoning the congress.

The two greatest English railway systems, the Northwestern and the Midland, have entered upon a long-time working agreement by which it is expected that economies in operating expenses amounting to $1,000,000 a year each will be effected.

The faculty of St. Petersburg University has disregarded the ministerial order to reopen the institution and is preparing to contest the legality of the repressive measures of the Minister of Education in the courts.

The autumn session of the French Parliament has just opened. The government hopes to expedite routine work, especially the budget, and devote considerable time to consideration of the proposed income tax.

Great Britain, France, and Russia, in dealing with the late actions in the Near East, propose that Turkey recognize the facts as accomplished and accept certain compensations for her territorial loss.

Floods in the Hyderabad district of India have caused an estimated loss of life of fifty thousand people and sixty-six million dollars worth of property.

Industrial and Commercial.

Within the past twenty years the changes in methods of rice culture have transferred the center of that culture from the Atlantic seaboard of the South to Louisiana and Texas. In the past eight years the acreage in Texas devoted to rice has increased from forty thousand to two hundred and forty-five thousand, and this conversion of the raw prairies into rice-fields by means of irrigation represents a total investment of $24,185,880. More than six hundred and twenty-five thousand acres in nine Southern States yield annually between $16,000,000 and $17,000,000 in rice.

An electrical fireless cooker now on the market is provided with steatite radiators that are electrically heated, and the food is then slowly cooked by the stored heat. In this connection electricity can compete with gas, coal, or oil, because practically all the heat generated by the current is absorbed by the radiator.

Efforts in New York for the relief of the unemployed are now tending in the direction of providing farm colonies to which vagrants can be committed. A bill will be introduced at the opening of the New York Legislature authorizing the acquirement of a tract of two thousand acres for such a purpose.

Contracts have been let by the Crescent Portland Cement Company of Pittsburg, for the completion and equipment of its new million dollar plant at Wampum, Pa. The plant will employ about three hundred and seventy-five men and will have a capacity of nine hundred thousand barrels a year.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

NEWSPAPER POSSIBILITIES.

REV. WILLIAM P. MC KENZIE.

THE tendency of the Grecians to be always on the *qui vive* for some new thing was not unique. A desire for news seems to be a human characteristic. The barber shop used to be the clearing-house for town gossip. Then some one thought of sending the gist of the talk in a news letter to out-of-town friends, and thus began the newspaper, occupied at first with clever essays and sage admonishments as well as items of news. To-day advice is given in a temperate way by editorials, and the news is presented so as to produce shock and astonishment as much as possible. Consequently "the evil that men do" is exploited so as to arouse sentiment and sensation, and the false position is assumed, that in human affairs terror and pain, horror and discord predominate.

The day will come when men and women will occupy their minds with their own duties, and will so perfect their occupations that in the business world there will be a fine fellowship of competent workers. At present it seems irksome to the average man to "mind his own business," and he has a curiosity, sometimes insatiable, in regard to his neighbor's affairs. Minstrel and troubadour used to travel from place to place, bringing to castle and palace and roadside inn tales of the doings of men, and in newer countries the traveling pedler and the peripatetic tailor used to carry interesting gossip. The circuit-riding pastors who carried their libraries in their saddle-bags, were welcomed, doubtless, as messengers of heaven, but the welcome was tinged by pleasure in the thought that they had news to bring about human beings on earth.

We who customarily greet a friend with the query "What's the news?" may as well admit this deep-lying interest in the happenings of the time and in the actions of men, and concede that it may legitimately be ministered to, but we have no right to assume that this interest is a morbid curiosity to be satisfied only with gruesome records of human agony and pitiless exposures of human mistakes, or cruel denunciations of human faults and errors. There is an interest which has nobility in it. There is a desire to know of worthy activities. The troubadours sang often of heroic accomplishments; seldom of court scandals. They set on fire the minds of youth who aspired to knightly endeavors. May not people of the present day be inspired to practical goodness even as ardent minds in times of old were inspired by the heroes of romance to devote their lives to high ends? Men say "romance is dead," but never was there so much opportunity for that fine flavor of interest in the deeds of men which we name romance, as in the present time, when the toil of a month will accomplish what once the labor of years could not do.

Why should the story of a tragic murder in a public park fill newspaper space and touch ten thousand lives with fear and horror, when the history of the building of that park would find but scant attention. Are men not interested in what is normal and beneficial? As a matter of fact they are, only this interest has not been appealed to nor trusted sufficiently; but the time has come when men's minds do not respond to the stimulus of the sensational as once they seemed to do. The human mind requires food, and the food should be wholesome. To feed the body on piquant sauces and relishes and sweetmeats alone would result in physical inefficiency. The craving would come for plain and common food. So does the overstimulated mind revolt from sensationalism, and desire the rest given by consideration of normal conditions. If we mistake not, the revolt has already begun. People are honestly tired of incessant appeals to their emotions of fear, horror, amazement. They would like wholesome stimulus to be daily given them by the newspaper of their choice.

There is an uplifting influence which comes from every presentation of the ideal. When some man has made the ideal practical, the news thereof may well be made known universally, for in emulation there is a fine pleasure; also the story of successful goodness enables ten thousand strugglers to "pluck up their courage." It makes them work with hope. There seems to be therefore a great field for a paper devoted to exploitation of positive goodness, usefulness, and success, one which will not consider the abnormal to be news, but which will minister to man's legitimate interest in "the good that men do."

CLAIMING OUR OWN.

CLARENCE W. CHADWICK.

IT is no small matter to claim one's own. The beginner in Christian Science has begun to do so, but he has to learn through "precept upon precept; line upon line, line upon line; here a little, and there a little." He needs frequent reminders in order to "lay hold on eternal life," for the constant tendency of human nature is to claim anything but that which is spiritual, pure, and perfect. Although he has been told what man's birthright is, he is too prone to forget about it. And what happens when he thus forgets? It is then that he lays claim to a multitude of things which are no part of man's inheritance as a child of God, and after hours of careless thought he wonders why he progresses so slowly,—why he does not understand Christian Science; why he is not healed. After many admissions on the wrong side and only one or two on the right, he wonders why the way seems strait and narrow.

Even the more advanced student may occasionally be caught napping. To claim that which is really ours, is a metaphysical problem. A knowledge of physics, of *materia medica*, of hygiene, a knowledge of matter and its assumed laws, can render us no aid in solving it. It must be approached from a different standpoint, one which the so-called physical senses cannot grasp nor disprove. Thousands of sincere Christians have tried to believe that they

Copyright, 1908, by Mary Baker G. Eddy.

Digitized by Google

are in reality God's children, without understanding the unreal nature of the mortal or "old man." They have been taught to believe the Bible, and in their ignorance of the truth they have read the account of spiritual creation in the first chapter of Genesis, and the material record of the Adam-dream in the second chapter, and have tried to imagine that these two contradictory accounts were intended to blend. Because they have tried to make them do so, man's true birthright was lost sight of, and mind and matter, good and evil, seemed to commingle. Disease took the place of health, and a thousand and one other human beliefs were substituted for spiritual truth. The divine command to reflect divine power, to establish the divine idea in individual consciousness, was misinterpreted, and matter was endowed in belief with intelligence and power to create. All the pain, sorrow, disease, and death in the world have followed in the wake of this unfortunate belief.

In due course of time, when humanity was ready to receive it, Christ Jesus came to awaken human thought from the deep sleep that had overtaken Adam and his progeny, into the understanding of God's perfect spiritual creation. All are familiar with the world's reception of his spiritual teaching. He taught men to claim their own, to put off the old man and to put on the new, to reckon man as spiritual and not material, and so long as they held to this perfect spiritual model in daily thinking and living, the sick were healed, the lepers were cleansed, and even the dead were raised to life. Unfortunately human thought gradually drifted away from the perfection of God and man, and religious teachers began to feed their flocks upon infirm thoughts, and the long night of materialism was the result.

To-day, in Christian Science, we are again called upon to "lay hold on eternal life," by reckoning ourselves "dead indeed unto sin, but alive unto God;" and in proportion as we shoulder the cross of self-sacrifice, the sick are again healed as in Jesus' time, and the sinful are awakened from the Adam-dream to put on the new man created in righteousness and true holiness. Jesus claimed his own; we must go and do likewise. He reckoned man as spiritual and perfect. He could not have done otherwise after instructing his followers to be perfect even as the Father is perfect. "That they may be made perfect in one" was his constant prayer. He did not call upon men to claim any relationship that was not already existent as a divine reality. He argued for perfection because spiritual perfection is the only foundation of real being. He well knew that man's real being is forever identified with perfection. This understanding was his mental stronghold, and it must be ours. How to reach such a high goal is a question prominently before the human race to-day. Christian Science gives the necessary information, and for the first time mortals learn that they have a mental work confronting them before they can become conscious of the kingdom of heaven here or hereafter. They must begin, as children of one common parent, to claim man's birthright, must begin to deny any relationship to "flesh and blood," which "cannot inherit the kingdom of God." There is no Biblical authority for leaving this work for a so-called hereafter. It confronts humanity to-day, and to-day is the time to undertake it. Christian Scientists have found this out and they have joyfully shouldered the cross of self-sacrifice, willing to leave all for the Christ-ideal of Life with its glorious promises.

When sickness confronts them they know in Christian Science that this is but a false belief of mortals, that it obtains only in the supposition of intelligent matter, and that it is no part of man's real being. What is the way out? To claim their own, that which really belongs to them. When they do this understandingly the sense of pain or sickness disappears as naturally as darkness gives place to the light. When tempted to sin they must and do know that sin is no part of man's divine inheritance, and again they lay claim to their own. The validity of sin is repudiated and good acknowledged to be supreme. What is the result? The temptation vanishes, and Christ, Truth, reigns supreme. Erroneous arguments may try to obtain upon different occasions, but wide-awake Christian Scientists will ever find refuge in the spiritual at-one-ment between God and man. They will claim what God has bestowed upon man and not what the so-called material senses would try to fasten upon them. Only in this way can the mesmeric influence of wrong thought be proven powerless, and mankind eventually freed from "the bondage of corruption." Truly says our Leader in Science and Health (p. 167), "Our proportionate admission of the claims of good or of evil determines the harmony of our existence,—our health, our longevity, and our Christianity."

Every professing Christian should ask himself how much of his own he is claiming. If he has not discerned man's birthright he should investigate Christian Science, and ascertain why Christian Scientists are healthier, happier, and wiser than they were before Christian Science entered into their lives; then he, too, will joyfully claim his own in the light of a higher understanding of God, and be at peace.

FAIR INTERPRETATION.

W. A. BOSWELL.

GRATITUDE for the fresh light that is thrown on the Bible by Science and Health, is often expressed in our churches; and the following account may help to show the wider and more reasonable way in which people learn to read the Bible after becoming interested in Christian Science.

A relative of mine who had been brought up in a very strict Calvinistic family, where the sinfulness of all amusements and the terrors of eternal damnation were constantly emphasized, had often discussed with me the question of a future life. The possibilities for further growth, increased activity, and a larger hope, heard of in later life, were, however, generally overshadowed by the early teaching, together with a haunting dread that, instead of heaven with its possibilities of increased good, hell with all its appalling accompaniments might be her ultimate destination. One text particularly filled her with apprehension, and she had often mentioned it, saying how terrible it was to think that our Lord might say to her, "I never knew you: depart from me, ye that work iniquity;" for if he said this to some who had "done many wonderful works" in his name, how could those who had never done any wonderful works feel sure that they would not be dealt with in the same way, even though they might have been doing what they thought was right.

Shortly after I had become interested in Christian Science, this lady again spoke to me on the subject; but this time, instead of accepting her interpretation of the passage as correct, I looked up the original and found, much to my surprise, that the whole lesson was on the importance, the absolute necessity, of doing the works of Christ instead of talking about them. Beginning with the statement, "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven," down to that which says that he who does the works is likened to a man who built his house on the rock, and the man who does not do the works is compared to some one who built on sand, this teaching is made clear; and as one reads it carefully it becomes evident that those were condemned

Digitized by Google

who merely made professions,—who said they had done all these things, but who in fact had never done them.

I suggested this interpretation to my friend, who acknowledged that it was reasonable, but somewhat anxiously inquired what authority I had for it, evidently wishing to be assured that it had come from an orthodox source. When I confessed that I could not quote any authority, she was a little apprehensive, but finally the reasonableness or inherent truth of the explanation satisfied her, and the text never troubled her again; that particular difficulty, and to her it had been a very real one, was in fact "healed."

This lady had lived practically all her life among earnest church people, some of them "men of light and learning," and she had no doubt discussed this problem with them, but it had never previously been cleared up; a fair inference being that her clerical friends read the text in the same way that she did. That her interpretation is still current among ecclesiastical dignitaries in England is evident, because a short time ago a lady, very young in Christian Science and very ardent, was (most unwisely) arguing with an archdeacon, but was, as she said, "dumbfounded" when he quoted this text to establish his contention that the moral and physical healing effected through Christian Science was no proof of the truth of its teaching, and that those who turned to it would no doubt find themselves included among the "workers of iniquity." This ecclesiastic's use of the text seems a fair instance of the way in which isolated passages are made use of to try to establish some doctrinal point, without considering the context and apparently without the slightest attempt to grasp the essential part, the moral or spiritual meaning which we are taught in Christian Science to look for so earnestly.

This essential spiritual meaning is what the "Key to the Scriptures" has unlocked, and it has thus restored "the glorious gospel of Christ," the "good news" of the coming to the human consciousness of the right idea of God, —of Life, Truth, and Love, and of man as His image or reflection.

"THE DISFIGURED PICTURE."

KATHERINE WHITE.

THE account of the creation of man given in the first chapter of Genesis, ending with the statement that "God saw every thing that he had made, and, behold, it was very good," and Paul's exclamation, "O wretched man that I am! who shall deliver me from the body of this death?" present so much of incongruity that they seem to point to some great change having taken place somewhere. One is led to ask, "How can such a change have come about? has God altered His method of creation?" The Bible reveals to us a God "with whom is no variableness, neither shadow of turning." We cannot therefore believe that the change is in Him; that in the first instance He created man in His own image and likeness, and now creates men mortal sinners, subject to sickness and death; that in the first instance He gave man dominion over all things, but has since taken from him that dominion, leaving him so unprotected that he is subject to every evil chance, his very life (may be) at the mercy of a pin prick. But if God has not changed, what has? Is it man who has so changed that he has lost the likeness to his Maker with which he was originally endowed?

Some years ago I had an experience which made a deep impression on me at the time, and it has been of value to me since coming into Christian Science in helping to clear up this question. I was visiting in the house of a relative who had but recently added to his already large collection of beautiful pictures three of especial interest and value as being the works of so-called "old masters." After his acquisition of these pictures the authenticity of one of them was questioned, and in order to satisfy himself as to whether or not the picture was really a genuine example of the great artist's work, an expert was called in to pronounce judgment upon it. This gentleman had made such a close and exhaustive study of the works of these old painters that he was capable of discriminating between the true and the false and of detecting spurious imitations with unerring skill, his judgment in such matters being considered final. It was my privilege to be present when he inspected the picture, and as I recall the incident the whole scene comes vividly before me,—the studio, with the usual artistic properties and implements about, an empty frame or two, a few unfinished sketches, and untouched canvases of various sizes and shapes leaning against the walls. On an easel alone in the middle of the floor, with the light from the large north window falling upon it, stood the picture under consideration, while its owner and one or two friends and members of the family, a little apart, anxiously watching the keen and eager face of the expert, silently awaited the verdict.

After some minutes' close examination he looked up with a smile and said, "It is all right—the picture is all right—you have here a really fine specimen of the work of Sir Joshua Reynolds!" "But this bit of coloring," began my host, stepping forward and pointing. "Oh, Sir Joshua never painted that," interrupted the expert. "And this dark shadow in the background?" "Was added later," came the immediate answer. And then, after discussing the various points in the picture which had been called in question, he told us how it frequently happened that a great work of art fell into the hands of one who was not educated to appreciate its beauty, and who thought it would be more pleasing to the eye with a little added color here and there, and who gave it to some one equally ignorant of its real value, to deal with as directed.

A later owner might think, perhaps, that the picture would show up better with a darker background; another might put it away in a dusty attic, and it would be many years before it was again brought to light, and then a coat of varnish was added which fastened all the dust and dirt upon it, blurring the fine outlines and obscuring the delicacy of its coloring,—after having passed through such treatment as this, it required the eye and the understanding of an expert to discriminate between that which was true and false in the picture, between the work of the master hand and the touches which had been added by ignorance and lack of taste. His hand passing tenderly and caressingly over the surface of the canvas before him, the great connoisseur ended by saying, "Let me have the picture for a little while; let me clean it, and erase from it all that does not rightfully belong to it, and there will no longer be any doubt as to who painted it. The picture is all right, but in its present condition you cannot see it as it really is."

Does not this little story teach its own lesson? and does not its teaching coincide with that of the Preacher in the book of Ecclesiastes, where he says, "Lo, this only have I found, that God hath made man upright; but they have sought out many inventions"? Have we not indeed reason to be grateful that there exists one whose thought is so closely in touch with the one master Mind,—the cause and creator of all,—that in spite of the accumulated rubbish of false beliefs which have fastened themselves upon humanity through generations of wrong thinking, she has been able to trace the work of the supreme Artist? In spite of the false lights and shadows, the darkened background, the dust and dirt and the superficial varnish, she has seen through "the face of the covering cast over all people, and the vail that is spread over all nations," has rediscovered "the radiant reality of God's creation" (Sci-

Digitized by Google

ence and Health, p. 110), and been able with authority to proclaim, in the scientific statement of being which she has given to the world, that "Spirit is the real and eternal; matter is the unreal and temporal. Spirit is God, and man is His image and likeness. Therefore man is not material; he is spiritual" (*Ibid.*, p. 468).

THE DIVINE BENEDICTION.

ELSIE H. DE FESTETICS.

WE frequently hear remarks about the sweet expression on the faces of Christian Scientists,—the beauty of their smile, their joyous look, etc. A short time ago, a lady just beginning to be interested in Christian Science said to me, "If only my face did not look so sick and worn, I should be so glad! Why cannot I have that beautiful smile which all Christian Scientists have?" I replied, "Do you not know what that smile is? It is the spiritual sense dominating the material; it is God's benediction for victory won over self, over sin, sickness, and sorrow. It is the seal which divine Love sets on those dear faces, and it says, "Well done, thou good and faithful servant: . . . enter thou into the joy of thy lord."

Where rests a sweeter expression than is to be found on the face of our beloved Leader! Surely she has fought "the good fight" victoriously. So few people realize that it is the spiritual manifestation which all Christian Scientists love in Mrs. Eddy; it is her pure reflection of Spirit that we love,—the radiance of Spirit shining through all she says and does. We know that it was because of her fitness that she was enabled to receive this wonderful revelation of Truth and Love and give it to us.

Daily and hourly, from every quarter of the globe, great waves of gratitude and love unspeakable go up to God for the discovery of the healing truth of Christian Science, for since the days when Jesus walked the earth, there has not been known such healing, such redemption from sin, such understanding and practice of the Golden Rule. The great body of Christian Scientists are united in their desire to bring daily not alone into their own lives, but into the lives of all with whom they come in contact, that "peace of God, which passeth all understanding." Without this grand revelation of the truth of the Bible, which for hundreds of years has been an unknown tongue so far as its practical demonstration is concerned, very many of us would yet be in bondage to error of every sort. We therefore thank God for the patience, sweetness, and love that day by day is working and watching for our more perfect understanding of God.

[Written for the *Sentinel.*]

COMMUNION.

AGNES FLORIDA CHALMERS.

TO-DAY my famished heart looks up to thee,
Master and Lord, on Galilean coast,
And, looking on past waves of sin, I see
Revealed the living Christ earth's fears had lost.
To-day my weary heart so longs to live
Apart from self, and learn to love and do;
To cast my net aright, and freely give
All on the side of good; to hear anew,
Across the sea of life, Truth's loving call:
Child, hast thou labored all the weary night
And still hast found no meat? Thou findest all
Upon the side of Principle and right.

This morn, upon life's shore of Galilee,
Dear Christ, I long to share thy bread with thee,—
To know the truth that sets the captive free.

SELECTED ARTICLES.

[Willard S. Mattox in the *New York American.*]

A careful reader of your symposium on the subject of drugless healing of the sick, which appeared in a recent issue, must have noticed that nearly all of the contributors, every one of whom was a clergyman, took occasion to make some disparaging comment on Christian Science. To notice this is not to offer an argument in reply to the strictures put upon Christian Science. I merely call attention to this fact because it seems to me worthy of note that the advocates of the new religio-medical cult are divided in their zeal between a constructive expectation that they can heal the sick by means of hypnotic suggestion and a destructive desire to overthrow all that Christian Science is doing for the alleviation of suffering humanity. Whether a satisfactory building can be reared upon such a foundation remains to be seen.

Our critic is good enough to explain that what he calls "Christian psychology" differs in three ways from Christian Science. He first admits that there are diseases which his system cannot cure, but which must be left to the surgeon and physician. It is difficult to understand how he can make this admission at the outset of his career of healing and yet expect to be taken seriously when he claims that his method is the application of Christ to the mind and body of man, or that he is preaching a whole salvation. Christ, as conceived by this critic, has less potency in the healing of disease than has the surgeon and physician, who take precedence according to the bishop's estimate. Christian Science claims to be a reinstitution of apostolic healing, and there is no record that either Jesus or his disciples admitted that there were classes of diseases which they could not heal through the power of God alone.

Apparently all of the advocates of the new movement to heal the sick by hypnotic suggestion do not agree on this question. In this same symposium another writer says, "Jesus didn't stop to ask for a physician's certificate. He wasn't concerned whether a disease was organic or a matter of nerves. He healed them all. He did more. He raised the dead." Now Jesus himself said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." All of the comfort and hope and confident expectation are drained out of this prophecy by the timid conservation which admits that those who believe on him can only expect his name to be efficacious in the healing of minor diseases.

Our critic's second reason why his doctrine differs from Christian Science is that "there is no commercialism" to his movement. There is certainly no commercialism to the Christian Science movement *per se*. It is quite true that Christian Science practitioners who have given up in many instances lucrative businesses, charge a nominal fee for their services to the sick; it is true that the official literature of the Christian Science movement is published in a businesslike and orderly manner by a well-conducted publishing society; it is also true that the officers of the churches are sometimes paid nominal salaries, although they frequently serve without remuneration; but do any of these circumstances differ from those that prevail in our critic's church, for example? If there are expenses connected with the clinics which he holds in his church, may I ask who defrays those expenses? Does he personally maintain this clinic, or is he provided with funds by his church? If so, is not some one paying for the work? In Christian Science the individual benefited is supposed to be grateful, and he is logically the one to contribute toward the maintenance of the work.

Digitized by Google

There is much to be said on this subject. Clerical flings at Christian Science because fees are charged are by no means uncommon. There is nothing to indicate that Jesus did not sustain himself and his disciples by the generosity of those to whom he ministered. Were Jesus and his disciples in possession of a private income? If not, how did they subsist during his three years of travel and ministry? The record says that Judas "carried the bag," and mention is made of certain women who ministered to the needs of the disciples. If Jesus and his followers did not actually charge a stipulated fee, they certainly were rewarded in some substantial manner. If the bishop finds nothing to criticize in the fact that clergymen receive salaries for preaching the Word of God, what criticism can he offer of the fact that Christian Scientists, who also preach the Word of God and heal by means of their preaching, receive compensation? He also says that "Christian psychology applies to all persons, whether they are Christians or not." In this respect it does not differ from Christian Science. Both Jew and Gentile, agnostic, atheist, and dogmatic theologian may study Christian Science, become imbued with its teachings, and demonstrate its Principle.

Another contributor to the symposium complains that there is no prospect of cooperation in good works between the orthodox Church and Christian Science while the latter "remains tied to Mrs. Eddy's book." If there is lack of cooperation between the Christian Science Church and other Christian churches it is not because Mrs. Eddy's book stands in the way. It is because the theory and methods are so radically different as to make it impossible to unite on a common basis of practice. Christian Science is not "tied" to Science and Health. Christian Science is indissolubly connected with the Word of God. Before Abraham was, the truth expressed in Christian Science was available to heal and to save. The prophets dimly comprehended this ever-present power and were natural healers. In the fulness of time Jesus embodied in his life the complete saving Principle, and he said, after three years of teaching, "I have yet many things to say unto you, but ye cannot bear them now." He promised the Comforter, which should abide forever. Christian Scientists believe that Christian Science is the veritable Comforter promised by Jesus, and its history amply confirms this belief. It would be impossible to separate Science and Health from Christian Science, because while Christian Science as a spiritual presence has always existed, it has been made concrete in the lives of men by Mrs. Eddy's discovery, which she has presented in her book, "Science and Health with Key to the Scriptures." Consequently the text-book and Christian Science cannot be considered apart.

Christian Scientists do not "anathematize" drugs and they do not "grudgingly" accept food as a means of sustaining material existence. Neither do they "deny the value of sacraments as means of spiritual approach to God." They merely insist, as Jesus did, that "the hour cometh, and now is, when the true worshipers shall worship the Father in spirit and in truth," and the observance of material rites is no part of this spiritual worship.

In another contribution to *The American* symposium, the statement is made that the movement the writer advocates "does not ask people to deny the plain facts of every-day life." Jesus' whole career was a denial of the "plain facts of every-day life." He overthrew every material belief about existence. He exposed the nature of various so-called laws. When he walked on the water, when he fed five thousand with five loaves and two fishes, when he healed incurable diseases by the spoken word, when he raised the dead, including himself, when, after his resurrection, he appeared to the disciples in an upper chamber, although the doors were locked and there was apparently no means of entrance except through solid masonry,—when he performed all these deeds he denied "the plain facts of every-day life." Christian Science teaches that Jesus' life was a pattern, that his purpose was to point the way to a perfect spiritual existence, and that in order to do this he proved the futility of reliance upon any form of material existence.

[J. V. Dittemore in the *New York Journal.*]

Christian Science denies the existence of sin and disease in the sense of their being any part of God's "very good" creation. The life and practice of Jesus Christ indicated very plainly that he recognized physical disease as wholly abnormal and illegitimate, and as the result of sin, including ignorance and false beliefs. Through the metaphysical process he described as knowing "the truth," he promised that mortals were to be made "free" from the penalties of these deceptions. He said of one sufferer that Satan had bound her; not that God had caused her disease, or that it was so great a reality that even the creator could feel it, but that it was the result of that which he so clearly defined as "a liar," a deception. It is through the understanding of the omnipotence of God and His ever-present availability, as taught in Christian Science, that the impotence of sin and disease becomes apparent. This does not mean that the existence of these evils as a part of erring human experience is not recognized, or that they are ignored; but it does mean that their pretense is unmasked and their claims grappled with and overcome through a realization of the truth of being. . . .

Christian Scientists believe that the dominating note of true Christianity is the supremacy of spiritual power, and that the import of the teachings of the Old Testament, as well as the mission of the Saviour, was to prove that mortals must gain dominion over the flesh, which "profiteth nothing," through the Spirit, which "giveth life." The signs of the times indicate unmistakably that the world is tiring of materiality, with its forms, symbols, and "the contentions of creeds," and that it is rapidly approaching the time when, as prophesied in a recent issue of the *Westminster Review*, it "will recognize no God who leaves His own creatures to wriggle and writhe through unmerited pain and sorrow to a doubtful heaven or undeserved hell;" when "it will not exalt and preserve suffering and poverty on the unwarranted assumption that such misery forms the safest passport to paradise," and when it will refuse to accept "the theological anesthetics administered to lull men to present slumber by persuading them of the eventual righting of all human ills."

Christian Science declares its Principle, its rules of practice and its promise, and then willingly awaits the hour when humanity will perceive, and in some measure approve, the inestimable value of its mission.

[E. H. Carman in *The Ledger*, Columbus, Ga.]

Christian Science is founded upon divine Principle—this Principle is God—God understood. The student of mathematics does not question either the principle or the rule in mathematics, but he does not claim to understand all of the principle or know all the rules; in the degree of his persistent effort he becomes proficient. So it is in the practice of Christian Science: the practitioner who adheres to the divine Principle, who studies and practises its rules, is rewarded for his persistent work. Jesus illustrated the difference between "faith-cure" and scientific understanding when his disciples failed to heal the epileptic boy. When they asked him why they had failed, he said, "This kind goeth not out but by prayer and fasting."

Mrs. Eddy has discovered this great demonstrable Principle, and she has so thoroughly proved it that she has courageously given its statement to the world, where it will remain a divine heritage so long as its rules are adhered

Digitized by Google

to strictly, as Jesus adhered to them and thus demonstrated his divine Principle. Christian Science looks beyond the physical effect of error and sin and uncovers its hidden and subtle mental cause, and denies the power of evil or Satan to hold God's children in bondage to fear and disease. With the Master, it says, "Loose him, and let him go," knowing that the claims of disease, fear, and sin are illegitimate and no part of God's law or plan. Many are healed through this understanding, after *materia medica*, mental suggestion, and "faith-cure" have failed. Christian Scientists accept compensation for their efforts to heal the sick, because Jesus said, "The laborer is worthy of his hire." Ministers and physicians have to live by their labors and ministrations, and so do Christian Scientists.

When the world awakes to the real value of this great discovery by Mrs. Eddy there will be no longer any contention as to who discovered it. Those who are willing to follow its divine behests find that the kingdom of God has come on earth, and that infinite, divine Love, through Christ, Truth, is here, taking away the sins of the world, healing its aches, its sorrows, its poverty, its blindness, as Christ Jesus did.

[Alfred Farlow in the *Boston American*.]

Christian Science is based upon the Scriptural teaching of God and the Scriptural affirmation concerning His creation. The Bible teaches that "God is Love," "God is good," "God is Spirit," "Spirit is Truth," and that God's creation is "after His kind," that it is "very good." Christian Science honors God and His Word, the Holy Bible, by adhering consistently to these fundamental propositions. Since God made all that was made, "and, behold, it was very good," and since sin, sickness, and death are no part of the very good things which God created, although they have an apparent existence in erring mortal experience, and, consequently, must be grappled with and overcome, there is no other logical conclusion than this, that they are not real.

In Christian Science the term "reality" is not attached to the temporal, but only to that which is spiritual and eternal, and this accords with the Scriptural teaching. St. Paul declared, "But God hath chosen the foolish things of the world to confound the wise; and God hath chosen the weak things of the world to confound the things which are mighty; and base things of the world, and things which are despised, hath God chosen, yea, and things which are not, to bring to nought things that are: that no flesh should glory in his presence." Here the apostle agrees with the Master's declaration: "It is the Spirit that quickeneth; the flesh [matter] profiteth nothing." In the text St. Paul refers to the spiritual facts, unseen to material sense, and, therefore, not in existence so far as sense testimony is concerned, which, being discovered, bring to nought (nothing) the things that are according to the evidence of the material senses. Thus the Scriptures plainly and clearly corroborate the teaching of Christian Science that when the spiritual fact of being is ascertained the material sense thereof is discovered to be an illusion. This does not mean that creation is an illusion—that man is an illusion—but that what he is represented to be by material sense is false, while the man himself exists as the creature of God. Every statement contained in the Christian Science text-book is consistently deduced from the Scriptural premises which we have already presented. . . .

Our critic declares "Christianity says that pain is so great a reality that even the creator could feel it," and that God thought of death "with awe." Let us consider what Jesus the Christ, God's representative on earth, said on this subject, while we bear in mind that according to his recorded declarations he acted the will of the Father. When it was reported to him that the damsel was dead, he did not treat the matter with "awe," but brushed it lightly aside, saying, "The damsel is not dead, but sleepeth," and he proved his declaration by awakening the damsel out of sleep through his reliance upon divine Life. He did not say of the woman, "She is suffering from rheumatism," he spoke of her "whom Satan hath bound, lo these eighteen years." He defined Satan as a liar, and referred to Satan's own—his offspring—as a lie. Thus we have shown by logical reasoning that Jesus regarded disease as a falsity—the result of deception; in other words, that it existed in consequence of misguided belief.

The Scriptures teach, "Her [wisdom, and her understanding] ways are ways of pleasantness, and all her paths are peace." Science accords with this teaching, and affirms that as mortals grow in the understanding of Truth and put that understanding into practice, they will grow above sin and suffering. It should be noted that the Master not only overcame death for others, but for himself.

[Frederick Dixon in the *Alexandria* (Egypt) *Egyptian Gazette*.]

That argument by proof-texts is futile, is not my opinion alone and that of the *Church Times;* it is the opinion of the thinking world. Your correspondent's own letter, indeed, is a liberal illustration of the truth of it, as one instance is sufficient to prove. Job, he says, "knew that without shedding of blood there could be no remission of sins," and he goes on to explain that therefore "Job rose up early in the morning and offered burnt offerings." But then Isaiah writes, "To what purpose is the multitude of your sacrifices unto me? saith the Lord: I am full of the burnt offerings of rams, and the fat of fed beasts; and I delight not in the blood of bullocks, or of lambs or of he goats." The simple fact, of course, is that not only can every Christian sect make good its particular dogmas, to its own satisfaction, by such a method, but every opponent of Christianity is in a like case. Not long ago one of the principal organs of free thought in Europe claimed to demonstrate the utter unreliability of the Bible by just this method.

It is quite true, as your correspondent argues, that Jesus quoted the Scriptures, and did not hesitate to rebuke sin in the most unequivocal way, as true as that the Christian churches have found it considerably easier to emulate him in this respect than in his works of mercy and healing; but if, on the strength of this, everybody were to adopt the controversial method of cheerfully accusing any one from whose views they might happen to dissent, of hypocrisy and theft, we should soon be even farther than we are now from realizing that "now abideth faith, hope, charity, these three; but the greatest of these is charity." When a man is Christian enough to heal as Christ Jesus healed, he may perchance be wise enough to condemn as he condemned. Until then he had, perhaps, best remember that if Jesus said, "Get thee behind me, Satan," he likewise said, "Judge not, that ye be not judged." . . .

All great religious leaders have left their impress on human thought. Wyclif in Lollardy; Colet and Latimer in Protestantism; Knox in Presbyterianism; whilst Calvin gave his name to Calvinism, and Luther his to the Lutherans. In a way somewhat similar, in our own time, Mrs. Eddy has founded the Christian Science movement, and in founding it she has given her followers a text-book, "Science and Health with Key to the Scriptures," the spirit of which may be judged from the words which conclude its noble preface: "In the spirit of Christ's charity,—as one who 'hopeth all things, endureth all things,' and is joyful to bear consolation to the sorrowing and healing to the sick,—she commits these pages to honest seekers for Truth." . . .

The fact is that the world is beginning to see that it is much easier from the summit of the meanest critical

Digitized by Google

mole-hill to condemn Christian Scientists than to come off that mole-hill, and engage in the works they are striving to perform. Your correspondent, for instance, kindly affirms that their religion knows nothing of suffering; but at the very moment when he was writing those words Christian Science workers, all over the world, were sitting by the bedsides of the sick, endeavoring to prove by healing that they, at any rate, believe in the promise of Christ Jesus, "These signs shall follow them that believe; . . . they shall lay hands on the sick, and they shall recover." There is, indeed, one way, and one way only, by which the progress of Christian Science can be fought by those who seriously believe themselves to be in opposition to it, and that way is in deeds not words, for faith without works is dead. It is to give humanity a faith which is nearer to Truth, and which consequently will enable it to perform more effectually the works which Jesus did, and which he made the test of faith when he said, "He that believeth on me, the works that I do shall he do also."

To give humanity such a trust in good, in God that is, it is necessary to keep the promises and teaching of Jesus ever before it, not as "some far-off divine event," but as an ever-present practical reality. This is what Christian Science is doing. It is telling not only the sinful, as men count sin, but those who are suffering from a belief in the power of evil in any of its manifold phases, the sick, the poverty-stricken, the downtrodden, the "wasters," that there is a power which can lift them, here and now, from the hell of sin and the fetters of human misery and passion into the glorious liberty of the children of God. In the light of this, the importance of healing in the Christian Science movement becomes apparent, for in it healing comprises not merely the overcoming of sickness, but the destruction in the human consciousness of all that is unlike God. The Christian Science student, Mrs. Eddy has told us, should heal by teaching and teach by healing (Miscellaneous Writings, p. 358); and just in proportion as he does this will he prove to his patients the absolute powerlessness of evil by filling their consciousness with that abiding sense of the allness of God, of Life, of Truth, of Love, which was what Jesus referred to when he said, "The kingdom of God is within you."

The Founder of the Christian Science movement has had one great hope always before her: that her followers should never cease to strive to let that Mind be in them which was also in Christ Jesus. He who would attempt, however humbly, to acknowledge Christ Jesus as "the way," must accept the first great commandment of the law, and the second, which is like unto it: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself." When this is done, not only will man cease from striving with his neighbor, but he will have found for himself "the peace of God, which passeth all understanding."

[Burt LeRoy Knowles in the *Worcester* (Mass.) *Telegram.*]

If one does not believe in or acknowledge the Christ, of course no science nor anything else can, by such an one, be considered of Christ—that is, Christian. But, on the other hand, if our definitions of science are at all reliable, then that system of religion which is based on a fixed Principle, strict adherence to which will invariably bring about a definite and certain good result, is entitled to be classed as a science. Christian Science is the Science of right, or Christian living, and the mere physical healing which it brings about is not its chief aim, but is, in a sense, a by-product.

Our rabbi critic does not believe that healing is a part of the Church's work. This opinion is perfectly natural for him, but we prefer to take Christ Jesus as authority in this matter. He has made his position perfectly clear, and we believe we shall not go far astray in following his example. Our critic states that "the Church must either specialize in spirituality and ethics, or give to religionists an all-embracing philosophy of life which will include all the four aspects of our human nature, namely: the physical, the mental, the moral, and the spiritual." Christian Science does the latter (which includes the former), only it places the four aspects in exactly reverse order.

[E. J. Simpson in the *Manitou* (Okla.) *Field-Glass.*]

This sentiment, expressed by you in a recent editorial concerning Christian Science, impressed me very much: "Omnipotence does not admit of failure. It is just as easy to cure cancer as chills. One failure destroys the entire system." I presume you meant that if a system had been perfectly applied, and yet had failed, the failure would indicate a defect in the system. I am sure you will grant me the privilege of supplementing your statement by saying that even a perfect system must be perfectly understood, and perfectly applied, in order to produce perfect results. An accurate mathematical rule would not produce perfect results unless it were perfectly applied, and a failure to obtain perfect results would not indicate a failure of the rule; but would rather make plain the fact that the pupil or student has not properly understood and, consequently, has not properly applied the rule.

[W. E. Brown in the *Long Beach* (Cal.) *Press.*]

In a recent issue appears a report of the convention of Christian churches, in which a clergyman is quoted as saying, "There is not one good thing in Christian Science that does not come from Christ. We do not need more Science, but more of Christ." As this statement carries the inference that Christian Science is something apart from Christianity, I wish to explain that Christian Science is not a new religion, for it is based exclusively upon the teachings of Jesus and does not depart from them either in Principle or practice. Christian Science insists that the gospel as taught by Jesus is as efficacious to-day as it was in the first century, and is proving it by healing the sick and reforming the sinful in fulfilment of the Master's promise, "And these signs shall follow them that believe." Therefore Christian Science is a fuller Christianity than the world has heretofore known, and is giving us what the good doctor says we need, "more of Christ." Christian Science has nothing in common with hypnotism, suggestion, or any so-called systems of the human kind. It is a religion—the religion of the Bible, and its Master is Christ.

CORRECTION.

In the article by Capt. D. D. Baynes, which appeared in the *Sentinel* of Sept. 19 (page 48), the words "examine the book solely from the bias upon which it is written," should have read, "from the basis," etc.—EDITOR.

ADMISSION TO MEMBERSHIP.

The next admission of candidates to membership in The Mother Church will be Nov. 6, 1908. Applications should be in the hands of the Clerk of The Mother Church on or before Oct. 21, 1908. Application blanks may be had by addressing William B. Johnson, C.S.D., Clerk, at the church edifice, Falmouth, Norway, and St. Paul Streets.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy upon proper subjects *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

"COURAGE AND RESOURCES."

THE witty paragrapher of the *Boston Herald* has paid his respects to *The Christian Science Monitor* in a characteristic and hearty way which pleases us, notwithstanding the rather gruesome ending of his words of welcome to our newspaper. We quote as follows:—

Good luck to the coming Christian Science newspaper. Starting a daily paper is an enterprise that usually tests the courage and resources of the bravest and most resourceful souls. The graveyards are full of their remains.

Nevertheless we have no doubt that the *Monitor* will be as successful in avoiding the journalistic graveyard as Christian Scientists themselves have been in avoiding the "really truly" graveyards which yawned for so many of them in times past, and the reason for our confidence is our assurance that the same divine Principle which has rescued so many sick and suffering men and women from the grave, may be depended upon to nourish and sustain whatever expresses good and eschews evil. There are thousands upon thousands of Christian Scientists on earth to-day who were condemned to death or lingering invalidism by their physicians, only to be afterward restored to health by Christian Science. Surely the *Monitor* is not overconfident when it counts upon the support of these people, whose great desire to help their fellow-men as they have been helped naturally leads them to the support of every movement that stands for righteousness and truth.

We hope that we shall not be considered boastful when we say that the progress of the Christian Science movement from its very beginning has been not one only, but a series of steps such as "usually test the courage and resources of the bravest and most resourceful souls;" and that as an incentive to high endeavor we could have nothing better than the example of our Leader, Mrs. Eddy, under whose guidance these steps have been taken successfully.

ARCHIBALD MCLELLAN.

IMMORTALITY.

JOB'S mournful question, "If a man die, shall he live again?" has been asked by many mortals, and who shall say that in most cases doubt has not overshadowed the answer. When material sense prevails doubt will always be present, as it was in Job's case; but when the spiritual sense dominates we shall be able to say as he did later, "I know that my redeemer liveth." Christ Jesus gave the whole world a strong assurance when he said, "Because I live, ye shall live also." Every day and hour of his earthly experience was given to proving that Life is not subject to matter, hence not subject to disease or death. On this point we have in Science and Health (p. 349) the unequivocal statement that "neither Life nor man dies;" and on page 581 we are told that the reflection of Truth is "proved to be as immortal as its Principle." Again we read (p. 204), "It is evil that dies; good dies not."

The long centuries of mortal belief and experience all show that the material body is not immortal, while spiritual understanding declares that it must be put off, with all the erroneous beliefs which it represents. That the world's thought is changing greatly of late years is evidenced by a statement of Sir Oliver Lodge, in which he declares that the body does not represent the individual, and "that death merely marks the end of a certain grouping of physical materials." He goes on to say that "consciousness, will, honor, love," etc., are "similarly stamped with immortality." Christian Science goes much farther in declaring that everything which is like God, good, is of necessity immortal.

In "In Memoriam" we find a brief but forceful putting of the human sense of separation caused by death, when the poet says.—

> He [death] put our lives so far apart
> We cannot hear each other speak.

We might say to this, that materiality often puts us very far apart without the experience called death; sometimes without distance or separating walls. Some phase of error may serve to put apart those who are physically near each other, but as Paul said so long ago, "the middle wall of partition" is taken away in Christ, Truth, and then we see eye to eye, and love heart to heart, no matter where we may be. Christian Science annihilates distance, when the Christly help is needed, as it did in Jesus' time; and does not this prove that as "neither life nor death" can "separate us from the love of God," neither can death separate us from those we love? Concerning this our revered Leader says, "In Science, individual good derived from God, the infinite All-in-all, may flow from the departed to mortals" (Science and Health, p. 72); but this is very different from material communications supposed to come from those who ought to be advancing spiritually.

When the Jews asked the great Teacher to enlighten them respecting the future, and presented the case of a woman who had had seven husbands, he referred them to the Scriptures. Now no such case was mentioned in the Scriptures, but Jesus turned their thought to a universal truth which covered the whole question. He reminded them of the divine declaration to Moses, "I am the God of Abraham, and the God of Isaac, and the God of Jacob;" and he added, "For he is not a God of the dead, but of the living: for all live unto him." If we fail to understand anything which relates to our progress, it is because we cling to a narrow, personal sense of things, and fail to study the Bible and its "Key," Science and Health, for the truth which will help us to solve satisfactorily every life problem. In constantly living up to our highest sense of Truth, great illumination comes to us and assurances of man's spiritual identity and immortality meet us on every page of these books, inspiring us to press on to the heights where all the mists of mortal belief will have rolled away, and where we shall

> Find the joy of loving as we never loved before;
> Loving on unchilled, unhindered,
> Loving once, forevermore.

ANNIE M. KNOTT.

THE PLEA FOR JUSTICE.

As one looks out upon earth's millions to-day, he finds nothing in the whole list of wrongs that makes stronger appeal to his sympathy and sense of right than the condition of those who, through no fault of their own, are brought into subjection to ceaseless pain and misery,—the vast army of those who are branded, and perchance at their birth, with that blighting word "incurable," and committed by medical authority to the prison-house of disease and despair,—surely nothing could be more moving than these pictures of an unjust fate.

Digitized by Google

In the presence of such pitiful human conditions on every hand it would seem natural and legitimate to expect that every Christian would instantly and forever deny the lawfulness of these conditions, and be glad for any word of hope and encouragement that may be brought to the unnumbered "children of sorrow." The fact that at this time, as for centuries past, Christian priests and people are consenting without protest to such injustice seems utterly anomalous, and when we compare this attitude of Christian believers with the attitude of Christ Jesus toward the "brother in bonds," we can but be impressed with the thought of how this practical denial of Christ's present power to heal dishonors him before the world and hinders the establishment of his beneficent rule. When professed Christians are offended with those who bring the hope of health to the "incurable," through the apprehension of spiritual truth, then indeed is Christ "crucified afresh."

This committal of the so-called "incurable" to hopelessness by Christian people, precipitates the necessity of adjusting faith in a good God to the unfairness and injustice of conditions that, as men have been taught, are to be associated with His government. On the one hand moral sense cries out against the torture of the innocent for the offense of the guilty as inherently wrong, while on the other religious teaching declares that God is responsible for the laws which bring about this iniquity!

To the Christian Scientist these inequitable conditions bring a deeper sense of the sinfulness of mortal law, and of the cruel unkindness of that condemnation to a hopeless fate which is visited not only upon men and women who are unselfish and aspiring, but upon the unflecked innocence of little children! Now, as never before, humanity is insisting that everybody has a right to a fair chance, that a just God is "just in all his ways," and that under His rule all wrong must disappear. Asserted Christian belief is thus called on to demonstrate the justice of the divine government. Christian Science has awakened this new and higher sense, and more and more are its demands being honored. Furthermore, in healing so-called incurable ills Christian Science is proving that the discrimination made by many between organic and functional disease, and the attendant refusal to believe that Christ "is able also to save them to the uttermost that come unto God by him," is wholly erroneous and unworthy.

The teaching of Christ Jesus was distinguished by the fact that it championed the cause of the needy, so that the "common people heard him gladly," and it may be further said that the restatement and emphasis of this teaching for which our Leader stands is bringing a new and "lively hope" to the oppressed and the afflicted everywhere. Christian Science recognizes no human ill as "incurable," and because it is proving the efficiency of its faith, its words to the many who were once in bondage, but who are now free, are "sweeter than honey and the honeycomb."

JOHN B. WILLIS.

THE CHRISTIAN SCIENCE MONITOR.

The sale price of *The Christian Science Monitor* will be two cents each copy, and the subscription price in the United States, Canada, and Mexico will be five dollars for one year, or three dollars for six months; in all other countries eight dollars and four dollars and fifty cents respectively. Subscriptions may be sent to The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Mass., or through local Reading Rooms.

NOTICE.

The Trustees of The Christian Science Publishing Society express gratitude to the large number of Christian Scientists who have expressed willingness to do service with *The Christian Science Monitor*. It was not known that so large a number of Scientists were now engaged in newspaper work, and so many applications have been received that the invitation to apply is now discontinued.

THE PUBLISHING HOUSE BUILDING FUND.

Contributions to the Publishing House Building Fund should be sent to Stephen A. Chase, Treasurer, P. O. Box 56, Fall River, Mass. These contributions will be thankfully received and promptly acknowledged.

LETTERS TO OUR LEADER.

Richmond, Va., Oct. 4, 1908.

Dear Mrs. Eddy:—Many times I have wished to write and tell you of the great joy that has come into my life through Christian Science. I had never been strong or well, and was steadily growing morbid, and farther from God, but the inspiring truth in your book, "Science and Health with Key to the Scriptures," has taught me to understand and to love God; and through many demonstrations made for me of the healing power of divine Mind, I am to-day a happy, normal person, and steadily growing stronger.

Christian Science has also brought great peace and happiness to my grandmother, who is in her ninetieth year. She loves to hear Science and Health read in connection with the Bible, and says she wishes all the world could hear the Lord's Prayer with its spiritual interpretation as given in this book. Last December she enjoyed so much the article on Christmas which you wrote for the *Ladies' Home Journal*. She said it was a wonderful revelation to her and most uplifting and beautiful. My heart overflows to-day with love and gratitude to you, for all the words of life you have given the world.

Yours gratefully and lovingly,

MOSELLE D. APPERSON.

Pittsburg, Pa., Sept. 12, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dear Mrs. Eddy:—After I had been studying Christian Science for some time I felt a great longing to see the author of Science and Health, as I thought that whoever could write such a book was entitled to the greatest respect and love. In the year 1902 this desire was gratified while I was visiting Concord, as in riding by you bowed to our little party. After you had gone by, this thought came to me: Mrs. Eddy is an inspiration in showing what one woman can do, but her work is not your work. She has accomplished this by close communion with God. Now go home. Do not stand gazing at her personality, but follow her example, purify your own thoughts and walk in the path laid down in the Bible and Science and Health. This is the only way to earn the reward of the "well done, good and faithful servant." Humbly I returned home, and have been striving ever since to be obedient to God's commands by casting out the sick and sinful thoughts in myself and others.

I feel that you would rejoice if you could see how many business men of our city visit the Reading Room and study the weekly Lessons. We hear reports of people being healed during our services, and good work is being done in both of our churches here.

Humbly yours,

MRS. JESSIE P. COBB.

Digitized by Google

Kansas City, Mo., Oct. 6, 1908.

Beloved Leader:—To-day I am so full of gratitude for Christian Science that I feel impelled to attempt a feeble expression of it. From early girlhood I never knew a day free from pain. Eight years ago, when medicine, surgery, and all material methods failed to give relief, Christian Science was recommended to me. I was hopeless and almost helpless, and I felt that if death would end my suffering, then death would be my best friend. I was utterly discouraged, but to please my husband I consented to try Christian Science, as I had given everything else a trial. In a few weeks I began to see an improvement: the pain had left me for the first time in ten years. Then I began to be curious, and wanted to know what was giving me this relief, and I commenced to read Science and Health. At first I could not understand it, but after a time I received instruction from a loyal student of yours, and began to see a little light. Suffice it to say that this light is growing brighter and brighter.

Many times I have been perplexed and disturbed with the thought that others have gained their healing with less effort than I; nevertheless, since so many of my seemingly incurable diseases have disappeared, I have persevered in my study of the Bible and the Christian Science textbook, and I am gaining thereby a spiritual understanding of God which is more precious, far more precious, than all my physical healing, for it is bringing me to know God as Love, as Love that heals, and destroys all discord. I want to thank you for your loving, helpful, impersonal thoughts for mankind, as given to us in Science and Health, for the truth found in this book is destroying the error, discord, and disease of the whole world.

Lovingly and gratefully,

MRS. ANNIE C. MAY.

Boston, Mass., Oct. 5, 1908.

Dear Leader and Friend:—Although I have never had the pleasure of knowing you personally, still I claim you as my best earthly friend; as indeed you are to all mankind, if they will only receive and benefit by what you are so constantly giving out to help and uplift us all. You may never see this letter, but I cannot help writing you these few lines of heartfelt gratitude on this my first visit to The Mother Church, so dear to the heart of every loyal Scientist. I have not words to express the deep sense of joy and gratitude which I felt when I heard the wonderful words of love, wisdom, and comfort read from our two greatest treasures—the Bible, and "Science and Health with Key to the Scriptures"—in yesterday's Lesson-Sermon.

With grateful love,

BLANCHE M. BROTHERTON.

West Tampa, Fla., July 18, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dear Leader:—I have for several years been a constant reader of your books and the publications of The Christian Science Publishing Society, and I realize that I am being led out of the wilderness of material sense into the glorious liberty of Soul, where thought is not material nor sinful. I want to thank you for your great courage and uncompromising attitude toward evil, and for your untiring and unselfish work for poor humanity. From my youth I was physically weak, and I had become so clouded mentally that I was often despondent and vicious. But at this point "Science and Health with Key to the Scriptures" came to my notice, seemingly by mere chance, and about a week later I had ceased to use drugs or other material remedies, and had cast away several dollars' worth of medicine which I had in the house, and which I had been taking every day. I took treatment for a few weeks from a Christian Science practitioner, and though my ailments seemed stubborn I improved gradually, and by constant study of the Bible and Science and Health I have been enabled to turn away continually from error, and to gain health and harmony.

Many thousands of people have, perhaps, desired to visit you, to hear your voice, and I, too, have had a yearning for such a temporary gratification, but I now realize that the only way to know your real character, or to come close to you, is by following in the path which you are marking out and illuminating for us by your consecration to God and your love for all mankind.

Your loving and grateful follower,

B. SOLON HAGLER.

Ocean Park, Cal., July 9, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—The members of First Church of Christ, Scientist, this branch church of the "Mother Vine," planted on the Pacific shore in the favored and beautiful land of Southern California, have much of encouragement in the reports of the church officers submitted to us at our annual meeting. Our membership, though small, is steadily growing in number; there is a marked growth in the attendance on the Sunday and Wednesday services; the distribution of Christian Science literature, as evinced by the Reading Room sales, shows a notable increase over the past year. A sense of gratitude to God for all the blessings that have come into our individual lives, and into the life of the church, fills each heart this evening, and seeks to find expression in a message to you who, as God's messenger, are pointing out the way so faithfully to all mankind, and through whose loving work and example these blessings have come to us.

We ask the privilege of telling you of our love and veneration for you, and desire to pledge ourselves to renewed efforts in following your wise counsels, and striving to heed faithfully and carefully your loving admonitions, to the end that we may more quickly "heal the sick." To us who are so far removed in miles from Boston, the abolishment of the Communion season in The Mother Church means much. For this added proof of your loving thought and care for all of your followers we are deeply grateful.

Yours lovingly,

THOMAS H. HAIL, *Secretary.*

New Bedford, Mass., Oct. 5, 1908.

Mrs. Mary Baker G. Eddy, Chestnut Hill, Mass.

Dear Mrs. Eddy:—Meeting in love and unity, at the beginning of our church year, we, the Board of Directors of First Church of Christ, Scientist, of New Bedford, Mass., wish to express our gratitude, dear Leader, for your great wisdom and loving guidance. We desire to consecrate ourselves anew, and be more loyal and obedient to the demands of Christian Science.

Faithfully yours,

DAISY A. SNOW, *Clerk.*
For Board of Directors.

Des Moines, Ia., July 7, 1908.

Beloved Leader:—Every advance step is simply an added proof that you are constantly about your Father's business in obedience to the command, "Go on before the people," and that you are listening to hear the word, "Speak unto the children of Israel, that they go forward." Your whole teaching is, Out of self into universal Love.

Yours with ever-increasing love and gratitude,

VALERIA J. CAMPBELL.

THE LECTURES.

BALLARAT, AUSTRALIA.

Bicknell Young, the accredited lecturer on Christian Science from Boston, U. S. A., lectured at Her Majesty's Theater last night [June 25] to a very large audience. Mr. J. Thorp of Melbourne, who presided, stated that while a resident of Ballarat he had had much trouble with his health and from other points of view, but that since applying the teachings of Christian Science to his life, he had found himself to be a very different man in all ways.

The Ballarat Star.

EXCELSIOR, MINN.

Mrs. Mims of Atlanta, Ga., delivered a lecture at the Town Hall, Sept. 13. David P. Knowlton, an attorney of Tonka Bay, introduced Mrs. Mims, saying in part,—

Christian Science, as a system of religion, is one of the most revered and at the same time one of the most ridiculed and condemned of all the various creeds and sects throughout the civilized world. It is revered and most zealously followed by its adherents, because it furnishes a sure rule of conduct in all the various walks of life. Every problem, whether it be one of business or of a social nature, whether mental or physical, political or religious, is promptly met and as promptly solved. And when fear is cast aside, and faith in the omnipotence, the omnipresence, and omniscience of God becomes a certainty, the true Christian Scientist, he who leans "on the sustaining infinite" (Science and Health, Pref., p. vii.), is at peace with God and with his fellow-men, and "secure and undisturbed abides." Christian Science is ridiculed and condemned by those who know nothing of it. Many an earnest Christian Scientist of to-day began by ridiculing and making light of it, until circumstances over which he had no control compelled him to investigate the subject with an unprejudiced and receptive mind. He then found that what he had ridiculed and belittled was not Christian Science, but merely his false concept of it.

Thousands of intelligent, thinking men and women are turning to Christian Science to-day; many for physical healing, many because they are not satisfied with their present church affiliations, and many who have felt that they could not subscribe to any of the various creeds and dogmas, and who are hoping to find in Christian Science that which will satisfy their spiritual longings.

Correspondence.

FLANDREAU, S. DAK.

Dr. F. J. Fluno of Oakland, Cal., delivered a very able address upon the subject of Christian Science and Christian Scientists in the Flandreau Opera House Sunday afternoon, Sept. 20, to a fair-sized audience. The speaker was introduced by State Attorney Ira F. Blewitt, who said in part,—

In these eventful days so much of our time is occupied by the struggle for existence that little is left for the pursuit of higher and better things. The spirit of the age, our ambitions molded thereby, fierce competition, and the demands of a rapidly advancing civilization, all conspire to force us to give a very large measure of time to the pursuits of ordinary life. So generally true is this fact found to be, that the ordinary business man finds it impossible to keep pace with the march of advanced thought.

Confessedly uninformed of the fundamentals and philosophy of the great religious movement of Christian Science, I know not with what treasures its messages are fraught, what benedictions it has to offer, what blessings to bestow; but this I do know, that behind this great religious philosophic movement, giving it freely their love, their labor, and endorsement, are a vast number of men and women of intelligence, character, and distinction, which fact in itself must challenge the attention of every thoughtful man and woman and invite investigation of its merits.

The Egan Express.

COLDWATER, MICH.

Tuesday evening [Sept. 15] was quite a "rally day" for First Church of Christ, Scientist, of this city, when a large audience of their friends and many interested citizens gathered at the Opera House to listen to a very able address by Frank H. Leonard of Brooklyn upon "Christian Science, a Demonstrable Religion." The speaker was introduced by Prosecuting Attorney Cowell, who said in part,—

Creeds can no longer be accepted for their antiquity, but because they appeal to reason as true. Every one has the right and it is his duty to think for himself, and it cannot but be beneficial to learn more of a doctrine which is growing rapidly in favor and which has two peculiar characteristics—the culture and intelligence of its converts and the earnestness and zeal of its disciples.—*The Courier.*

BILLINGS, MONT.

Rev. Arthur Reeves Vosburgh delivered a lecture on Christian Science at the Babcock Theater last evening [Sept. 24]. Richard Sherwood introduced the lecturer substantially as follows:—

We have met to-night to listen to a lecture on the subject of Christian Science, and it is a subject which is well worthy of our most earnest attention. All over this and other lands are to be found its churches, its Reading Rooms, its practitioners, and its literature, and wherever it has appeared it has added something to the sum of human happiness. But its influence cannot be measured by the number of its followers alone, for the idea it presents has leavened the thought of all religious bodies, and the influence of that leaven has always been for good. Christian Science has been found by thousands of our fellow-men to fill a human need, and this is the reason for its extraordinary growth. It attacks nothing which can be called good, but steadfastly refuses to acknowledge the power of evil.—*Billings Gazette.*

TESTIMONIES OF HEALING.

For the spiritual uplift that I have received through the reading of Christian Science literature, especially that grand book, "Science and Health with Key to the Scriptures," by our beloved Leader, and by contact in the daily walks of life with Christian Scientists, I find myself each day more grateful than adjectives would enable me to state. Although for twenty years an omnivorous reader, and for sixteen years engaged in literary work, —much that came from my pen, verse especially, displaying, in the opinions of critics and friends, deep religious feeling,—I am free to confess that I was as one who walked in darkness, in the understanding of the Scriptures, until the light of Truth reached me, but a few months ago, from the watch-towers of Christian Science teaching. But once have I had to call upon divine Love for physical healing, and while the practitioner by declaring the truth for me rendered me deeply indebted to Christian Science for an almost instantaneous cessation of a seemingly unendurable pain, I have felt, now feel, and shall ever continue to feel more of thankfulness for having had my sense of discordancy attuned, and for having been brought so fully into harmony with divine Love that eagerly and gladly I made the pledge with myself to "watch, and pray for that Mind . . . which was also in Christ Jesus" (Science and Health, p. 497).

At present engaged in active newspaper work, as city editor of a daily paper, I parry the petty annoyances, worries, and cares that are believed to be incident to this field of labor with the sixteen beautiful verses of the 91st Psalm, glorious with promises which were never plain to me until Christian Science gave me understanding. At one time a member of a "Don't Worry Club," I strove with all the power of will and mortal mind to keep cool, placid, equable of temperament in the emergencies that my journalistic work compelled me to face; but mortal mind and will-power were, as they ever must be, ineffectual, and—I continued to worry! Since coming into Christian Science my friends have remarked how smoothly everything seems to go with me, how destitute of fear I have grown and how opulent of faith, hope, and charity. Cheerfulness has taken the place of gloom and depression. I am an optimist who once was a pessimist. I think better, live better, and my friends say I write better, since I have come into more perfect harmony with divine Mind. And thus, for daily strength and hourly faith, for broader knowledge and the opening unto me of what I feel is, and must continue to be, greater fields of usefulness,—all these blessings coming to me through Christian Science,—I speak my thankfulness from a full heart.—Roy Farrell Greene, Arkansas City, Kan.

When Christian Science first appealed to me I seemed to be plunged in a sea of despair. I had been for twelve years a sufferer from what several physicians and specialists had puzzled over and finally declared a form of epileptic trouble. I very frequently became unconscious in public places, and was unable to go into a crowd for fear of an attack. Along with this I had a severe trouble which is bowing down so many of the women of our day, and my four-months-old babe was wasting away for lack of nourishment, so that no one held out any hope for him.

When the hour seemed darkest, a friend gave me an old copy of Science and Health. I do not wish to convey the thought that the subject was a new one to me, for before this I had bitterly opposed the healing as impossible. I believed my sickness to be incurable, but how true it is that "a little child shall lead them." When I lost all hope for my boy's recovery under *materia medica*, I seized upon what seemed the only chance left, and I can truthfully say that from the day that precious volume was handed to me he began to mend. Food began to nourish him, and I had no return of the epileptic attacks, though the fear of their return was almost overpowering at times. When I came to Pasadena, five weeks later, I decided to place myself unreservedly in the hands of a Christian Science practitioner. I did so, and my fear fell away from me; and a severe case of kidney trouble, together with a bowel trouble which the child manifested, disappeared in a very short time. To-day both baby and I are in perfect health, and with the physical healing has come a sweet peace and uplifting of thought.

Is it any wonder that the land rings with praises of that noble woman who has lived such a consecrated life as would enable her to give to us a working understanding of the truth that Christ Jesus preached and practised centuries ago. My desire is to grow daily in grace, that I may know more and more of the divine Love which heals and saves.—Mrs. Frances Monnette, Pasadena, Cal.

I wish to express through our periodicals my gratitude for the blessings of Christian Science. Many proofs of the power of God to heal in our day have come to me and mine through the earnest, honest study of the "little book," "Science and Health with Key to the Scriptures" by Mrs. Eddy, the application of its rules, and the "habitual struggle to be always good" (Science and Health, p. 4). One of the clearest demonstrations of ever-present help that has come in my experience was in this wise: We had given up a home in the city for our own in the country, and on our first trip to town my husband took two of the children with him in a lumber wagon drawn by two beautiful new horses. I with my oldest daughter followed in a buggy and our family horse. We returned late in the afternoon, the wagon loaded with household goods, groceries, etc. I was in the lead with two of the children, and my husband some blocks in the rear, when we heard a noise, and turning to see if a car was coming, I saw my husband driving very fast and the car coming. I turned aside a little, and the next thing I knew I was being helped into a street-car, with a terrible gash over my eye.

Of course there were the usual conditions,—calls for help and physicians, and three of us were helped into a drug-store, where I asked for the use of the telephone. While waiting for the connection this statement from Science and Health came to me: "Matter can make no conditions for man" (p. 120). I was so strengthened by this thought, so equipped for the work of the hour, that all sense of bodily injuries left me. The call for help was answered, and as the circumstances came to light we learned that the horses had run away, my husband had been thrown from the wagon and under the horses, the wagon going over his body, and the child with him, who was also thrown out, had one hand hurt. The other children were unharmed. While I was in the drug-store, a physician came to offer his services. My heart was full of love, and I said, "I am a Christian Scientist, and have been for nearly ten years. Truth has always met every need, and I know it will now; but I thank you for your kindness." He said that doctors did not claim to heal every time, but that they could alleviate pain. I assured him that I had no pain, and again thanked him for his kind offer.

How my heart went out in gratitude to our dear Leader, who has given us this truth that makes us free from fear and suffering. My husband seemed to be severely injured, but through the declarations of the truth and the practitioner's loving care his need was met, and through this experience he has learned that "now is come salva-

Digitized by Google

tion and strength, and the kingdom of our God, and the power of his Christ;" that "God will heal the sick through man, whenever man is governed by God," as our Leader teaches in Science and Health (p. 495). We stayed in the city that night with loyal Christian Scientists, and to further prove the protection of Truth, all our goods were picked up—not one article was lost. We returned to our home twenty-four hours later, knowing more clearly than ever before that God, divine Love, meets every human need.—JULIA CLARKSON WOLCOTT, So. Omaha, Neb.

When I first commenced to take treatment in Christian Science I was a wreck. The doctors all said I had nervous trouble which was very serious, besides stomach trouble, and that I was going into a decline; and my neighbors thought the same. From the first treatment in Christian Science I commenced to gain. I had not eaten anything for some time without great suffering, but after my first treatment I ate a hearty dinner with good results. I continued to eat what I wished, and found that my food did not hurt or distress me. I had not had a good night's sleep for three months; now I can both eat and sleep, and I work hard every day, thanks to Science and Health and the study of Christian Science. My advice to any one is to get a copy of Science and Health and study it.

W. R. PICKERING, Auburn, Me.

[Translated from the German.]

My wife and myself can never be grateful enough to God, infinite Love, for all the blessings which have come to us through the revelation of Christian Science, as our inspired Leader, Mrs. Eddy, has brought it to us. My wife had suffered continually for twenty-five years with a severe chronic stomach and bowel trouble. She had to live on bread and milk for many years. All medical means were tried without avail; one physician would give the disease one name, and another would name it something else. Finally a physician pronounced it an alarming disease of the bowels. Through the treatment in Christian Science my wife learned to know the truth: she learned that life does not come from food, and that God, good, is the Supreme Ruler. Through this understanding she was enabled to eat all food without fear and with a good appetite, and also to digest it. She is to-day as well and strong as she was thirty years ago, in spite of advancing years, and she is performing all her household duties alone and without difficulty.

I have also been relieved of many physical ailments and mental errors through the healing power of Christian Science. Apoplectic and spinal trouble, varicose veins, which had in former years kept me for months at a time from my service as engineer, and many other troubles have been healed by the knowledge of the truth. In many cases I have been able to help my family and friends through the practical administration of Christian Science, and often the healing was instantaneous. For all this I thank God, and also our revered Leader, Mrs. Eddy, who has taught us to understand God in our text-book, "Science and Health with Key to the Scriptures."

PHILIPP RAUSCH, Hannover-Doehren, Germany.

Christian Science came to me at the darkest time of my life. I had just lost my earthly father, and was heartbroken besides being utterly miserable physically. I had suffered with bowel trouble for years, which finally resulted in a serious condition. Nothing gave any lasting relief, and after resorting to the knife I became so ill that I could scarcely get around. I was in this discouraged condition when a dear friend, who is a Scientist, spoke of her own wonderful healing and advised me to try Christian Science, telling me that I could be healed. This sounded strange to me, for I had tried many skilful physicians, but it seemed stranger still when she said I could be healed of my grief also. Ever since I could remember I had been a sufferer from catarrhal trouble. I was a victim of fear,—afraid of sickness, poverty, death, everything, it seemed. I told the practitioner of this, and with a sweet assurance which seemed to know no fear she told me that God is Love, and referred me to that beautiful verse of Scripture, "For God hath not given us the spirit of fear; but of power, and of love, and of a sound mind." In my first treatment fear was cast out, and in less than two weeks I was entirely well. All seemed changed; I thought of my father with love, but did not grieve for him.

It is my earnest prayer to show my love and gratitude to our Leader by demonstrating the healing power of Truth and Love, thereby proving myself worthy of the name Christian Scientist.—MRS. ESTHER PELTON, Fresno, Cal.

[Translated from the German.]

When I found my way to Christian Science in 1903 I was partly lame, and *materia medica* had declared my trouble to be incurable. Electricity, as well as various other material means, had been of little avail; rather did they seem to be leading me rapidly toward the grave, and I hardly think that I would be here to-day if Christian Science had not healed me. My first visits to the Christian Science meetings, and later on the treatment, soon brought me relief. Material means had lost all power, and had to be given up, for which I am not sorry. Even the belief in hygiene, climate, etc., had to yield to the truth.

Christian Science treatment has freed me from all desire for tobacco and liquor, although I was a slave to the latter. It put a halt to my diseases, and stopped the unbearable pain which had tormented me day and night. This physical healing seems, however, but a small thing in comparison to the spiritual and moral strength with which Christian Science has blessed me. My mathematical work is now an easy task for me. Through the study of Science and Health, which I began about two years ago without any teacher, I have been enabled to read English readily. A few months ago I understood but little of our English Christian Science services, which I attend quite regularly, but now my ear has become accustomed to this language, and I follow the Lesson gladly and intelligently. I wish to say that these services give me a wonderful inspiration, so that I return home from them with renewed strength and a light step. For this great blessing I am thanking God from the depth of my heart.

Christian Science is showing us the way to Truth; and there is no other way. It is my daily task to watch and pray that I may remain in this path, and follow faithfully the banner which our revered Leader, Mrs. Eddy, is bearing onward in advance of us; it will lead us all upward to the zenith of demonstration,—to Life as God.

GUSTAV SCHLUMPF, Zurich, Switzerland.

About two years ago my baby boy was born. After a few days the doctor noticed an abnormal condition of his head, and upon examination she decided that an operation would be necessary. My husband and I talked it over, and we decided not to have an operation, as we were afraid of it; and this being our only boy, we were very much distressed about the condition. Before I was married I had lived where I had heard and known about Christian Science, and I told my husband about what I had seen done by it. We then decided to send for a Christian Science practitioner. By this time the child was a week old and the lump on his head had enlarged considerably, the top of

Digitized by Google

the head was flattened, and one eye was drawn back so that it appeared much smaller than the other and was closed almost all the time. The practitioner took the case in hand, and improvement appeared almost at once, the lump becoming smaller, until after three weeks' treatment it had almost disappeared. The eye was entirely cured, becoming as large as the other one, and all soreness gone. The practitioner then said there was no longer need of treatment. The small lump remaining has disappeared and baby is as bright and intelligent as any child can be. I am glad to give this testimony to what Christian Science has done for my child.—Mrs. V. P. Abels, Bay City, Mich.

[Translated from the German.]

In the latter part of January my husband was taken ill with serious rheumatic trouble. The suffering was very severe; he could neither walk nor move, and suffered terribly when we touched him. He lost his sleep and his appetite. We immediately called in a physician, but my husband refused to take the prescribed medicine, fearing it might affect his heart. We, however, left no home remedy untried, but all to no avail.

Four weeks passed, and his condition was growing worse, when an acquaintance told us of Christian Science. She told us how she had been helped by it, but at first my husband would not listen. He said he had prayed earnestly to God, and yet his disease had become worse; but after another sleepless night he said that we would leave nothing untried, and he would therefore turn to Christian Science. I went immediately to a practitioner and asked for treatment. The lady treated him, and when I returned home my husband said he was greatly relieved—the pain almost entirely gone. Two days later he got up and walked about the room. A week later he went to the practitioner for present treatment. He enjoyed his meals, and could sleep again. He made daily progress and grew stronger, for he had lost so much flesh that our acquaintances hardly recognized him. About Easter he was so well that we could travel to the Harz mountains, and he enjoyed the trip.

I can hardly explain the sad condition in which my husband was, nor describe the happiness we feel for having found Christian Science, which heals all our diseases.

Frau Gehrke, Hannover, Germany.

For the past two and a half years I have been getting so much help from the Christian Science literature that I feel it is time to make some small return, which I do with the hope that what I have to tell may help some other as I have been so often helped. Prior to the above-mentioned time I had had personal knowledge of various wonderful healings among my friends, for over a period of twenty years; and it had been suggested to me that I look into this new religion, but I always either flatly refused or based my human opinion on my understanding of a few detached sentences, whereby no light came, but only the endless doubt. When the work of Christian Science was new in the West I attended one church service, but was so little impressed that I gave it up as non-understandable. Having been a church-member for many years, but not finding any satisfaction thereby when in trouble, I changed my belief to liberalism, and from there drifted almost to agnosticism. For years there was no Bible in our home, but I finally got one for the children for appearance' sake.

Being a great reader, and for years kept close at home, I read about many theories,—isms and schisms,—and sometimes one would look like the truth to me for a time, but would finally fade to nothingness. At a time when seeming troubles so weighed on my mind that I slept very little and began to fear insanity, again Christian Science was presented to me. By what I would once have called "chance" but I now know as the call of God, good, I was led to the Christian Science Reading Rooms, where for the first time I met those in the work. I was asked to attend the services, and answered that I would. I had scarcely entered a church of any kind in fifteen years, and then for no right motive, but when the next Sunday came even a pouring rain could not keep me away, for I was curious to see what these people had to offer. The new way of conducting a church service impressed me, but the question came to me, Can I ever stand this Bible reading? I knew, however, I had given other beliefs more than that time to prove their worth, and so I continued to attend until it became a pleasure as well as a duty.

My children are in the Sunday School, and from that time till now God, as understood in Christian Science, has been our only physician. I had been reading Science and Health, by Mrs. Eddy, about a month when I took my first treatment for bowel trouble, and was told that I should also read the Bible. That seemed absurd to me, and I rebelled audibly and declared that I had never been able to get anything out of it. However, in being obedient I found that those who had gone the same road before me could point out the way. I soon learned that the Bible and "Science and Health with Key to the Scriptures" must go together, and that God is no respecter of persons. I was helped physically and mentally from the first; I gained fourteen pounds in flesh in a little while, and have had no more stomach or catarrhal trouble,—ailments from which I had suffered since childhood. I have been able to meet error in various forms with constant dependence on God's Word, and it is indeed wonderful what the Bible means to me now.

I am so glad that our Leader, Mrs. Eddy, gained such an understanding of good as to become the channel for this great revelation, and I hope to show my gratitude in helping others and in living the truth of Christian Science.

Ella M. Snook, Mankato, Minn.

The time has come when I feel that I should tell what Christian Science has done for me. I was afflicted with several ailments, my eyes being very bad, also my hearing, so that I was almost deaf. I tried different physicians for my eyes, but found no relief. I then tried to find glasses that I could see to read with, but could find none. I had used tobacco for thirty-five or forty years. This was the condition in which Christian Science found me. After the first treatment I threw the tobacco away, and have had no desire for it since. I was also able to sleep, which was something I had not been able to do for two years, not having had a good night's rest in that time. After five treatments I found I could see to read without glasses, and I now read in my Bible and Science and Health. I feel that I have been greatly benefited by Christian Science in every way, and am very thankful to God, and to Mrs. Eddy for showing me the way.

Levi Stewart, Ashland, Ore.

Three years ago I seemed to be a mental wreck and without hope. The one dearest to me said that perhaps God was punishing me in order to make me a better Christian, but I had gotten to where I hated the mention of the word God, as I was sure He was far from being a loving Father. In my distress I appealed to Christian Science for help, and there I found God to be true and loving and always ready to help me through each problem that came to me.

I did not become interested in Christian Science through physical healing, but I can to-day bear witness to the fact that this Science is a help physically, mentally, and spirit-

Digitized by Google

ually, as there have been a number of instances of physical healing in my family. A serious case of fever was entirely healed in a few days; severe headache has been instantaneously healed, when under *materia medica* the patient would suffer for several days, while a case that had been under the care of the best physicians for three years was healed in less than a week. I was myself healed of supposedly hereditary lung trouble, for which my physician had prescribed a change of climate. I never had special treatment for this disease, but it has passed away. Since I have been studying the Bible and Science and Health I have come into the realization that I am living in the atmosphere of Love, God. I know Christian Science can and does destroy the belief of limitation; I know, too, the wonderful power of Truth, and rejoice in the proof I have seen in this direction.

Words can never express my thankfulness to God, and my gratitude to Mrs. Eddy, for all the good that has come to me. The help I have received spiritually has exceeded my expectations, and my great desire is to do and to be good.—MRS. CALLIE J. TUCKER, Houston, Tex.

I am very glad to have the opportunity of giving a testimony of my healing in Christian Science. During the spring of 1907 I was taken down with a serious eruption and confined to my bed for about a week, suffering considerable pain from the severe inflammation. I was treated by as good a physician as could be had, he attending me at least once a day for over a week; but it was very nearly, if not quite, two weeks before I felt entirely relieved. At the time of this illness I did not know much about Christian Science, which accounts for my having a physician to attend me; however, soon after recovering I did look into the subject and commenced attending services. I did not give it very serious consideration until after I had attended a number of meetings, but my wife was deeply interested and very enthusiastic, all of which had its effect on me.

Last October I was again attacked with the same disease, which involved my face and very nearly the entire surface of my head. Instead of securing the services of a physician, my wife prevailed on me to call for a Christian Science practitioner. I at once commenced to improve after the first treatment. I did not have to remain in bed at all during the attack, and the pain was very slight, the inflammation being confined to the external portion of the face and head, the physical condition otherwise seeming not to be in sympathy with the disease, and in less than one week I was healed. I consider my case very remarkable from the fact that I was healed by absent treatment, and what might seem more strange is that I am a regular graduate of a medical college and have practised the profession many years. Another remarkable effect of reading Science and Health is that during my first study of the book I used tobacco quite liberally, smoking very frequently, but after having read for some time I had less desire to smoke, and in a very short time dropped the habit entirely.

Since I have taken up the study of Christian Science I feel deep gratitude to Mrs. Eddy for the joy of living and the better understanding of God which I have gained thereby.—CHARLES PHIPPS, M.D., Los Angeles, Cal.

To the testimonies of many others I wish to add my own thanks and appreciation for the benefits I have received since becoming interested in Christian Science, about a year ago. I thank God for our revered Leader, and her uplifting work, "Science and Health with Key to the Scriptures." Up to the time when I saw the truth, I was a constant and extravagant user of drugs, and had a potion for nearly all the ills that mortal mind is heir to. I had suffered from catarrhal trouble for twenty years, and bronchial trouble for the past five years. Up to the present winter I had not been free from a cold for five years, these colds lasting from early fall until late spring, and the bronchial trouble kept me disturbed most of the day and often during sleeping hours. My reading of Science and Health and the stimulating thought derived from it, has benefited me greatly, though I feel incompetent to express fully my thankfulness. I have given up all use of drugs, and feel the better for it.

In November and December, 1907, I had a great deal of dental work to be done, and one tooth particularly was very painful. The dentist treated it for about ten days, and then filled it. The next day after he filled the tooth it began to pain me, so much so that I was unable to sleep. I called on the dentist, and he again treated it for about ten days. All through that time I was in intense pain day and night, and upon my last visit I asked him to extract the tooth, which he did. When the tooth was out I learned the reason for all this distress, the case having been improperly treated. I was still in much pain, and the dentist advised a number of different remedies, as he had a great fear of the development of something serious. I, however, used none of the drugs prescribed, but left all to God. About three weeks after the tooth was extracted I removed a piece of the bone. I believed that God would heal me from the effects of the dentist's mistake, and He did, for which I am truly thankful. I shall always remember what Christian Science has done for me.—PHILIP KOLMAN, Chicago, Ill.

It is with deep gratitude to God for Christian Science that I send this testimony. For years I was weak and delicate, and had medical treatment almost constantly. After the birth of my little daughter, I turned in my helplessness to Christian Science, and I have certainly found it a "very present help" in sickness and in the overcoming of fear and error of every sort. From being almost an invalid, I am now a healthy woman. My baby was instantly healed of an acute attack of illness, and many other ailments have been overcome by the application of the truth.

For the many and great benefits we have received through the teachings of Christian Science, I am indeed grateful to Mrs. Eddy, who has given to the world our inspired text-book, "Science and Health with Key to the Scriptures."—MRS. BESSIE VAN HORN, New Orleans, La.

I wish that I might in some manner express my gratitude for the benefits derived from Christian Science. Nearly two years ago I was remarkably healed of trouble with my eyes (I had worn glasses for eight years). Last March I was healed of a severe attack of blood-poisoning in less than two weeks' treatment. I have also had several other wonderful demonstrations of Truth's power, in cases of colds and severe sore throat. Stomach and bowel trouble have both disappeared. I am thankful to our Father-Mother God for having given us our Leader, and thankful to her for her labor in giving us "Science and Health with Key to the Scriptures," which shows us how to live and love.

CARRIE COTHRIN, Cosumne, Cal.

This is to certify that I was healed, by Christian Science treatment, of severe stomach and throat trouble, of which physicians could not help me.

G. C. RUTLEDGE, Porter, Wash.

FROM OUR EXCHANGES.

[Prof. A. C. McGiffert in *The Hibbert Journal.*]

When many men are interested enough in a particular system to attack it, it still has a hold upon the world; when they are too absorbed in other matters to trouble themselves about it, its day is over. And so it is evident that a new age has dawned in the history of Christianity and the old apologetic is out of date, not because it attempts to prove so many unbelievable things, but because it attempts to prove so many things in which men have no interest. Much mattered in other days which does not matter now. An apologetic which is to be of value to-day must defend the things that matter to-day, and only those. The question, then, for the modern apologist is not merely what is true, but what is important. What is the one thing, if there be one thing, that really counts—the one thing whose acceptance or rejection means the acceptance or rejection of Christianity? For this it is the business of the Christian apologist to secure approval and support. Failing this, his apologetic is a failure, whatever else he may successfully defend.

[*The Christian Life.*]

What means the unrest of this age, particularly in connection with matters of religion? It means the revolt of the million against the moral tyranny of ecclesiastical organizations. It means a protest against sacerdotalism, and against the mind-enslavement which inheres in the insistence upon creed profession as a condition of membership of Christian congregations. It means the uprising of the common sense of civilized society against all forms of oppression or repression of the human mind; against all theology which is in disharmony with the plain teaching of Christ, and all religion of the magical or mechanical sort. It means profound dissatisfaction, not with the Church as such, but with the fact that it is still in large measure in discordance with the spirit of the age, and that its history bears witness against it of many sins, both of commission and omission.

[Rev. R. George McLeod in *The Universalist Leader.*]

It is a matter of common assent that our age is witnessing a process of theological disintegration. Dogmas, thought forever established by the authority of creed, no longer rest secure upon *ex cathedra* foundations; doctrines, the crystallization of centuries, are in a state of solution; beliefs, never before questioned, are haled before the bar of inquiry. Hence the beholder receives impressions of wide-spread spiritual unrest and intellectual insecurity, and the "orthodox" see in the attempts in theological reconstruction a veritable "eclipse of faith" and the annihilation of the norms of spiritual religion.

[*The Outlook.*]

Over the face of the world lies a strange mist, bred by the lawlessness, sins, perversities of men, through which many radiant stars are invisible, and in which many things appear out of focus, distorted, misshapen; so that what we call progress is not so much rectification of knowledge by discovery of truth, as purification of knowledge by character and correction of the fancies of disease by the clear vision of health. The redemption of society is an intellectual quite as much as a moral process, and the end of it is the restoration of the race to health.

[*The Congregationalist and Christian World.*]

We do not doubt that God is speaking to men now as really and clearly as ever He has spoken in any age; and the same tests now as in every age, will show what are genuine words of God and how to understand their meaning.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel.* Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All correspondence and orders relative to membership and church tenets should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PUBLISHING HOUSE BUILDING FUND.—Contributions to the Publishing House Building Fund should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

Quarterly covers in black seal leather for sale at the following prices:—

Regular size, 5¼ x 7¾, $1.25 each or $12.50 per dozen.
Pocket size, 4½ x 6½, $1.15 each or $11.00 per dozen.

Leather cases for the pocket editions of the Bible and Science and Health are now made slightly wider in order to provide space also for the trimmed *Quarterly* with or without cover. Price, $1.25 each.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

Terms of Sale, Postpaid to any Address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, Mexico, and Cuba, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. This pamphlet is also printed in German. 29 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By JUDGE SEPTIMUS J. HANNA. 36 pages.

CHRISTIAN SCIENCE: ITS ADVANTAGE TO MANKIND. A Lecture delivered in London. By EDWARD A. KIMBALL. 46 pages.

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREED, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 50 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

CHRISTIAN SCIENCE SENTINEL

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

Falmouth and St. Paul Sts., Boston, Mass., U. S. A.

ARCHIBALD MCLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE

Single copy, one year, $2.00.

Ten copies or more to one address, one year, each copy, $1.90.

Twenty-five copies or more to one address, one year, each copy, $1.80.

Fifty copies or more to one address, one year, each copy, $1.60.

These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add 50 cents for postage on each subscription.

Six-months subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month, and will include all issues for the month named as expiration date on the wrapper. The receipt of the periodical by the subscriber will be our acknowledgment of the subscription.

TERMS OF SALE

Five cents a copy, postpaid to any address in the United States, Canada, Mexico, and Cuba. In quantities to one address: twenty-five copies, $1.00; fifty copies, $1.80; one hundred copies, $3.00.

To all other countries, six cents per copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The gates forming the temporary dam of the Charles River in the Back Bay, Boston, were dropped in place last week. The permanent structure will be steel and concrete. This dam will hold the water of the river at a level for a distance of about ten miles upstream, the distance affected by tide-water. The ship-locks have been in place a number of weeks. The main lock is forty-five feet wide, three hundred and fifty feet long in the clear, and twenty-one feet deep. The piling used in the dam and about the basin would, if put end to end, reach a distance of about one hundred miles. The concrete used and to be used would be sufficient to make a wall two feet thick, four and a half feet high, and about eight miles long.

The full bench of the Massachusetts Supreme Court, in a case recently brought before it to secure a definition of the rights of owners of automobiles, holds that statutory laws regulating the speed of automobiles on highways and their exclusion from some are reasonable and proper for the promotion of the safety of the public.

It is said to be not improbable that a prohibition law for the District of Columbia may be passed in the near future. A law has already been passed forbidding the sale of liquors in any Government building there. The District has an area of sixty-seven square miles and a population of about three hundred thousand.

Ten Chinese students arrived at San Francisco last week and will be matriculated at Harvard, Cornell, Yale, and the University of California. They were selected out of a large number who offered themselves to the Chinese provincial government, which is paying their expenses.

Congress will be asked to make an appropriation of $35,000,000 for carrying on the work on the Isthmian Canal during the fiscal year 1910 if the estimates prepared by the commission are approved by the war department. The current year's appropriation aggregates $27,000,000.

Through the finding in the library of Marietta (O.) College of old papers and maps, it is believed that the international boundary line in Passamaquoddy Bay, separating Maine and New Brunswick, which has been in dispute since 1784, can now be settled.

The hundredth anniversary of the birth of Abraham Lincoln occurs Feb. 12, 1909. A committee was appointed by the National Encampment of the G. A. R. in Toledo this year to arrange a suitable program for its observance.

Municipal improvements made by Americans in Panama, Colon, and the canal zone, up to the close of the fiscal year, 1908, amounted to $5,770,750, embracing waterworks, sewers, and paving.

The constitutionality of the enactment prohibiting corporations from contributing to campaign funds is being attacked in a case now before United States District Judge Dole at Honolulu.

To complete the naval base at Pearl Harbor, Hawaii, will require, it is estimated, two million dollars in addition to the three million already appropriated by Congress.

The Centennial meeting of the American Board of Commissioners for Foreign Missions will be held in 1910 at Boston. The next annual meeting will be held at Minneapolis.

Pennsylvania is said to lead the Union in the amount of personal property within its borders returned as subject to taxation. It reaches the total of $1,104,513,428.94.

Government receipts from internal revenue sources for the month of September were $21,070,056. The returns from spirits alone were $10,055,050.

New Hampshire towns have a valuation of $242,341,263.

International.

The United States fleet of battle-ships arrived at Yokohama, Oct. 19, from the Philippines and Australia, and has been given a most cordial and elaborate reception. The first item in the reception to the Americans was the departure of Rear Admiral Sperry and the admirals and captains of the fleet for Tokio by a special train. Along the whole eighteen miles of the way to Tokio there was a continual greeting to the Americans through a lane of waving flags. At Tokio the train was met by a committee composed of representatives of every department of the government.

Interesting discoveries relating to mound-dwellers have just been made in Manitoba by a professor of Toronto University, who has been digging in mounds fifteen hundred years old. He has discovered copper and sea-shell ornaments, which demonstrates that these people had communication with those of whom relics have been found all through the Mississippi Valley, from the Gulf northward.

The English government, to meet the serious problem of the unemployed in England, is prepared this year, according to Premier Asquith, to provide a fund of $1,500,000 to help them, and the admiralty is giving out orders for the construction of nine torpedo-boat destroyers and five unarmored cruisers, to cost a total of $12,500,000, two months earlier than originally had been intended.

During the past twenty-five years the Prussian State railways have paid into the public treasury $1,300,000,000, while rates have been lowered and service improved. Railway rates in Germany are high, as the railroads there help to pay some of the enormous military expenses.

The admiralty of Chili has decided to build a lighthouse and establish a life-saving station on Barnevelt Island, nine miles northeast of Cape Horn.

It is now allowable for Turks to wear hats, the restriction requiring them to wear the fez, the prescribed national head covering, having been removed.

Industrial and Commercial.

A new iron furnace, built on quite different lines from the Bessemer furnace and capable of treating low-grade ores, almost worthless now, and converting them into iron of Bessemer quality, has been given a successful trial at Iron Mountain, Mich. Instead of being perpendicular and rigid, the "stack" is horizontal, except that it is elevated at one end, and is rotated by gearing. The tube is one hundred and twenty feet in length and nine feet in diameter. It is corrugated and lined with fire brick. When furnace stacks are perpendicular as much as eighty-five per cent of the heat units escape through the top; with the big tube horizontal, or nearly so, approximately ninety per cent of the heat is utilized. Crushed ore is fed into the elevated end of the tube, and by means of the rotary motion is slowly worked down through a temperature of four hundred degrees Fahrenheit at the upper end of the tube to fourteen hundred degrees at the lower end.

Government chemists experimenting with corn-stalks believe they have succeeded in producing a paper that will take the place of papers made of wood fiber. Thus far five grades have been made. One is a dark gray, thick and heavy like parchment and almost as tough as sheepskin; another is a lighter shade of the same character; two shades of yellow, and one of white. The white paper is made from the hard outside shell of the stalk, and the yellow grades from the pith. The yellow grades have a much longer fiber, and resemble paper made from linen rags or cotton. It is very soft and pliable. The "soda cooked" process used in making pulp papers has been used in the experiments, but the corn-stalks only need about two and a half hours of cooking in this process against the thirteen or fourteen hours needed to soften the wood pulp.

A combination of machinery and chemical processes, invented by a German and designed to produce more than a score of marketable solids and liquids as by-products from wood, is to be installed at Marquette, Mich. Woods hitherto considered worthless or suitable only for fuel can be utilized by the process.

A factory has been established in a German town for the manufacture of glass telegraph and telephone poles reinforced with strong wire threads. They are especially suited for tropical countries, where insects and climate quickly destroy wooden poles.

The total product of petroleum in the United States in 1907 was 166,095,335 barrels, with a valuation of over one hundred and twenty million dollars. If placed end to end, these barrels would make a four-ply chain around the world.

The mayors of Portland and Boston last week exchanged greetings by the new invention, the "telepost," which is said to be many times more rapid than the ordinary telegraph.

The iron ore movement down the Lakes to Lake Erie to Oct. 1 shows a total for the season of 16,630,000 tons.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE THORN IN THE FLESH.

REV. ARTHUR REEVES VOSBURGH.

CHRISTIAN SCIENCE heals the ills of the flesh by recognizing that the cause of every disease is mental and that the law of divine Mind destroys it. Such scientific healing is radical, certain, and immediate, just in the degree of the understanding of the practitioner and the unalloyed sincerity of the patient. Occasionally there is some persistent manifestation of discord that continues to recur. There have not been wanting good Scientists who were able to do excellent service in bringing help and healing to others, while they have had to labor long to free themselves entirely from the encroachments of some discordant physical manifestation. In almost every such instance it is found that the key to the situation, the real cause of the physical discomfort and disease, is something which has to do with temperament and character, and something which requires spiritual unfoldment and growth before that strength and poise of consciousness which maintains health is established.

The element that causes the suffering may be some obscure tendency, some subtle fault, or even a lack at some important point. The higher and nobler the character, the finer the sensibility, the keener will be the consciousness of disturbance, if there be any point of consciousness or character which does not measure up to the standard and the harmony of the rest. Ofttimes it is only through persistent suffering that one learns to discern what are the lines of character which must be unfolded to bring that poise and harmony of consciousness which establishes health.

Paul's oft-noted and oft-quoted "thorn in the flesh" seems to be a vivid illustration of such a condition. Just what the physical manifestation was we do not know, but it is obvious what a sore trial and humiliation it must have been for the great apostle to be open to the constant cavil, "Physician, heal thyself!" But while we do not know just what the disease was, the apostle does reveal to us, if we read a bit between the lines, just what point must be strengthened to bring healing to the flesh. After telling something of the wonderful and unspeakable visions of Truth that had been given him, he writes: "And lest I should be exalted above measure through the abundance of the revelations, there was given to me a thorn in the flesh, the messenger of Satan to buffet me, lest I should be exalted above measure. For this thing I besought the Lord thrice, that it might depart from me. And he said unto me, My grace is sufficient for thee: for my strength is made perfect in weakness. Most gladly therefore will I rather glory in my infirmities, that the power of Christ may rest upon me."

From this it is evident what and where was the point in Paul's consciousness that would easily open the way for the "rift within the lute," if not guarded and equipped with divine grace. That one who had not even been a disciple of Jesus should have received such a marvelous measure of spiritual knowledge and power would present one of the subtlest temptations that can beset the human mind, viz., the tendency to self-righteousness. Then, Paul's entire previous training and experience would have tended to emphasize this as his weak point. He had been trained a Pharisee. The earnestness, the self-denial, the obedience to the Decalogue which this training inculcated in a sincere follower, would furnish a superb foundation for Christian character, when once they were illumined and directed by the Christ-spirit. But in the midst of these qualities there was likewise developed the besetting pharisaical sin of self-righteousness. It was upon such a condition of consciousness that the glorious light broke, when Paul was on the road to Damascus; it was to such a one that there were given the transcendent visions of things "not lawful [possible] for a man to utter."

So it is evident that until this one inherent, besetting tendency should be fully eliminated, even as a possibility, there would be one jangling note in the midst of the spiritual harmony that was brought forth in the consciousness of Paul. So, too, it is clear that this would be entirely corrected only by such an unfolding and upbuilding of character as would result from great spiritual growth; a growth that should replace this one carnal element, deep-seated and primitive, by the utter selflessness and true consciousness of the Christ-man. Such a work as this, going down to the most primitive elements,—the mental depths of such an one as Paul,—would not be done in a moment. We cannot doubt that it was accomplished in time, that in later years Paul could have recounted his freedom and victory. In the mean time this one discordant factor in his physical being was a constant reminder that there must be a ceaseless effort to bring his whole thought up to a consistent obedience "to the heavenly vision." In this there would be a constant demonstration of how the divine "strength is made perfect in weakness;" and so be a constant fulfilment of God's assurance to him: "My grace is sufficient for thee." So, too, the thorn in the flesh bears its own lesson for to-day.

THE FIRST REQUISITE.

MARY WHEELER.

IT is sometimes said, "How is it possible that Christian Science should do the marvelous things which are claimed for it? I could more easily believe in it if I could see how such things can take place." We do not need to know how they take place. What we need to know is that they can and do take place. God takes care of the process. True, we have a part in the process; but that part is only to know,—to know what to know and how to know it. "Ye shall know the truth." All else belongs to Truth, for it is Truth that performs the work. "The truth shall make you free."

An electrician does not need to know, and does not know, just how those wonderful manifestations come about with which we are all familiar in the electrical world to-day. He does not even know, or claim to know, what electricity itself really is, or why certain results follow certain prearranged conditions: but he does know, from his own experience and that of others, that those results do follow those conditions, and that is enough for him. His part is to arrange the conditions, and the electricity will take care of the rest. Provided he obeys faithfully those laws that have been discovered to govern the action of electricity, he has no doubt as to the outcome, and meets with no failures in his work.

So it is with the supreme Science of Christianity. We need only to ascertain something of the possibilities proved for it by those who have already worked in it, and then to acquaint ourselves with the Principle of this Science,—to master and apply those few simple rules which we are prepared to comprehend,—in order to reap the harvest of its miracles. In other words, we have only to arrange the conditions of our mortal consciousness, and God Himself, divine Principle, will do the work for us. We do not know, and do not need to know, what God in His absolute nature is, but we can know Him in part and we can know how to come into right relations with Him; that is, we can know that all good, which is only another name for God, forever *is*, and that, since God is all, nothing else can really be; therefore, we can know that His work is in reality already done, that that particular form of good of which we seem to stand in need is already ours; then, abiding in the quiet assurance which is born of that knowledge, the result will be the demonstration in our own experience of that particular aspect of good.

After all, is not this what is meant by becoming "as a little child"? Is it not the teachableness of little children, —their freedom from doubt as to the possibility of things to which they have not yet attained,—which constitutes the very first condition to be established in our consciousness? Is it not that humility which is at the same time true self-confidence,—the humility which confesses, "I can of mine own self do nothing," the confidence which appropriates the promise, "All things are yours,"—the humility which asks to be taught, the confidence which knows it can learn? Science is essentially simple, and just as the laws of electricity are so clear and exact that a boy can understand them, and obtain results that astonish his elders, so the Principle and rules of the Christ-Science may be apprehended and demonstrated, in wondrous measure, by all who approach it in childlike simplicity. Maintaining this attitude, and with hearts made receptive to yet fuller light by gratitude towards her whose unwavering faith and selfless humility have at such unspeakable cost unlocked its treasures for a needy world, we can put no limit to those "greater works" that we shall yet do, no limit to the unimagined good which God hath prepared for them that love Him.

SUBSTANCE.

CAPT. GEOFFREY WILKINSON.

THERE is perhaps no aspect of the teaching of Christian Science which departs more from the commonly accepted opinions of the world to-day than its teaching with regard to the nature of "substance." To the ordinary man substance is synonymous with matter, and the more material possessions he can get together, the more substance does he imagine himself to possess. If, however, one is aiming merely at the acquisition of material possessions, he is building on sand, for his tenure of them rests on no spiritually scientific basis, and any day he may find himself deprived of them,—find himself reduced from a condition of affluence and luxury to one of abject want, which could never have happened if he had gained the true idea of substance. How then shall we define substance, and what is its nature? Surely it is unsatisfactory to call that substance which is here to-day and gone to-morrow, which at one time is and at another is not. "Substance," writes Mrs. Eddy on page 468 of Science and Health, "is that which is eternal and incapable of discord and decay." Here at once we get a definition which helps us to solve our difficulty. Such substance is real substance, for it must be ever-present; but what is it which is "eternal and incapable of discord and decay"?

Christian Science teaches that there is only the one self-existence, the one intelligence or Mind, that which has created all things out of itself and like itself, that is "over all, and All" (*Ibid.*, p. 17). This infinite intelligence or Mind is God, unchangeable, ever-present; and thus we see that the divine Mind, being infinite, is the only true substance. And what is the nature of this Mind? Let us turn to the inspired pages of the Bible. Here we find God, Spirit, described as "the Father of lights, with whom is no variableness, neither shadow of turning;" not a capricious deity, not a mixture of opposites like the ordinary mortal, but Principle, always to be depended on, "a very present help in trouble." Elsewhere we find God described as "merciful and gracious," "just and right," "abundant in goodness and truth;" while John says comprehensively, "God is love."

We see, then, that Mind is Truth, Love, mercy, justice, in a word infinite good; and man as Mind's idea is the image and likeness of God,—Mind's eternal and perfect reflection. It follows, therefore, that man, reflecting God, that is to say, manifesting the divine attributes, is thereby reflecting infinite substance, and becomes a channel for the infinite supply, which is always equal to his every need. The realization of this fact enables us to understand the deep spiritual truth underlying the Master's saying, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," for we see that in proportion to man's genuine desire for and manifestation of the fruits of Spirit, will his demonstration of the infinite supply be.

TARDY ACKNOWLEDGMENT.

GEORGE S. POWELL.

THINKERS who have not studied Christian Science are beginning to see that this much discussed and misunderstood Science is working marvelous changes in the spiritual and physical experiences of those who study and practise its teachings, and that it is exerting a wonderful influence in the world for better thinking and better living. Recent statements by some of those prominent in religious thought show a trend towards a measure of acknowledgment of Mrs. Eddy's great and beneficent work in restoring to the world the Christianity taught and practised by Christ Jesus. A divine of international reputation, who is generally recognized as a man of great intellectual force, says in a recent magazine article: "Christian socialism springs from the neglect of the principles of stewardship inherent in Christian religion. The process was the same in the aggregation of Christian Science, which seems to have such a strong hold in your country. It seems to arise, it would seem to me, from the neglect of the truth of the power of mind over matter and of the sanctity of the healing art."

It is now about a third of a century since Mrs. Eddy startled both the religious and medical beliefs of the world with her statement of the Science of Christianity as set forth in "Science and Health with Key to the Scriptures." It is difficult to imagine anything more at variance with the

Digitized by Google

established beliefs, along spiritual lines, than the teachings of this wonderful book. Who is it that, acting on the theory and practice of human wisdom and experience, would dare put forth a book, the teachings of which they knew would be rejected by human wisdom? Does not the accumulated evidence of the past thirty years or more prove conclusively that in giving to the world the Christian Science text-book our Leader was responding with a sublime faith to the call of Him "in whom we live, and move, and have our being," and thereby putting into the thoughts of men the new-old leaven of Truth, which will work with renewed vigor until the whole lump is leavened and the "earth shall be full of the knowledge of the Lord, as the waters cover the sea." Through this knowledge men shall see old things pass away and all things become new; a belief in sorrow exchanged for the knowledge of joy, hate for love, sickness for health, and death for life, proving the correctness of Jesus' sayings: "Ye shall know the truth, and the truth shall make you free;" and, "Whosoever liveth and believeth in me shall never die."

Had Mrs. Eddy been guided by human wisdom and experience, Science and Health would never have been written; but, obeying the call of divine wisdom, she ignored human wisdom and experience and, following steadfastly the Truth revealed by the Galilean Prophet as her guide, she pressed "toward the mark for the prize of the high calling of God in Christ Jesus," clearing away the accumulated debris of creeds and dogmas and gloriously proving the truth of the apostle's saying, that "the wisdom of this world is foolishness with God." Even the attempt to utilize Christian healing in connection with material means, as is now being done by certain religious teachers, is in effect a tardy acknowledgment of what Christian Science has done and is doing for mankind, but that this line of endeavor in no way tests or utilizes Christian Science, must be recognized by all thoughtful people. Mrs. Eddy says, "If Mind is foremost and superior, let us rely upon Mind, which needs no cooperation from lower powers, even if these so-called powers are real" (Science and Health, p. 144); and this statement clearly harmonizes with the Scripture, "Thou shalt have no other gods before me."

"ALL THINGS ARE BECOME NEW."

HELEN L. YOUNG.

OUR forefathers were satisfied with candle-light, but we are anticipating something much brighter than electricity has yet given us. The Revolutionary heroes, who were seeking a new and better government than that of "the right divine of kings," knew nothing better than the stage-coach for travel, but we are not satisfied with the luxurious Pullman sleeper, and are demanding flying-machines. Our Knickerbocker ancestors made it most uncomfortable for Fulton when he dared suggest steamboat transportation on our beautiful Hudson River; now the Atlantic greyhounds are not swift enough for us. Dire catastrophes were predicted for the penny post; but few of us were in the least astonished when wireless telegraphy became practical. Indeed, we are expecting that time and space will be annihilated, because we are beginning to understand that the only real laws are those of Mind, and to Mind there can be no obstruction.

We never dreamed of seedless berries, nor of the cactus without its spines; but Burbank with his higher sense of harmony is transforming the vegetable world. Similar changes have been chronicled in the field of physical healing. The allopath gave great quantities of medicine. Then came the homeopath, with his attenuated doses; and now the osteopath, who gives no drugs at all. Each step has made it easier to see and to welcome the higher law of healing through divine Science. Past generations bowed to a God of vengeance and believed that He made disease contagious; but with clearer vision we see a God who is Love, who knows nothing but good. "Surely the old order changeth, yielding place to new." Druggists' windows are placarded with guarantees of safe prescriptions, but Christian Scientists, who have God as their only physician, fear neither a wrong dose nor an overdose, for we know that we cannot have too much of Truth, nor can divine Love be poured out in too large a measure. In the new heaven and the new earth each man and woman will be transformed and healed by the renewing of the mind. The new woman has given to the new world a new religion that is making us know that the new heaven is right here in each of us, and that we do not have to die to attain it.

A young lady who had wept so much that her eyes became very much diseased, was given up by the specialists of this country. She was wearing colored glasses, and sat waiting for blindness to overtake her. She began Christian Science treatment the last week of May, and some six weeks later celebrated the Fourth of July by declaring her freedom from glasses. She has never worn them since. A year later she received a telegram which at first overwhelmed her with dread, fearing that the inflammation would return to her eyes; but she asked for Christian Science treatment during the ordeal, and when she returned in a couple of weeks she said that the tears had all been wiped away. One year's study of Christian Science had changed her view of life and enabled her to catch a glimpse of the new heaven spoken of by John in Revelation: "And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away. . . . Behold, I make all things news."

It is ours to live each day, each moment, in that new sense of heaven which makes a "new earth,"—"forgetting those things which are behind, and reaching forth unto those things which are before." It is ours to let the old fears, aches, pains, irritability, age, ugliness, hate, sorrow, grief, selfishness, criticism, prejudice, bigotry, gossip, poverty, and mad ambition pass away, to make room for the new sense of Life,—health, courage, peace, joy, youth, beauty, love, charity, affluence, patience, and meekness. Thus we shall grow in the consciousness of our unity with God, until we are made perfect even as our Father in heaven is perfect.

BUSINESS.

WALTER SHAW.

THERE is no doubt that discords of every kind can be overcome by Christian Science when our understanding of it is clear and definite enough to make the demonstration. It often seems much easier to overcome sickness than some of the varied phases of human existence in which undesired conditions assume to rule. In thinking out a business problem, for instance, there is the danger of being misled by self-will or self-interest rather than by a single desire to demonstrate "the law of God, the law of good," which leads us to the ultimate "rule of universal harmony" (Rudimental Divine Science, p. 7). To be harmonious, business must give satisfactory interchange between buyer and seller. A "good deal" in the old sense, where profit is one-sided, is not good from the standpoint of Christian Science. We must always give fair and honest value, for to take unfair advantage of another is not loving our neighbor as ourself. (We need not fear, because the market appears to be already glutted with what we desire to sell, if we know that our supply will meet another's need.)

Digitized by Google

To eliminate selfishness and dishonesty from trade is part of the work of Christian Science, and we must see to it that our share in this line of progress is not neglected. Many theories for business interchange have been cleverly set forth, but all material theories which lack the practical, logical basis of Christian Science fail to meet humanity's need. The teachings of Christian Science, if put into practice, will overcome all evils of "sweating" and uncover to us the subtle dishonesty of trying to make unfair bargains which must result in loss to some fellow-man. The craze for cheapness will be checked, as we realize that every laborer "is worthy of his hire,"—not a mere pittance, but an honest and liberal reward, for honest toil. Our right to live in peace and harmony will be seen as we relinquish all faith in evil, and learn that the only power is God, good. Having been so long accustomed, almost unconsciously, to yield authority to evil of some sort, it requires a vigorous, firm determination to get rid of this old lying serpent and assert man's God-given dominion over adverse material conditions.

We may, however, do well to remember that our *wants* are not necessarily our *needs*. When Mrs. Eddy wrote that glorious sentence, "Divine Love always has met and always will meet every human need" (Science and Health, p. 494), she did not mean that God will give us everything we ask for or imagine we want. Our great need is to understand more clearly the revelation of divine Love, and as this dawns upon us, things formerly counted of value will cease to attract, business cares will no longer have power to tyrannize over us, the wish for gain will be subordinated to the desire for right action in every department of our work. We shall begin to realize the truth of these words of our Leader (Science and Health, p. 442), "Christ, Truth, gives mortals temporary food and clothing, until the material, transformed with the ideal, disappears, and man is clothed and fed spiritually."

THE CHURCH USHER'S OPPORTUNITY.

HARRY J. WIXSON.

THE services in all Christian Science churches have a specific purpose, in the fulfilment of which all members are equally interested and all have an opportunity to share. The discouraged, the sick, and the sinful come to these services, and notwithstanding their seeming condition or their creeds, they are healed, some by a single attendance. There are constant proofs that these services heal, and yet the demonstration is but just begun. The church usher is usually on the alert for "the stranger that is within thy gates," and it is frequently to him that strangers express their gratitude for the bright, cleanly church, the helpful service, and for the love which the congregation reflects.

An usher, in the performance of his duties, is like the vanguard of an army. He should be possessed of great Christian courtesy, so as not to give offense, but rather to predispose the stranger favorably to the service. Usually he is a member of the church, and should be a progressive Christian Scientist, capable of keeping himself in spiritual poise, ready to meet any manifestation of error if it should seek to make its appearance. Even a partial appreciation of the benefits to be derived from the church service may be accepted as a sufficient reason for his invariable punctuality, while the responsiveness of the congregation makes his work of seating them a pleasure, and the loving thought which they reflect assists him in his spiritual work and in his demonstration of the truth. The writer has found the belief untrue that punctuality is a difficult demonstration; on the contrary, it is a pleasure and a benefit. In one of her letters to The Mother Church (Miscellaneous Writings, p. 149) Mrs. Eddy asks that all be invited to "bring what they possess of love and light to help leaven your loaf;" and to see a congregation thus assembling is an inspiration to all who avail themselves of this opportunity.

The usher should be awake to his great opportunities and responsibilities, and should come to the church service prepared to meet them. He should be endowed with a sense of the divine energy, and demonstrate this by punctuality and obedience. As a faithful follower of his Leader he should endeavor to fulfil the law of Love, doing good to all, imparting the blessings of Truth, Life, and Love to all who come within the radius of his thought. He should aim to work in harmony with Love toward one common end, through obedience, concerning which our dear Leader says, "Obeying the divine Principle which you profess to understand and love, demonstrates Truth. Never absent from your post, never off guard, never ill-humored, never unready to work for God,—is obedience; being 'faithful over a few things'" (Miscellaneous Writings, p. 116). The fulfilment of his duty as regards daily prayer will save him from disobedience, from obeying "the material senses, false suggestions, self-will, selfish motives, and human policy" (*Ibid.*, p. 118).

The silent prayer in our church service gives each an opportunity to benefit the congregation, as required by the Manual of The Mother Church (p. 42). To live up to the highest point of efficiency with which he is endowed, enables each to impart his blessings to others, and although the demand seems great, the law of Love can be fulfilled. No demands have ever been made by divine Love which we have not been able to meet. It is by faithful service to his church, and a manifestation at all times in and out of church, of the sacred power of Truth and Love, that the usher can best express appreciation of the manifold benefits he has received through the understanding and application of the truth taught in Christian Science. His every thought must be made better, and all his work more fruitful, for the divine energy to move him onward and upward. Principle will lead the way, and Love will show him how to be better and do better each day. Because of his conspicuous relations to the church it is important that he recognize the responsibilities incumbent upon his position, and his constant effort should be to advance in his understanding of Christian Science,—to "study thoroughly the letter and imbibe the spirit" (Science and Health, p. 495), and so to conduct himself in his daily walk and conversation that he may never be a reproach to Christian Science.

[Written for the *Sentinel*.]

AT DAYBREAK.

CASSIUS M. LOOMIS.

WHEN the lark pours forth his birdling speech,
As the sunrise gilds the sky;
When the diamond dew, with its sparkling hue,
On the meadow grass doth lie—
What seest thou most in the flaming east?
Is it God who speaks to thee?
Hast thou done thy part with a reverent heart?
Hast thou eyes that long to see?

Then gather the beams of the golden light,
And store them within thy breast.
Here a word of cheer, there a smile sincere,
Will comfort some heart distressed.
From the willowy hedge, from the very air
Comes a counseling word to thee:
If for freedom ye long, 'tis the gladsome song
That setteth the bondsman free.

SELECTED ARTICLES.

[Willard S. Mattox in *The Star*, Fredericksburg, Va.]

Our critic perhaps unconsciously finds himself attempting to hold the inconsistent and untenable position of admitting an effect and in the same breath denying its cause. He acknowledges that "truthful and sensible people" testify that they have been healed of divers diseases. If truthful, then their statement that they have been healed is true. The truth which has made them free has been interpreted to this age through the book Science and Health, which the gentleman ridicules for its "illogical twaddle, its childish repetitions and assertions." Many of those who testify at a Christian Science service were healed merely by reading this book. Is it possible to believe that "illogical twaddle" or "childish repetitions" could heal inveterate disease or change the evil habits of a lifetime? Since the results cannot be denied, will it not be necessary for the critic to amend his views of Christian Science and its text-book? I wish to assure him that neither Mrs. Eddy nor Christian Scientists put Science and Health above the Bible. The Bible remains for Christian Scientists the chart of life, the most valuable book in the world. Science and Health is what it declares itself to be, a "Key to the Scriptures," a spiritual interpretation of the text which enables the student to believe more practically in the all-power of God.

On the question of the non-existence of matter, the critic says that "no sane philosophy would teach that matter has no real existence." It may be that the gentleman does not remember what Mr. Huxley said: "After all, what do we know of this terrible matter except as the name for the unknown hypothetical cause of states of our own consciousness?" Professor Oswald of the University of Leipzig has said that "matter is a thing of thought, which we have constructed for ourselves, rather imperfectly, to represent what is permanent in the change of phenomenon." Prof. Boden P. Bowne, who holds the chair of philosophy in Boston University, says in his book, "Theory of Thought and Knowledge," "Objects exist for us only as the mind builds up valid conceptions within itself." In his book "Metaphysics" he says, "Common sense unhesitatingly takes phenomena for substantial realities, and takes the phenomenal categories as the deepest facts of real existence. In this way it builds up a mechanical and material system which often proves a veritable Frankenstein for its creator. But when we came to study this extra-mental reality we found it extremely elusive. It finally appeared that the world of things can be defined and understood only as we give up the notion of an extra-mental reality altogether, and make the entire world a thought-world; that is, a world that exists only through and in relation to intelligence." And elsewhere in the same work Professor Bowne says, "A thought-world is the only knowable world and a thought-world is the only real world." Of course it is not necessary to say that neither Mr. Huxley, Professor Oswald, nor Professor Bowne was writing in an effort to confirm the doctrine of Christian Science. I quote them merely to disprove our critic's statement that nowadays no sane philosophy would teach the non-existence or unreality of material substance.

When your correspondent says that Mrs. Eddy's teaching "dishonors and dethrones our Saviour," he makes it evident that his study of Christian Science has been very superficial. On the contrary, I do not know of any religious teaching which honors the Christ more than does Christian Science, none in which stress is more constantly laid upon the necessity of imitating the life of Jesus and putting into practice his teachings. I would like to have the sentence pointed out which justifies the statement that Mrs. Eddy's teaching "dishonors and dethrones our Saviour." Christian Science teaches that neither God nor His perfect man know sin, but mortal man is very much in need of a Saviour, of something which will save him from his belief in the reality of an existence apart from God. Jesus' life was an example to prove to us the supremacy of Spirit and its ability to save from all evil.

[From an editorial in the *Pasadena* (Cal.) *News*.]

There is no way to demonstrate in figures the influence of the churches—divided as it is—on the individual life, the home life, and the civic life of a city. If these churches were removed and their aggregate influence were to cease, the demonstration would be plain enough. A man's most faulty or ignorant groping after spiritual truth makes him a better man, a better father, a better citizen. The defects of a church do not constitute a valid indictment against its existence in a community, any more than a weak or even a counterfeit Christian constitutes a valid indictment against the genuine man or woman who sincerely follows a high ideal.

The educational, ethical, and spiritual influence of the pulpits of this city cannot be estimated. Whether the attraction be the high-class music and pulpit eloquence characteristic of most orthodox Protestant churches, the beautiful symbolisms through which the devout Catholic approaches and worships God, or through the simple study and interpretation of the spiritual truth of the Bible according to the method of the Christian Scientist—spiritual hunger is there, men and women go there for the "bread of life," and each, according to his own choice or his own hunger, finds it in some profitable measure. A city's churches do not include all of its spiritual life and ethical ideals, but without them this life and these ideals would have a hard time in the selfish every-day grind and competition of modern society, mercenary and merciless as it is. Better have ethical culture one day in the week than none. The religion that is lived every day in the week must be the one to survive the rest.

[From a correspondent in the *Fairbanks* (Alaska) *News*.]

The Christian Scientist deals with neither medicine nor surgery, and his practice is not accompanied by the dangers which belong to a practitioner of medicine or surgery. His requisites consist of a clear and unmistakable understanding of Christian Science and a high degree of spirituality. The power which he uses is made operative, not through drugs, but through prayer. Prayers necessitate no regulation, for it is quite popularly conceded that if, from a skeptic's view-point, they do no good, they certainly will do no harm. If, however, for any reason the State should assume the responsibility of granting individual license to pray, it should at least observe the doctrine of equal rights to all its citizens. All Christians pray for the sick, but some accompany their prayers with drugs because they think their prayers would prove inadequate without them. Christian Scientists, however, find their prayers preclude any necessity for drugs. If there is a difference between the prayers of a Christian Scientist and those which have been offered in past years without the knowledge of Christian Science, it may be seen in improved results, but the mere fact that prayers avail more now than they did formerly does not seem to be an intelligent reason why medical knowledge should be demanded of those who pray.

There should be no discrimination against the prayers of Christian Scientists on the basis that they are of a quality to insure an answer, or that they heal sickness as well as sin. A prayer which destroys bodily ills is no more dangerous and no more in need of regulation than a prayer which overcomes sin only. Therefore, if a law

Digitized by Google

exists which provides that Christian Scientists must be examined as to their qualifications to pray for others, this same law should be applied to all other praying people. How many clergymen would remain in the ministry if they were compelled to have a four-years medical course before being permitted to pray for their parishioners? Not only our good clergymen, but all laymen, according to the proposed regulation, should be required to obtain a State license before entertaining a desire or prayer that God shall guide and sustain and protect and heal their neighbors. Why is it that the requirements of medical knowledge as a qualification of safe prayer had not been thought of until Christian Scientists appeared in the arena of human affairs? All Christians pray for the sick, whatever may be their afflictions, but no legislative body or medical association has ever concerned itself with the kind of prayer that is offered by any other religious sect.

It would be quite as unreasonable to require Christian Scientists to pass an examination in *materia medica* as it would be to require M.D.'s to pass an examination in Christian Science. If it is proper for the State to require any qualifications from a Christian Scientist, it should require those qualifications which enhance the practice of Christian Science. There is no constitutional provision to prevent the Christian Scientist from practising within the bounds of that which he professes, and thus far in the history of our country a man's right to practise his religion has never been made contingent upon medical knowledge, nor the question as to whether he was to be compensated for his service.

[John A. Webster in *The Arena.*]

In metaphysics there are two distinct systems of thought, one of which must be true and real and the other false and unreal; the two positions are in contradistinction one to the other, and hence a third theoretic system, a combination or compromise of the two, is unreasonable, impossible, and untenable. Upon the premise that matter is all-in-all, and that the five physical senses furnish the only testimony upon which to base accurate deductions, all the so-called sciences have been formulated. This position, when accepted in its entirety (which must be done in order to accept its deduced sciences), reveals the existence of substance or cause, found abstract from matter, as an impossibility. . . . This position precludes the presence of Spirit, Mind, or intelligence, apart from matter. All is physical and of the material senses. There can be no force nor power without matter, no spirit, no God, no unseen intellectual agency sustaining and maintaining the universe, that is not inherent of substance-matter. An inquiry into a cause or creator outside of matter is an illusion, a seeking for something that has no existence. All things are physical and mechanical, not mind nor mental. This material monistic philosophy had as its chief exponent in modern times, Auguste Comte, who was a student of the ancient schools of Protagoras and Heraclitus. It is the position of the atheist. It can go no farther than human reason and is not subject to pure philosophy or true theology. There can be no continuity of spiritual or mental existence, since a succession of monistic physical phenomena is the ultimate of all materialistic action. There can be no God, no prayer. There is no problem of future existence, for there is no existence without matter, and the material man with the mortal mind is the highest exposition of all substance-matter. Materialism, pure and simple, and atheism are catalogued in the same concept of human investigation and existence.

The second school of thought accepts the other position, that Spirit (God) is All-in-all; that God is, of His very nature, substance, eternal; that His whole creation, of which man is the highest ideal, is spiritual. Theoretical logic or the theology of religion has attempted to establish a dualistic school of thought, which finds its adherents among those who seek a union or compromise between a materialistic and a spiritual creation. It presupposes that matter and spirit both exist, are eternal, and have equal or comparative reality. The doctrine of the union and nature of matter and spirit is seldom attempted and never made clear. Advocates and students of philosophy, chemistry, astronomy, *materia medica*, and all the so-called sciences, rarely accept the theory except as a belief, and all experimentation is in the line of materialism. These so-called scientists refuse to accept as testimony any deductions not derived from matter, and centuries have been given to experiments in trying to find life, spirit, intelligence, as not only existing in matter, but also existing as matter. The effort has been to find life or spirit having form, outline, and mobility, rather than to seek life or spirit as existing independent of matter.

This dualism always partakes of some form of pantheism, and upon this dualistic basis rests polytheism, spiritualism, hypnotism, theosophy, telepathy, animal magnetism, mesmerism, etc. This dual position is responsible for much of the philosophy of materialism and the theology of religion of the present era. Little or no effort is made by the so-called scientists to reconcile revelation or religion with what is called the physical sciences, and theologians often accept the physical sciences with a theological interpretation that is at great variance with the recognized process of determining results in material science. In fact, the natural or material scientist has met and almost eliminated the arguments of his opponents, yet humanity clings to the innate conviction that there is a God and that revelation and religion are necessary. At the same time the belief in the necessity for sin, sickness, and death remains as a part of the dualist's creed. This position proclaims God as the author of good and evil, health and sickness, and makes life and death coexistent in matter. This double attribute is pantheistic rather than Christian. God is recognized as being "in" things,—God in nature, therefore God in the mountain, in history, in peace, in war. Likewise, according to the dualist, God is in health, in sickness, in life, in death, in calamities of nature, even in sin. God creates sickness and then makes medicine to cure sickness. He brings suffering, according to this belief, and wills that medicine should fail, in order to punish His child for disobedience. This contradictory position leads its advocates to believe in fate and predestination, and asks us to bow our heads in humble submission to a dualistic God, a God of life and a God of death. The history of theoretic religion shows a strange and unreasonable commingling of materialism and sensualism with pious reverence. With the two opposite and conflicting pathways no definite end can be reached. All systems of dualism teach life in matter and make God responsible for all physical and moral evil, and the only escape is by a process of natural laws, or by a regenerative and supernatural grace administered by a priestly mediator.

The second and higher school of thought is in ultra contradistinction to atheism and materialism. It establishes its fundamentals upon the first command of the Decalogue. It teaches that God is Spirit. That His creation, including man made in His image and likeness, is spiritual and not material; that God is All-in-all, and that He is the only cause, the only force, the only power; that He is the only creator, hence the Father-Mother-substance of all creation; that He is eternal, hence real and unchangeable. God being the only cause and creator, matter has no real entity and exists only to mortal concept. It is a physical phenomena of which the physical senses alone bear testimony. The physical senses being a creation of materialistic causes, their testimony cannot be true, because they testify to the unreality of the eternal and only

Digitized by Google

First Cause and creator. This physical testimony is therefore an illusion—a shadow of the real substance—a belief of something which has no real existence, was never created, has no place nor power, and cannot of its own assumed nature have eternity. Hence matter is no more real than the belief or illusion concerning it. It is the human concept or projection of the testimony of physical phenomena and has no existence in the spiritual kingdom of infinite intelligence. This position is spiritual monism: one God, one creator, the eternal One, who is Spirit, Life, Mind, intelligence; one creation, spiritual, which reflects Life, Mind, intelligence. This is the basis of all true religion and pure philosophy, free from any taint of materialism. It is the fount of every pure inspiration, and makes revelation a stepping-stone to spiritual consciousness and understanding. God is the only substance and reality. This underlying secret runs all through the Bible from Genesis to Revelation. This is the only basis from which a correct understanding of an all-wise, all-powerful, all-loving, unchangeable, infinite heavenly Father can be gained. It is the basis of holy healing by prophet and apostle. It is the foundation-stone upon which the Master stood and wrought his wondrous works. This latter position of spiritual monism finds its basis of support in the Bible, in the words and deeds of prophets and apostles, in Christ's teachings and works, in history, in reason, in spiritual consciousness and in individual experience. It is exemplified in works rather than in words. Its proofs are in results rather than in theory. It is the philosophy of facts rather than philosophical theorizing. . . .

This higher spiritual scientific position is the one taken by Christian Science. The world is indebted to Mary Baker G. Eddy, Discoverer and Founder of Christian Science, for the clear apprehension and perception of a revealed Science, the Science of infinite God. It is the rediscovery, the revealing again of the old-new Science of Christ and the early prophets. It is not a religion of beliefs and theories; it is a revelation of understanding and a demonstration of works. It casts out both sickness and sin by the same method. It destroys the beliefs in and of matter by supplanting them with the understanding of infinite intelligence. Christian Science has brought a new-old religion; a new school of scientific metaphysical philosophy which reveals infinite substance; a new interpretation of life, a life that is not dependent on matter, hence is deathless; a new love, a love that knows not hate; a new truth, a truth that is changeless, and that makes free; a new God, or, if you please, a newer, higher, and holier conception of a loving heavenly Father, who created everything spiritual and good, who knows no evil nor matter, who brings no calamities, and "who healeth all thy diseases" without any material (matter) remedies.

[C. N. Churchill in the *Commercial Appeal*, Memphis, Tenn.]

The prayer of faith which heals the sick in Christian Science, is as far from the occult as the poles. It is the prayer of spiritual understanding, according to Paul's admonition, and relies solely upon the power of God for the healing. . . . As Jesus continually affirmed that he healed by the power of Spirit, God, it is plain that those who, according to history, healed the sick in his name for about three centuries healed spiritually, and this healing could only have been lost through the growing materialism of the age. Then why should it be expected that the spiritual truth which destroys material error and heals the sick and sinful should conform to preconceived material beliefs. . . . Nothing can be plainer to one thoroughly instructed in this Science than the fact that God is not the creation, but the creator; that he is Spirit, and His creation spiritual. God is not the universe, and the universe is not God but His spiritual manifestation. God is divine Principle, Love, the omnipotent, omnipresent, infinite intelligence or Mind which underlies and supports all creation. . . . Mrs. Eddy's writings pay tribute to and exalt our Lord's character, and only prejudiced misapprehension of her meaning can gain any other idea from her teachings. Through the practical application of her teachings one can prove the Master's word to be true, and thus he comes not merely to believe that Christ is his Saviour because the Bible says so, but because he knows it, since he proves it. "Ye shall know the truth, and the truth shall make you free." Free from what? Plainly error, sin, disease. Surely this exalts the Saviour's character more than words could possibly do.

[Frederick Dixon in the *Newbury* (Eng.) *News*.]

Law defined scientifically is the unvarying recurrence of phenomena, and is expressed perfectly in that verse of the epistle of James which declares, "Every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning." It is therefore natural that this epistle should contain the further statement that "faith without works is dead." For faith is but the initial perception of causation, the accuracy of which is demonstrated in works, so that just in proportion as those works fulfil the requirements of law may faith be said to be perfected. In the words of Paul, "Faith is the substance of things hoped for, the evidence of things not seen." Now that for which man hopes is the kingdom of God, and the evidence of things not seen, that is of spiritual things, is the answer he receives to prayer. James tells us that "the prayer of faith shall save the sick, and the Lord shall raise him up; and if he have committed sins, they shall be forgiven him." Paul bade the Thessalonians "pray without ceasing," and a Christian Scientist learns to fulfil this command just as he learns to act on some beautiful words of advice written by Mrs. Eddy: "Keep your minds so filled with Truth and Love that sin, disease, and death cannot enter them" (*Christian Science Sentinel*, Oct. 6, 1906). Then indeed man attains to the kingdom of heaven, for "the kingdom of God is within you."

It is in the attempt to act up to this teaching that the Christian Scientist becomes a healer of the sick. Passing as he often does hours of the day, many hours of every day, in the presence of sickness and by the bedside of those in pain, he is in little danger of ignoring human suffering; on the contrary, his effort is to destroy it. He does not however, fetter himself, in the midst of the struggle, by insisting that disease and suffering are real, for by real he means that which is spiritual and eternal. In this, however, he does not declare that suffering is not real to human sense. It is because it is terribly real to the human sense, because it has a relative existence in the human consciousness, that he is there to attempt to destroy it; but it is because it is not real in any absolute sense, because it has no place in the divine consciousness or the spiritual universe, that he hopes to bring about its destruction. Nor does it in any way imply that Christian Science places physical before spiritual healing; so far from doing this, it makes physical healing the result of increased spiritual understanding. All that Christian Scientists know of Christian Science they have learned from reading Mrs. Eddy's book "Science and Health with Key to the Scriptures," and as a result the world is to-day the richer by many thousands of happier, healthier, and better men and women, rescued not merely from sorrow and sickness, but from poverty, and misery, and despair, and going out in their turn into the world able to say and to prove to those that meet them, "I know that my redeemer liveth."

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy upon proper subjects *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

INTERESTING NARRATIVE.

Carroll, Ia., Sept. 18, 1908.

Mrs. Mary Baker G. Eddy, Boston, Mass.

Dearly Beloved Leader and Teacher:—"Grace be unto you, and peace, from God our Father, and from the Lord Jesus Christ." On the last day of August, 1908, a tramp got off a freight train in this town. He spent the night in a barn, and early Monday morning begged his breakfast from a workman living near by. The history of this tramp was plainly written in his face, and might be summed up in two words, viz., vice and debauchery. At thirty-eight this man (?) was a fair sample of a very coarse, common, and degraded type—a "wreck." When this man looked behind him he hung his head, when he looked ahead he shuddered. All the companions of his youth were gone, even hope had at last left him. Health had been gone for years. Yet he was not alone; O God, that was it! If he had been alone he would have gone back to God's country. But they would not let him; he had tried how many times to get away from them, to outwit them, outrun them. How many terrible fights had he had with them. There was a time when there were not so many of them, and youth, hope, health, and strength were with him, and they hadn't yet chained him with chains. If he had known, and if his friends had urged him to turn back!

When people gave this tramp food he would go, if necessary, a mile, hide himself and devour it. Not often, some one would let him come in the house and eat at the table with them, and on some of these tables he found and drank "living water." When this occurred a curious thing always happened. This man—vanquished in a thousand fights—would again face his foes; if he could, this tramp would go to work.

After breakfast the tramp accompanied his host to his work and himself secured employment. After supper that evening he found among some papers in his boarding house an old *Christian Science Journal*, dated October, 1907, and began listlessly to read it. And now, O mother in Israel, if your eye should see this, or those my brethren who wrote those words! As he read the dingy room enlarged its borders, the smoky lamp vanished in light, and he saw that God was All and evil was none. He fell on his knees right there in that office and knew that he was not forsaken, but surrounded by the unnumbered host; knew he was not old (prematurely) but immortally young, and his rags fell off from him and he was clothed in the beauty of holiness, and his friends whom he had mourned for weary years,—youth, strength, purity, holiness, truth, health, love, affection, righteousness, peace, happiness, and all the host of heaven,—were still his.

Enclosed find two dollars and twenty-five cents. My wages are two dollars and twenty-five cents per day, and it will take me several days to "render unto Cæsar," but I wanted to put in one day's work to help "spread the joyful tidings all the world around."

"The poor [I am rich] ye have always with you." O Father, all mine is Thine and all Thine is mine, and Christ has said, "Blessed are the poor in spirit." I have sent for the *Christian Science Sentinel* and secured a copy of Science and Health from the local library. On the fly-leaf of this book is this legend, "Presented to the Carroll Public Library by Thomas O. Neal." My clothes are not yet presentable, but the 19th (to-morrow) is pay day and will make that all right. And then will I make myself known to my brethren and join my heart and voice to theirs in sounding His praise.

Peace be unto you, and unto yours peace.

Yours risen from the dead,

LEW MYERS.

THE ONWARD MARCH.

CHRISTIAN SCIENTISTS often think of their experiences as a repetition of those of the Israelites, in that they, too, have escaped from bondage,—the bondage of material belief, which is no less oppressive than that of Egypt. The journeyings of Christian Scientists are, however, mental, and the enemies to be overthrown the accumulated errors of long centuries,—beliefs in sin, disease, and death, with many attendant beliefs of limitations of every kind; but the grand discovery that all these would-be masters are unreal gives certainty to the prospect of entire freedom as we go forward. Knowing that "the earth is the Lord's, and the fulness thereof," Christian Scientists aspire to demonstrate their rightful place in the realm of Mind and to prove that Truth's ideas, for which they stand, are entitled to recognition as representing in the highest sense law and order.

When Christian Science entered the domain of therapeutics it was challenged by the existing systems—challenged on the ground that man is material and that he therefore requires material remedies; also, that he is governed by material laws, and that he must obey them or endure the penalties imposed by those who believe in disease laws and material remedies. In spite of these seemingly hard conditions Christian Scientists have proved, point by point, that the understanding of spiritual law frees us from all the disabilities attendant upon belief in asserted laws of disease and death, or man-made laws which restrict the human right to follow that which makes for progress.

Before coming to Christian Science most of its present adherents were in bondage to many false beliefs concerning God and man's relation to Him, beliefs which held them in abject submission to sin, suffering, and death. When they ventured to declare for man's God-given right to health and holiness, the self-constituted authorities in the domain of scholastic theology charged them with being unchristian and unscientific, but this only compelled them to add proof to proof that Christian Science is truly named, because it is a rediscovery and revival of the teaching and practice of Christ Jesus. No theologian of any note now ventures to deny that the Christian church ought to heal the sick, whatever his views may be as to method. Thus has Christian Science, by a series of bloodless victories, become firmly entrenched in the realms of theology and medicine. No fair-minded person can to-day deny that the changes wrought in these realms in the last forty years have ushered in better conditions than the world has ever known, and that these changes point to a still greater advance toward the realization of the divine ideal—viz., the perfection of man and the universe.

Christian Science has also entered the domain of literature, its greatest contribution in this direction being our inspired text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, together with her many other vitally important works. No correct statement of this Science can differ from what is to be found in these works;

Digitized by Google

and as the truth of being is better understood, this will be admitted everywhere. For about a quarter of a century students of Mrs. Eddy's writings have been giving to the world, through *The Christian Science Journal* and *Sentinel*, the results of their study, their demonstrations of the divine Principle revealed through their text-book. Now these students are about to enter the domain of secular journalism with the lofty hope that it, too, may be made sacred,—that every real interest of humanity may be shown in its possible relation to Truth, to Principle, and so made to conform to the pattern shown in the mount.

The healing of Christian Science has meant first the purification of the individual, then of his environment, and the latest effort of Christian Scientists is to meet a widely acknowledged need by bringing the leaven of Truth into the domain of journalism through *The Christian Science Monitor*, thus causing thought to "rise" above the selfish and the base to the noble and the true, for which the advancing sense of humanity is loudly calling.

ANNIE M. KNOTT.

SOWING AND REAPING.

THE possibilities of good attaching to the present number and variety of means for the dissemination of thought can be exceeded only by their possibilities of ill. Never in the history of the world was there so broadcast a sowing of ideas, and never, it would seem, were the channels of youth so flooded with that which vitiates the appetite, degrades the sense, and debases the character. These things being true, the need of forethought and discrimination, upon the part of those who are responsible for the kind and quality of the reading-matter which supplies the young with "food for thought," was never so great.

All this was deeply impressed upon the attention of one individual some years ago by a discovery which he made while visiting in a beautiful country home. He had arrived late in the evening, and having gone immediately to his room, he made his first acquaintance with his surroundings on the following dawn, when he came downstairs to find that the other inmates of the home were enjoying the privilege of a Sunday morning nap. Being thus alone, he began to look about, and noted that the furnishings and decorations of the home gave evidence of much intelligence and taste, as well as of abundant resources, while the well-stocked library, together with numerous religious and literary periodicals, spoke more specifically of the high ideals and aspirations of the parents. Nevertheless, in the midst of this Eden, the visitor found the trail of the serpent, when, to his utter astonishment, he chanced upon a pile of the emblazoned Sunday issues of an ultra "yellow journal," together with numerous well-worn copies of a paper devoted wholly to the exploitation of crime.

The shock attending this discovery led him to recall the fact that the eldest daughter of this household had brought untold pain to her parents through her frivolity and indiscretion, and that the depraved habits of the eldest son had for years been chiseling its sad record upon the rapidly aging faces of the father and mother; and as he mused upon these things, the Master's words, "Whatsoever a man soweth, that shall he also reap," came to him with an altogether new force and significance. What a far-reaching folly was this! An intelligent Christian father labors for years that he may provide his children with creature comforts and educational advantages, and then shows an indifference with respect to the daily nourishment of these children which he would have instantly recognized and condemned had the welfare of his animals been at stake! And yet is not a kindred offense committed by all those who thoughtlessly open their homes to reading-matter which conduces to a vulgar and frivolous, not to say immoral, sense?

In these days of freedom and of self-assertion, upon the part even of callow youth, appetite determines for the most part the nature of the food consumed; hence the imperative duty of every Christian parent to protect the home, so far as possible, from all that tends to beget a sense of life which is unideal and untrue. "But," says one, "this is an impossible standard. Where can we find books and papers for our homes which measure up to this requirement?" In answer it may be said that Christian Scientists have an inestimable advantage here in the fact that, through a loving wisdom which they gratefully recognize, they and all who seek it have been provided with a large amount of literature thus free from all taint. More than this, thoughtful Christian Scientists are acquiring a discriminating sense which, if duly exercised, will enable them to make selective appropriation, for themselves and for their children, of all real values in the classics of story and of song. A well-trained nurse will taste for herself the food prepared for her patient, that she may make sure of its wholesomeness. Surely thoughtful Christian parents can do as much for their children.

JOHN B. WILLIS.

ADVERTISEMENTS IN THE MONITOR.

In answer to the question which has been asked by some of our friends, Will *The Christian Science Monitor* publish advertisements? we are authorized to state that a limited space will be devoted to the publication of advertisements which conform to the requirements of the management.

LETTERS TO OUR LEADER.

Boston, Mass., Oct. 17, 1908.

Rev. Mary Baker G. Eddy, 384 Beacon St.,
Chestnut Hill, Mass.

Beloved Leader and Teacher:—I rejoice that the daily newspaper, announced in the *Sentinel*, is to be placed before the world. The need of this paper has been long felt by those whose thoughts are reaching out for higher intellectual and spiritual things. The good, not the bad, should be chronicled in every nation and land, so that the world will be educated to be good. Parents will feel that their children may read the *Monitor*, and not have their young and impressionable thoughts attacked by the debasing images too often portrayed in some of the daily papers. I believe that the establishment of this paper will be the voice of a reformer in newspaper policies. I know that this effort will appeal to many outside the ranks of Christian Science; those kind, loving, tolerant, and God-fearing people who desire to think rightly and to act rightly, and in justice to all men. It is your labor that has made this paper possible, and the world is again indebted to you for your fearless and prayerful work in behalf of humanity.

Lovingly your student,

WILLIAM B. JOHNSON.

Boston, Mass., Oct. 22, 1908.

Beloved Leader:—I cannot be so near without sending you my loving greetings. The fall lecture work has kept me busy, and everywhere "the signs of the times" are greatly encouraging. In my recent tour, which is culminating in this section, I have talked with three persons healed of total blindness, and I have heard of many wonderful demonstrations of the healing truth that God

Digitized by Google

has revealed through your great spirituality. I am rejoicing in the grand move expressed in *The Christian Science Monitor,* soon to be issued. Even the outside world must soon glimpse the great fact, so clear to us, that Christian Science is the universal church for universal man, and that it meets the universal need. I lectured in Winchester, and go to Stamford and New Haven, on next Sunday and Tuesday, returning then to dear Boston for a few days.

Yours devotedly,
SUE MIMS.

Macon, Ga., Oct. 20, 1908.
Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dear Mrs. Eddy:—The announcement that we are to have a daily newspaper run along the most ideal lines that Christian Scientists are capable of giving to the world as well as having for themselves,—that the age will admit of,—both pleases and interests me greatly. I hope that according to the best human standards, as well as the higher standard by which the human must always be subordinated and judged, that this is to be the best newspaper in the world. The conception of *The Monitor* is a great one; and not only should it have a great individual success, but inspire and lead the way for the journalism of the future. When the press gives prominence to the good that men do and becomes the daily record of the real history of the world,—the unfoldments and activities of good,—we shall be much nearer the millennium. Such a press will itself be a promoter of ideal progress as well as its recorder.

While, prior to your great discovery and life-work, it seemed that the most ideal conceptions and efforts were doomed to long waiting, if not to temporary defeats, somehow what you see and feel and live—the reality and allness of the good, which makes the sense of evil correspondingly unreal—makes possible the success of every achievement that is right and necessary for human betterment. The practicability of any conception is seen to be in direct relation to its need, to its beneficence, to its genuineness, to its ideality. And because you have seen a world-need and opportunity, and gone to work and put others to work to meet it, I feel that it will succeed as everything great and good you have seen and longed and labored to make the privilege and possession of all, is succeeding. With special joy in everything that is a joy and blessing to you, I am Yours sincerely,

J. R. MOSLEY.

London, England, Oct. 12, 1908.

Dear Mrs. Eddy:—The love that Christian Science has uncovered in my heart and that is changing my whole life, has for some time turned instinctively to you in gratitude, and I felt this morning, as I was reading the Lesson-Sermon, that I must express it to you. The beloved disciple wrote, "If a man . . . loveth not his brother whom he hath seen, how can he love God whom he hath not seen?" and if we cannot express our deep gratitude to you who have made life real for us once more, how can we truly express it to God?

The last time I was in Florence,—in the late winter,—while looking at the beautiful frescoes of Giotto, I thought, "If only we had a religion nowadays, we painters would be able to do something that should be of real interest." But for some time, that which was really a little prayer for light seemed unanswered. In a few months, however, I experienced a wonderful change of thought quite suddenly one morning—a realization of unity—and very soon I began to study your beautiful book, "Science and Health with Key to the Scriptures." I am glad to say that already the truth has begun to show itself through my work, and I look forward confidently to the time when art as an expression of Science takes up once more its responsibility and joins in the chorus of praise that will ascend everywhere to God.

My gratitude to God, and to yourself as His prophet to our time, can only be expressed in my work and my life, but these few words are a symbol that, even if you never see them, mean much to me.

Yours very gratefully,
MAXWELL ARMFIELD.

Minneapolis, Minn., Oct. 20, 1908.
Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader and Teacher:—Who can ever say again that the day of miracles is past? Our new publishing house was no sooner finished, than an extension was necessary. And now, in the establishment of a Christian Science daily newspaper, appears an enterprise which, in scope of usefulness and as a proof of the boundless resources of our Cause, is nothing less than a modern marvel. It all speaks to me of unparalleled energy, zeal, and love of humankind, as shown forth in your consecrated life, and supported and inspired by your own "deep-toned faith in God" (Miscellaneous Writings, p. 204). My heart bows in silent wonder before these fresh evidences of God's blessing, and I offer you, His messenger, my deepest gratitude and love, with my most earnest desire to be, now and always,

Your obedient and faithful student,
MARY BROOKINS.

Hartford, Conn., July 17, 1908.
Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dear Mrs. Eddy:—I am inexpressibly thankful to you for Science and Health. I seemed to gain but little understanding of Christian Science when reading the book for the first time, and still I was healed and received great benefits at the first reading. I had been doctoring about two years for a throat and an ear trouble. The ear trouble was considered incurable by two specialists, one of Hartford and one of New York city. My throat was well before I had finished the reading of the book. How thankful I was that my voice was clear, that I could sing the hymns and breathe easily. My ear was also very much better, and after some months of reading, was pronounced in "fine condition" by the Hartford physician. It was also a great joy to me that my eyes became stronger. After I had been reading a week I could read easily the small type at the head of the chapters, a thing which was seemingly impossible when I began to read your book. My eyes were painfully sensitive to strong light, but that and other troubles have all passed away.

I read Science and Health in February, 1907, for the first time. I was deeply touched with your great love for mankind and with your marvelous patience in writing this book. I finally found the key-note to my healing in these words on page 152 of Science and Health: "Truth has a healing effect, even when not fully understood." Dear Mrs. Eddy, you have given us so much! and in return we can only give you our love and gratitude.

Sincerely,
CAROLINE W. MOESER.

THE LECTURES.

LECTURE IN THE MOTHER CHURCH.

The regular semiannual lecture on Christian Science given by The First Church of Christ, Scientist, in Boston, was delivered on Thursday evening, Oct. 22, by Bliss Knapp, C.S.B., member of the Christian Science Board of Lectureship. The spacious auditorium of The Mother Church was filled to its utmost capacity at an early hour by an audience which included a large number of those who were manifestly hearing for the first time an authoritative statement respecting the teaching of Christian Science. The lecture was listened to with that unflagging attention which evidences the liveliest interest.

The lecturer was introduced by Judge Clifford P. Smith, First Reader of The Mother Church, who spoke as follows:—

In behalf of the officers and members of this church, I extend to you a cordial welcome. The presence of this vast audience proves that many persons are making inquiries concerning the Principle and practice of Christian Science. Logical and orderly inquiry into the truth and value of any discovery or addition to human knowledge, necessarily includes hearing of it as presented in the affirmative by some qualified person. The affirmative side of a question can seldom be learned from one who maintains the negative. If Ferdinand and Isabella had not listened to Columbus, but had heard his propositions only as presented by those who did not believe in them, they would not have profited by his discovery. Therefore, inquirers who attend the lectures given under the auspices of this church pursue a logical and orderly method of inquiry. What Christian Science teaches and what it does for humanity is best set forth in the Christian Science text-book. For the benefit, however, of those who wish also to see and hear a personal witness, this church provides semiannual lectures by members of a Board of Lectureship, which is composed of men and women who can speak with actual and adequate knowledge. Such is the present occasion; and I can assure you that the speaker is well qualified for his subject. It is therefore with much pleasure that I introduce to you the lecturer, Bliss Knapp.

FITCHBURG, MASS.

A large audience assembled in City Hall yesterday afternoon [Oct. 18] to hear the address of Bicknell Young of Chicago, and all seemed to be fully and deeply impressed by his enunciation of the beliefs of the true Christian Scientist. The gathering also had further interest and significance, introducing as it did to a Fitchburg audience Rev. George W. Solley, formerly pastor of the Unitarian church at Winchendon, who has recently embraced the Christian Science faith. F. D. Tuttle, First Reader of First Church of Christ, Scientist, of this city, presented to the audience Rev. Mr. Solley, First Reader of the newly-formed Christian Science society in Keene, N. H., who is soon to locate in Fitchburg, and who spoke by way of introduction to the lecture in part as follows:—

The world is sick of fads and fancies, of imitations and shams. It is alike restive of a pompous authority and a tinseled ecclesiasticism. It wants reality; it will have the truth. The world wants religion; it wants a religion which is both vital and personal, and which meets and covers every human need. Christian Science has just passed through an era of misrepresentation and persecution, surpassed only by that dealt out to Christianity during its first three centuries in pagan Rome. No slur has been withheld from it, no stone has been left uncast, but it has come forth bright and shining. According to history the era of persecution is always the era of growth and progress, and to Christian Science has come a growth almost unparalleled in history. Men and women from the highest walks in life eagerly seek its teachings, our two leading universities have recognized its philosophy, and thousands from the depths of sin, sickness, and despair have felt its life-giving power. Christian Science seems now to be passing from its era of persecution to one of triumph and power.

For myself, I came into Christian Science because it was vital and real. It dared to say of God: He is All! After being in active religious work for twenty years, and after making a special study both of our decayed New England country towns and our city slums, which are a direct result of the materialistic life of to-day, I came to the conclusion that only a new spiritual vision and a powerful religious incentive could ever change those conditions. Present-day religious methods are largely palliative; they touch symptoms, but do not reach the cause. Like every earnest minister, I felt that we must have something which reached the cause of sin, disease, and misery. Here are sin and wrong conditions in society, and disease and unbearable things without number. What have you done for them? What are you going to do for them? In Christian Science we have a distinct remedy, a remedy which reaches the very root of the trouble. I came slowly into Christian Science. I tested it at every point, and I can best give its effects upon me in the words which a man from New Hampshire's hills said about a neighboring family who had come into Christian Science: "If what has got hold of that family and changed them is Christian Science, then I want it; every one ought to have it; it's the best thing in the world."

Friends, it is to present to you this best thing in the world, this great spiritual vision of the twentieth century, which presents the all-power of God to meet every human need, that we have this lecture here to-day.

Fitchburg News.

EXETER, NEB.

Exeter's commodious Auditorium was well filled Sunday afternoon [Oct. 11] to hear Francis J. Fluno, M.D., of Oakland, Cal., lecture upon the doctrines of Christian Science. Dr. Fluno was introduced to the audience by Hon. J. N. Cox, who said,—

One of the new thoughts of the present age is "Christian Science." A large and fast increasing portion of the intelligent men and women of this country pronounce it good, and their daily lives bear witness to it. This warrants our careful consideration of the subject.

Fillmore County News.

LECTURES AT OTHER PLACES.

Waukesha, Wis.—Bicknell Young, Sept. 20.

TESTIMONIES OF HEALING.

In sincere gratitude for Christian Science, which has proven so beneficial in healing all the ailments that have been presented for adjustment, both in my wife and myself, I send this grateful acknowledgment. Mrs. Eddy has given to the world a method by which it can reclaim the gift that was so bountifully bestowed upon those present in the age when the Master taught the doctrine of true Christianity,—a truth that was to remain forever, to bless all succeeding generations. Words seem inadequate to express fully my gratitude for the healing that has been brought to myself and wife, and for the spiritual uplifting which has come to both of us,—that of constant ascendency, every hour raising us higher in thought and realization of God's spiritual creation. Through Christian Science we are reaching an altitude of thought which gives us the true understanding of Life, Truth, and Love, thereby lifting the curtain of perplexity and doubt and allowing us to peep into the vestibule of man's divine heritage, "dominion," with an occasional glimpse at the beauties of its promised realization.

Through Christian Science my freedom from bondage to the following ailments has been gained, and I have been perfectly healed of the tobacco habit of forty years' duration, the wearing of glasses for about eighteen years, rheumatic trouble, etc. My wife was healed of a malady which had baffled the skill of physicians, and each day she seemed to be growing worse under their treatment, with no encouragement for any result other than a gradual disruption of her physical health. Not until Christian Science was brought to her aid was she released from bondage, and only a very few treatments were required to restore her to a normal condition, this truth effecting her complete recovery.

With the understanding that there is but one Mind, and that this Mind produces only what is good, we learn the falsity of mortal belief, and this establishes confidence and banishes fear. We then naturally cling to the divine laws which reveal to us God as the only creator,—omnipotent, omniscient, and omnipresent,—our only refuge; and realize that the Christ-idea is the only way to peace and harmony, and a release from all mortal limitations. We are therefore grateful in the highest sense for the understanding of Christian Science, which enables us to meet temptations with the spirit of Truth, which quickly dissipates their seeming force and proves the unreality of all evil. Our greatest desire is that we may each day add to our usefulness in the field of Christian Science, devoting ourselves strictly to its teachings, that our lives may attest our sincerity.

ELI S. WILLIAMSON, Buffalo, N. Y.

Feeling so very grateful for what I know of Christian Science and its benefits, it gives me great pleasure to write of some of my experiences as a mother, hoping thereby to help other mothers who may be situated as I have been. When our two children were quite young, we lived in a town where there were no Christian Science practitioners, and feeling that we were young in Science, and not sufficiently advanced to help ourselves, we thought it best to telegraph to a distant city for the help needed. Upon several occasions we had, to mortal sense, very alarming conditions to meet, but they were all promptly overcome in Science through absent treatment. When our little boy was only a few days old, he seemed to be very ill. We immediately telegraphed for Christian Science treatment, and even before we had received a reply, we noticed a very great change for the better, and by the next day the child had entirely recovered. When our little girl was about six months old she contracted a severe cold and had a high fever. When she seemed to be growing rapidly worse we telegraphed for help, which was about one o'clock in the afternoon. For a while there seemed to be no change in her condition, but in the evening she began sleeping peacefully, and next morning was much better. The third day she was restored to her normal condition. I would like to tell how quickly a case of croup was overcome a short time ago. Upon retiring one night, our little girl was coughing constantly and had very alarming symptoms. At midnight we had to telephone to a practitioner for help, and fifteen minutes later everything was quiet, and all asleep. The child did not arouse any more until five o'clock, when she had a little coughing spell, but soon went to sleep again; and she has had no return of the ailment since.

I realize more and more each day that there is but one source of supply—which is all sufficient for our every need—and that this source is God, good, omnipotent and omnipresent Mind. I am indeed grateful for the new light that has come to me through the works of our dear Leader, Mrs. Eddy.—MRS. E. P. WOODFORD, Baltimore, Md.

I am truly grateful to be able to add my testimony to those of others who have been so wonderfully helped through the understanding of the blessed truth. Christian Science was brought to my notice over four years ago. I had been suffering from throat trouble for a long time, and the doctors had done everything in their power to relieve me, but the trouble would return. Finally, through the advice of a friend, I called a Christian Science practitioner, and after the first treatment I was healed. I had also suffered from stomach and bowel trouble, headaches, and an eruption. All of these have been overcome through the understanding of divine Love. I also wish to say that I had used tobacco for a long time, but after my first treatment I was freed from that filthy habit.

For these, and many other demonstrations of the power of Truth which have been made in our family, I am most thankful to God. I am also grateful to our Leader, Mrs. Eddy, for this glorious truth which makes free.

W. B. WARNER, Chelsea, Mich.

I have desired for some time to send a few words of gratitude to our periodicals, and will delay no longer. I am thankful for Christian Science for many reasons, some of which I will give. Christian Science found me trying to serve God as a blind leader of the blind. I was filled with the fear of death for myself as well as for others. I see now that I did not know God, for God is Love and "perfect love casteth out fear." To know God is life eternal, and I am thankful to have the privilege of living in the light of the Christian Science gospel. I have been lifted out of sorrow, and I feel sure, though I have been severely censured by loving relatives and friends for entering this new-old way, that I have been able to help them, whereas I might otherwise have been a care and burden.

I have experienced healing through Christian Science on several occasions. In the winter of 1907 I was to all appearances quite sick with a heavy cold. Our family physician was very much worried about me, as were also my relatives, who thought I should be taking material remedies, as I had symptoms of serious lung trouble. I tried to overcome fear for myself, but as I was suffering very much, I thought I had better have help; so I wrote to a practitioner for absent treatment, as there were no Scientists near me. On the day my letter reached the practitioner I began to be relieved, and was soon healed. I did not take any medicine at that time, nor have I taken

Digitized by Google

any for the past eight or nine years. At this Easter season I am thankful to have a clearer understanding of the resurrection,—that great awakening to a knowledge of the true man as the image of God, Spirit, which enables us to worship God "in spirit and in truth."

I read every word in our periodicals, and wish to thank the editors and all who contribute to them, and above all our dear Leader, who has opened the door to this happy way to health, holiness, and heaven.

AGNES WALKER, Mitchellville, Md.

It is now almost twelve years since I first became interested in Christian Science. In the summer of 1896 I was entirely healed of a chronic ailment, then of twenty years' standing and for which I had been unsuccessfully treated almost continuously during all that time, not only by physicians of this city, but for about three years by a specialist of excellent reputation in a neighboring city. Although, at times, my condition seemed to be improved, such relief in all cases proved to be but temporary and was soon followed by a return to the earlier difficulty, often in a more aggravated form; and no hope whatever was held out to me by the physicians of their ever being able to effect a permanent cure. When I had become wholly discouraged, and had concluded that my future life was to be at best only a continual term of suffering and discomfort, I was induced to try Christian Science, about which I then knew nothing whatever, and I was very skeptical in regard to its beneficial effects. The results have been gratifying to me in the highest degree, for I am now in the full enjoyment of excellent health. At first my healing was slow, but it has been effectual and complete.

Since being healed as above related, I have occasionally had slight ailments, all of which have yielded promptly and surely to Christian Science treatment; and for all my healing I am truly grateful, and for the truth as interpreted by Mrs. Eddy in her writings and teachings.

ALICE C. DENTON, Atchison, Kan.

In November, 1907, my son was taken with distress in his stomach and bowels. A doctor was called, and he diagnosed the case as a dreaded fever and said that he considered him a very sick boy. He called again before night, saying that all we could do was to watch and wait, and that the fever must have its usual run of fourteen or twenty-one days. After ten days of medical treatment the case was given to a Christian Scientist, and the boy was healed of the fever in a very short time, and by absent treatment. I immediately commenced giving him solid food without any bad effect, and in a short time he was out on the street, with all trace of his sickness gone except loss of flesh. I thank God for divine Science, which helped us in this hour of trouble.

MRS. H. G. RIDBY, Auburn, Me.

It is now over five years since I came into Christian Science. Up to that time I had suffered almost incessantly for at least fifteen years with distressing stomach trouble. Only those who have passed through a similar ordeal can realize what it means to be healed of it. All the time I was taking medicines from the most highly recommended physicians, but was gradually growing worse, until my condition was such, on many occasions, that when my day's work was done I would place my tools carefully in my tool-chest, feeling as though I would not be able to return to work or use them again. This brought me to a realization that something must be done, but what to do or try next I did not know, until a friend came to me and told me of healing through Christian Science and advised me to try it. This I finally decided to do, and was healed after taking a few treatments.

Words cannot express my gratitude to God for this physical healing, also to Mrs. Eddy for the teachings in "Science and Health with Key to the Scriptures," which enable us to understand God and to demonstrate the truth for ourselves. The spiritual understanding we derive from the study of this wonderful book is indeed priceless.

YOST S. ALLEN, Colorado Springs, Col.

[Translated from the German.]

The lips say what the heart feels! My heart is filled with gratitude for Christian Science and I must give expression to it. Through the teaching of Christian Science I have found a peace which no mortal could give me.—a peace obtained only through the uncovering of hidden sins, and through the teaching that divine Love does extinguish all error. When we thus overcome we gain a peace of mind which the world can neither give nor take away. I have received the greatest blessings through the study of "Science and Health with Key to the Scriptures" and Mrs. Eddy's other works, as well as *Der Herold*, the *Sentinel*, and the *Journal*.

But not I alone have found this happiness; my children are likewise enjoying the blessings. Two children have been healed of bronchial and asthmatic attacks, after all medical aid, an operation, and a change of climate from central Germany to the far West in the United States had failed to effect a cure. This statement will be still more appreciated when I add that we had lost our twelve-year-old boy three years before. The physician who was consulted, an experienced and conscientious man, had declared that the boy's heart was too weak through the frequent attacks for him to recover. After that another acute disease set in, and there seemed to be no strength to rally from an operation. The terrible anxiety and discouragement which overcame me every time such attacks appeared, have now left me. Peace and assurance have entered in, and I know that my children are safe when governed by divine Mind. Smaller ailments have vanished in a short time, so that the children did not have to neglect their school work. They get their lessons better and more easily by knowing that God is everywhere, and ever ready to aid when His help is sought.

These are but a few of the most important demonstrations since I learned of Christian Science in July, 1907. I never understood our German domestic blessing, or motto,

It is my greatest desire to grow daily into a better understanding of Christian Science.

FRAU BERTHA MENSING, Portland, Ore.

I heard of Christian Science about five years ago, after a general breakdown and having tried all that physicians could do for me. At the time I felt that unless I received aid from some source, I could not hold out much longer. My healing was slow but absolutely sure, and here I wish to say a word of encouragement to those who are waiting a little longer than they had hoped, for release from pain and suffering. "With God nothing is impossible," and although the healing may seem slow, it will surely come. During these years I have had many beautiful demonstrations of the power of divine Love to overcome sickness. A serious throat trouble, with high fever, was cured almost instantaneously; also another illness, and a badly injured ankle were healed in a remarkably short

Digitized by Google

time. A very painful growth on the foot, the inflammation reaching up to the ankle, was perfectly relieved in three treatments. A disease of the gums which dentists claim to be incurable, and which had been troubling me considerably before I became interested in Christian Science, was entirely healed by reading the text-book.

For the many physical benefits received, I am truly grateful, but I cannot express in words my gratitude to God for the spiritual blessings which have come to me through the understanding of this truth, the coming out of darkness into light which has been my experience. Whereas God was formerly but a name to me, I realize now that "God is our refuge and strength, a very present help in trouble." I wish to express my deep gratitude to Mrs. Eddy, whose understanding of God has enabled her to give to the world that priceless book, "Science and Health with Key to the Scriptures."

LILLIE MARCUS, San Francisco, Cal.

Christian Science is to me an ever-present help. It is a rod and a staff, with the aid of which I am ascending the path of life and overcoming the discords of sense, and I wish to express my heartfelt appreciation for the spiritual understanding I am attaining through the study of the Christian Science text-book, "Science and Health with Key to the Scriptures" by our beloved Leader, Mrs. Eddy. I am a traveling salesman, and the success with which I have met in business, since coming into Christian Science, is scarcely conceivable by any save Scientists. Notwithstanding the so-called money panic, my business is very good. It is even better than last year, and I attribute this fact to my knowledge of Christian Science, wherein I learn that divine Principle governs all things harmoniously; and because all honest business belongs to God, it must be and in reality is always good. I have also learned that there is never failure, but always success in divine Love, whose supply for human need is ever abundant. Our privilege and duty is to realize that business is not governed by the laws of mortal belief but wholly by the law of divine Mind. "In Science, divine Love alone governs man" (Manual, p. 40), and man, reflecting divine Love, knows no lack.

I have had many physical healings since coming into Christian Science, and many of these demonstrations have been made without the aid of a practitioner. One ailment from which I suffered had required two months of medical attention before I got relief, and then I was not

I am most thankful to God, the divine Principle of all real being, and to Mrs. Eddy, our beloved Leader, who has revealed this truth to us.

JOSEPH S. GLICKAUF, Chicago, Ill.

[Translated from the German.]

Years have passed since my sister and myself became convinced of the truth of Christian Science, and we have found therein satisfaction and help. I wish to relate an experience which I had five years ago. In calling on an acquaintance I tripped in going down-stairs, and fell down quite a high flight. My sister, who was with me, became frightened, and hastened to help me. I rose with difficulty, suffering severe pain, for I felt that my knee was badly hurt. As this occurred in Waldhausen, where we could not procure a carriage, I managed with my sister's assistance to reach the nearest street-car, and went to a Christian Science practitioner, who gave me treatment immediately.

After the second treatment the nervous chills vanished, and I felt better. I received absent treatment for two weeks; then I went to the practitioner and walked a long distance. No diagnosis was made, but I felt that my knee was seriously injured. My sister told me that it was terribly swollen and that she would have thought my condition critical had I been in the care of *materia medica*. I had present treatment for a few weeks longer, after which all pain and swelling vanished; I did not spare myself during the time, but attended to my household duties as before the occurrence, although I did this at first with difficulty. I am thankful to God for Christian Science, and that I was healed so soon.

N. NIETHE, Hannover, Germany.

I wish to express my gratitude for what Christian Science has done for me and my husband, for it has helped us in a great many ways. When I was brought to Christian Science I was a great sufferer from stomach, nervous, and kidney trouble. I could not eat anything without distress. At the time we called in a Christian Science practitioner I was living on dried bread, and I could not sleep at night; but, thanks be to God, I can truthfully say that I have not missed a meal at the table or a night's sleep since I was treated in Christian Science. My healing was instantaneous! It is a great comfort to know the truth, and to know that God never commands us to do impossible things, as we once thought; and that Christ Jesus, the Wayshower, did not do his mighty works merely to prove that he could do them, but to show us that we, too, could do them.

Christian Science reveals man's divinely natural ability to do the works which Jesus did and to follow in his footsteps. It found me too miserable for words to express. I had become dissatisfied with everything,—the world, and the people in it. I felt that God had forsaken me, and I wished that I might die and leave it all; but, thank God, the light dawned on me, and brought me to know that God is Love and nothing less, and that everything He made is good. It is a little over a year since I took up Christian Science, and I can truthfully say it has been the happiest year of my life; such sweet comfort and contentment. What wonder, then, that Christian Scientists love their religion and the dear woman who was able to give it to the world.

MRS. GEORGE MORTIMER, Austin, Minn.

It is with deepest gratitude that I tell something of what Christian Science has done for me. I began the study of Christian Science after noticing the wonderful benefits my wife was receiving through treatment. I purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and after reading it a short time, I found that I had been healed of kidney trouble. I also had a chronic cough, for which I had been treated for thirteen years with various kinds of material remedies, but it was gradually growing worse, and seemed so alarming to me, with my little understanding of the truth, that I decided to call on a Christian Science practitioner for help. I did so, and was healed in a very short time.

Before coming into Christian Science I indulged in intoxicating drinks and was very profane. These and many other sinful habits have been overcome through this truth. For the many benefits which my family and myself have received, I am truly grateful to God, also to our Leader.

EMMET GIBSON, Louisville, Ky.

While reading some testimonies in the *Sentinel* the thought came that I ought to acknowledge what Christian Science has done for me and mine. Six years ago this

Digitized by Google

truth came as "a lamp unto my feet" in the healing of my little girls. I bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and began to search for the truth that makes us free. In a very short time afterward I was cured of chronic throat trouble, for which I had been treated medically to no avail. Our little girl, aged five, was kicked on the head by a mule and seemed to be very seriously injured, but none of the bad effects that usually attend such cases remained with her. I have seen many complaints overcome through the understanding that God is All-in-all. We have a little boy, who was born after Christian Science came to us, and he is a cheer to us all. It is a joy to know that God is an ever-present help. I never want to go again over the dark road of bygone days,—the days before the message of Truth and Love came to me through the understanding of the Bible as illumined by Science and Health. I had laid my Bible aside, as I got no consolation out of it—I could not understand it, although I was raised in an orthodox church. I feel truly grateful to Mrs. Eddy for the wonderful gift of her untiring devotion to all mankind.

EULA V. POWELL, Fort Davis, Tex.

I have been so greatly benefited by the testimonies published in our periodicals that I feel it a duty to forward mine, hoping it may be helpful to others. When our little girl was fourteen months old she fell from the porch, striking on her head. She was unconscious when I picked her up, and I ran to the house of a neighboring Scientist, asking that she help me in realizing the truth for her. For a time my fear was greatly calmed, but later, when a serious injury to the skull was discovered, I called upon a practitioner, asking her to take the case. The Lesson-Sermon for the week was "Substance," and through the help received therefrom the true substance was realized, and within a week the fracture was perfectly healed.

Our boy, when four and a half years old, was treated by a Christian Science practitioner for the habit of sucking his thumb, which he had indulged since babyhood. During these years we had tried every material means of which we heard, but to no avail. After a few treatments he was completely cured of the habit. He was also instantly healed of a very serious illness about four years ago, through absent treatment. We feel most truly grateful to our beloved Leader, Mrs. Eddy, for this truth, and hope to show our gratitude by our lives.

MRS. EDITH L. GIFFORD, Oakland, Cal.

Two years ago I knew nothing about Christian Science. At that time I was suffering from stomach trouble. For two years I had been trying to be healed by the use of material medicines and following the physicians' advice to refrain from eating various kinds of food; but notwithstanding my efforts, I became no better. I could not eat food nor even drink cold water without suffering. At this time I met a friend, a well-known business man of New Haven, and in the course of conversation I told him my tale of woe. He then told me of his great interest in and appreciation of Christian Science, but although I was interested, I was not quite ready to take up this new treatment. Well do I remember my friend's last statement at that time. He said, "When you get tired of doctors and medicines, come and see me again."

I kept on faithfully with my medicine about a year, then I was ready to return to my friend and ask for Christian Science. I had paid quite a sum of money for medical treatment, and my friend, to test my sincerity (as I afterwards learned), asked me if I would be willing to pay one hundred dollars to be cured. I replied that I would. He sent me to a practitioner, to whom I applied for treatment, and in answer to my question I was told that I could eat anything I wished. I discontinued the use of material medicine, and from that day to this I have eaten what I desired without suffering. I was treated two weeks, and instead of paying a hundred dollars I paid ten.

Through the study of Christian Science I have been able to demonstrate the healing power of Truth. For my physical healing, for my new understanding of God, and for all the blessings of Christian Science, I am grateful to God, and also to Mrs. Eddy, the messenger of Truth to this age.—HENRY F. BAUMGARDT, Highwood, Conn.

I would like to give my testimony so that some one perhaps may be helped on the way to health and happiness. Through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and the help of a dear practitioner, I have been healed of a serious throat trouble which appeared periodically, and have been made a healthy, happy woman at fifty years. I have also been healed of the sense of poverty, and know that as I love my neighbor as myself, and do unto others as I would have them do to me, which is keeping the commandments of God and the tenets of our Church, God will provide me with all I need every moment, even as our dear Leader has told us, on page 307 of her "Miscellaneous Writings."

MRS. JULIA TODD, Chicago, Ill.

In August, 1907, our little girl was taken very ill with a fever. We did all we could, and called in a doctor who was highly recommended; but his treatment did not help her, and she was steadily growing worse when we discontinued medicines and called in a Christian Science practitioner. The truth as thus manifested saved our child, and I cannot say enough to express my appreciation of Christian Science, but I am glad to give testimony to what has been done for us.

MRS. ARTHUR GRISDALE, Fort Wayne, Ind.

[Written for the *Sentinel.*]

BETHESDA.

EVELYN GAGE KNIFFIN.

Dost thou wait beside Bethesda's pool,
  Heavy laden, sick, and worn with care?
When its waters by the angel moved,
  Wert thou not among the blessed there?
Hast thou waited many lingering years,
  From each weary dawn till close of day?
Know ye, then, thy vigil now is o'er—
  Christ, the blessed Master, comes this way!

No more need'st thou wait the angel's spell,
  No more need'st thou watch with longing eyes;
Truth entreats thee, Wilt thou not be whole?
  Christ is here to say to thee, Arise!
Banish all thy dismal doubts and fears,
  Smooth the lines of suffering from thy brow;
Wait no longer till the waters move,
  Know that God's accepted time is now!

See God's man, the perfect thought of Truth,
  Rise above the earth-clouds dark and drear!
When the light of Love for thee shall dawn,
  Pain and care, like mists, shall disappear.
Stretch thine hand and take the offered gift,
  God has waited long to give it thee.
From thy dreams of sin and sickness wake,
  Know the truth, and be forever free!

FROM OUR EXCHANGES.

[*The Congregationalist and Christian World.*]

The only liberalism that is worth while is that which frees the spirit for the fuller play of spiritual forces. The Revelator saw a "sea of glass, mingled with fire," which in a parable is that exceedingly rare combination, intellectual clarity with moral passion. A good deal of orthodoxy is all fire, all passion. And a good deal of liberalism is all glass, rationalism and nothing more, nor always clear at that. Indifference is worse than dogmatism, at least it has less life in it. Give us "neither poverty nor riches," neither the intellectual penury of men who have never learned to think, nor the burdensome intellectual opulence of men who can only think and are never satisfied with their thinking, and have lost sight of the great truth that "out of the heart are the issues of life." Liberty is nothing without life, and life is nothing without love, and love must ever find itself supremely in the cross of Jesus Christ.

[*The Universalist Leader.*]

When Jesus went about his public ministry he made his appeal directly to the conscience of his hearers. He saw how the ceremonial religion of his day had obscured the profounder facts of the spiritual life, therefore he swept the whole fabric aside with unceremonious brevity. He reached out directly to human hearts. He spoke his simple word from his great soul as man to man and spirit to spirit. He proclaimed no new ethics. He formulated no new theology. He set up no cult. He elaborated no ritual. He consecrated no sacerdotal customs. He uncovered his soul. He poured out his deepest convictions. He laid hold of his followers with the grip of a great sympathy. He went about teaching, helping, healing. At every step, under every circumstance, he looked people squarely in the face and pleaded with them to trust in him, have faith in him, follow him.

[*The Examiner.*]

It is always profitable, but may not always be comfortable, to know the truth about matters that fall into the realm of our environment. It was well that our fathers of the long ago had visions, given them by inspiration of God, of the coming blessedness of the times of the Messiah, and undoubtedly it was profitable for them to have the discipline of the wilderness and of the waiting. There was preparation needed for the new home, as surely as there was a new home needed. Truth is light, and light simply makes manifest the things with which we are concerned, so that with open eyes we may do our work, and not be left to groping while we are at it.

[Willard H. Hinkley in the *New-Church Messenger.*]

What we need to learn, at first, before we have learned to exercise unselfish love, is that the law of recompense is certain and unfailing in its operation; we need to realize not only that the exercise of love to another brings a heavenly reward, but that with the evil man the exercise of hatred brings the evil back again to him who indulges in it. Virtue brings its own reward and evil brings its own punishment. I cannot do any wrong without suffering the consequences of my own doing.

[*The Christian Register.*]

The world of our day, which is so splendid in its intellectual earnestness, in its eager pursuit of knowledge, is looking to the Church to adjust its theology to the intellectual life of the time, to interpret this new world in terms of the spiritual life. Honest, fearless, and clear thinking on matters affecting man's ethical and spiritual life,—this is the duty and function of the Church.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All correspondence and orders relative to membership and church tenets should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PUBLISHING HOUSE BUILDING FUND.—Contributions to the Publishing House Building Fund should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

Quarterly covers in black seal leather for sale at the following prices:—

Regular size, 5¼ x 7¾, $1.25 each or $12.50 per dozen.
Pocket size, 4½ x 6½, $1.15 each or $11.00 per dozen.

Leather cases for the pocket editions of the Bible and Science and Health are now made slightly wider in order to provide space also for the trimmed *Quarterly* with or without cover. Price, $1.25 each.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

Terms of Sale, Postpaid to any Address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, Mexico, and Cuba, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

PAMPHLETS AND REPRINTS

Upon the occasion of the visit of the American fleet to Japan the President sent this message to his majesty, the Emperor of Japan:—

"Through the American ambassador I wish in this personal manner to extend to your majesty the thanks of the American people for the signal generosity, courtesy, and hospitality with which the American fleet has been received on its visit to Japan. The people of the United States have been deeply touched by this fresh and striking proof of friendship and regard. The officers of the fleet report that hearty though their reception has been everywhere else, it has nowhere been more hearty, nowhere more hospitable than in Japan. On behalf of this nation I desire to express my acknowledgments to you and to say how deeply this nation appreciates this fresh proof and seal of the ancient friendship between the two peoples. Your message to me was not only deeply appreciated by me, but when published gave a lively satisfaction to all the citizens of the United States."

A report from Consul General Anderson at Rio de Janeiro states that a combination between the producers of cocoa in the several countries in which the bean grows is now in the course of formation, according to announcements made in Brazil in furtherance of the plan. The production of cocoa in the world at large is generally placed at about 340,000,000 pounds, of which in general Brazil produces about one sixth, with San Thome, Ecuador, Santo Domingo, Trinidad, and Venezuela following in the order named. Of this production the United States consumes about one fifth.

The signal service wireless stations in Alaska have removed all doubt as to the feasibility of sending wireless messages overland. Fort Gibbon, several hundred miles inland, is receiving messages from Nome and St. Michael, five hundred miles distant, with many ranges of hills between the two stations. A message sent by the steamer Northwestern eleven hundred miles west of Cape Flattery to United Wireless station at Cordova was copied. The message traveled about twelve hundred miles in an air line over two ranges of mountains, capped with snow.

The abstract of the reports of the condition of the 6,853 national banks under a call issued by the comptroller of the currency for statements as of Sept. 3, 1908, shows that since Feb. 14, 1908, the loans and deposits in the national banks of the country have increased to $4,750,612,731, a difference in a little over seven months of about $428,000,000, and during the same period total resources of national banks have increased $631,000,000.

A total of $1,297,263,420 in new money was printed and circulated by the Bureau of Engraving and Printing during the last fiscal year. The output was larger than in any previous year in the bureau's history. The $500,000,000 issue of national currency notes required the alteration of nearly ten thousand engraved plates. The bureau also prepared and delivered 77,666,333 sheets of postage stamps.

The race for the Vanderbilt Cup at the Long Island Motor Park was won last week for the first time by an American-built car, the 90-horse-power Locomobile racer. The driver was also an American. The 258.06 miles were covered in 4 hours, 48.2 seconds, and established a new American road-race record of 64.06 miles per hour. The second car, an Italian car, the Isotta, was less than two minutes behind.

The Central Trust Company of New York, as trustee for the bondholders of the Cleveland Railway Company, has filed a suit in the Federal Court praying that a receiver be appointed for the Municipal Traction Company, the holding company now operating the lines of the former corporation in Cleveland on a basis of a three-cent fare.

The fortnightly bulletin of the American Railway Association shows that the number of surplus freight cars on the lines in this country and Canada on Oct. 14 was 115,036, a decrease of 18,756, as compared with the number on Sept. 30.

It is said that the governor of California is considering a recommendation to be sent to the next Legislature favoring an issue of bonds amounting to $18,000,000 for State roads.

The election for president in Cuba occurs Nov. 14. The electoral college will meet one hundred days later and will consist of one hundred and seven electors.

Postmaster General Meyer proposes to introduce penny postage to New Zealand.

International.

The autumn session of the third Russian Douma was opened Oct. 28, and the sittings of the Council of the Empire began the same day. This is the first time a Russian Parliament has come to its second session. It is believed that the present Douma will be of greater service to the country than was either the first or second. A number of important reforms, which were in the committee stage in the preceding session, are now ready for immediate consideration in the lower house, others are far advanced, and a successful issue of these matters is looked for. Two prominent measures deal with the agrarian question, the law permitting the dissolution of the commune and the transfer of lands to individual ownership, and reform of the local courts among the peasantry.

The International Bureau of Central American Republics was opened last week in Guatemala City on the anniversary of Guatemala's independence by President Cabrera. The new bureau was established by a convention signed by a representative of the five republics at the Central American Peace Conference, held at Washington last winter. Its object is the development of the interests common to Central America.

The Chinese government set aside the sum of $280,000 to meet the expenses of entertaining the battle-ship squadron during its visit at Amoy, China, from Oct. 30 to Nov. 5. Amoy is a treaty port on an island of the same name, and has one of the best harbors on the coast. It lies opposite Formosa and is nearly under the tropic of Cancer.

A law recently promulgated in Italy provides for the expenditure of $107,000,000 on railways in the next sixteen years, in constructing nine hundred and twenty-two miles of new railroads as well as improving existing lines. The sum of $965,000 has been put at the disposition of the Italian government for the study of railroad problems.

A committee has been elected for the purpose of celebrating the tercentenary of Bermuda. The proposed program, which will occupy six days, commences April 12 next.

Industrial and Commercial.

There was little reflection of the so-called "hard times" in the tourist travel from New York this summer. Figures compiled up to Sept. 5 show that nearly seventy-seven thousand persons went out in the first cabins of the liners for England and the continent. All the steamships now departing have larger lists than at the same time last year.

The *Manufacturers' Record* says: Reviving optimism as to prospects for much needed resumption for railroad construction in the South is indicated in reports of preliminaries for the building of railroads in many parts of the South and Southwest.

The amount of coke produced in the United States in 1907 amounted to 40,779,564 net tons.

General.

Sven Hedin, the Swedish explorer, has just arrived at Simla, India, after extended explorations in Tibet. He started in December, 1907. A short distance from Karakoram Pass he turned due east and reached Aksai China Lake in January and after great hardships finally reached Shementso. Adopting the disguise of a mule driver he traveled with his party for two months through an unknown tract ending at Tongsto. From March 8 they traversed the northern edge of a great tract between latitudes thirty and thirty-two, stretching from his old route to the Brahmaputra, which was the great object of his journey. The explorers then proceeded due south, crossing several ranges running east and west, and passed the enormous ice mountain, known as the Shakangshan, on the east, from which point flowed a big river. Thence they crossed Ladang Pass into an open valley, and Bongda province, which no European had ever entered. Dr. Hedin discovered Lake Chunitso and followed its west shore for a day and first heard of the great Salt lake of Tabia Tsakha, a source of wealth to the government through the salt exports. Two more ranges were crossed and an open plain was reached which was bounded on the south by a mountain range two thousand miles long, stretching east and west. Snow and glaciers everywhere abounded. He discovered the continuity of this chain, which he crossed eight times at various points, naming it originally the Xinchan Tangla. He attempted the solution of the problem of the course of the Charta Tsanpo, a big tributary of the Brahmaputra, and found that its course has been wrongly marked on the maps and that it is fed from huge snow peaks, a lake being formed whence the river reached the Brahmaputra.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

[Frederick Dixon in *The World's Work* (English Edition).]

PREACH THE GOSPEL AND HEAL THE SICK.

It is no part of the duty of Christian Scientists to engage in uncalled-for criticism of those who are striving in their own way to ameliorate human suffering. In the first place, they possess, as so acute a reasoner as Principal Lindsay has recently admitted, "a superb faith" in Truth, which in turn entails a no less practical than theoretical reliance on that great saying of Gamaliel's, that the things which are the outcome of human wisdom will come to naught, but that those which are of God cannot be overthrown; and, in the second place, they have always before them as a warning the rebuke of Jesus to John, when the beloved disciple told him, "We saw one casting out devils in thy name, and he followeth not us: and we forbade him, because he followeth not us;" to which Jesus replied, "Forbid him not: for there is no man which shall do a miracle in my name, that can lightly speak evil of me." If therefore Dr. McComb and those who think with him had been content to accept the advice of Gamaliel, or to act on the command of Jesus,—that is, to preach the gospel and heal the sick in their own way, without staying to quarrel with their neighbors for not seeing eye to eye with them,—they might have found, as Lot found when he stood with Abram in the plain, between Hai and Bethel, that there is room in the world for all; but inasmuch as they have found it impossible to preach the gospel, as they understand it, without explaining that Christian Science is a perversion of it, or to heal functional disease without insisting that Christian Scientists cannot heal organic disease, it becomes necessary to examine their arguments, not for the sake of depreciating what they are doing, but for the purpose of correcting the misconception of Christian Science which they are engaged in promulgating.

It is a cardinal point of the teaching of the Emmanuel movement, of which Dr. McComb is one of the founders, that, unlike Christian Science, it is based "fairly and squarely" on the Bible. The moment, however, that you begin to examine this claim you are brought face to face with a method of Biblical exegesis which is on all fours with a theory for which Matthew Arnold contended, and which he termed "aberglaube invading." It is the theory that the miraculous element in the Gospels was one of gradual development, which, starting from cures that could quite reasonably be attributed to mental action, blossomed into the thaumaturgy expressed in raising the dead and walking on the water. That this is practically the position taken by Dr. McComb is manifest from his own categorical statement that spiritual healing, by which he means healing by suggestion, is limited to functional diseases, and that Christian Science never has and never will heal a case of organic disease. If this constitutes taking a stand "fairly and squarely" on the Bible, it must be a bowdlerized edition. Only the other day Dr. Shaw of Harley Street wrote a letter to the *Daily Mail* in which he explained that no doctor was justified in speaking of any disease as incurable, and that, though not a Christian Scientist, he believed in what he would regard as the essential tenet of their creed, and which he might sum up in the words, "The Lord's hand is not shortened, that it cannot save."

Dr. McComb does not seem very sure of that from any point of view. There is no record, he points out, that Jesus ever healed tuberculosis, typhus, or diphtheria. He admits that it is "reported" that he cured leprosy, which the medical men of to-day regard as incurable. "But," he proceeds, "here we must remember that in the ancient world two types of leprosy were recognized, the one curable, the other incurable;" and he goes on to suggest that "if we assume, for example, that this was the type of leprosy mentioned by all the first three Evangelists as having been cured at Capernaum, we can understand why the leper was permitted to come up close to Jesus and to mix with other people." It is to be feared that if we assume this we shall be forced to assume a good deal more, for it is obvious that if Christ Jesus walked on the waters and stilled the tempest, it is not the least likely that he would have been unable to cure the more malignant form of leprosy, and that if he could not cure the more malignant form, it is not in the least likely that he could have raised the dead.

The Gospel record is, indeed, sufficiently clear. Jesus healed "all manner of sickness and all manner of disease," functional or organic, and healed them without recourse to material means or help. Dr. McComb confines healing to functional disease, and only attempts that under the advice and with the cooperation of qualified medical men, and this he terms taking his stand "fairly and squarely" on the Bible. Jesus, however, not only healed the sick himself; he declared that those who believed on him should do the works he did: that is, he made the miracle the proof not in the least of a claim to divinity on his own part, but the test of the faith of those who professed to believe on him. The apostles accepted this test without question. An attempt has frequently been made to prove that Luke continued his medical practice after his conversion, and that he traveled with Paul as a sort of physician in ordinary. The suggestion, in reality, is ludicrous. That any of the little band which had witnessed the healing works of Jesus, or had worked with those who had witnessed that healing, should have had recourse to gall of red scorpions or tabloids of charred snakes' flesh is so unthinkable that Professor Harnack himself has written of "the beloved physician," that "his medical profession seems to have led him to Christianity, for he embraced that religion in the conviction that by its means, and by quite new methods, he would be able to heal disease and drive out evil spirits," and this method he boldly terms Christian Science.

The question consequently arises, Is there a Science of Christianity? Christianity is the religion preached by Jesus, and Jesus, as it has already been shown, made that

Digitized by Google

which has been termed the miracle the test of the understanding of his teaching, a test subsequently enforced by "the brother of the Lord" in the comprehensive phrase, "Faith without works"—theory without practice—"is dead." Science, in turn, is exact knowledge analyzed and demonstrated. Now the most exact knowledge possible is obviously the knowledge of absolute Truth, that is, from a Christian point of view, of God. This knowledge is that spoken of in the Epistles in a phrase translated, in the Authorized Version, knowledge of God, but which should, of course, more accurately be full, exact, that is scientific, knowledge of God; and it is significant that both the men who make use of the phrase, Peter and Paul, demonstrated this knowledge by raising the dead. A precisely similar statement, if we are to trust that great scholar and churchman, the late Bishop Westcott of Durham, occurs in the text of the fourth Gospel in the differentiation of absolute from relative truth by the use of two terms, both translated truth, but which should be respectively translated "the truth" and "truth." If, therefore, we are to accept the New Testament as an authority, there is a Science of Christianity. This, indeed, is so obvious that it has been truly said, "Christianity must be Science, and Science must be Christianity, else one or the other is false and useless" (Science and Health, p. 135).

In the article in the August *World's Work* Mr. Hart makes the claim, as he is quite entitled, that the Emmanuel movement is both Christian and scientific, but unfortunately he finds it impossible to do this without going out of his way to explain that Christian Science is neither. The grounds, however, on which he bases his claim are so remarkable that they are worth considering. The Emmanuel movement, he affirms, is "Christian in that it affirms the reality of sin, scientific in that it affirms the reality of disease." Now the Confucianist, the Hindu, and the Mohammedan affirm the reality of sin, and have consequently, so far as that goes, as much right to be regarded as Christians as Dr. McComb and his supporters; while the idealists deny the reality of disease, and, for that reason, have no right to be regarded as scientific.

The fact is that, so far as Christian Science is concerned, Mr. Hart is hopelessly at sea as to what is meant by the unreality of sin. From the standpoint of Christian Science, sin may be defined as the expression of all that is unlike God. This is casting the net much wider than is ordinarily the custom. It includes sins of omission as well as sins of commission, the things which have been mistakenly left undone no less than the things which obviously ought not to have been done. The man, for instance, who has been overtaken by disease as the result of flagrant sin is branded by the whole world as a sinner; but the man who is ill for any reason surely never could have been ill if that Mind "which was also in Christ Jesus" had always ruled in him. The Christian Scientist is the last person in the world to ignore or to excuse sin; he knows perfectly well that no human being is absolutely without it, and that "if we say that we have no sin, we deceive ourselves;" but he does not conceive that it is any part of his duty, in his struggle with it, to endow it with power, and, by describing it as real, to proclaim its indestructibility. If sin be real, sin is of God, and there is no possible way of escaping from it short of destroying some part of the knowledge of omniscience.

A precisely similar argument, of course, applies to disease. If disease is real, disease is sent by God. In such a case it is not only questionable Christianity to employ a doctor, who may be an agnostic, to destroy what God has sent; it is hopelessly unscientific. It reminds one of nothing so much as the famous effort of Dame Partington to sweep back the incoming tide with her mop. The sea advanced, Dame Partington retreated. She was excellent, says her historian, at a puddle, but she had no business to meddle with the elements. Mr. Hart describes Dr. McComb's method as "the fine and beneficent art of fooling the body into good behavior." Certainly if disease were real the description would be an admirable one, were it not that the process of fooling the inert matter known as the body must be somewhat difficult. There is, however, one serious drawback to healing planned on such a basis. It is that every period of fooling is followed by the inevitable moment of discovery, and that moment is by no means always a pleasant one for the culprit.

Having proved to his entire satisfaction by such means as these, that Christian Science is neither Christian nor scientific, Mr. Hart goes on to supply an additional proof of its infidelity in the fact that its adherents accept money for healing, and proceeds with undiminished urbanity to explain that the Emmanuel movement has no part in such "moonshine and charlatanry." Now every Christian minister and every Christian doctor accepts payment for his services, so that it is apparently only when the effort is made to fulfil the command of Jesus to preach the gospel and heal the sick, by combining the two, that the breaking point with Christianity is reached. Constituted as Western civilization is, it would be impossible for the Christian Scientist to travel from city to city and from house to house, taking up his abode with those whom he came to help after the manner described in the Gospels: "And into whatsoever city or town ye shall enter, inquire who in it is worthy; and there abide till ye go thence." *Autres temps, autres mœurs;* the Christian Science worker follows the custom of his country. His fees, which are always of the slightest description, disappear to the vanishing-point, as the necessities of his patient may require. But the suggestion that it is against the spirit of Christianity to accept them is contradicted out of the pages of the New Testament itself. "The laborer," Jesus said, "is worthy of his hire;" and Paul wrote, with exceeding plainness, to the church at Corinth the passage which concludes, "If we have sown unto you spiritual things, is it a great thing if we shall reap your carnal things?"

The real answer, however, to the critics of Christian Science, and the answer they are unable and never will be able to get over, is the rescuing through its healing of hundreds of thousands of men and women, not merely from disease and pain, but from sorrow and sin, from want and fear, and from despair. These people have not been fooled into believing that they are well and happy; they have experienced the healing of which Jesus spoke when he said, "If I with the finger of God cast out devils, no doubt the kingdom of God is come upon you." No man was ever fooled into "the peace of God, which passeth all understanding," and no man ever will be.

The process known by the name mental suggestion is not a recent discovery; all that there is novel about it is the attempt to confuse it with Christianity. It may be described as the claim of the human mind to the power to do good and evil; a claim familiar to every reader of the Old Testament, and described, in the words of the Jehovistic document of the Hexateuch, as "the fruit of the tree of knowledge of good and evil," the eating of which ultimated in death. It was a method fully understood by the magicians and sorcerers of the East, and it was to it that the Jews referred when they hurled at Jesus the accusation, "This fellow doth not cast out devils, but by Beelzebub the prince of the devils." The reply of Jesus stands as the Christian reply for all times, "Every kingdom divided against itself is brought to desolation; and every city or house divided against itself shall not stand. . . . But if I cast out devils by the Spirit of God, *then* the kingdom of God is come unto you." The *kingdom* of heaven never came to any man by mental suggestion,

Digitized by Google

and never will. If there was really any power in suggestion, evil would have become power, for it could be practised for evil just as successfully as for good. Fortunately evil is not power; the only true thing that can be said of it is that it is a lie, and the only semblance of power it can ever manifest is the power that seemingly results from being deceived by a lie.

The basis of spiritual healing is the fact that causation is spiritual and not material. Writes Mrs. Eddy, on page 207 of Science and Health, "The spiritual reality is the scientific fact in all things." As the world grasps this it will begin to understand why Mrs. Eddy has insisted that Jesus was the most scientific man who has ever lived. The miracle which was defined by Hume as "a transgression of a law of nature by a particular volition of the Deity," was to him the demonstration of the fact of spiritual law. Jesus knew more of law than any other man because he knew more of God, that is of Truth; and knowing more of Truth, he was able to demonstrate his knowledge more fully. "Heaven and earth," he said, "shall pass away, but my words shall not pass away," and his word was this: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind," and God is Truth as certainly as He is Life and as certainly as He is Love.

Nineteen hundred years after the ascension, when the materiality of the world seemed to have parted the seamless garment, and the church and the hospital stood on the opposite sides of the road, there came a woman pure enough to grasp what her Master had taught, humble enough to show it to the world, and selfless enough to stand amidst the passions her discovery had aroused. To-day, grudgingly and half-scornfully, the world is forced to admit that she has at least pointed it to a lost element of Truth; to-morrow it will admit she has pointed it to Truth itself.

ADJUSTING ONE'S SELF TO LIFE IN TERMS OF ETERNITY.

PROF. JOEL RUFUS MOSLEY.

A WRITER in a recent issue of *The Interior* says: "If a man does the will of the Father in heaven, nothing in his earthly circumstances can be wrong. This confidence is half a faith that the Father will compel circumstances to turn out favorably; half a faith that a man who lives for the Father can be happy under any circumstances."

May we not even go beyond this, and say that in Christian Science our confidence is based upon the perception that all things work together for good, and is the result of actual experience that no seeming evil has any terror for us if we trust the Father and do the best we know? Certainly all experience, as well as our highest spiritual insight, points to the conclusion that, through union with God and our own higher and real selfhood, the burdens of human life become so light that they are no longer burdens; and the trials are actually overcome, as well as mitigated, by the right attitude towards them. In the highest states of mind and in the finest life activities, we find ourselves happy under any circumstances; and the insight and love that can make us happy under adverse circumstances give us more power to shape our environment in harmony with our ideals. When we do our duty as we see it, we are happy, independent of external results; and as we follow the promptings and leadings of conscience, reason, and love, the results are also satisfactory.

The ability to rejoice in the midst of the most painful and trying external circumstances, and actually to shape the circumstances so that they result in good instead of evil, are necessary and complementary steps in the overcoming of evil with good. The perception and the conviction that make the good so vital, real, and all-inclusive that no seeming evil has any power to separate us from it, is a great step towards a victory over even the sense of evil; and the actual victory over any evil makes it easier to be of good cheer in the very midst of the battle with other evils. The non-resistance of evil, that is, the refusal to meet evil with evil, as well as the meeting of evil with good, aids in the destruction of evil. To suffer wrong and yet do no wrong, to suffer injury and to complain not, to be seemingly sick, or even to pass through the valley of the shadow of death, and to fear no evil, is a great step towards victory over the sense of sin, sickness, and death. To rejoice in good always robs evil both of its terrors and of its sense of existence.

Neither rebellion nor resignation, in their ordinary usage, is the highest attitude towards the experiences of life that do not satisfy our sense of good. What we want is the all-inclusive sense of God, of good, as made known in Christian Science, for this makes life sweet and joyous and wholly worth while even in the midst of the appearances of evil, and at the same time it enlists us in the active service of good, which gives us dominion over evil. If we become resigned to the evils of life, we fail to do our part in overcoming them; and if we fight one evil with another we become servants of evil instead of good. Christian Science makes it clear that we cannot destroy evil with evil any more than we can destroy darkness with darkness. Best of all, it reveals the fact that good is just as effective in destroying evil as light is in destroying darkness.

The perception that, in spite of all appearances, God is actually wise and kind and good and All-in-all, makes it possible to be happy under any circumstances, and at the same time inspires the finest efforts in the way of shaping one's environment in harmony with ideal conditions.

SUPPLY.

ANNIE M. PAYNE.

THE command of Jesus that we should seek "first the kingdom of God," has since his time been deprived of its full significance, owing to the fact that the rest of the verse has been practically rendered, "then seek all these things" instead of "and all these things shall be added unto you." As in a thousand other instances, until the Scripture is spiritually interpreted, *i.e.*, viewed in the light of divine Science, the elevation of Jesus' thought is not perceived. In this light we behold supply as the natural outcome of our understanding of Principle—an emanation from God having characteristics correspondent with its divine source. Let us look at some of these characteristics.

First, supply is spiritual. Quality is here indicated, a quality that is secure against adulteration or theft. Is not this a good reason for seeking supply through the divine concept and means, instead of the human? The business of the Christian Scientist is to demonstrate that good which of itself will take right forms—patience, perseverance, alertness, contentment, beauty, sufficiency, order, power, and so on. "Principle is imperative" (Science and Health, p. 329); and should the so-called Scientist sacrifice his sense of Principle in any direction in order to obtain more of this world's goods, he is bound to forfeit something of the quality of the true supply.

Second, the source of supply is infinite. This implies that exhaustless quantity which corresponds with the omnipresence of God. Think what this means—man is not only never without some good, but he actually possesses (reflects) at all times all good. We ought not, therefore,

Digitized by Google

to expect supply as we expect an eclipse or a comet, as something unusual and only to be repeated at long intervals, but as the daily sunshine, whose presence we know is blessing the earth, even at those times when clouds obscure its source.

Third, supply is never misdirected, but always meets the need. That would not be true supply which failed here, as Jesus forcibly reminded his hearers when he asked whether any father present would offer his son a stone in place of bread. Our mistake lies too often in thinking that our need is not supplied because mortal desire remains unfulfilled. To illustrate: If I am ready for a fuller sense of spiritual life, save that the desire to demonstrate material wealth is somewhat too accentuated, the real need will doubtless be first supplied; then that which through the greater spiritualization of thought will have become a safer gift. Suppose, on the other hand, that thought is less advanced, and, disregarding the true meaning of life, craves wealth for selfish pleasure; through will-power this may be secured, and later the real supply be gradually unfolded through those "proofs of God's care" (Science and Health, p. 66) which we call trials, until the heart is ready to obey, and to seek "first the kingdom of God."

We need fear no poverty of any sort when we take the right road. Supply is not under mortal control, to diminish or spoil its manifestation; nor can the flow of good be checked by adverse circumstances. The apostle James assures us that "every good gift . . . is from above," and the psalmist declares that "no good thing will he withhold from them that walk uprightly."

"THE EAR TRIETH WORDS."

ERNEST C. MOSES.

HUMAN language at its very best, and as best understood, is indeed but a feeble vehicle for the transmission of the truths of Christian Science to the human consciousness. Mrs. Eddy has often commented on the inadequacy of mere words properly to interpret or convey the spiritual import of divine revelation. In Science and Health (p. 349) she especially refers to the difficulty of expressing "spiritual conceptions and propositions" through the use of mortal language, and states the way whereby to elucidate the profound meanings of Christian Science. Students who have secured some understanding of this Science of God readily perceive the barrenness of language to measure and record the facts of its unlimited Principle.

For the practical purpose of regenerating material sense, our present understanding of Science must, however, depend in considerable measure on an enlarged understanding of the terms of the English language. For this purpose of human betterment there are systems of logic, rhetoric, and other modes of cultivation in the realms of thought-expression, which are relatively excellent approximations of true intelligence, and are available to the discriminating students of Christian Science. But in advance of and underlying all aids to mental cultivation, an expanding comprehension of the definitions and applications of words is of prime importance to study and demonstration. In fact, it is admitted by all progressive students of the Bible and Science and Health that no compilation dealing with the letter of intelligence is so essential to study and practice as a dictionary of recognized authority and standing.

All languages composed of words and their combinations are the products of the human sense, groping its way under the heavenly impulse upward to Mind, the sole creator, and source of all true intelligence. Such vehicles of thought have been slowly developed and brought into common use by a continual evolution in human circumstances and necessities. In many instances the former meanings of words have been so completely changed that present definitions declare the very opposite of significations common in the use of terms fifty or one hundred years ago. Again, many words are employed to signify two or maybe ten different things, conditions, or actions, and many different words are used to give various discriminating shades of meaning to the same thing or action. Consequently, in Christian Science, in which the infinite Principle of all true intelligence is brought nearer to human comprehension, and in which judgment is laid "to the line," and "righteousness to the plummet," there is more than ordinary necessity that words of important significance, used in the Scriptural writings and in Science and Health, should be well understood. A good dictionary, therefore, is not only designed to be, but is, an important factor in the upward trend of human intelligence, and it is especially of great value in Bible study, because it assists the student to interpret the varied definitions of any word employed to declare or qualify a truth, and thus to secure the exact meaning of any sentence of which the general import may at first seem to be obscure.

For instance, take the statement made in Genesis, "God did tempt Abraham," which according to popular interpretation is in direct variance with the statement made by the apostle James, "God cannot be tempted with evil, neither tempteth he any man." We turn to our dictionary, and find that the word "tempt" is first defined, "To put to trial, to test, try;" and the verse just quoted is there cited as an example of such a definition of the term. The same word is next defined as "to lead into evil; to entice," as declared in James: "Man is tempted, when he is drawn away of his own lust, and enticed." We thus quickly see, in the light of Science and its lexical explication, that what appeared to be a contradiction between Genesis and James is dispelled, and the responsibility for temptation is lodged where it belongs—with the carnal mind of mortal man, which does not "turn back the battle to the gate," but easily admits the enticing illusive thought. Do we not rejoice in the additional proof thus given, in every similar elucidation, of the scientific consonance of the Scriptures and of the eternal fact, revealed in Christian Science, that God is "of purer eyes than to behold evil," and cannot "look on iniquity"?

Instances without number could be cited in illustration of the necessity for that scientific thoroughness in the study of the Bible and Science and Health which comprehends a careful analysis of every important word employed to present and explain the truths of Christian Science. As students of the most profound theology ever revealed to humankind, we are yet far from the state of mental cultivation wherein we cannot practically apply the observation of Elihu the Buzite: "For the ear trieth words, as the mouth tasteth meat." And Job's interlocutor straightway adds the reason for such analysis in stating that we should "choose to us judgment," and thereby "know among ourselves what is good." The use of a good dictionary in connection with the study of our Bible Lessons will often not only clear up a doubt, reconcile an apparent disagreement, or dispel the obscuration of a Scriptural text, but it will assist in enlarging the student's vocabulary and wonderfully enhance his God-given power of accurate communication. In fact the dictionary can be made a most reliable means for self-culture in correct terminology, choice of synonyms, pronunciation, spelling, and composition, all of which are of much importance in the refinement and cultivation of the human mind in its progress toward the understanding of the divine Mind, or God the Father of all.

SELECTED ARTICLES.

[James D. Sherwood in the *Beaumont* (Tex.) *Enterprise*.]

We do not question the right of our critic to make his choice of remedies. Christian Scientists claim the same right. If our appeal is to Spirit instead of matter, it is because we have confidence in the promises of Christ Jesus, who said: "Come unto me, all ye that labor and are heavy laden, and I will give you rest. Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls." In more than a million cases it has been proved in Christian Science practice that Christ's way is the best way. Indeed, there is no other way. While it is true that Christian Scientists resort to divine Mind instead of drugs, when needing help, they are taught to entertain the greatest respect for physicians and to admire the self-sacrifice and devotion which they manifest in the practice of their profession.

Many clergymen are to-day bearing faithful testimony to Christian Science and its devoted Leader. In strong contrast with our critic's remarks, I will present a few statements by Rev. Frank N. Riale, Ph.D., a prominent Presbyterian minister, from his contribution to the *Westminster*, a Presbyterian weekly published in Philadelphia. He says: "I am very glad indeed to express my own reason for gratitude for what Christian Science is doing; for he is not a truth-lover who would not be willing to proclaim upon the housetop the honest convictions of his heart. I do most sincerely feel that the 'spirit' of the message of Christian Science is that which ever has been dearest to the heart of Christendom at the moments of its deepest awakening, and is truly naught else than the heavenly-anointed message of Jesus. It is a living consciousness, not a mere theoretical assent to the great cardinal truth of all religion, that 'God is All-in-all,' and that in Him there can be no darkness at all. It is the awakening of the conviction in our hearts, by the witness of the Spirit, that 'God is Love;' and that in Him there never has been, nor ever can be, a problem in human life that the working out of this love will not solve." Of Mrs. Eddy he wrote: "I want to express my most sincere gratitude for what she has been doing, through God's proven presence, to lead a great multitude that no man can number into a more living realization of the priceless preciousness of an experienced knowledge of Jesus Christ, and make them feel that he came to show us that there is no more reason for a man being sick, than there is for his being a sinner; and that the sinless, the sickless, the deathless life is the gift of God, to be had by all for the taking—the longed-for possession to be had by all that fully believe it."

["The Busy Woman" in *The Magog News*, St. Johns, Quebec.]

Another reform which has made some progress is against the unreasonable custom of condemning those things that we do not understand. It is rapidly going out, but that it has not entirely gone was evidenced on a recent Sunday evening in a Methodist church in the little village of H——. The preacher was from a neighboring circuit, and is considered a good speaker, an earnest advocate in the cause of truth, and an ardent worker in his church. No report reached "The Busy Woman" from the morning service, but she was an eye-witness at the evening discourse, which was based upon that thrilling passage in Exodus where the children of Israel were commanded to "go forward" in the face of a seemingly insurmountable barrier, and trust in the Lord God alone for the saving of their bodies as well as their souls. Obeying this command, they were privileged to see the supposed laws of nature set aside and the "arm of the Lord revealed." We are reminded here that this was no extreme or unusual case in the history of God's people, who were continually being brought out of dangers and doubts. The sacred writers have ever striven to show that it is the same God who forgiveth our sins, who also healeth our diseases. In view of all this it seems a little strange that there should still be so many doubts as to His ability or His willingness to do this now.

The preacher did not express himself on this phase of the subject. He stated that he was not preaching a sermon but giving a heart-to-heart talk. He was showing that it was impossible for all men to see alike, that in reality no two men could see exactly alike, that their thoughts and beliefs were constantly changing. He appeared to concede that all might have a measure of truth, and have a right to their convictions, when suddenly, by an unexpected flank movement, he upset that generous supposition and told the little congregation, which included a seat full of believers in that faith, that Christian Science had no right to the name Christian.

While one can but be surprised at such a statement coming from a well-informed pulpit, it should only have the effect of quickening into newer and deeper life the teachings of Christ as brought to light and emphasized anew by Mrs. Eddy, that noble woman whom the world is beginning to understand and appreciate. "Follow your Leader, only so far as she follows Christ" (Message to The Mother Church, 1902, p. 7), has been her oft-repeated injunction, and it has proved a forceful rallying cry and a veritable gleaming "pillar" by night and by day to the ever-increasing multitudes who "follow that way."

[E. H. Carman in *The Carolina Spartan*, Spartanburg, S. C.]

When Mrs. Eddy first made known to the world her great discovery of the scientific Christ-healing, the orthodox world said the days of miracles had passed, and that to claim they had not was not in accord with Bible teaching, although Mrs. Eddy claimed that her method was in accord with Jesus' spiritual healing. Since then many articles have been written, attempting to credit others with this great discovery. Now, some of the religious bodies are trying to incorporate mental healing, claiming that it is "keyed to the Lord and Master's teaching," thus virtually admitting their former judgments to have been incorrect. This method of combining drugs and mental suggestion, when compared with Christ's method of healing, or Christian Science, is as darkness compared to light.

Jesus never used drugs in any form to heal the sick. He never healed a case of sickness, cast out a devil, or raised the dead with a drug or through mental suggestion. His medicine was Truth, the word of God. The psalmist says, "He sent his word, and healed them." The word of Truth is not the false belief in the power of inert matter or drugs, nor in the suggestion of the human mind or human will, but it is an understood Principle, that needs no boosting or bolstering by drugs or human will. Jesus said, when he raised Lazarus from the dead, "Father, . . . I knew that thou hearest me always," thus proving that he understood divine Mind, or Principle, and its law and action. . . . Said Jesus, "Not my will, but thine, be done." Said Paul, "The carnal mind [human mind and will] is enmity against God: for it is not subject to the law of God, neither indeed can be." Again, Paul said, "The sword of the Spirit, which is the word of God." This "sword of the Spirit," the "word of God," separates the carnal mind, with its erroneous will-power and suggestion, from the divine Mind or will, and through divine law operates to heal and to save. . . .

Christian Science is knocking at the door of the present age with a divine message; it does not ask any one to

Digitized by Google

accept its teachings or practise its methods because Mrs. Eddy has discovered it, named it, and practises it, but because it is the unfolding in human consciousness of a demonstrable Principle,—demonstrable because it is true, and true because it is demonstrable. Those who find fault with it and condemn it are not those who understand it. Only those who are trying to climb up some other way call it nonsense. If those who wish to teach and practise the absolutely correct method of mental healing would lay aside their false estimate of Mrs. Eddy, and be just and fair to her, and study the text-book of Christian Science, Science and Health, without prejudice, they would find the true understanding of mental or spiritual healing, as demonstrated by Jesus; nonsense would be put aside, and the true sense, the spiritual sense, would be revealed, and right and justice would be done both the Discoverer and those taught.

[James Phelps in the *Milwaukee* (Wis) *Journal.*]

When Mrs. Eddy discovered Christian Science the first fact that forced itself upon her consciousness was that Christ had never left us. She grasped the tremendous import of the promise, "Lo, I am with you alway," and was lifted from what was supposed to be her death-bed to health. The confusion arising from a wrong sense of Jesus' words has contributed largely toward preventing theologians and their followers from appropriating the blessed promises of Scripture and exercising man's God-given dominion over the ills that beset humanity. Christian Science differentiates between Jesus, who appeared in the form of a babe in Bethlehem some nineteen hundred years ago, who grew to manhood in Nazareth, who preached in Galilee and was crucified on Calvary, and the Christ that existed before Abraham, that was one with the Father, and will remain till the end of time to comfort and heal the "poor in spirit."

I think our critic will admit that God is Spirit, Love; that He made man in His image and likeness; that all things were made by Him; and without Him was not anything made that was made, and that everything He made was very good. If he admits these premises,—and he must do so or deny the Bible,—how can he escape the conclusion that material existence is not a reality? or that sin and sickness were not made by God and pronounced by Him as "very good," and hence do not exist as realities, but only as negations—the supposititious opposites of good; even as darkness is the supposititious opposite of light? Christian Scientists recognize the fact that to the distorted consciousness of sick and sinning humanity, sickness, sin, and death are realities; hence the mission of Jesus the Christ to destroy the works of the devil; hence, also, their efforts to carry on the good work and hasten the day when all shall know God, and the creations of God shall appear to every man, woman, and child as "very good;" and the claims of material sense (*alias* the carnal mind) be forever silenced. . . .

There is a wide difference between Christian Science and hypnotism, for one is the exercise of one human mind, or will, over and upon another human mind and will, and may be used injuriously; while Science and Health teaches one to subjugate the human will and yield to the divine will, wherein is harmony, love, peace, health, and purity.

[Charles B. Jamieson in *The Union*, Manchester, N. H.]

With wide differences of opinion and uncertainty among physicians with regard to diagnosis, the Christian Scientist, who trusts to God for his life and health, cannot be expected to rely or wait upon one doctor's diagnosis, which may be entirely different from that of another doctor of equal eminence and experience. The Christian Scientist makes his own diagnosis from a metaphysical basis, and not a physical one as does the physician, and is at least equally successful in practice. This spiritual method of healing the sick should not seem strange or unwise to professing Christians. On the contrary it should seem strange indeed that a community of church-going, God-loving Christian people should be "all agog," exercised with "feeling," filled with "indignation," and so "excited" as to call on the county authorities because some well-known and respected members of that community had chosen to put their trust in God to practical application.

Christian Science is becoming so generally known and resorted to in cases of sickness that it is no longer an "unusual method of treatment." While there is an occasional failure to heal, the percentage of cures is greatly in its favor. When there is a failure to cure under medical treatment, no "excitement of public sentiment" follows, but it is regarded as a regular matter-of-fact occurrence.

[John L. Rendall in *Ottumwa* (Ia.) *Review.*]

It must be patent to all thinking people that every movement touching the welfare of humanity must stand or fall absolutely upon the basis of its merits or demerits. This applies to what is termed the science of medicine and to Christian Science. Christian Science is now recognized as an established religious faith, because it has been proven to be an important factor in the healing of the sick, the overcoming of the many discordant conditions incidental to humanity, and in the regeneration and reformation of the sinner. Christian Scientists do not decry the work of physicians or their attempts to alleviate suffering. They recognize and appreciate the honesty of the better class of physicians and respect their endeavors; therefore they make no attempt to stir up prejudice against the work of said physicians. At the same time they insist upon their individual right to employ such means as have been proved to them to be most efficacious.

It is a notable fact that a large majority of the people who come to Christian Scientists for help are those who have run the gamut of medical experience and have failed to find healing. To these people Christian Science offers a hope of surcease from their sickness and distress. That this hope has been justified is abundantly proved in the practical experience of those who have embraced the healing ministry of Christian Science. If the Bible teaches anything of a positive nature, it is that the power of God is equal to every emergency and necessity. Christian Scientists rely upon this one power, having proved by practical experience that the words of the psalmist are true: "He sent his word, and healed them, and delivered them from their destructions." In proportion as Christian Science becomes better known, the intrinsic value of its healing ministry is being more clearly recognized and understood for what it really is, and mankind are finding less in its teachings to antagonize and more to appreciate and respect.

[J. V. Dittemore in *The Standard*, Fort Plain, N. Y.]

Our critic asks, as "the main point at issue," "Is Christian Science, so called, in harmony with the teachings of the Bible?" A vast and ever-increasing host of men and women affirm that it is, because through its practice their lives have been saved and they have been regenerated and restored to health and usefulness, in fulfilment of the promises of the Master that true Christianity must furnish mortals a whole salvation from disease as well as from sin. If God is all-mighty, He must be available in all trouble and in all ways. In answer to John's inquiry, "Art thou he that should come?" the Master did not stop to engage in a debate, to theorize, or to condemn those who were the advocates of any of the religious or healing systems of the day. He simply recounted his works and left

Digitized by Google

his inquirers to form their own conclusions. Those who were ready for the blessings his ministry imparted became his disciples, and those at enmity with his teachings continued to cling to the barren doctrines of the scribes and Pharisees and to pursue their enmity to the truth to its final outcome—the tragedy of Calvary.

Our critic's arguments, based on the supposition that any theory is necessarily true because it is believed by a large number of people, are not sound. In the fifteenth century all save one man believed the world to be flat, but that did not make it so. Every great truth has been forced on mankind in the face of the disbelief of the great majority, but that which has been true has weathered all the storms of protest. Christian Scientists are willing to submit their faith to the same experience and abide by the result. It is unfortunate that our critic is not also willing to trust its future to the same test.

WHAT IS "I"?

GERTRUDE ASPLEN.

"I"—"I"—what can "I" be?
Is it the flesh and bone we see,—
This human frame that mortal eyes
Look on, which suffers, sins, and dies?

Is "I" no more than this—blood, brain, and nerve,
That hastes, a fettered slave, to fear and serve
The human passions, human grief and pain—
To be cast off when death shall choose to reign?

Can "I" be this, that death no more hath power
Its days to number, nay, to choose the hour
Of its own triumph—tell me, is this "I,"
Born of the flesh, to suffer, sin, and die?

Hark, 'tis a strange voice answering—Waken, rise!
Cease from this dreaming, let thy blinded eyes
At last be opened to behold the Light,
For dawn breaks o'er the darkness of thy night.

See how before this Light the shadows steal
Away and sink to nothing! Canst thou feel
The loosening of thy fetters? Wilt thou see
And know that thou canst break them and be free?

For thou hast served that which should be thy slave—
A thief, who falsely taught thee that the grave
Alone from sin could free thee; that death's portal
Must first be passed ere man becomes immortal.

And so a lie didst cheat thee till, unsatisfied
And weary, thou didst strive to tear aside
The veil that shrouded thee, and so that cry
Passed mortal sense in questioning, What is "I"?

This thou shalt learn,—for Truth shall be thy guide
And Love shall light thy way,—Though storm and tide
Shall seek to stay thee, know thou canst not fall,
For faith shall hold thee, knowing God is All.

Then cast no backward glance, lest thou shouldst stray
One step from out thy path,—the narrow way
Wherein the answer lieth to thy cry,
Immortal Mind's idea,—this is "I"!

AMONG THE CHURCHES.

MC KENZIE, TENN.

A most beautiful and desirable lot of land, centrally located, has been donated to First Church of Christ, Scientist, of this place, and we hope at an early date to erect a handsome church edifice.—*Correspondence.*

ADAMS, MASS.

The members of First Church of Christ, Scientist, of North Adams, held a meeting in the old Quaker meeting-house in the Maple Street cemetery yesterday afternoon [Oct. 4], and it was a very successful one, the old meeting-house being packed to the doors. There are a number of local persons who are members of the North Adams church, and this was the first meeting ever held in Adams. In connection with yesterday's meeting an unusual thing occurred, inasmuch as a melodeon was played during the services, which is the first time that a musical instrument was ever played in the old Quaker house. Another matter of much importance was that there were a number of ministers of various denominations present at the meeting. It is thought that there will be a number of meetings held at the house in the near future.

The North Adams (Mass.) *Herald.*

BELMONT, N. Y.

In September, 1906, three people interested in the study of Christian Science, though unknown to each other, came to this town from different parts of the country. Two months later two of us met at a lecture given by Judge Buskirk at Olean, N. Y., and shortly after we two began to meet for the reading of the Lesson. The third lady joined us whenever possible, and after a time others came in. A copy of Science and Health was bought and placed in the town library and another in the jail, and three other copies are loaned to any desirous of reading. This month we have rented and furnished a room with money already in our treasury, and there were sixteen present at our first Sunday service, and fifteen at the first Wednesday evening meeting. We feel that the "leaven" is working, and as divine Love leads the way we hope to follow, with hearts filled with love and thanksgiving to God, and to our Leader, who has given this new-old truth to the world.

Correspondence.

ST. ANTHONY, IDAHO.

In the latter part of 1905, the work in Christian Science was taken up in St. Anthony by two persons, who, with a deep sense of gratitude and love to God, and to Mrs. Eddy, for blessings received and with a sincere desire to help others, agreed to meet each Sunday for the reading of the Lesson-Sermons. Six months later a family of Scientists moved to town, and in the fall we began holding services at their home and organized a Sunday School with an attendance of eight children. The following year three other families of Scientists came to make their home in St. Anthony, and our borders were greatly enlarged. In 1908 we organized as a society, and moved into the Baptist church, where we are now holding regular Sunday and Wednesday evening meetings. Most of the members of this society are members of The Mother Church, and all are striving to follow in the footsteps of the Master and to be obedient to the teachings of our revered Leader, Mrs. Eddy. With hearts filled with gratitude, we are striving to be "faithful over a few things."

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy upon proper subjects *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

[From the *Boston Post*.]

POLITICS.

MRS. MARY BAKER G. EDDY has always believed that those who are entitled to vote should do so, and she has also believed that in such matters no one should seek to dictate the actions of others.

In reply to a number of requests for an expression of her political views, she has given out this statement:—

"I am asked, 'What are your politics?' I have none, in reality, other than to help support a righteous government; to love God supremely, and my neighbor as myself."

MARY BAKER G. EDDY.

A MISTAKE CORRECTED.

AN important part of the work done by the Committee on Publication is disclosed in the following letter, which appeared in the *Columbus* (O.) *Dispatch* of recent date:—

Editor of the Dispatch:—

Your issue of Wednesday, Oct. 28, contained an article with reference to two children who were sent home from one of the public schools by order of the city board of health, and stated that upon making an investigation the health officers were surprised to learn that the parents of the children were believers in Christian Science.

It seems customary to lay at the door of Christian Science everything resulting from a refusal to call a doctor or to take medicine. In this connection, permit me to call attention to the fact that the mere refusal to call a doctor or to take medicine does not constitute one a Christian Scientist. We are at a loss to understand how the health officers made their investigation and found these people to be Christian Scientists, as we have taken the trouble to call on the parents of the children and found them to be a very nice family, but absolutely disclaiming any connection with, knowledge of, or any desire to know anything about Christian Science. Their belief is entirely different.

From the foregoing you can readily see what injustice has been done, not only to the Christian Scientists, but to the citizens at large, in publishing an article which has no foundation in fact, and which tends to prejudice the public against a class of people than whom there are no more law-abiding citizens.

R. A. MAGLY.

The news item corrected by Mr. Magly was as follows:—

Two children were sent home from one of the public schools of the city Tuesday by orders of the city board of health, because they were afflicted with a malady that is not only catching but of a very repulsive character. When the health officers made an investigation they were surprised to learn that the parents of the children were believers in Christian Science and had refused to call in a doctor. The children themselves, when asked to accompany the official to a physician, replied that they would not take any medicine as "the Lord" would cure them. Because of the danger of the disease spreading throughout the school, the children were compelled to leave, and they will be placed under quarantine until they have been cured of their ailment.

A considerable part of the prejudice which has existed against Christian Science, in some quarters is attributable to just such inaccurate and misleading statements as the one corrected in this instance. In the absence of any definite knowledge of the practice of Christian Scientists it has been the custom of many people to place every non-drug system in one general class and call it Christian Science; and in turn, the enemies of Christian Science have used these misstatements to attack our Cause.

Happily, through the Committee on Publication, and the lecturers, these mistakes are becoming fewer, and we hope that in time they will entirely cease, for Christian Scientists are not in any wise careless of the rights of others, nor do they neglect any of the precautions which the law requires.

ARCHIBALD MCLELLAN.

"WHY WILL YE DIE?"

THE Bible offers no instance of loving and prophetic appeal which is more argumentative and more telling than that recorded in the 18th chapter of Ezekiel, and summarized in the words: "Cast away from you all your transgressions, . . . for why will ye die, O house of Israel?" The logical import of this appeal is expressed by Mrs. Eddy, when she says, "The so-called sinner is a suicide" (Science and Health, p. 203).

If, as all Christian teaching declares, sin brings death, then consciously to identify or affiliate oneself with sin—with any falsity of statement or belief—is to contribute to sin's end, and though the offense be far removed from any purposeful endeavor to terminate existence, it is not different therefrom in progressive effect, and the realization of this fact gives a new significance not only to Ezekiel's word, but to Paul's when he says, "Be ye separate, . . . and touch not the unclean thing." Were it not for the belief in the reality of evil and its asserted power of reproduction, it would speedily effect its own extermination, for whether its end be determined in a climax of abnormity or in the unnumbered moments when men consent to the indulgence of material sense,—give material sense its way, and it always registers the same unvarying effect, namely, the so-called death of that which enters into it and depends upon it for life.

In the light of Christian Science it is clearly seen that, unless arrested by truth, the cycle of material belief can but close with a tragedy which is contributed to and assured by our every assent to the belief that there is life and intelligence apart from God. Belief in materiality, its power to give pleasure or pain,—this always tips the beam toward error's goal. Men look to mortal conditions as an end, and they are deceived and defeated, for the reason that, as Paul says, the "end of those things is death." Whatever the circumstance or condition, all have the same lessons to learn, namely, that the pleasures of sense cannot satisfy the heart, and that every alliance with error is suicidal.

To the Christian Scientist the command, "Thou shalt not kill," forbids all commerce, compromise, or companionship with that which conduces or contributes to the asserted place and power of death. Understanding the inevitable self-destruction of sin, he knows that he cannot indulge it in any form or degree without subjecting human sense in so far to sin's catastrophe, and his consequent watchfulness is ever questioning, "In this choice, this determination, this enterprise, this habit, am I affiliating with that which makes for life or for death?" The true Christian Scientist is thus continually mindful that the promise is to those who overcome all sin and its effects—namely, disease and death—through that heroic contention for truth and righteousness which must ultimately eliminate from consciousness all that can die. He is impelled so to order his thought that its every activity and his every sequent doing shall contribute to his highest sense of life.

When in Christian Science we come to realize that every least immorality or untruth of thought and deed is allied to death in nature and effect, we understand and are able to respond as not before to that importunity of divine Love which, in the words of the olden prophet, is ever calling to the children of men, "Turn ye, turn ye from your evil ways; for why will ye die, O house of Israel?"

JOHN B. WILLIS.

TEMPERANCE.

IN reading St. Paul's epistles one is impressed by his references to temperance, although his meaning is quite different from the rather narrow sense in which this word is used by many to-day. One of his most impressive statements follows a reference to some of the Greek athletic contests, and he says, "Every man that striveth for the mastery is temperate in all things." St. Peter also urges us to add temperance to faith, virtue, and knowledge, and he goes on, "He that lacketh these things is blind, and cannot see afar off." While it is well known that Christian Scientists eschew the use of intoxicants, this is but one step in the right direction, as temperance is a Christian virtue which springs from spirituality and indicates the control of man's entire being by divine Principle.

A very interesting meeting was held in Boston a few days ago for the purpose of discussing the "no-license" question. A number of prominent educators and others took part, and their statements showed the great change which has come with respect to the use of stimulants. Among other things President Charles W. Eliot of Harvard said,—

As a result of experience it is a fact that men who are to be exposed to cold or heat or hardships of any sort are not prepared or braced for such encounters by any form of alcohol. You know it was considered essential that a sailor in the merchant marine, or in the navy, should be braced for his arduous work by grog every day; that was really and simply considered as a necessity. Now grog has been abolished in our navy absolutely, and is no longer served in well conducted ships of the merchant marine, and the result is a demonstration that the rough, hard life was not really helped by alcohol, but hindered. No captain of an ocean liner ever supports himself now against the terrible exposures of the bridge by means of alcohol. . . . It is so in regard to most intellectual labors. It was not expected that anybody encountering the labors of the prime minister of England, in his office every night and during the long hours of the day, could do the work without being supported by one or two bottles of port a day; and many famous men have lived through that sort of life under those conditions. That view is now absolutely abandoned. It is well known that alcohol, even if moderately used, does not quicken the action of the mind or enable one to support mental labor.

Thus do we witness the passing of the belief that stimulants give health, strength, or happiness. It was at one time thought that they did, and yet individual experience has always proved in the end that this belief was merely a delusion, and a very dangerous one. Men reasoned that God gave them intoxicants to minister to their needs, hence intoxicants must be good, and yet results showed that the devil could not have devised a more cruel snare for the unwary than the desire for stimulants, for the pretended servant soon became a relentless tyrant from which there seemed to be no escape. The human will had no power to break its self-imposed fetters, and it seemed almost inconsistent to appeal to the God who, according to material belief, instituted the law which had brought about the deplorable condition of bondage to intemperance.

Now Christian Scientists have never undertaken a temperance crusade by any of the usual methods, but it is safe to say that a large number of hopeless sufferers from the error of intemperance have been set free by the teachings of Christian Science, and in many of these cases the beneficent results have been gained through the study of "Science and Health with Key to the Scriptures" by Mrs. Eddy. From its teachings they learn that the real man neither needs nor desires stimulants of any kind; then health, strength, and happiness come from the realization of the truth that man finds all good in God, divine Mind. The great Teacher once said, that to the one who accepts it, the truth is "in him"—not outside —"a well of water springing up into everlasting life," and such an one would of necessity be "temperate in all things."

ANNIE M. KNOTT.

THE PUBLISHING HOUSE BUILDING FUND.

Contributions to the Publishing House Building Fund should be sent to Stephen A. Chase, Treasurer, P. O. Box 56, Fall River, Mass. These contributions will be thankfully received and promptly acknowledged.

THE CHRISTIAN SCIENCE MONITOR.

The sale price of *The Christian Science Monitor* will be two cents each copy, and the subscription price in the United States (except where delivery is made by carrier), Canada, and Mexico will be five dollars for one year, or three dollars for six months; in all other countries eight dollars and four dollars and fifty cents respectively. Subscriptions may be sent to The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Mass., or through local Reading Rooms.

THE MONITOR IN NEW ENGLAND.

To ensure prompt receipt of *The Christian Science Monitor* by residents in Greater Boston and other cities and towns in the New England afternoon newspaper field, subscriptions already received by The Christian Science Publishing Society from these districts will be delivered by carrier, unless the Society is otherwise instructed. Prospective subscribers for carrier service in these districts may order the *Monitor* directly through their local news-dealer, at the usual rate of 12 cents a week, payable to the news-dealer, or if they prefer, they may send name and address without remittance to the Publishing Society in Boston.

LETTERS TO OUR LEADER.

Boston, Mass., Oct. 31, 1908.

Beloved Leader:—I do not believe you will ever know what it meant to me to have you see me to-day. It was so unexpected, so unsought, mentally or otherwise; it was wholly the result of your perception of my need and the outpouring of your love. Not in years have I seen you look so well and strong, and I am grateful to God for this manifestation of His continued care for you. Every day do the people rise more and more to call you "blessed," and every day, through renewed consecration, am I striving the better to live the love you have taught, that all who run may see it manifested and know that Christian Science is the Comforter that God has sent to the world, through you, to save it from self. My love, my loyalty, and my devotion are more than ever all yours, and I know my lecture tonight will be the best I have ever delivered. Your rebuke of the tears which you saw so near the surface was merited, but I never yield, dear Leader, and more and more am knowing that I can never be separated from anything I love that is good and true.

God bless you, our dear one, and keep you, as ever, in all your ways.

Devotedly your student,
FRANK H. LEONARD.

Cambridge, Mass., Oct. 29, 1908.

Wise and Beloved Leader:—How I thank you out of my heart's deepest affection for the words from Colossians, 3 : 24, with which you annotated the letter we sent reporting progress. It is wonderful how you know what is needed for the comfort and guidance of your friends and servants in this work. Unless our *Monitor* expresses more than business success and wisdom of human minds, what is our labor worth? Amid the contending ambitions of many minds comes like music the reassurance, "Ye

Digitized by Google

serve the Lord Christ." This truly is the purpose of the enterprise, namely, to serve mankind by bringing thought into loving obedience to the Christ-mind. I mark on the margin Fenton's translation of 2 Corinthians, 10 : 4–6.

"For the weapons of our campaign are not corporeal: but powers from God, for the purpose of destroying fortresses; defeating opponents, and every pride exalting itself against the knowledge of God; and subduing every thought to the discipline of the Messiah; and competent to expel every mutineer, so that your discipline may be perfect."

Lovingly ever,

WM. P. MCKENZIE.

Washington, D. C., Oct. 19, 1908.

Beloved Leader:—The proposed publication of a daily paper by The Christian Science Publishing Society is cause for rejoicing all over the Field. Every practitioner will give thanks that the news of current events can thus be read by those taking treatment, without having their days darkened by the details of vice and crime, of disasters and deaths. Every busy man will be glad to keep an eye on the world, without getting both eyes black and blue before he goes to work. All homes will be enlightened by the daily entrance of a paper bringing good news.

To add a daily paper to the Christian Science publications already spreading the gospel of salvation over the world, gives a satisfying sense of completeness to the great work of the Publishing Society. The members of the Publication Committees in the cities and states constitute an able corps of correspondents. Here in Washington, in addition to our Publication Committee, we have in our church two or three members who are regular correspondents of the press. The infinite possibilities for good of a Christian Science daily, and the fact that the *Monitor* has your approval, is another reason for rejoicing in the practical wisdom of your leadership. "Praise God from whom all blessings flow,"—and only blessings flow,—in whom all being is, and is all-harmonious.

May the Comforter enfold you and hold you safely and gently in divine Love and Life.

Faithfully yours,

WILLIAM HOLMAN JENNINGS.

Riverside, Cal., Oct. 24, 1908.

Dear Mrs. Eddy:—Having been a newspaper journalist until a year ago, when I entered upon the practice of Christian Science, I am quite naturally very keenly interested in the tidings from headquarters which tell us there is soon to be a daily newspaper conducted along the lines of the Christian Science ideal. Long have I recognized the need of a daily paper that could and would serve as a reliable criterion for others throughout the world, and especially in the United States. Now I feel that the need is about to be met, and I know that soon after the inauguration of this important enterprise, the world of real thinkers, of whatever denomination, will rise up and call the *Monitor* blessed. As I look forward to columns of daily print that will disclose the truth in a truthful way, that will uplift morals and will prove to the reading public there is righteous dignity and cleanness in newspaper journalism, my heart goes out in augmented gratitude for the power of Christian Science, the healing truth which you, beloved Leader, have made available for use among the children of men.

God certainly does wonderfully sustain you and your noble and tireless corps of assistants at headquarters, who are every hour accomplishing so much for the elevation and purification of the race. Allowing this same God to manage the affairs of a newspaper means more of good to the twentieth and succeeding centuries than can at present be legitimately estimated.

Lovingly,

STOKES ANTHONY BENNETT.

Bristol, England, October, 1908.

Beloved Leader:—It is our happy privilege to inform you that First Church of Christ, Scientist, in this city, is now fully organized under the recent By-law, a large proportion of the number being members of The Mother Church. It was from this ancient seaport of the West of England, so history tells us, that John Cabot sailed on the fateful voyage that led him to the shores of that far-off land which claims you as its honored citizen, and thus it is the more appropriate that we rejoice to-day over some realization of the glorious promise which has come to us from those same distant shores, in your thrice blessed discovery of Christian Science.

To every faithful pioneer of this hallowed truth there comes inevitably, as he presses on towards the fruition of its glad tidings, some faint appreciation of what you, our much loved Leader, have met and overcome in establishing the grand and holy Cause in which to-day we share your triumph. So, dear Leader, in all steadfastness and true humility, we rejoicingly send you the assurance that the members of this church will ever seek faithfully to follow you in your uplifting of the healing Christ and "bring forth therefore fruits" in "signs following." In love and lowliness we would remember and live your message: "Forget self in laboring for mankind; then will you woo the weary wanderer to your door, win the pilgrim and stranger to your church, and find access to the heart of humanity" (Miscellaneous Writings, p. 155).

In assimilating and practising the teachings you have given us, may we accept your invitation, "Drink with me the living waters of the spirit of my life-purpose,—to impress humanity with the genuine recognition of practical, operative Christian Science" (Miscellaneous Writings, p. 207); and thus attain in due time to that understanding of the spiritual idea which, as you have written on page 566 of "Science and Health with Key to the Scriptures," shall "guide all right desires in their passage from sense to Soul, from a material sense of existence to the spiritual, up to the glory prepared for them who love God."

In loving loyalty to God and His Christ, to you and our Cause,

JOHN E. G. SANDFORD, *First Reader,*
LILIAN DESTER, *Second Reader,*
WILLIAM A. CHASE, *Clerk.*

Bowie, Tex., Oct. 19, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—I have just read in the *Sentinel* the announcement of our Publishing Society, that they would shortly issue a daily newspaper to be known as *The Christian Science Monitor.* As a business man who feels the necessity of keeping in touch with the world's progress and daily events of importance, allow me to express my sincere gratitude that this step has become possible. To your faithful followers all over the world it comes as an added evidence—to the many already given us—that through divine guidance your leadership brings us nearer each day to our rightful heritage, Truth and Love supplying our every need.

Ever sincerely and gratefully yours,

LEROY C. GIBBON.

THE LECTURES.

ELWOOD, IND.

At the Kramer Grand, Sept. 17, Frank H. Leonard lectured to a large audience on Christian Science. He was introduced by Mayor O. A. Armfield, who said in part,—

From the dreamers and advanced thinkers have come the great things of life—the dreams of yesterday are the successes of to-day. Mary Baker G. Eddy, the Founder of your church, can be termed one of them. She has thought great thoughts; she has brought into every-day use great truths; a great Principle has been demonstrated by her to be true. At times she has been condemned in strong words, but her dreams of yesterday are accepted as the great truths of to-day; they have been demonstrated and found good. The church founded by her has now been accepted by the world as an assured fact. Its progress has been rapid, its success is secure; it is now one of the fixed denominations of the future, and I feel safe in saying that it has a great future before it for success and usefulness to mankind. The fundamentals of religion are unchanging; they are the same to-day as they were when first given to the world centuries ago by the great Master. We have only discovered hidden truths in them, are only applying them in a more liberal spirit and interpreting them in a more rational way than has been done in the past; we now see in them more beauty than the past unfolded.—*Correspondence.*

DIXON, ILL.

Hon. Clarence A. Buskirk of St. Louis, Sunday afternoon [Sept. 27] delivered his lecture on Christian Science to an audience that nearly filled the Dixon Opera House. The speaker was introduced by Attorney Clyde Smith, who in his introductory remarks spoke in part as follows:—

We may well congratulate ourselves upon the opportunity which we are about to enjoy of listening to the speaker of the day. His subject is of the deepest interest. The benefits of peace and contentment which follow right living and thinking are apparent to all. But, as I understand it, far more important benefits to mind and body are claimed than we who are not familiar with the doctrines of Christian Science are at first blush ready to concede. To me personally they may come with assurance of a fair hearing, for I have uniformly remarked in the lives of its members a cheerfulness and hopefulness and a serenity that were not there before they embraced its doctrines. What I have personally observed is in perfect accord with what I have read from the pen of those whose field for observation was wider than my own. They ask the privilege of helping us, and we owe it to ourselves to give their message an impartial hearing.

Dixon Telegraph.

LONDON, ENGLAND.

Clarence C. Eaton of Tacoma, Wash., U.S.A., delivered a lecture entitled "Christian Science, the Restoration of Primitive Christianity," in Queen's Hall, London, yesterday (Tuesday) afternoon [Oct. 6]. A. Hervey Bathurst, who presided, said in part,—

The interest in Christian Science throughout the world is daily growing, because through its loving ministrations mankind are being healed of physical suffering and freed from the fetters of discord, sin, and therefore death; and in the words uttered by our great Master over nineteen hundred years ago, "By their fruits ye shall know them." It is with deep gratitude that I say I have experienced the regenerative and healing power of Christian Science myself, and have seen its blessings reaped by others.

Christian Commonwealth.

AUBURN, NEB.

A good audience gathered at the Maclay Opera House last Saturday night [Sept. 26] to listen to the lecture on Christian Science delivered by Bicknell Young of Chicago. Mayor J. S. McCarty introduced the speaker, saying in part,—

Every religion evolved from the life of Christ and adhering to his teachings must necessarily be good, because it comes from a fountain of purity; and within the time of this generation there has been placed before the world a religious faith, termed by its Founder Christian Science, so pure in its teachings, so lofty in its ideals, so beneficent in its results, as to number among its devotees innumerable hosts of the best, the most intellectual, and the noblest of our people.—*Nemaha County Republican.*

WESTERLY, R. I.

Bliven Opera House was well filled Sunday afternoon [Oct. 4] with an audience to hear Judge William G. Ewing lecture on Christian Science. He was introduced by Rev. W. L. Swan, who said in part,—

Some people may become enthusiastic over the discussion as to the location of the garden of Eden, or the precise date of the second coming of Christ, but after all of what value are they to mankind? So many of the differences that divide the denominations are of little practical import to humanity. Now comes the question, What if Christian Science is true? What does it mean to humanity if Mrs. Eddy has rediscovered the Principle which underlies the works of Jesus, and if by following this Principle we are able to realize this promise, "The works that I do shall he do also"? Can a man afford to be indifferent to a religious movement which is spreading all over the world?

TESTIMONIES OF HEALING.

One of the first proofs vouchsafed me of the truth and power of Christian Science was in the healing of my eyes. At the time my attention was first attracted to Christian Science I had been troubled with them for some fifteen years. For the last eight years of that period I had found it necessary to wear strong glasses constantly, and although I consulted skilful oculists, and followed the treatments and used the glasses which they prescribed, I never received anything more than partial relief. My eyes were almost a constant source of discomfort and distress. When at their best I could use them only a few minutes without resting, while not infrequently there were days at a time when I could use them scarcely at all. Aside from the distress they occasioned, therefore, they seriously handicapped me in my occupation, preventing me from accomplishing anything like the amount of work that otherwise would have been possible.

Something over two years ago, with my eyes in this condition, I received one week's treatment from a Christian Science practitioner. After two or three treatments I discovered that I could read Mrs. Eddy's book, Science and Health, without glasses, and after receiving four or five treatments I discarded my glasses entirely. An optician warned me not to part with them, declaring that it would be impossible for me to dispense with them; nevertheless I have never since used glasses, nor have I suffered any interruption in my occupation on account of my eyes, notwithstanding my work is of a nature which calls for close application of the eyes throughout each day. On the contrary, my eyes since that time have been in a far better condition without glasses than they were before with them. In truth, they no longer interfere with me in my regular work, and during the past year I have done a vast amount of work in addition to my usual duties.

I do not wish to convey the impression that my healing was easily accomplished, but at no time did I permit myself to entertain a doubt as to the ultimate outcome. I realized that if I was sincere and really relied on Christian Science, there was no excuse for my wearing glasses. There was a further factor in the case well worth mentioning. While my healing was going on, I was reading Science and Health to my wife, and endeavoring to assist her to an understanding of its teachings, for she had then, after several years of illness, sunk into a state of invalidism from which material remedies offered hardly a ray of hope. She recovered through the assistance of the same practitioner who treated me, and in trying to help her I undoubtedly promoted my own recovery.

A testimony to the saving power of Christian Science is incomplete without an expression of gratitude; and I am grateful to God for this revelation of Truth that has come to this age through Mrs. Eddy—grateful also to her and to all others who have made our nearer approach to Truth possible.—P. V. Ross, San Francisco, Cal.

As an evidence of the deep sense of gratitude I feel for the many benefits received from Christian Science, I desire to tell something of the healing which I experienced. I had scarcely known a well day in my life, catarrhal and stomach trouble being constant annoyances. When twelve years old it was found that I had a spinal disease, for which I wore steel braces two years; and while the trouble was partially corrected, a very weak back remained. Several years later I was seriously ill with inflammatory and nervous trouble, and this so aggravated the condition of the spine that for over three years I was confined to my bed. I had many different doctors,—allopathic, homeopathic, and osteopathic; electrical treatment, four months in a sanitarium; I spent one winter in the South seeking benefit from the climate, and was operated on; but only very slight improvement resulted from any of these material means. Doctors pronounced my trouble a serious affection of the bowels, and the spinal condition was such that it seemed I would never walk again.

I had heard something of Christian Science, but would neither investigate it nor accept it until every other means had failed. Then I asked for treatment, and through faithful and persistent effort on the part of my practitioner the healing came. The spine became straight and strong, and I could walk as far and as much as any one. The freedom from untoward physical conditions, the mental joy and peace I have since experienced, are so great that I cannot express my gratitude for what this truth has done for me. I have found a God who is Life, Truth, and Love, and I have learned to enjoy the study of the Bible, which appears to me in a new light through Mrs. Eddy's interpretation of the Scriptures. My sincere desire is to live the teachings of this truth as given to us in the Bible and Science and Health.

GERTRUDE KELLY, Indianapolis, Ind.

The first that I remember to have heard of Christian Science was through a semihumorous sermon preached against it. This sermon was published and widely circulated, and I do not doubt that it carried the first tidings of Christian Science to many beside myself. I did not, however, investigate the new doctrine at once, but after removing to Cincinnati and finding that many of my friends there had become Christian Scientists, I began to try to find out what had attracted them. At first their statements seemed just as the preacher had said, "ridiculous in the extreme." I could not understand the explanations given in answer to my questions, and was about to drop the whole affair when something happened.

I had been subject all my life to a bilious affection with frequent attacks of illness. I had used all sorts of remedies, tried a good many doctors, and finally settled down with a medicine which seemed to be a regular liquid fire. These attacks were extremely severe and usually lasted from four days to two weeks. One morning several weeks after coming to Cincinnati, an attack came on while I was at the office, and I started home to get my medicine. On my way I passed the office of a Scientist friend, and merely to rest a few minutes, but without the slightest intention of asking for help, I went in. My friend looked up at my pain-drawn face, and asked if I wished him to help me. Now I did not in the least believe he could do me any good, but I did not want to hurt his feelings, so I said, "If you can help me, I wish you would." He closed his eyes and sat silent for perhaps one full minute, and in that brief space of time I felt a distinct relaxation within, and realized that the seeming power of the disease was broken. When I left the office, ten minutes later, I walked out almost straight. My friend gave me another treatment that night, and I reported for duty at the office next morning as usual.

This happened six years ago, and I have never been troubled by the ailment since. The special mixture and the rest of the contents of the family medicine-chest went long ago to the dump, and I find that Christian Science is equal to the overcoming of all adverse conditions which arise in the family. We are earnestly studying the text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, and feel that we are gradually coming closer to the truth.—GEORGE B. SHERWOOD, Cincinnati, O.

It is a privilege to express my gratitude through the Christian Science periodicals for the benefits that I have

Digitized by Google

received from Christian Science during the past two years and a half. After reading Science and Health by Mrs. Eddy for three weeks, I was healed of bowel trouble, from which I had suffered since I was a child. I also gained in flesh, in strength, and in happiness. After reading Science and Health for three months, I had faith enough to believe I could become a perfectly healthy woman if I was willing to do my part of the work. I went to a practitioner for help, saying I had come to prepare for winter, as I had suffered with bronchial and asthmatic troubles for twenty years. I had been obliged to sit up nights for three and four months at a time during the winter, and suffered greatly. After having been treated by a specialist I seemed worse, and became completely discouraged, believing that no material remedy could help me. The doctors told me that I ought to spend my winters in the South.

This past winter, since accepting Christian Science, I have been free from any cough or throat trouble. I have slept peacefully at night and been out in all kinds of weather. I have also been healed of neuralgic and rheumatic trouble in different parts of the body, which caused intense suffering at times. A severe stomach trouble has likewise yielded to Christian Science treatment. The physical help has been great, and I am most grateful to God, and also to our dear Leader, Mrs. Eddy, for it is through her self-sacrificing life that we are enabled to know the truth which does indeed make us free from the bondage of sin and suffering. Sometimes I feel more grateful for the spiritual uplift and the peace that has come into my life through the little understanding that I have of this truth, and I trust that this testimony to what Christian Science has done for me may help some one to cling to the truth, even though sometimes discouraged if the healing seems slow in the outward manifestation.—Mrs. E. H. Arnold, Hartford, Conn.

A friend, who was not a Christian Scientist, loaned me a copy of Science and Health by Mrs. Eddy, and from the first I was convinced that it contained the truth and that the author must have been inspired. After a thorough perusal of this wonderful book my whole thought toward God and man changed, and I learned to love the people with whom I came in daily contact in a way that before I never thought possible. When I made up my mind that Christian Science is the religion of Jesus, I began to apply its teaching to every physical need, and for over three years I have not used a material remedy of any kind, and it has never failed to heal. All of my life, from the time I was two years old, I had a great deal of trouble with my throat, and as I grew older I suffered intensely from it. Previous to the time that I became interested in Christian Science, an attack lasted for over two months, with but very short periods of relief. With every relapse a new remedy would be tried, but without my receiving any permanent relief, and at the end of the time I went to my home in the West a physical and nervous wreck, and could not return to my work until I had taken a four-months vacation.

Shortly after coming into Christian Science I had occasion to test the healing power of this truth in a case of the same kind with the following results: I put myself under a practitioner's care on Monday, and on Friday I was entirely free from pain and returned to my work feeling as free as if nothing had been the matter; nor was there any relapse, as had always been the case before. Not only did the quick and permanent healing impress me, but the difference in my mental condition was even more marked. Before, when under a physician's care, I had always been depressed and irritable, but under Christian Science treatment I was cheerful, and this made it more comfortable for those around me. The difference in the cost was also noticeable. When under Science treatment I lost fewer days from my work than I did weeks in the time previous, and the doctor's bill, prescriptions, etc., amounted to a great deal more than the practitioner's fee. Taken altogether, I realized that I had found a practical religion,—one that could be applied every day and to every thing. Aside from this special instance, I have had many other proofs of healing, in the case of extreme nervousness and biliousness, also the overcoming of temper and the constant fear that my eyesight would become impaired and I would thus be incapacitated for my work.

For all the freedom, the health, the happiness, and the regeneration that have come to me through Christian Science, I am more grateful than mere words can express, —grateful to God for giving us our brave Leader, Mrs. Eddy, who has pointed out the way so clearly, and has set us such a beautiful example of what a Christian Scientist should be and do.—Anna L. Cook, Waltham, Mass.

A little less than two years ago I injured my ankle very badly. The best medical aid was summoned and everything was done to alleviate my suffering. This condition continued for nearly six weeks, when a second physician was called in, who pronounced it a serious injury and said that I must not attempt to use my foot for three weeks at least. After following his instructions for one week, and seeing no improvement, I was ready to try Christian Science, for I was totally discouraged. Treatment began on Friday night, Saturday showed a marked improvement; by Monday the ankle was entirely healed, and I was able to go about my usual duties without the slightest trouble. Since then we have had many demonstrations in our family, and we are trying day by day to gain more understanding of this great truth which meets every human need.

I am very grateful to dear Mrs. Eddy for her discovery of this wonderful Science, which is being demonstrated more and more clearly each day.

Alice W. Metcalf, Denver, Col.

Through a healing from the effects of a fall I became interested in Christian Science, and while in Salt Lake City, a year ago, I attended service in the Christian Science church. A year and a half previous to this I had had a major operation performed, and before the internal wound was healed, thoughtlessly tried to lift a heavy weight, and thus was supposed to have torn open the part where the stitches had been taken. On the Sunday referred to I was returning home from a winter in California, but was even worse than when I left,—cognizant of my inability to cope with home duties upon my arrival, and with visions of another "necessary operation." I felt greatly depressed, and it was with difficulty that I walked from the hotel to the church. I entered the edifice with a painfully discordant body, but there all was harmony, and by the close of the service, through the grace of divine Love, my thought had climbed the heights, and I seemed to grasp the understanding of Life and Love which, as Mrs. Eddy states, is a foretaste of eternity. During this blessed time of spiritual uplifting I left the church, with tears of joy and gratitude filling my eyes, and walked with an elastic step to the hotel, a different person,—practically healed. Since then I have retained health, which I had not known for twenty years, and my gratitude is boundless.

I am also thankful that through Mrs. Eddy's teachings I have learned how to call upon God, that I may claim the promise to those that dwell "in the secret place," "He shall call upon me, and I will answer him: I will be with him in trouble; I will deliver him, and honor him."

Lucy R. Mitchell, Riverside, Ill.

Digitized by Google

Sometimes people are so quickly healed that the realization of what has been accomplished for them does not come until long after. It is nearly five years since Christian Science first helped me, when I was healed in one treatment of an ailment of years' standing. Having no knowledge of the truth, I thought that I need only pay for my treatment, and I gave Christian Science no further thought.

Nearly three years after this time we were in deep distress. Our baby, who was at that time six months old, became very ill, and in the extreme heat of the summer no food seemed to agree with him. After the doctor could do nothing more for him, and offered us no encouragement, we turned to Christian Science, and again it proved to us that Truth is an ever-present help in every need. In three treatments our baby was perfectly healed and was able to take the nourishment which he required. The physician had said that unless he was properly nourished he would have a disease for which *materia medica* can give very little if any help. After the third treatment the bones of his head began to manifest a normal condition, and he is now at two years considered an exceptionally robust child. I am more than grateful for the benefits derived from Christian Science, and am happy in the knowledge that, whatever the trouble, we have a never-failing remedy at hand.—FLORENCE I. SALINGER, St. Louis, Mo.

I wish to add my testimony to the hundreds of others for the healing and regenerating power of Christian Science. I was a sufferer for many years with stomach and bowel trouble, also from weakness and a mental depression which at times was almost despair. I tried drugs till they hurt me even more than the disease; then I experimented with osteopathy, electricity, massage, dieting, and hygiene, never receiving anything but temporary relief. I came to California for the climate, but after six months there was very little change. I was then advised to try Christian Science. I did so, and was helped from the first, so much that I began to read the text-book, "Science and Health with Key to the Scriptures," and to attend the services. In a short time I was perfectly free from the stomach trouble, and could eat and drink whatever I wished without any suffering, but I am even more grateful for the spiritual awakening.

Christian Science came to me when a mourner, and it lifted the shade of gloom. It has shown me that God is my Life, and that God is Love; it has taken away the fear of death, and is teaching me not to worry; it has given me that peace which the world can neither give nor take away. I thank God every day for Christian Science, and am grateful to our loved Leader for showing us how to make the truth practical.

SAREPTA HAVERFIELD, Los Angeles, Cal.

Before coming into Christian Science I never knew what it was to be well. Medicines did me no good; I was unable to eat any solid food, in fact the lightest food would sometimes cause suffering. When "Science and Health with Key to the Scriptures" by Mrs. Eddy was loaned to me, I could not at first understand it and did not know that the reading of it could do any good, for the lady who loaned it to me was not a believer in Christian Science, and knew nothing about it, except that a sister of hers in another city had been healed by it, and had sent the book to her to read. At the time I began to read it, I was unable to do any work, and felt that I needed something more than a book to help me; but in a short time a little understanding began to come to me, and before I knew what had happened all my ailments had disappeared. I was happy, and singing all the time. I felt like a girl of sixteen, and hardly knew what it was to be tired, whereas before that I was always tired. This was the first time in twenty years that I could eat anything and everything without being afraid that it would hurt me, and I have been well ever since that time, which was about nine years ago.

My oldest girl suffered greatly from the effects of vaccination, so that her condition seemed serious; but she was entirely healed by Christian Science treatment. Both of my little girls were healed in a very short time of attacks of eruptive fevers by Christian Science treatment. I could tell of many blessings, and much healing done in my home through this wonderful truth. Though at times I was not able to pay anything for her services, the kind practitioner would always come to me when help was needed, although it was quite a distance.

Every day I feel so thankful to God for what Christian Science has done for me and mine. I owe endless gratitude to Mrs. Eddy for that inspired book, Science and Health, for through its teachings I was not only physically healed, but the Bible, which I had always loved but had never understood, has been opened up to me. God bless Mrs. Eddy for this healing truth and for all the good it has done to humanity.

MRS. CATHERINE KNOOP, Baltimore, Md.

I wish to express my gratitude for what Christian Science has done for me. In October, 1907, I had a severe attack of illness, and had to leave school. Finally the doctor told me that I must have an operation, but not being a surgeon he did not want to perform it himself. I went to one of the best in the city, who told me that I should wait no longer, but have it done at once, as any delay might be very serious. He engaged a room at a hospital (this was on Saturday), and I was to go there on Sunday and on Monday be operated upon. On Sunday, however, I backed down, and sent word that I would not be at the hospital, and the next day my mother found a Christian Science practitioner, who began to give me treatment. In two weeks I was completely healed, although in all I had about five weeks' treatment for the abdominal trouble, and another which was never named.

While I am very grateful for my physical healing, words cannot express my gratitude for the spiritual uplifting which I have received and for my better understanding of God and the Bible. It is my earnest desire to know more of this truth, which is indeed "a lamp unto my feet, and a light unto my path."

A. OMAR HODGES, Kansas City, Kan.

My son's testimony is true in every respect, and we give thanks to God for his healing. We are also grateful to our dear Leader, whom God has inspired to make plain to human understanding the life and teaching of Christ Jesus.—MRS. C. H. HODGES, Kansas City, Kan.

When the truths of Christian Science first came to me, I was to mortal sense a physical and mental wreck; could not eat or sleep, or even read five minutes at a time. As my husband once expressed it, he guessed I had everything. We were visiting my husband's uncle and family, and I came across a copy of the *Sentinel*. I read the different cases of healing, and I thought that if these people could be helped, I could too, although a doctor had said that nothing short of an operation would relieve me; nevertheless, I resolved to try Christian Science. My aunt reminded me that I would have to give up medicine. I told her I would, and I have never had any desire to use a material remedy since that time.

The sense of peace that came to me with my first treat-

Digitized by Google

ment was indeed wonderful. We made a journey to Port Angeles, Wash., and when we reached there I received treatment from another practitioner. After an eight-days stay at his home, I went to my own home, perfectly healed, although the treatment was continued until all fear was destroyed, and I now enjoy perfect health every day. After a few treatments I laid aside glasses, which I had worn nine years. I was supposed to wear them constantly, being an employe in a printing office when I first got them. With my healing came help also for our little son, who had been dosed with drugs for a long time.

The Christian Science literature is my guide, and I am able to meet seeming difficulties for myself and family, realizing that God is All-in-all. Along with many beautiful demonstrations we have had, one of the most convincing came to me one day when I was studying the Lesson-Sermon, "Soul and Body." For about eight months I had not been able to hear in one ear. I had been declaring the truth for myself, and as I went through with the Lesson, the sense of obstruction entirely disappeared from consciousness and I could hear as clearly and distinctly as ever. No return of the trouble has ever been manifested. I can say with the psalmist, "O give thanks unto the Lord, for he is good: for his mercy endureth for ever." I thank God for our beloved Leader, Mrs. Eddy, who has so lovingly given this truth to receptive hearts. I have been in Science about two years, and after receiving my letter from an orthodox church, I united with First Church of Christ, Scientist, Port Angeles; have also made application to unite with The Mother Church. I am striving daily for that Mind to be in me "which was also in Christ Jesus," and always to be found living this blessed truth; as our beloved Leader says in Science and Health (p. 272), "It is the spiritualization of thought and Christianization of daily life . . . which really attest the divine origin and operation of Christian Science."

MRS. MARY A. LEWIS, Port Angeles, Wash.

I am very grateful for what Christian Science has done for me. I had suffered from lameness since childhood, being confined to my bed at frequent intervals. Two years ago the condition became worse, and last March my suffering seemed greater than I could bear. An X-ray examination showed a diseased condition of the bone. I had the very best orthopedic surgeons in Baltimore and Philadelphia to treat me, but they could do nothing. In October I was compelled to use crutches, and an hour's application to any task was agony. A lady, seeing my condition, asked me to try Christian Science. I was willing to try anything, and after one week's treatment by a kind practitioner there was some improvement. Six weeks after the practitioner took the case I was absolutely without pain. I use the limb now more than ever before, and there is no pain.

I am very grateful to Mrs. Eddy for showing us that God is indeed good, and that He is Love, and does not create sickness and suffering.

MISS EUTHA CORDREY, Philadelphia, Pa.

I came into Christian Science after the healing of my daughter, and I am glad to tell of some of the many benefits I have received from this healing and saving truth. I suffered a severe injury to the kneecap, and the knee often pained me greatly, especially in change of weather and when I was fatigued. I had worn a rubber knee supporter for five years, and the doctors said I could never get around without it. I was able to walk fairly well on level ground, but in going up and down stairs I was obliged to put my whole weight on one foot. After coming into Christian Science I laid aside the bandage, and with it all my fear, and then I was able to walk up and down stairs as well as any one, nor do I suffer from any change of weather. While visiting a relative at one of the large Chicago hospitals, a well-known surgeon heard of my case. He considered it very remarkable that I had such perfect use of my leg, considering that the knee bones were still separated, and he asked the privilege of taking an X-ray photograph of it to use in a paper on the subject. Only a short time before this, this same surgeon had said it was imperative that I have an operation, but after he saw the improvement he said, "Let well enough alone."

Besides this I had for twenty years suffered from stomach trouble, and had always been on a very rigid diet. I sometimes craved the things prohibited, but after indulging in these a few times the consequent suffering was enough to prevent any further trial. I have since obeyed the Scriptural injunction, "Take no thought for your life, what ye shall eat;" and I have eaten anything I wanted. For the many beautiful demonstrations of Truth's power I am very grateful and happy.

MRS. CLARA SOLOMON, Elgin, Ill.

[Translated from the German.]

Many years ago I began to have serious trouble with my gums. One double tooth became loose, and pained me in eating. I hoped the trouble would soon remedy itself, but it did not; so I finally decided to go to a dentist, who took out the tooth. He was a medical man of high standing, and he advised me to apply a solution to prevent the spread of the disease. After a time another double tooth became affected in the same way and was taken out, and I was told that I would probably lose all my teeth in that same way, because I was afflicted with a condition of the gums which nothing could cure.

Later on I came to Hannover, and turned to Christian Science. I learned to know the nothingness and powerlessness of matter, and gained the understanding that God, who is Love, does not create anything imperfect. I thought of the animals, which have good teeth in their old age because they do not hold wrong thoughts in regard to them as we do, so I overcame all fear of losing my teeth. After I had lived in Hannover for about nine months, I went to see a dentist about an old filling, and while doing the work he remarked, "What good strong teeth you have; we do not often find such teeth." I laughed to myself as I thought of the prediction of my former dentist. I have had no loose teeth since then; and five years have passed since I came to live in Hannover.

C. EICHMANN, Hannover, Germany.

The truth of Christian Science was revealed to me through an instantaneous demonstration. I had from early childhood been a sufferer from chronic throat trouble, the doctors pronouncing it serious. I was seldom without a heavy cold. A Christian Science practitioner was at my home when a very severe attack came on, and I asked her for help, which she gave me, and the trouble was overcome in one treatment. It then occurred to me, Why suffer from stomach and bowel trouble, nervousness, headaches, etc., which keep me almost constantly under a doctor's care? I began to take Christian Science treatment, and in a few days the first-mentioned troubles disappeared, and gradually I became comparatively free. Truly, my gratitude to our beloved Mrs. Eddy is very great, for the health and happiness which are now mine through Christian Science.

MRS. EDITH WING HUGHES, Kansas City, Mo.

FROM OUR EXCHANGES.

[Editorial in the *Outlook*, New York.]

From time to time men and women of spiritual genius appear who are not imposed upon by the mere processes of thought, the sounding verbiage of knowledge, the false witness of the blind or the half-blind, the illusion of the finality of the age; who look through the mist and see the sublime order moving to its appointed ends with the majesty of great stars set in their places by omnipotence. When these prophets, poets, teachers, appear, faith comes stealing back to the channels that had become hard and dry, and the barren land begins to sing once more. To such as these, who have the pure heart, the obedient will, the mind of the child, the highest things are not only credible: they are inevitable and unescapable. And these men and women are the spiritual experts; the only observers who speak with the authority of eye-witnesses. Against their witness the testimony of the sick, the deaf, the blind, has no weight; it is moving, pathetic, freighted with the pathos of suffering; but its value is personal, not universal.

[Rev. C. A. S. Dwight in *The New York Observer*.]

In the moral sphere as in the physical there is a law of conservation of energy which requires that everything be accounted for and that no items of influence or moments of energy be anywhere or by any one lost. The law was enunciated by the Galilean Teacher long ago on the Syrian hills, in the exhortation, "Gather up the fragments . . . that nothing be lost"—and it holds good still. And if God is carefully inquisitive after fragments of strength and social influence, much more, *a fortiori*, does He demand that those who are rich like Dives, wise like Socrates, eloquent like Apollo, or vigorous like Peter, shall of their much bring offerings to Him, on the account of humanity—on the time-honored principle, "Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me."

[*The Christian Life*, London.]

The kingdom of heaven stands essentially for a great moral and spiritual reality: the supremacy of goodness, the supremacy of love, the supremacy of social justice. The men and women who are laboring to establish it are translating into concrete action the apostolic precept, "Honor all men." They see more clearly than most of their fellows that "man himself is the highest form of human value." They live and move and act in an atmosphere of cosmopolitan sentiment and feeling.

[*The Examiner*.]

We are really saved only when we are born into the spirit of love, and progressively saved as we are growing in the grace and power of love which makes us saviors of others. Because Christ has made us lights, we are to "shine as lights in the world; holding forth the word of life."

[*The Universalist Leader*.]

To do a little good work in our little corner is of greater value than to revel in faith and spiritual vision over a redeemed world, whose redemption can come only by the permanent establishment of the good in every part of it.

[Sir Oliver Lodge in *The Hibbert Journal*.]

Every man, woman, or child who has the power of elevating the thought of another human being, every one who is chosen to act as a channel of the divine Spirit, is for the time a priest.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All correspondence and orders relative to membership and church tenets should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PUBLISHING HOUSE BUILDING FUND.—Contributions to the Publishing House Building Fund should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

Quarterly covers in black seal leather for sale at the following prices:—

Regular size, 5¼ x 7¾, $1.25 each or $12.50 per dozen.
Pocket size, 4½ x 6½, $1.15 each or $11.00 per dozen.

Leather cases for the pocket editions of the Bible and Science and Health are now made slightly wider in order to provide space also for the trimmed *Quarterly* with or without cover. Price, $1.25 each.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.
It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.
Terms of Sale, Postpaid to any Address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, Mexico, and Cuba, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., 30 pages.

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER. SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science: containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Postmaster General Meyer, in arguing for the establishment of postal savings banks, notes the fact that fourteen States of the Union have savings bank deposits of over three and a half billions of dollars, or 98.4 per cent, while the remaining thirty-two States have a trifle over seventy million dollars, or 1.6 per cent. This condition, he avers, does not give adequate facilities to many people for depositing money in banks and furnishes a convincing reason for affording such facilities through a Government postal savings system. There are in the United States sixty-one thousand post-offices, of which forty thousand already do a money order business and could become depositories for savings.

President Roosevelt is expected to start on his trip to Africa within a fortnight after the inauguration of his successor in office, and will probably be accompanied by his son Kermit, a professor from the Smithsonian Institute, and an officer of the navy. He will reach Mombassa in East Africa in April and spend six months between that point and the province of Uganda, finally reaching Lake Victoria Nyanza, whence his objective point is Entebbe in Central Africa. From there he journeys by boat and on foot to Khartoum, about three thousand miles.

Cordial messages expressing gratification over the visit of the American fleet to Amoy, China, and the remission of the Boxer indemnity by the United States, have been received at the State Department. Both messages, one signed by forty-one public officials, directors, and officers of private enterprises representing twenty provinces, and the other by the former governor of Kiangsu and various prominent citizens of Hangchow, expressed appreciation of the friendly relations existing between the United States and China.

President Eliot of Harvard University has tendered his resignation, which has been accepted, to the Board of Overseers, to take effect not later than May 19 next. He has been a forceful leader in American educational life. He has served the university forty years, and retires at the age of seventy-five with powers unimpaired and amid universal expression of regret from graduates and undergraduates.

The comparative statement of the Government receipts and expenditures for October, 1908, shows an increase in receipts of $1,000,000 and an increase in expenditures of $7,000,000, as compared with September, 1908. This increase in expenditures is due entirely to the payment to the Post-office Department of $7,000,000 on account of the quarterly deficit in the postal revenues. The total receipts for the month were $49,317,724.

As a result of the investigation and report of the Finance Commission of Boston, indictments were found against six men charged with collusion in bidding on iron work required by the city. They have pleaded guilty, paid their fines, and have made restitution to the city.

The national bank receivers, who met in convention in Washington some time ago, have handed their report to the Comptroller of the Treasury. Among other things, great stress is laid upon the need for economy and judgment in handling the affairs of failed banks.

The tentative budget agreed upon by the New York Board of Estimate to cover expenses for the year 1909 amounts to about one hundred and fifty-seven million dollars. For the current year the amount was fourteen million less.

The "initiative and referendum" has been adopted in Oregon, Maine, South Dakota, Illinois, Montana, and Oklahoma. North Dakota and Missouri vote on it this year.

International.

The Formosan Trunk Railway, which recently was completed, was formally opened last week in the presence of General Prince Kanin of the Japanese army and a large number of officials and specially invited guests. Formosa is now threaded throughout by the railway, which extends over a length of three hundred and thirty-four miles. Sixty-two miles of the completed roadbed were taken over by the Japanese from the Chinese in 1895. Japan built the two hundred and seventy-two miles additional at nearly $2,000,000 less than the estimate, and the sum thus saved will be applied to improvements. A concession to build four hundred and fifty miles of branch lines has been granted to the Formosan Sugar Refining Company, and ninety miles are already completed.

The far-sighted Japanese, foreseeing the results of the destruction of their extensive mountain forests, which are government lands, safeguarded themselves by placing all of these under government control. For twelve hundred years, a longer time than in any other country, the people of Japan have been planting and growing forests. These yield very high financial returns, made possible by the close utilization of every bit of the tree so that scarcely a twig is wasted, and by the improvement of the growth of their forests by carefully conducted thinning and tending. The woods are first thinned at the age of thirteen years, and then every five years after that up to the time of the final harvest, at one hundred and twenty years.

The members of the shipworkers' unions have voted to accept the offer of Sir Christopher Furness of the shipbuilding firm of Furness, Withy & Co., giving them a share in the profits. The majority in favor of the proposition was ten to one. The scheme, which is to be tried experimentally for a year, in its general outlines, is as follows: In place of a certain amount of their wages the men may take out shares in the business. On these an interest of four per cent is guaranteed and an additional dividend when the profits exceed a certain sum.

Within an omnibus ride of the Bank of England in London there are, it is reckoned, quite ten thousand acres of waste land lying vacant. A society has been formed, the Vacant Land Cultivation Society, with the object of obtaining the loan of unused land from public authorities and private owners, and a first-class gardener has been retained to visit the gardeners and give advice.

President Castro of Venezuela has modified one of his decrees issued last August to the extent of permitting the shipment of produce from Parian ports to Trinidad, the vessels returning in ballast. No passengers will be allowed on vessels sailing from these ports to Trinidad, or sailing from Trinidad to Venezuelan ports.

Though the government and private railways of Japan carried 126,000,000 passengers last year, the deaths from accident numbered only nineteen, and the injuries were only three hundred and thirteen. Not a single fatality occurred on the government lines, though 47,500,000 people were carried.

The seventy-fourth anniversary of the birth of the Dowager Empress of China was celebrated on the 3d at Amoy, China, and the event was made the greatest day of the festivities in honor of the visiting American battle-ships under Rear Admiral Emory.

The twelve new torpedo boats under construction for the German navy are to be driven by steam turbines, four different types of which are to be tried.

Industrial and Commercial.

At a meeting last week of the directors of the Pennsylvania Tunnel and Terminal Railroad Company there was awarded to the Westinghouse Electric and Manufacturing Company a contract for the electrification of the Pennsylvania terminal in New York and the lines in New Jersey and Long Island connected with it. The initial amount of the apparatus required under this contract will aggregate $5,000,000.

Important railroads have recently been testing pressed steel wheels for cars intended for heavy work. The sample wheels were put to severe tests, both chemically and in service, and in every way showed their superiority over those of the cast steel variety. Their adoption as a standard wheel is considered a certainty.

Ten million dollars in round figures, out of a total of $18,000,000 put up by investors for the bankrupt Chicago and Milwaukee Electric Railway Company, are not accounted for by construction costs, according to reports of certified accountants to the receivers just appointed.

It is estimated that the market value of this year's crop of tobacco in the Connecticut Valley will be nearly $5,000,000.

The total value of pig-iron produced in 1907 in the United States, estimated at $20.59 per ton, was $529,958,000.

General.

The money expended on the present election throughout the country, says the *Boston Globe*, would be sufficient to put all the unemployed at work, as well as give the poor in many communities the necessaries of life during the coming winter. The millions of dollars put out do assist many individuals besides the successful candidates, yet most of the money is practically wasted. No one can estimate the aggregate amount of cash that all of the thousands of candidates for public office have spent, but it must be many millions.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE PRESIDENT'S THANKSGIVING PROCLAMATION.

In his Thanksgiving proclamation President Roosevelt says:—

"Once again the season is at hand when, according to the ancient custom of our people, it becomes the duty of the President to appoint a day of praise and of thanksgiving to God.

"Year by year this nation grows in strength and worldly power. During the century and a quarter that has elapsed since our entry into the circle of independent people, we have grown and prospered in material things to a degree never known before, and not now known in any other country.

"The thirteen colonies, which struggled along the seacoast of the Atlantic and were hemmed in but a few miles west of tide-water by the Indian-haunted wilderness, have been transformed into the mightiest republic which the world has ever seen. Its domains stretch across the continent from one to the other of the two greatest oceans, and it exercises dominion alike in the arctic and tropic realms.

"The growth in wealth and population has surpassed even the growth in territory. Nowhere else in the world is the average of individual comfort and material well-being as high as in our fortunate land.

"For the very reason that in material well-being we have thus abounded, we owe it to the Almighty to show equal progress and more in spiritual things. With a nation material well-being is an indispensable foundation. But the foundation avails nothing by itself.

"That life is wasted and worse than wasted which is spent in piling heap upon heap those things which minister merely to the pleasures of the body and to the power that rests only in wealth. Upon material well-being as a foundation must be raised the structure of the lofty life of the Spirit if this nation is properly to fulfil its great mission and accomplish all that we so ardently hope and desire.

"The things of the body are good; the things of the intellect better; but best of all are the things of the soul; for in the nation as in the individual, in the long run, it is character that counts.

"Let us, therefore, as a people set our faces resolutely against evil, and with broad charity, with kindliness and good will toward all men, but with unflinching determination to smite down wrong, strive with all the strength that is given us for righteousness in public and in private life.

"Now, therefore, I, Theodore Roosevelt, President of the United States, do set apart Thursday, the 26th of November next, as a day of thanksgiving and prayer, and on that day I recommend that the people shall cease from their daily work, and, in their homes, or in their churches, meet devoutly to thank the Almighty for the many and great blessings they have received in the past, and to pray that they may be given strength so to order their lives as to deserve a continuation of these blessings in the future."

AN INTERESTING STATEMENT.

[A statement of the following very interesting case was sent to a popular magazine which had published the medical opinion that Christian Science has never healed any so-called organic diseases. The magazine did not see fit to publish Mr. Oliver's statement, but we are glad to do so, and venture to quote briefly from a report of this case which appeared in the *Journal* of the American Medical Association, under date of July 27, 1907. The article, which was written by one of the physicians who had attended Mrs. Oliver, began with this explanatory statement: "The following case is reported because it is, I believe, the first instance recorded of recovery from generalized blastomycosis." The conditions are then described in detail, one statement being, "The lesions in some instances, as on one of the fingers, destroyed the bone." The general report bears out the husband's statement, except where it says that she "lived much of the time out of doors." The article gives the names (which we omit) of a number of physicians who attended Mrs. Oliver, and concludes as follows:—

"No medicine was taken after March 23, 1906. In August, 1906, the last sore had disappeared. I have seen the patient several times since, and she is apparently, at the date of this writing, July 12, 1907, in perfect health. She writes me under recent date, 'I am better now than I have ever been in my whole life, and can endure anything and never have an ache or pain.' The diagnosis of blastomycosis was made, not only on the clinical symptoms, including the naked eye appearance of the lesions and the exclusion of other diseases,—tuberculosis, syphilis, etc.,—but by the microscopic examination of the pus from the wounds with a cultural development of the blastomyces. The culture experiments were made by Dr. ———. The patient was seen at various times by Drs. ———, ———, and ———. These agreed in the diagnosis of generalized blastomycosis."

This case of healing in Christian Science recalls the following statement in the Gospel of Matthew: "And Jesus went about all Galilee, teaching in their synagogues, and preaching the gospel of the kingdom, and healing all manner of sickness and all manner of disease among the people. And his fame went throughout all Syria: and they brought unto him all sick people that were taken with divers diseases and torments, and those which were possessed with devils, and those which were lunatic, and those that had the palsy; and he healed them." —EDITOR.]

THE writer begs to take issue with a statement which appeared several months ago in one of our leading magazines, in which a doctor claimed that in his personal research into Christian Science cures he had never found one case in which there was any good evidence that cancer, consumption, or any other organic disease had been arrested or banished, and that the diagnosis was either made by the patient himself, or was an interpretation at second hand of what a doctor was supposed to have said. The writer has not made a personal research, but has come "face to face" with a case of so-called organic disease, which he is fully convinced was cured in Christian Science, in spite of any opinions which may be held by physicians and others to the contrary.

An article appeared in the American Medical Association *Journal*, under date of July 27, 1907, which gave a complete statement of the case to which reference is made. By way of explanation it may be said that according to medical opinion blastomycosis is a so-called organic disease, as unsightly as leprosy and as painful as any form of rheumatic trouble known to suffering mortals. To impress one with the severity of this case, it may be noted that the knife was used some eighty odd times, and that up to the present time there has never been a positive cure of such a case known in the history of medicine. It may also be of interest to know that the patient suffered from this terrible disease

Copyright, 1908, by Mary Baker G. Eddy.

Digitized by Google

for over two years, and was treated by a number of eminent physicians, and that they agreed upon the diagnosis of the case as given in the medical journal already named. The writer of this testimony is the husband of the patient, and the facts herein related can be substantiated by any of the medical doctors who attended the case. The article referred to would give one the impression that the "out-of-door life" in sunny California had a decided tendency toward the healing of this case, but the facts are that the weather during the patient's stay in California was rainy and disagreeable, which confined her to the house during her entire stay with the exception of a few hours which were spent upon the porch.

The patient was taken ill the latter part of May, 1904, and was not able to leave her bed except for a short period until taken to California in February, 1906. Upon her arrival in Los Angeles, she was refused admission to all hotels, hospitals, and sanitariums, nor was it possible to lease a house after the owner had ascertained the nature of the disease. At last, as a final resort, it became necessary to purchase a house for her shelter. A remarkable coincidence happened in the purchase of that house. After being turned from door to door, it certainly seemed a miracle to have the owner of that house recommend Christian Science, though she herself was not a Scientist. Like all others who have had to be driven into the acceptance of the truth, my wife scorned the idea of being cured in Christian Science, until she was told point-blank by her Los Angeles physician that her place was at home, where she could "die among her friends." Then came the resolution to accept the truth, and she did so right there and then. The physician was dismissed in the forenoon and a Christian Science practitioner called in the afternoon. Up to that time the patient had had little or no natural sleep during the entire illness, and had, during the past several weeks, retained none of her food. At this time she weighed less than ninety pounds, her normal weight being over one hundred and thirty. The rapidity of her progress under Christian Science treatment was almost phenomenal, and unless substantiated by responsible people would certainly sound mythical, or, to put it stronger, like a downright falsehood.

March 28, 1906, was the last day that the physician called, and the first day of the Christian Science treatment. It may seem past belief, but after the first treatment in Science the patient drank two cups of coffee and ate several doughnuts and a plate of baked beans for her evening meal. She then slept until after seven o'clock the next morning, and without the usual "capsule," too. Within a month she returned to Chicago, and although able to walk but little, showed rapid daily progress under treatment by a Christian Science practitioner in that city. In July of the same year she had regained her normal weight, and could walk and stand as much physically as she could prior to her illness. To-day she is the same, after having spent the past year in a trip around the world without a sign of the aches and pains which usually accompany such a feat.

It is well worth one's while to take the time to think of what Christian Science did in this case. Those who read this article carefully will see that Christian Science actually put life into a human being who had been as it were at death's door for more than a year.

DAVID OLIVER, Chicago, Ill.

WORKING OUT OUR PROBLEM.

REV. G. A. KRATZER.

MANY students of Christian Science, as well as Christian people generally, make a mistake in attempting too much at the start, or rather in not rightly selecting the phase or manifestation of error over which they attempt to demonstrate at the beginning. Error as a whole presents many problems to be solved, and no young student of Christianity is competent to work on them all at the same time, and find success in his efforts. He must choose among the problems, working them one at a time, although it is true that the solving of any one problem contributes to the solution of all the rest.

The most frequent mistake made by many who are trying to be Christian Scientists is in attempting to demonstrate peace without before they have demonstrated peace within. They think they must solve the world's problems, or their church's problems, or at least the problems of their family or friends, in order to solve their own. The scientific order of demonstration is the exact reverse. A man must cast the beam out of his own eye before he can see clearly to cast the mote out of his brother's eye. We must be sufficiently acquainted with God, good, and sufficiently grounded in our consciousness of Him, sufficiently able to dwell "in the secret place of the most High," so that in our own consciousness we have become largely impervious to the darts of error, before we are strongly enough placed in good to be of very much service to other people. If we have not a firm inward hold on peace and harmony, we shall not do much toward imparting these qualities to other people or to outward situations.

Beginners in Christian Science need to follow the example of Jesus. Before he entered upon his ministry, he went apart, for forty days, into the wilderness, to pray. He saw that each should have his own consciousness closely and firmly and unalterably united with God, good, before undertaking the problems of the world. During these forty days there were sick to be healed, there were evils to be cast out, there were wrongs to be righted, but for the time Jesus paid no attention to them; he was giving his entire attention to getting so firmly placed and grounded in the abiding consciousness of God, good, that he would be able to attack these evils all the more successfully later on, and without being himself overthrown in the process.

We do not need to make a physical journey into a material desert in order to follow the example of Jesus in this particular. It is sufficient to withdraw our thoughts from other people's problems for a time, so that we may give our entire attention to the solution of our own,—become sufficiently acquainted with God so that we shall be permanently at peace within, even while the storms of error rage all around us. When we have demonstrated such inward and abiding peace that feelings of anger, jealousy, envy, resentment, self-pity, brooding over wrongs, and the like, are not stirred into activity by the conduct of others, then we have gotten into a position to be of real service in overcoming the errors in our family, in the church, and in the world at large. Of course, such a demonstration is a matter of degree. Probably there are very few who have reached such a height of spiritual attainment that inharmonious feelings are not at times aroused into momentary activity; but we must have become sufficiently assimilated to God, sufficiently habituated in the abiding consciousness of good, sufficiently alert with regard to error, so that we promptly put out these intruders upon harmonious consciousness, instead of admitting and cherishing them, before we can be very helpful to others.

Even in the experience of those strongest in the truth, there come times when to sense error specially abounds and rages. In such a time a Christian's first duty is to save his own sense from taking part in the raging of error. With his utmost efforts this may be all he is able to do, and he will do well, at times, if he does this; but, unless he does this first of all, he can neither help himself nor any one else. Such a raging of error is spoken of by the prophet Ezekiel, and he tells us: "Though these three men, Noah, Daniel, and Job, were in it, they should deliver

Digitized by Google

but their own souls by their righteousness, saith the Lord God." If these mighty men of faith under the given unfavorable conditions would have been able to have saved but their own sense from having part in error, able to have done no more than maintain spiritual consciousness, then surely there are times when we, who have not endured the test of the flood, nor the trial by suffering and the loss of all earthly possessions, and who have not survived the lions' den,—there are times when we shall do well if we do nothing more than maintain our own peace.

In this connection, the story of Noah and the ark is illuminating. Taken figuratively, the flood may represent the raging sea of error; the solid ground the abiding sense of good, which for a time seemed to be completely covered and hidden from sight by the sea; while the ark represents that spiritual consciousness which rides safely above the raging waves. Spiritual consciousness was a place of safety to Noah, his sons, and their wives, but there were none others in the world who were able to dwell in this ark of spiritual consciousness, and so no other men were saved from the flood. The ark had but one window, and it was open toward heaven, toward light and truth and good,—the ark had no windows at the sides for looking out on the sea of error. From time to time Noah sent out a thought of peace, the dove; but it found no resting-place, none of the solid ground of good appearing above the flood, and so it returned to Noah. Thus he knew that the waters of error were not yet subsided, and he continued to dwell in the ark of spiritual consciousness until error should destroy itself, and thus abate, at least in some measure. When once more Noah sent out the dove, his thought of peace, it found a resting-place, and did not return. Then he knew that error was sufficiently self-destroyed, and enough of truth and good had appeared in the outward situation so that it was safe for him to begin to make preparations to go forth from the ark; that is, to reach out with aspiring faith for the benefit of mankind.

Many times there are members of our family, or of our church, or people in our neighborhood, who are so satisfied with their present condition that the wisest thing we can do is to protect our own consciousness and allow the error to find its own self-destruction, while we calmly abide in the consciousness that nothing real, nothing good, can be destroyed or lost. When error has sufficiently destroyed itself in the consciousness of others through suffering, the time will come when they will be ready for the help which we can give them. It is well for us occasionally to utter a word of peace, a thought of Science; but if their behavior does not indicate that this thought of Science finds a place in their consciousness where it can rest without stirring up violent manifestations of error, the thing for us to do is to continue to dwell quietly in the ark of our consciousness of Truth. If, in our efforts to help them, we ourselves are dragged forth from the ark into the sea of error, much is lost to us and to them. While the prodigal chose to remain in the far country, "no man ministered unto him." By these words Jesus seems to intimate quite clearly that to let them alone is the most effective treatment for those who are headstrong in error.

The proper interpretation of certain verses in the first chapter of Genesis gives us added understanding of our privilege and duty. God's universe was never "created" in the sense of having been developed from a previous state of non-existence. God's universe is coeternal with Himself. Any well-instructed Christian Scientist will recognize this fact, without argument from the Scripture to support it, though such evidence can readily be given. The record in the first chapter of Genesis is not, therefore, a record of creation, but a record of the inspired writer's advancing periods of understanding of the universe which eternally existed. Says Mrs. Eddy in Science and Health (p. 504), "Was not this a revelation instead of a creation? The successive appearing of God's ideas is represented as taking place on so many *evenings* and *mornings*,—words which indicate, in the absence of solar time, spiritually clearer views of Him, views which are not implied by material darkness and dawn."

While we are passing through the advancing periods of understanding, the human sense may be subject to more or less of disquietude and unrest. There will be "days" when all will appear bright and clear. Then other problems will arise, which we are not able to solve for a time, and we may pass through a period of "night." Then we succeed in solving or overcoming these difficulties of understanding or experience, and come into a brighter and fuller "day." Finally, we arrive at the goal of complete understanding, where we know the truth, and know that we know it, and feel scientifically confident that we can abide in the consciousness of Truth and protect ourselves from coming under the domination of error. While there is much that we have not demonstrated, yet we feel that we understand God, understand His universe, and understand ourselves, and that we have sufficient hold on the truth so that we can make our way forward gradually to a complete demonstration of that which we know to be true, without let or hindrance from error.

When we have attained this consciousness, we have reached the day of rest,—not a period of idleness, by any means, but rather a period of activity in demonstration of the truth. Like God, we are able to "rest in action" (Science and Health, p. 519). We work vigorously for our own advancement and the advancement of others. While doing so, we are confronted with all sorts of errors, but they do not disturb the harmony of our consciousness while we are overcoming them. We are strong enough in the truth so that they cannot disturb us. So we are in perfect repose, even while we are actively working. This period of repose, this day of rest, is our Sabbath day. We should "remember the Sabbath day, to keep it holy;" that is, our consciousness should rest in God, we should not allow inharmonious, annoying, unholy thoughts and feelings to enter. We should keep our consciousness pure and clear, and our Sabbath day, our spiritual consciousness, having been attained, should endure forever.

SPIRITUAL TRANSFORMATION.

C. W. CROCKETT.

We are told that "the fossil forest of the Yellowstone Park is a mountain composed of layers of a greenish sandstone, containing the trunks of silicified trees," and that "shells, bones, corals, etc., after fossilization have in almost all cases lost at least the animal matter they contained. Wood is often changed to quartz or limestone." In explanation of some of these transformations it has been stated that when a piece of wood is immersed in a silicious hot spring, the organic matter gradually decays and is replaced by the mineral, until finally the change into a stone is complete, though the wood still retains all the detail of its original structure.

Does not all this illustrate the great change that is taking place in us? As we grow in the knowledge of the allness of God our conception of our own being becomes more and more spiritual, and the material fades away, until finally we shall realize that we are not in any respect material, but spiritual, the perfect thought of the perfect Mind. Paul says, "For this corruptible must put on incorruption, and this mortal must put on immortality. So when this corruptible shall have put on incorruption, and this mortal shall have put on immortality, then shall be brought to pass the saying that is written, Death is swallowed up in victory."

SELECTED ARTICLES.

[J. Miles Chambers, M.R.C.S. Eng., L.R.C.P. Lond., in *The Onlooker.*]

It has probably been the experience of almost every doctor of to-day to be asked by his patients for his opinion of Christian Science as a healing agency, and one would not be far wrong in saying that the fact that Christian Science practitioners do not consider it necessary to use the stethoscope and thermometer and other means of ascertaining the actual physical condition which they propose to relieve, is considered by the majority of doctors to be a full and sufficient reason for declaring that the cures cannot be genuine. A patient inquiring about a reported cure of, say, cancer, is told, "If it was cancer, it wasn't cured; if it was cured, it wasn't cancer;" and the inquirer, in a spirit of resignation to the (supposed) will of God, has had to remain content with the knowledge—and fear—that should he at any time become a victim to any disease pronounced by medical science to be incurable, there is nothing for him to do but to bear it patiently, and pray for a speedy death.

This attitude towards Christian Science was, perhaps, excusable in the early days of its practice, but now that the results of the operation of its methods over a period of forty years have given, and continue to give, increasingly convincing evidence that diseases, call them by what medical name you will, which had been pronounced, after the employment of all known physical aids to diagnosis and prognosis to be incurable, have been cured by Christian Science, this position is no longer tenable, and many medical men, both here and in America, have been led to consider what is the understanding which enables men and women, without any previous knowledge of the various branches of medical science, to bring about a cure where they themselves have failed to do so, in spite of all the new remedies and improved methods of treatment which recent scientific discoveries have placed at their disposal.

It is not within the limits of this short article to consider the methods by which Christian Science performs its cures,—that is fully explained in the text-book,—and any scientific discussion by the medical profession on the merits or demerits of Christian Science may be regarded as premature until doctors are prepared to admit that such diseases as cancer and leprosy can be cured. I recently had the opportunity of questioning closely a patient who had been suffering from an attack of acute Bright's disease. There had been a consultation and the doctors had told his friends that nothing more could be done for him, and that he could not live more than a few days. All medical treatment was then stopped and Christian Science treatment begun, and in less than a fortnight he was quite well again. This single case is not in itself a proof that Christian Science is a panacea for all the ailments to which mankind is subject, but it is sufficiently convincing to prompt a further study of the methods by which the result was obtained.

Conscientious consideration of the cases treated and the methods employed reveals the fact that the method is applicable to every form of disease, whether hitherto considered to be incurable or not. (Hence its claim to being an exact science.) It also reveals the fact that the success of its treatment is in no way due to the operation of hypnotism, mesmerism, spiritualism, or animal magnetism, as is so frequently urged by the supporters of psychotherapy. It is, moreover, in these two essential points that Christian Science differs from every other form of treatment, whether purely medical, psychological, or psychomedical; and the former of the two gives promise to the investigator that this discovery of Mrs. Eddy's is, in fact, the rediscovery of the Christ-method of healing.

It is very doubtful if any system of healing since the days of Jesus Christ and his followers has been able to produce a case of leprosy healed through its agency. This has been done in recent years by Christian Science, and this fact alone is sufficient to establish it as a healing agency of inestimable value to mankind.

[Editorial in *The Morning Telegraph*, New York City.]

The attack on Christian Scientists, their Leader and belief, by a minister of this city, is regrettable as showing the intolerance of the orthodox clergy toward another denomination. This intolerance, it was believed, had in a measure died out; but there is little doubt that it still exists, just as it did centuries ago, when men were burned at the stake and driven from their native land because they held different religious views from those in authority. But in another way this minister's words will be of benefit, as they will attract attention to Christian Science, its work, and the people who believe in it. The more Mrs. Eddy's doctrine, or belief, is investigated, the higher opinion one will have of it. It is impossible for a person to talk with half a dozen Christian Scientists without being impressed by their earnestness and honesty and strong faith.

The truth is that a Christian Scientist is the real, the ideal Christian. With him there is no doubt, no foolish quibbling over doctrinal points, no halting. With his whole soul he believes what he says. He is trying to practise what he preaches. The Bible is the basis—foundation—of all Christian religions. Do you believe it? Do you believe all of it? If you do, you know that Christian Science is more in accordance with the teachings of that holy book than any other religious belief in all Christendom. Christian Science conflicts with no other belief; rather is it a strong addition, an increase of faith. You may be a Methodist or a Baptist, a Roman Catholic or a Jew, and have such a firm and abiding faith in the creator—the perfect One—that while you may not remove mountains you may remove bodily ills. We believe this has been done. The testimony of thousands of truthful and intelligent men and women prove it has been done—that Christian Science has healed the sick; that it has taken persons who were known to their friends as chronic invalids, and implanted hope and faith in their hearts, and from that hope and faith good health has come.

More than nineteen centuries ago there lived "a certain man at Lystra, impotent in his feet." He was a cripple from birth and "never had walked." He heard an address made by the zealous preacher Paul, a citizen of Tarsus, learned and eloquent. The words of the preacher made an instantaneous impression on the poor cripple. Paul was preaching the new religion, and his constant theme was faith, an unquestioned faith in the merciful One whose doctrine he expounded. The man with the useless feet heard him and believed; accepted his religion then and there. He had faith. Then Paul observed the lame man "steadfastly," and the account says that, "perceiving that he had faith to be healed," Paul said to the man, "Stand upright on thy feet. And he leaped and walked."

Paul was a Christian Scientist. The man of Lystra who was born a cripple was another Christian Scientist; he had, in the language of the story, "faith to be healed." That is all Christian Scientists of this day have—"faith to be healed." Is there a Christian man or woman who will deny the truth of that story of the healing of the cripple of Lystra by Paul? It is set down in the fourteenth chapter of the Acts of the Apostles. Whoever denies it denies the truth of the Bible. These words are addressed to those Christians who deny and cry "nonsense" and "humbug" and actually know little about that of which they are talking. Offhand, a person who never had heard

Digitized by Google

of the Christian religion might declare its basic idea to be absurd, and then become a convert after investigation. The fact of the matter is that all religious belief is based entirely on faith—"the substance of things hoped for, the evidence of things not seen." The Christian can absolutely prove nothing; he thinks his religion is true because he believes it so strongly and because a multitude that no man can number has believed the same thing. What we point out is that Christian Science is the most rational of all of the many beliefs, because at least a part of it can be demonstrated—can be proven. Without doubt every person who reads this has a friend, or knows of some one, who has been healed or helped by Christian Science.

If there were only one person in the world who went about telling his fellow-men that his faith had cured him of a sickness, we might assume that he was mistaken, that he had recovered his health through change of air or some other means. But it is not one alone who declares that Christian Science has made him whole; the numbers who bear testimony to the good results of the work of the followers of Mrs. Eddy cannot be counted; they are in every town and city—their name is legion. It is this cumulative evidence that gives weight to the belief that one can be healed by faith. You can find twenty men of good standing in this city inside of three hours who will declare to you on their honor that they have been cured of diseases through the efforts of Christian Scientists. Their word cannot be questioned.

Why should not Christian Scientists be believed? What they declare is done to-day, professors of Christianity admit was done in the days of Paul. Cannot others do what Paul did? You who doubt may say what was done nineteen centuries ago is impossible to-day. Why is it impossible? As a matter of fact it is not impossible. What Paul did, the followers of Mrs. Eddy are doing in this enlightened age. The character of Christian Scientists entitles them to the respect of all others. Go to a Christian Science church some evening and observe the people. You will find a handsome house of worship packed with persons cultured, intelligent, accomplished, inspired with the best ideas of Christianity, filled with love for their fellow-men, holding a faith that you may wish you possessed; you will find lawyers, noted business men, ladies well known in the best New York society. Such are Christian Scientists.

Certain physicians have found fault with Christian Science. A few years ago the medical men of this city and the country were greatly stirred because a woman suffering from consumption placed herself in the care of Christian Scientists. The doctors, we say, were very indignant about the matter. Just why is hard to understand. Can they cure consumption? Half a dozen of them had treated the afflicted woman referred to, and she wasted away under their hands. Wherein was it any business of those who admitted failure in the case because others were ready to help the woman? If a physician will assert that he can cure a disease and prove it by doing so, he is entitled to declare that patients should employ him. But if he cannot furnish the proof, let him hold his peace. The cures of Christian Scientists, as we have said, have been many; they are not to be questioned. Christian Science is here to stay; it numbers its converts by the score every week. If any one attempts to criticize it, he should go about the matter with a Christian spirit; above all, he should be sure of his facts. These facts can be learned only by careful inquiry and investigation, and after learning them—the investigator probably will have no criticism to make.

[From *The Illustrated Review*, Chicago.]

Christian Science, though founded upon the Bible, does not come to establish a new sect, even if some who adhere to sects may say so. A sect is something cut off or divided from some main body, but Christianity is not in itself divided. As the robe which Jesus Christ wore was woven without a seam, so that the soldiers thought it ill to tear it into sections, so Christianity, depending upon the proof of healing instead of argument, is a complete and perfect system or science. In pure science you can have no variety of teaching; though in the work of pupils you may observe approximate or perfect demonstration of the rules laid down. And so it is in Christianity. It is ever one, a perfect Science based upon perfect Principle, because God is that Principle. When it is understood, the prophecy of Jesus will be fulfilled, "And there shall be one fold, and one shepherd."

[Bishop Anderson as reported in the *Chicago Record-Herald*.]

In the early days of the Church the doctrine was held that God had no less a part in the welfare of the mind and body than in the welfare of the soul. The Church drifted away from this belief, but it is now to be noted that the Christian world is coming back to the belief that there is a close connection between religion and health. I hope that the future will show more and more of the acceptance of the truth of the great power of God to heal people.

[From an editorial in the *Duluth* (Minn.) *Tribune*.]

The Church to-day is exceedingly unfortunate in the interpretations of the ages of theological expressions from which they cannot free themselves, and the definition of words of necessary use, making it almost impossible to read into them now their real meaning as used from the modern pulpit. Among the stumbling-blocks placed between the Church and the man of to-day is that of a "personal God." God made man "after his own image," and through all the centuries this has come to mean more and more—to mankind in general—physical image. So we all have been taught, and the instant the term is used from pulpit or pew there comes to mind that picture in all the old Bibles and still found in many Biblical illustrations, of a benevolent-looking, flesh-tinted, wholesome old gentleman with an abundant white beard and surrounded by quite palpable clouds.

That is what the "personal God" of the Church means in the mind of the average adult. It is no longer what the term means to the modern theologian. There are many other terms still covered with the barnacles of the ages, or as one clergyman phrased it, "infected with the microbes of the years and sadly needing to be sterilized before being used as instruments by the Church." They are the barriers between the Church and the hearts and lives of the people who are coming to find a sufficient satisfaction in merely being of enough use in this world and of sufficient value to the immediate or remote environment to justify their being here. These are substituting this life-motive for the Christian religion, and their spiritual ideals for the Christian's personal God. The Church has need to move rapidly to surround and capture to itself this movement toward a possibly new but not a godless religion.

[Frederick Dixon in *Nature Cure*.]

When the term healing is used in Christian Science, it must be remembered that it is applied equally to the destruction of all that is unlike God, whether sickness or disease, pain or emotional ecstasy, sorrow or despair, misery, want, or sin. The medical training of a Christian Scientist consists of only one course, but it is a course which extends, humanly speaking, throughout his life. It consists of the effort to eliminate from his own consciousness the belief in the evidence of material sense; in a word, in

Digitized by Google

anything that is unlike God. Just exactly as he succeeds in doing this he, like Jesus, overcomes the world, and Christ Jesus is the way. A Christian Scientist has consequently only one prescription, but it is the prescription used by Jesus, whose therapeutics were moral and whose physiology was spiritual: "Repent; for the kingdom of heaven is at hand." Now the Greek word translated *repent* means, literally, something causing a conviction afterwards, and so a change of mind.

It follows consequently that as a man divorces sensuality from his thought, he touches the hem of the seamless raiment of Christ, and to the extent of the sacrifice he is prepared to make for Truth he is, in the words of Mrs. Eddy (Science and Health, p. 55), "endued with the spirit and power of Christian healing." This is about as far from placing the physical welfare of man before the spiritual as anything well could be. It is, on the contrary, accepting fearlessly the words of Jesus, "Whether is easier, to say, Thy sins be forgiven thee; or to say, Arise, and walk."

Christian Science, in a word, is Christian because it is the religion Christ Jesus preached, and it is scientific because it is demonstrated by signs following in the way he ordained.

[Willard S. Mattox in *The Times*, South Bend, Ind.]

It is interesting to note from a recent New York despatch published by your paper that the leading psychologists, clergymen, and physicians are endeavoring to discover how much of Christian Science they can with propriety adopt in their practice.

The nature of Christian Science, its basis and Principle, its practice and application to the needs of the human race, are so diametrically opposite to what is called mental science, or suggestive therapeutics, that in order to adopt the good contained in Christian Science the exponents of these other systems would have to eschew their previous practice. The fact that the leading psychologists, clergymen, and physicians are willing to admit that Christian Science contains something which they may, with profit, adopt, is interesting aside from the subtle compliment to Christian Science. It marks one step in a progressive movement that has been very evident during the last decade or two. Christian Science has successively endured contemptuous indifference and bitter opposition, and it will survive the effort to transplant some of its teaching to barren and uncongenial soil. However, Christian Scientists can assure those who are endeavoring to compromise with systems of healing which employ the human mind or will-power, that no such amalgamation with the pure teachings of Christian Science is possible. The healing power upon which they depend is not the human mind, but the divine Mind that was in Christ, the Mind that is God; and it will at once be seen that there can be no platform upon which this radical Science of Christ-healing can meet and associate in practice with a teaching which confessedly employs hypnotic suggestion.

[John M. Dean in the *Commercial Appeal*, Memphis, Tenn.]

If the reverend critic has something better to offer, a hungry world is waiting for that very thing, but experience has shown that no great religious movement was ever advanced by virulent attacks on the real or supposed beliefs of others, instead of a Christianly, dignified exposition of one's own belief. It may be remarked in passing, however, that it is almost incredible that in this twentieth century there could be found a scholarly exponent of the religion of the gentle Jesus who could find it in his heart to make even the least slighting remark about a white-haired gentlewoman who is beloved by hundreds of thousands of people redeemed from sickness and sin, and whose only crime is that she interprets the Bible spiritually instead of materially and proves her faith by her works.

The gentleman seems to be poorly informed regarding the nature of the gratitude felt by the beneficiaries of Christian Science, but the writer assures him that if he will take the slight trouble to attend a Wednesday evening testimonial meeting in any Christian Science church he will hear honest men and women of high standing in their respective communities fervently praising God for their release from the ills of the flesh. And he will hear not one word of unkind criticism of another religion at these meetings. These people are too busy minding their own affairs and trying to love their fellow-man aright to indulge in wanton thrusts at their neighbors' belief. They are grateful to Mrs. Eddy, to be sure, and if they were not it would be unnatural, but they are yet more grateful to our loving heavenly Father for sending her as His humble disciple to throw light and health on every page of a Scripture long rendered obscure by "the traditions of the elders." After all, the true test of any religion lies in what it accomplishes for mankind, and on this ground Christian Science invites the closest scrutiny. "By their fruits ye shall know them."

In regard to the insinuation that Christian Scientists are "base imitators" of Jesus, it might be pertinent to inquire if our critic has even attempted to imitate the Master in his injunction to "heal the sick," coupled with the promises, "These signs shall follow them that believe," and "Greater works than these shall he do."

[Rev. Dr. Charles F. Aked, New York. From a newspaper report.]

Do you think Jesus would have believed all the theology and philosophy that has grown up about the three years of his earthly ministry? Do you think he would have understood them? And yet we are not ready to admit that Jesus did not preach the gospel. All these theologies and philosophies are wonderful, but they are not religion. The fruits of the Spirit are love, joy, peace, kindness, goodness, self-control. All the rest are shadows. When men and women are physically living in the life and the love of God, there Christ is and there is his kindness and his power and his glory for ever and ever.

[Editorial note in the *Haverhill* (Mass.) *Gazette*.]

The world do move, and it moves fast. If there were any doubt about that, it was only necessary to attend the lecture on Christian Science at City Hall last night and note the personnel of the audience. The best blood and brains of the country is pioneering at last into the realms of thought, and if they profit by it mentally, morally, or physically, who dares challenge the belief?

THE MONITOR IN NEW ENGLAND.

To ensure prompt receipt of *The Christian Science Monitor* by residents in Greater Boston and other cities and towns in the New England afternoon newspaper field, subscriptions already received by The Christian Science Publishing Society from these districts will be delivered by carrier, unless the Society is otherwise instructed. Prospective subscribers for carrier service in these districts may order the *Monitor* directly through their local newsdealer, at the usual rate of 12 cents a week, payable to the news-dealer, or if they prefer, they may send name and address without remittance to the Publishing Society in Boston.

THE LECTURES.

CHICAGO, ILL.

Ninth Church of Christ, Scientist, gave its first lecture on Christian Science, Oct. 2 and 3, in Assembly Hall, Masonic Temple, Bicknell Young being the lecturer. The introduction the first evening was by Lyman J. Hubbard, First Reader, who said in part,—

Truth is eternal, omnipotent, and will stand forever. Changing, erroneous views in time pass into oblivion, while Truth, which is always the victor, must first be proclaimed, proved, understood, and then universally accepted. The fiery ordeal of opposition has never impeded the mighty strides of a single idea of Truth, but rather, on the contrary, stimulated its advocates to a greater endeavor towards the diffusion of instruction and a more general understanding. The Discoverer of Christian Science, having been convinced after most exacting tests that it is the truth, wisely allows it to stand or fall on its own merits, only asking all men, as did the apostle Paul, to "prove all things; hold fast that which is good."

The introduction the second evening, by Adnah K. Frain, M.D., chairman of the board of directors, was in part as follows:—

From the dawn of humanity men have been searching for God. Failing to find God, they have built up many idols, to whom or to which they have given power according to the measure of belief in them. We are all idolaters, despite the gleams of infinite Truth that have shot across the horizon of human thought during the past thousands of years. We smile at the ignorant credulity of the pagan bowing before his idol carved out of wood or stone, and perhaps pharisaically thank God we are not like him. If, however, we turn our attention away from the pagan and into our own mentality, we discover therein many idols, stronger than wood or stone, to whom, willingly or unwillingly, we are obedient slaves. We are even now recognizing some of them who are our masters,—anger, hatred, passion, appetite, resentment, revenge, greed, fear, envy, jealousy, sin, sorrow, sickness, pain, death,—any one of which, in proportion to its government over us, is a law of destruction to health, happiness, harmony, and peace.

Christian Science, that great light shining from God to man, is showing us, in the measure of our receptivity, how to dethrone these idols and how to enthrone the one infinite intelligence, the only true God, omnipotent good, thus bringing into brain, body, business, and daily life, the activities of good which alone emanate from this omniscient source.—*Correspondence.*

NEW CASTLE, IND.

Frank H. Leonard, lecturing on Christian Science at the Alcazar Opera House Sept. 18, was introduced by Senator Albert D. Ogborn, who said in part,—

Do we all love our neighbors as ourselves? When questioned by the Pharisee, Christ said: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the first and great commandment. And the second is like unto it, Thou shalt love thy neighbor as thyself. On these two commandments hang all the law and the prophets." Ever since the star of Bethlehem rewarded the vigil of the waiting shepherds, the struggle has been on to enforce these divine commands. At first the world was so steeped in ignorance, so swayed by prejudice, that war and desolation marked the fight for centuries; but Truth triumphed, and the spirit of religious toleration has spread around the world. . . . That this is so, witness the marvelous growth of the churches, the spread of the missionaries' work, the increasing number and influence of the great fraternal bodies teaching the fatherhood of God and the brotherhood of man. Note, too, the great moral awakening which has swept across our fair land, demanding, in trumpet tones, honor and purity in high places and legislative relief from evils which have wrought untold misery from the beginning of time. One of the forces in this mighty progress is the movement about which we are to hear to-night.

Correspondence.

LONDON, ENGLAND.

The members of the Christian Science churches in London have before now organized many well-attended public lectures, but we have rarely seen [writes a representative of *The Onlooker*] even the Queen's Hall more crowded than it was last Tuesday [Oct. 6]. Long before the hour announced for the lecture every seat in the great hall was occupied, and the number of clergy among the audience was rather notable as evidence of the interest which, more especially after the report of the Lambeth Conference, the Christian Science movement has challenged among members both of the Church of England and of other denominations. The attendance was rewarded by one of the most lucid and logical expositions of the bedrock fundamentals on which Christian Science rests we have ever had the good fortune to hear, and indeed, once admitting his premises, it would be hard to dispute the relentless logic with which Mr. Clarence Eaton drove home his conclusions, even when most at variance with dogmatic theology. Throughout a space of two hours the great assembly followed the lecturer with an attention that showed how entirely he had mastered their interest.

The Onlooker.

HASTINGS, NEB.

Walter H. Brownell, First Reader, in introducing Francis J. Fluno, M.D., of Oakland, Cal., who lectured on Christian Science at the Kerr Opera House, Friday, Oct. 2, said in part,—

You who are students of the life of Jesus must have been impressed by the fact that such a large proportion of the sacred records are devoted to recounting his works of healing. There is much significance in this, indicating, as it does, something of the great importance Jesus attached to these works. Humanity was in great need of this ministration of healing when Jesus was here upon the earth. Humanity is in great need of it to-day, and will be in the future so long as there is a sick and suffering child of man. Jesus was the perfect demonstrator of this healing power, and although his students or disciples were not always successful at first, he indicated to them that this was because of their need of greater spirituality, and not the fault of the divine Principle of healing.

Christian Scientists are humbly striving to walk in Jesus' footsteps, believing him to be the great Wayshower whom all the world should follow.—*Hastings Tribune.*

LECTURES AT OTHER PLACES.

Newport, R. I.—Judge Septimus J. Hanna, Oct. 9.
Springfield, O.—Mrs. Sue Harper Mims, Oct. 11.
Taunton, Mass.—Bliss Knapp, Oct. 11.
Hamilton, Ont.—Judge William G. Ewing, Oct. 11.
Hartford, Conn. (First Church).—Hon. Clarence A. Buskirk, Oct. 12.
Bangor, Me.—Hon. Clarence A. Buskirk, Oct. 13.
Olean, N. Y.—Mrs. Sue Harper Mims, Oct. 13.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy upon proper subjects *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

THE MONITOR AS A NEWSPAPER.

If we may judge by some of the inquiries received at this office, a number of our friends do not fully understand the scope of the daily newspaper soon to be issued by The Christian Science Publishing Society. In the announcement of this paper in the *Sentinel* of Oct. 17, we stated that it was the intention of the Trustees of the Society "to publish *a strictly up-to-date newspaper,* in which all the news of the day that should be printed will find a place, and the news service of which *will not be restricted to any one locality or section, but will cover the daily activities of the entire world.*"

Another point emphasized in the announcement was that the *Monitor* would contain, "*in addition to the usual news features of the best city papers,* such special departments as will make it *a home paper of the highest grade,*—one which will appeal to good men and women everywhere who are interested in the betterment of all human conditions and the moral and spiritual advancement of the race; but from the '*news*' standpoint as well the *Monitor* will be read with interest from Maine to California and from Canada to Mexico. Even our friends across the sea will find the *Monitor* interesting."

Practically a month has elapsed since the *Monitor* was announced, and in that time nothing has occurred to make it necessary for the Trustees to modify any of the promises made on behalf of this paper; on the contrary, judging from the personnel of the staff and the quality of the news service which they have been able to secure, they believe they are justified in saying that the *Monitor* will be even better than was promised.

To those who have inquired whether the *Monitor* is to be a real newspaper, we say, Yes. To those who have asked whether it will be "simply a Boston newspaper," we say, No, except that a special New England edition, which will give the current local news of that section, is to be issued each day.

Archibald McLellan.

SELF-DISCOVERY.

Nothing could be more dramatic, more appealing to the imagination, than the circumstances of that early morning hour when the land-birds first fluttered about his little caravels, and peering through the enveloping haze the brave Genoese caught his first glimpse of a new world. He had reached, as he thought, the consummation of his life-long struggle, and though his expectations of gain and glory were no doubt large, how meagerly they measured the significance of that morning's incident to all the world. It was the long-hoped-for moment of discovery, a moment whose anticipated joys have ever stimulated men to heroic sacrifice and patient toil.

All of us have known something of the enlivening interest that attaches to any pursuit in which one is momentarily liable to come upon some new and greatly desired object or experience,—something of the zest which has ever given impulse to the world's explorers, and which begets in unnumbered truth-seekers to-day the enthusiasm with which they are ever making sallies into that realm of the unknown which lies all about us, and which stretches beyond the farthest star. The quests to which men are committed are many, but none of them may be compared with that commended by Cervantes when he said, "Make it thy business to know thyself." Here every true "find" is a treasure above rubies, and it becomes an eternal possession.

When we remember Jesus' words, "He that hath seen me hath seen the Father," we may acquire some sense of the depth and vastness of the significance of this self-discovery, the compassing of man, the "image and likeness of God." Christian theology has not helped, but rather hindered mortals in this enterprise, and for the reason that it identifies man with sinning and suffering human sense, thus associating the thought of self-discovery with the effort to make a good thing out of a bad! The manifest hopelessness of this task has always paralyzed endeavor, and thus led men to wait for death to bring them, on the instant, as they have been led to believe, the realization of their spiritual nature and dominion. It has thus come about that one of the world's greatest sicknesses is this, that men have so little knowledge of man; and Christian Science has come to heal this fateful ill. It has come to tell men again the inspiring and redemptive truth told them so long ago,—that man is perfect and unfallen, the immediate and abiding expression of the wisdom and love and beauty of the divine nature, and that this true selfhood may be attained, its native sovereignty over sickness and sin demonstrated, as we waken from the mesmerism of mortal sense.

Christian Science bids us forever separate in thought the gold of spiritual individuality from the matrix of material seeming. It bids us resist every temptation to unprogressive content and strive evermore to reach that right consciousness, that kingdom of heaven on earth, in which the glory of man is revealed, as he rules in love "over every creature." Says our Leader, "Jesus beheld in Science the perfect man, . . . God's own likeness, and this correct view of man healed the sick" (Science and Health, p. 477).

To recognize and embrace in consciousness the Christ-man, the immortal I, is the supreme undertaking set before every Christian Scientist, and many are they to-day whose firm, glad purpose holds

> To sail beyond the sunset, and the paths
> Of all the western stars,

if happily they may find their true estate; and ever and anon, as aspiration dawns anew, they hear a winged song, telling them of their desired haven.

John B. Willis.

ONE MASTER.

Christian Scientists are asked a great many questions by people who, without knowing it, are trying to reconcile material belief with spiritual reality. They quite overlook the fact that if a single point be conceded to error, one has lost sight of the only possible basis from which to advance in the understanding of Christian Science, viz., the absoluteness of Truth. It should not be forgotten that any admission as to error's reality renders it impossible for one to work out any life-problem correctly. The acceptance of the belief that man is both material and spiritual leads one to doubt whether he is spiritual at all,—since the physical senses furnish no evidence that he is.

Because of a fundamental error in the premises,—namely, the admission that man is material,—human activity seems

Digitized by Google

to run altogether in the wrong direction, almost the entire time being given by mankind to the pursuit of materiality; hence we have error in all the conclusions of mortal man,—sin, disease, discord, death. Then, by way of a remedy, more of the original error is offered,—more materiality,—which shows what results from the attempt to "serve two masters." Either Spirit, God, must be all to us, or matter must be all. Which shall it be?

It should be noted that the mortal or carnal mind never expresses the things of Spirit nor obeys spiritual law. No, Paul was right in saying, "The carnal mind is enmity against God: for it is not subject to the law of God, neither indeed can be." Now it is this carnal mind which contends that matter, sin, disease, and death are real, and which also declares that the remedy for suffering must come from matter and from the determinations (and suggestions) of mortal mind itself, or come not at all.

Who is willing to take sides with that which is "enmity against God," good? Not the one who has proved that the divine Mind meets our every need by bringing out man's likeness to God, and who learns that the Christ-healing introduces no element of error, but awakens a mental alertness that quickly detects the slightest shadow of evil, be it sin or sickness, and dispels it by the light of Truth! Is not this "the bringing in of a better hope," "by the which we draw nigh unto God"?

Christian Scientists of necessity take their stand on the allness of God, as they must when they understand the irresistible logic of "Science and Health with Key to the Scriptures," for they see the utter vanity of attempting to serve two masters. If matter be god, or a power, why seek the aid of the God who is Spirit, matter's opposite? Most Christian Scientists have found the belief in matter and its service—"the god of this world"—a cruel oppressor, forever promising health and happiness, but giving neither. When, however, their need was greatest, they found that even a gleam of divine light—"a grain of Christian Science"—"does wonders for mortals, so omnipotent is Truth" (Science and Health, p. 449).

As they press on to gain more of the truth which heals, they see what Paul meant when he said, "They that are in the flesh cannot please God," and they rejoice that he added, "But ye are not in the flesh, but in the Spirit, if so be that the Spirit of God dwell in you." Then does the Spirit bear witness, even as in days of old, that the children of God have one Mind and are neither sick nor sinful, and that neither height nor depth, "nor things present, nor things to come" can separate them from divine Love and its all-protecting power.

ANNIE M. KNOTT.

THE PUBLISHING HOUSE BUILDING FUND.

Contributions to the Publishing House Building Fund should be sent to Stephen A. Chase, Treasurer, P. O. Box 56, Fall River, Mass. These contributions will be thankfully received and promptly acknowledged.

THE CHRISTIAN SCIENCE MONITOR.

The sale price of *The Christian Science Monitor* will be two cents each copy, and the subscription price in the United States (except where delivery is made by carrier), Canada, and Mexico will be five dollars for one year, or three dollars for six months; in all other countries eight dollars and four dollars and fifty cents respectively. Subscriptions may be sent to The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Mass., or through local Reading Rooms.

LETTERS TO OUR LEADER.

Boston, Mass., Nov. 1, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—Your message to the Trustees of the Publishing Society is greatly appreciated. To "serve the Lord Christ" is my intention and desire; and such a message from you gives fresh inspiration to endeavor.

With gratitude to you for the opportunities which my work affords, I am

Sincerely yours,
CLIFFORD P. SMITH.

Portland, Ore., Oct. 24, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dear Leader:—With a heart overflowing with gratitude, I thank you for the blessings which have come to my family and to the world through the teachings of Christian Science. The notice of the daily *Monitor,* which will bring only good news to our homes, gives cause for more gratitude and proves the wisdom of your guidance.

Sincerely,
EUNICE POND ATHEY.

Eau Claire, Wis., Oct. 19, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—I wish to express my love and gratitude to you for the first edition of "Science and Health with Key to the Scriptures" issued from the new publishing house. I am especially grateful for the change on the quotation page, which gives us a stanza from your own pen in place of the anonymous one of previous editions. The addition on page 201, which was a part of the Lesson-Sermon on "Doctrine of Atonement" for yesterday, was most helpful and healing. For all the changes and additions I send loving gratitude to you.

Faithfully yours,
CALVIN C. THOMAS.

Milton, N. C.

Dear Mrs. Eddy:—I feel it a great privilege to subscribe for *The Christian Science Monitor,* and I thank you that it is with your approval we are to have an ideal newspaper. The understanding already gained through the study of your works has brought many blessings. My heart is full of gratitude to God for the truth revealed to this age through you, our faithful and consecrated Leader. Lovingly and gratefully yours,

BELLE CUNINGHAM.

Anacortes, Wash., Oct. 5, 1908.

Mrs. Mary Baker G. Eddy.

Beloved Leader:—I feel impelled to acknowledge my gratitude to God for Christian Science. The practical truth about God and man, as revealed in your text-book, "Science and Health with Key to the Scriptures," came to me at the time of "man's extremity," and came into a home which seemed black with discord and despair. Words cannot convey the sense of regeneration that at once began and still continues. The physical manifestation, a severe bowel trouble, was healed in three weeks' time, through reading Science and Health, and I was able, after three years of bondage to a prescribed diet, to eat whatever I desired without the least inconvenience.

This healing, though a cause for rejoicing, is not to be compared with the blessing that came as a result of the healing of sin. Selfishness, jealousy, pride, and resentment were phases of error that seemed ever with me,

Digitized by Google

ready to spring forth. Through tears and triumphs, after months of work, according to my highest understanding, I was called upon to go through an experience which I thought would break my heart, but instead it purified my thought and healed me. Through the seven years that have followed, divine Love has met my every need. As I sit here in my peaceful home, with nearly all your writings, also our good *Sentinel* and *Journal*, and remember that it is through your self-denial and loving faithfulness that I have been redeemed, I thank you, and my earnest desire is to prove my gratitude by reflecting in thought, word, and deed the healing truth.

One of the vast throng who love you,

DORA L. PHILLIPS.

Columbus, O., Nov. 1, 1908.

Dear Leader:—I want to try to thank you for our text-book, "Science and Health with Key to the Scriptures," and your other beautiful and joy-inspiring writings. When my husband and I first became interested in Christian Science we were the possessors of a library of two thousand five hundred books. These books had been a source of great pride to me, but after studying Science and Health for a few weeks I began to realize that this library with its accumulated as well as diversified material theories would come to mean very little to me, and then began a struggle. Could I give up the pride of my life? I "was *alone*, wrestling with error" (Science and Health, p. 308), for three days, and then this question came to me so clearly, Is there anything in that library which would heal you if you were stricken with blindness? And if you were blind what use would they be to you? It is needless to say I saw the difference between the tares and the wheat. Later I found your sanction of academics on page 195 in Science and Health, and realized I need give up nothing worth keeping, and what was not I had no regret at losing. I have, however, very little time and still less desire for any other reading than the Bible, your books, and our periodicals. With these one rises above speculative theory into the absolute knowledge of divine Principle with which we may exchange "the objects of sense for the ideas of Soul" (Science and Health, p. 269).

I also wish to express my gratitude for our newspaper, the *Monitor*. I thank you for your wise foresight in all things and for all the benefits which you, through your years of unswerving consecration to Principle, have made it possible to come to me and to the whole world.

Lovingly and gratefully,

KATHRYN VAN HORNE.

Brooklyn, N. Y., Oct. 21, 1908.

Mrs. Mary Baker Eddy.

Revered Leader:—Just one word of joy over the *Monitor*. Every day word comes to the Reading Room from some business man, to this effect: "I have never known much about Christian Science, but if Christian Scientists are really going to publish a clean daily, containing real news, I shall take it." The world is preparing a most cordial reception for the noble guest you are about to introduce to it.

Faithfully yours,

FRANCES S. TURNER.

Foxcroft, Me., Oct. 29, 1908.

Mrs. Mary Baker Eddy, Brookline, Mass.

Beloved Leader:—The directors of First Church of Christ, Scientist, Dover and Foxcroft, have requested me to forward to you a copy of the local paper containing a cut of our new church home and a description of the same; also to express our love and gratitude to you for giving us the spiritual interpretation of the Bible and Christ's teachings in the form of a "practical, operative Christian Science." Many testimonials of healing of sin and sickness through Christian Science were given at our first Wednesday meeting in the new chapel, and a deep appreciation of what you had done and are doing for the salvation of mankind was expressed in these testimonies.

Sincerely yours,

NELLIE M. BRAWN, *Clerk.*

St. Paul, Minn., Oct. 26, 1908.

Dear Leader:—Words cannot express my gratitude for this last step of wisdom, namely, the establishment of a Christian Science daily paper. It has been my desire for two years. With children growing up and so much that is undesirable in the newspapers of to-day the *Monitor* will be a blessing indeed. May the homage of one grateful heart rest as a benediction upon your labors for the good of all mankind.

Gratefully, your student's student,

ELIZABETH VERNE.

Bromley (Kent), England, Oct. 17, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Dear Leader:—This being our first annual meeting as a church, we desire to express our love and thankfulness to you for the rich blessings which have come to us through the revelation of Christian Science. We wish to prove our gratitude by greater activity for our Cause, and to let our efforts as a church express to the world the efficacy of a healing religion.

Lovingly your followers,

FIRST CHURCH OF CHRIST, SCIENTIST.

West Bend, Wis., Nov. 2, 1908.

Mrs. Mary B. G. Eddy, Brookline, Mass.

Dear Mrs. Eddy:—As the announcement was made in the *Christian Science Sentinel* that with your approval we are to have a daily newspaper, my heart went out with joy. I knew that it meant something good to the world, since your approval had been given. As the name indicates, the world needs a *Monitor*, and to-day I send in my subscription for a year, so that the paper may be one to me.

Your obedient and faithful student's student,

CHARLES F. DOMS.

Boston, Mass., Nov. 3, 1908.

Dear Leader:—Thank you for your statement in to-day's newspapers regarding your political faith. The thought came to me, What a grand watchword this declaration of political affiliation would be for *The Christian Science Monitor!* A newspaper with such a sentiment would be not only bound to succeed, but would help to lift the influence of the press into the realm of Science.

Very sincerely,

WILLIAM LLOYD.

Leadville, Col., Nov. 3, 1908.

Mrs. Mary B. G. Eddy, Brookline, Mass.

Dear Leader:—Among other things, I thank you for what you have done for Christmas. In the old thought of that season, how many are so burdened by material preparations for the day that, as the time draws near, they have neither time nor strength to give a thought to the true meaning of Christmas. I know that, through Christian Science, the day will finally be restored to its rightful place, and the birthday of our Lord will become a day of praise to God, and of rejoicing over His great gift to men.

Yours faithfully,

DOROTHEA LOWE.

AMONG THE CHURCHES.

LOS ANGELES, CAL.

An object of great interest to local Christian Scientists, as well as to those throughout Southern California, is the beautiful new church now being built by Second Church of Christ, Scientist, of Los Angeles, on Adams Street near Hoover. The site is an unusually fine one. The church stands on a terraced lot two hundred by two hundred and fifty feet, and the top of the dome, when completed, will be nearly one hundred and thirty feet above the street. Besides being the largest edifice built by this denomination on the coast, it will be the finest and most magnificent church building west of Chicago. It is expected to cost two hundred and fifty thousand dollars. Because of the fact that on Wednesday evenings people speak from all parts of the house, the church is built without galleries, and will seat twelve hundred people on the main floor.

The writer had the pleasure of inspecting the progress of the building recently, and can truly say that the work being done appears wonderful both in construction and in detail. The span of the dome, held by great concrete trusses, is next to the largest in the country. At the present rate of advancement it is hoped that the building will be completed by spring.—*Whittier News.*

CLEVELAND, O.

Christian Scientists are preparing to build the largest church in Cleveland. It will seat two thousand persons. The church is to be built by the members of Second Church, Euclid and E. 77th. The corner property between their present church and E. 77th has been bought, and this will give the new site a frontage of one hundred and sixty-eight feet on Euclid. The lots are both one hundred and ninety feet deep, and the combined cost was forty-five thousand dollars. Building plans for the church have not as yet been made, and the cost will of course depend on the kind of material used, but in any case it will be a large, handsome church.

There are now three Christian Science churches in the city. The First at Cedar and E. 46th, the Second on Euclid, and the Third at W. 35th and Mapledale.

Painesville Telegraph.

NEBRASKA CITY, NEB.

The corner-stone of the new edifice of First Church of Christ, Scientist, was laid in place yesterday morning [Oct. 20], with beautiful and impressive ceremonies. The program consisted of the reading of the 91st Psalm by the First Reader, also the definition of "Church" from Science and Health (p. 583), the first paragraph of which is: "The structure of Truth and Love; whatever rests upon and proceeds from divine Principle." Within the corner-stone were placed a Bible and a complete set of the writings of Mrs. Mary Baker Eddy. The new church is at the corner of Twelfth Street and First Avenue, and when completed will be handsome and substantial.

The Nebraska City Press.

ROCHESTER, N. Y.

Plans are in progress for the union of First Church of Christ, Scientist, at Alexander and Cobb Streets, and Second Church of Christ, Scientist, in Fitzhugh Street. This is a step which is always looked forward to by Scientists with joyful expectation, as the advantages have been manifold wherever the union of societies and churches has been consummated. As neither church building is adequate for the accommodation of the new society, steps have been taken for the erection of a new church edifice either in South Fitzhugh or Alexander Street, the plans to be perfected later.

Quoting from the September number of a prominent magazine, a tribute is paid to the "earnestness and zeal of a people whose societies are entirely supported by voluntary subscription. No entertainments are given and no donations ever solicited from people outside of the church. Unnumbered thousands have found peace and happiness in this religion, and are following out its precepts, quietly and unostentatiously."—*Rochester Times.*

SCHENECTADY, N. Y.

The erection of a chapel which will cost in the neighborhood of seven thousand dollars was begun Tuesday [Oct. 20], by First Church of Christ, Scientist, at the corner of Rugby Road and Parkwood Boulevard. The architect has planned a very pretty two-story structure, which will be of stucco work with Corinthian pillars in front. The building will be thirty-five by forty feet, and the lower floor will be used as a Reading Room by the Christian Scientists. On the second floor will be an assembly room seating two hundred and fifty persons. It is expected that the building will be ready for occupancy in January.—*Daily Union.*

SANTA CRUZ, CAL.

The Christian Scientists of this city have decided to go ahead with the erection of their new church building, for which the lot has already been secured at Ocean Street and Dakota Avenue. A small auditorium, capable of holding two hundred people, will be built first, and later the main church, for which all the plans have been made, will be added. The general idea is that of a one-story, flat-roof, concrete-veneered building, in representation of stone. Like most Christian Science church buildings, it will have nothing in common with the Gothic style of architecture commonly adopted for churches. The first auditorium to be built will be thirty-eight by forty-six feet.

Santa Cruz News.

[Written for the *Sentinel.*]

TRUTH'S EVER-PRESENCE.

HELEN M. EMERY.

O Love divine! reveal Thy presence now,
That in Thy glorious fulness all may see
That sin, disease, and even death must bow
Before Thy more than might, and majesty.

Knowing that God is Love, and God is All,
Why give attentive heed to error's voice?
Why longer yield to mortal mind's enthrall,
But claim man's lawful birthright and rejoice?

O stately Science, grandly marching on
In spite of sneer and fear and honest doubt,
From one small seed in human weakness sown
How grand the truth that puts all foes to rout!

O healing truth, how sweet it is to know
That now, as once and always, Thou art here!
The leaven hidden centuries ago
Is leavening all thought—Thy kingdom doth appear.

TESTIMONIES OF HEALING.

In the Christian Science Hymnal we read, "Ceasing to give, we cease to have; such is the law of love." I think most of those who have been in Science any length of time realize the truth of these words. I have for a long time felt that I was greatly indebted to others in the Field for the many helpful messages from grateful hearts, and that I also must give from my store. It will soon be ten years since I was led to this truth. I had read a little at various times about this Science, but it always appeared so far away. My attention was directly called to it by a friend who had been healed of chronic catarrhal trouble, an affliction from which he had suffered for thirty-five years. He told me what his personal experience had been, and advised me to try Christian Science for my daughter, who had been afflicted with epileptic trouble for about eight years. Her condition had become very alarming, and medical law had declared that the ultimate would be mindlessness, a condition which had already begun to manifest itself, and looking into the future I could only see years of burden and sorrow.

It was at this juncture that the truth of Christian Science was brought to me in undeniable evidence through the healing of this friend. I saw before me, in my friend, a changed man, and this proof brought me hope. I went that day, Saturday, to see a Christian Science practitioner, and the work began the following Monday evening. The healing was accomplished then and there, though treatment was continued for two weeks; but I slept that night in peace, and have continued to do so. The mental state of my daughter had become such that she could not always go into a designated room or find her place at the table, and she was of course kept out of school. After treatment in Christian Science was taken up her condition very soon became normal; she went on with her school work as if there had not been any interruption, and also manifested perfect health in other ways. There is a detailed account of her healing in *The Christian Science Journal* of August, 1899. I did not understand at that time that this healing was accomplished practically at the first treatment, but I found out afterwards that such was the case.

In seeking the treatment for my daughter I had no thought of myself, though I was worn out in mind and body, but the truth began its healing work in my own consciousness. The habit of profanity left me inside of twenty-four hours, and severe chronic headache was also overcome for me. I had been subject to attacks of this trouble from my earliest recollection and would often be prostrated by them. From the time I was a young boy I was afflicted with rheumatic trouble. The attacks, though not frequent, were very severe, lasting for weeks, and part of the time I was helpless. I have had two of these attacks since I accepted Christian Science, but on these occasions I suffered very little, and now I know that the dread of them is gone. I am indeed grateful for these physical benefits, but more for the understanding that God's creation is perfect, that only good can obtain at all times. It is not necessary to detail the many unpleasant and evil things that have been overcome and destroyed in myself; they were many, and I am rejoiced to part with them! I do not suppose I am the only one who has found that the hardest battle to fight is with one's self, to overcome self. I feel, however, that this is being accomplished, step by step. I also know that I have a deeper sense of justice and of love for all mankind.

To those who are seeking health through this truth I would say, Take the medicine of Christian Science with the same obedience and care that you used to take your material remedy; then you will see results. Obedience, I have found, is one of the first things to be learned and practised in Christian Science. To those who may be seeking employment, those who are striving to overcome the sense of lack, I would say, Be thankful that our Father, who created all and governs all, never created lack, poverty, fear, injustice, dishonesty, greed, or oppression, for in Christian Science we learn that not one of these evils belongs to God's creation. This to me appears to be the strongest argument with which to meet each one's need. Though I am not working all the time, I have some work to do, and I am continuing this demonstration to know that error cannot limit us in having all our needs supplied.

As to our Leader, our loyalty to her can be best manifested in working and striving to do for others, as far as one can, what she is doing for all the world.

H. L. WYNKOOP, Boulder, Col.

[Translated from the German.]

I consider it a great pleasure to tell of the healing of my nephew. About a year ago the child, then six years old, was taken ill. The first symptoms were little noticed, it being thought that through careful nursing the child would soon be well; but his condition grew worse. I had spoken to my brother of Christian Science treatment as the only true remedy for the child; but he would not consent to it, and as the rest of the family felt as he did, a physician was called in. He recognized the attack as dangerous (probably epileptic), but did not wish to name it to the troubled parents. He advised that the child be taken to the children's hospital to be closely watched. The parents, however, did not desire this, and called in another physician, who made no promises of a rapid cure. Several days more passed, and the attacks appeared more frequently and in a worse form, each lasting several hours. The whole family was more or less excited, and finally my brother and his wife decided to call for help in Christian Science.

With their consent I went to a Christian Science practitioner, who took the case on March 24. She gave us assuring hope of healing, and told us that it was our part to keep the child in harmonious surroundings, to attend to his necessary wants, and leave the case to divine Love. After the first treatment the child had no more attacks, and began to improve, to the great joy of all the family. A grandmother of the little boy, who was helping to care for him, not knowing anything about Christian Science had opposed it, but when she saw this favorable change, her thought, too, was changed. In two weeks the boy was healed. Later on, in May, the practitioner was again asked for treatment. This same little boy had a troublesome affection of the eyes, but this was healed in a week. We have thus proved that the worst diseases of children are but dark phantoms of mortal mind, which disappear quite naturally before the divine reality. This healing was effected through absent treatment.

We are all grateful to God, and to Mrs. Eddy, the Founder of Christian Science, for these and other great blessings.—J. H. NOETZLI, Zurich, Switzerland.

My first introduction to Christian Science was in 1900, when it was presented to me by the one who afterward became my wife. I was then in business in South Haven, Mich. Shortly after hearing about it, my hand was quite badly crushed. My friend learned of my accident, she being in another city at the time, and acting on a previously given permission, treated me. The hand healed so rapidly as to puzzle the surgeon to whom I had taken the case without consulting her. My views of Christian Science were vague at this time, but crystallized greatly during subsequent explanations and reading. My acceptance of

Digitized by Google

the truth was gradual and without notable incident until the birth of our little daughter in 1903. This occurred under Science treatment, and was without ill after-effects, though a physician who was in attendance on one of our household at the time, said voluntarily that he could hardly have hoped it to be so successful. In 1905 I was taken down with what was admitted to be a serious attack of fever, during a local epidemic of this disease. I had become too weak to leave my bed and was somewhat delirious when my wife telegraphed to the practitioner who had attended the birth of our baby. Immediately upon her receipt of the telegram I fell into a sleep, from which I awoke after about six hours, well except for weakness, which left me before the next morning, when I attended to my business as usual.

Besides these seemingly more important manifestations of God's love, we have been blessed by many minor demonstrations, and are learning to apply this great truth to every problem of business or other intercourse as it arises. With each new manifestation of the protecting power of divine Mind, gratitude to the source of all good receives a renewed impulse. I also add my mite to the great stream of thanks flowing ever toward our revered Leader.

L. W. NEWBRE, Chicago, Ill.

Three years ago I wrote my first testimony, in which I described my healing in Science two years previously. Prior to this healing I had been in a wretched condition, mentally and physically, and had vainly resorted to three different physicians. Since then I have been able through the understanding of Truth which I have acquired in the study of the Bible and Science and Health and the *Christian Science Quarterly, Sentinel,* and *Journal,* to overcome every ailment that has arisen. Physical illnesses have been few, I am thankful to say, since I have come into Science, but those which have appeared—colds, headaches, etc.—have been quickly overcome. A nervous habit, which had been a lifelong companion and which I had vainly striven to overcome by "will-power" in the old thought, has disappeared without any effort on my part; mental depression, to which I had been subject at intervals for many years, troubles me no more, and I have realized many ambitions which formerly I had little hope of ever attaining. When I have obeyed the admonition, "Seek ye first the kingdom of God, and his righteousness," I have found the accompanying promise, "and all these things shall be added unto you," not an empty one. The only physical ill of a serious nature was a growth in the side. This caused considerable pain, and for some time I felt that I must put the case in the hands of some one more advanced in Science than I. Then the realization came that I was allowing fear to creep in, and when I had cast this fear out and declared that it could vanish into its "native nothingness" now, it entirely disappeared in two days' time, nor have I had the slightest return of it.

But beyond all the physical healing is the desire which Christian Science daily engenders, to live nearer to God, to follow as nearly as possible the command, "Be ye therefore perfect, even as your Father which is in heaven is perfect," knowing that Christ Jesus never gave us a command impossible of fulfilment, however long and hard the path before us. I am indeed thankful to God, who has led me through doubt and darkness to see the impossibility of attaining true peace or happiness in a material sense of existence; and thankful to that noble woman, Mrs. Eddy, who was pure enough to see the truth that shall set us free, and brave enough to stand for that truth in the face of persecution and misrepresentation. I am glad that I have been the means of helping others to some extent, and hope that by living the truth and reflecting divine Love I may be enabled to bring to many others the realization of what an understanding of Christian Science does for humanity.

ELOISE B. ROBBINS, Brooklyn, N. Y.

Christian Science was brought to my notice by a friend who had been greatly helped by simply reading Science and Health. He loaned me his copy, which I read, and being convinced of its truthfulness procured one of my own. I then asked a practitioner to treat me, which she did. At this time I was, and had been for five years previous, a broken-down, sickly girl. I had not one, but many ailments, among them being what the doctors pronounced female trouble in its worst form. I had been treated by different doctors and tried many remedies, but all to no avail. I had given up in discouragement, thinking there was nothing before me but sickness.

I had been under Christian Science treatment but a few days when I noticed that a swelling on my hand near the wrist, which had troubled me for more than a year, had entirely disappeared. This demonstration gave me courage, for I knew that if Christian Science could heal my hand it could heal me of all other troubles. I had gained enough understanding of Science by this time to know that nothing is impossible to God, and that one belief of disease is as easily overcome as another when we know the truth. The swelling on my hand seemed to be the least of my troubles at that time, in fact I had not mentioned it to the practitioner, as I felt I could endure this, if only I could be healed of other and worse things. I continued treatment, and one by one the different ailments disappeared, until but one remained,—the most dreaded and disagreeable of all, and I continued treatment for this trouble off and on for more than five years. Last summer I was taken with a severe attack of eruptive fever, which was overcome so beautifully that I asked my practitioner, who lives in Reno, Nevada, to treat me for the chronic trouble also. She did, absently for the most part, and in a number of weeks I was entirely healed, and I am indeed grateful for my freedom.

I would also like to tell of the healing of my nephew, four years old, who was taken with a dreaded fever. At the time treatment in Christian Science by a practitioner in San Francisco, Cal., was telegraphed for, the child was seemingly at the point of death. He had been unable to speak for about three weeks, and had pined away to almost nothing. When Christian Science treatment began, the change was not so noticeable at first, although he rested better, but in a few days there was a marked improvement, and even as one can see the change in a plant, daily expanding in the sunshine, so it was with this child, until he became perfectly well. At one time there was a fear that he had lost his voice, as he had been unable to speak during the latter part of this illness. The practitioner's attention was called to this condition, and she wrote back not to be afraid: that nothing good is ever lost in Truth, and that we should read daily to the child "The Mother's Evening Prayer," and "Shepherd, show me how to go," from "Miscellaneous Writings," p. 389, asking him to repeat the words. This was done, and in less than a week's time he was able to ask for anything he wanted. Mrs. Eddy says in Science and Health (p. 179) that "space is no obstacle to Mind;" and so it has been proven to me, for which I am most grateful.

I would like to say to those whose healing is seemingly slow, to press forward, never doubting, for "he is faithful that promised." This is not all, for I have found Christian Science a very present help in every kind of trouble. The physical healing seemed wonderful, but the spiritual uplift that the understanding of Christian Science brings is the

Digitized by Google

secret spring from which all blessings flow. I am truly a new creature, and for this I am deeply grateful to God, and to dear Mrs. Eddy for the light of Truth.

MRS. RUTH PERRY, Sparks, Nev.

It is with a feeling of gratitude and love to God that I give this testimonial, hoping that it may be of benefit to others. I suffered from stomach and bowel trouble for nearly twelve years, being under the treatment of several different physicians and taking medicine nearly every day without benefit. I could eat only certain kinds of food, and always suffered pain afterwards. I had just gone through a course of treatment with one of my home physicians, and was left in a worse condition than before,—almost a nervous wreck,—when my attention was called to Christian Science by a friend. After a little explanation on his part I became interested enough to buy a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I can truthfully say that by studying this book and gaining an understanding of the truth therein, and attending the Wednesday evening meetings, I was completely healed of stomach and bowel trouble in less than three weeks. I can eat anything I wish, and as much as I wish, without any distressing effect. For this alone I am very grateful.

I am also very thankful to God for the spiritual uplift I get each day in the study of Christian Science. My earnest desire is to know more of this truth as it is explained to us in "Science and Health with Key to the Scriptures" by that beloved and noble woman, Mary Baker G. Eddy.—JOHN ARTHUR KOHLER, Atchison, Kan.

It is about three years since I accepted Christian Science and gained the life "more abundant," for which I am truly grateful to our heavenly Father. For the wisdom and understanding contained in Science and Health I am deeply grateful to our dear Leader, who was found worthy to be used of God to do so grand and noble a work for humanity. We have had many demonstrations of Truth's power in our home, giving us proof that God is indeed with us. I was healed of general weakness in the first week that I read Science and Health. I was really waiting and hungry for the truths it teaches.

A daughter who was visiting me became terribly ill and was given up by the doctor. She had lain from Saturday until the following Thursday, retaining no food, and having constantly recurring convulsions. The morning I telephoned to a Christian Science practitioner she had been in a stupor for hours, but in twenty minutes after I communicated with the Scientist she became conscious and asked for food. She retained all she took, and she was very hungry. She used no medicine after this, and discharged her doctor. In a few days she did a strenuous day's shopping without any ill effects. One other demonstration was in the case of my little grandson. He had run a rusty nail into his hand, and it was in a bad condition, but he was healed and able to use his hand quite freely within three days. I trust these demonstrations will encourage some one. I realize that we need much love and humility for God's work always.

MRS. MERENA SYMINGTON, Vallejo, Cal.

It is now six or seven years since I first heard of Christian Science. My sister was at that time very sick with a fever, and a neighbor who was a Christian Scientist brought us several copies of the *Sentinel* and asked us to read them. The papers lay on a table for some time, and were at last returned without my having read them, as I feared I might be led to change my religious belief, with which I at that time believed I was satisfied. After that we neither thought nor heard anything more about Christian Science for a year or two, when it was again brought to our notice by this same neighbor, my mother being sick. A copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy was loaned to us, and I took it up and began to read. I knew at once I had found something which I did not need to fear, indeed I had found something which would drive all fear away. I have received many blessings through the study of this wonderful book, together with the Bible, and the understanding of Christian Science which I have thereby gained is worth much to me.

It was my mother's healing, however, which caused me to take up the study of Christian Science, and I will speak of it, as some one else may be benefited thereby. About five years ago my mother became mentally unbalanced, and while we did all we could for her, she still seemed to grow worse. At last she became so violent that we decided we would have to send her to an asylum, but as we were getting ready to do this our neighbor came to us and asked us to try Christian Science. After talking it over, my father decided to give Christian Science a trial, and treatment was begun. We noticed a change in my mother for the better very soon, and she kept on improving until her mind was restored to its normal condition. This was about five years ago, and she has never had a return of the trouble. I cannot find words to express my gratitude for this healing, for it brought my mother back to us from something worse than the grave.

Among the many things that Christian Science has done for me, I wish to speak of a demonstration that was made last summer. I had a growth in my throat which troubled me very much, as it seemed to be the cause of frequent spells of coughing. This went on for some time, until finally I asked for Christian Science treatment. It was not long before I noticed an improvement, the irritation ceased to trouble me, and slowly but surely the growth disappeared until it was entirely gone. I have had no trouble with my throat since, and can talk and sing without the least difficulty. I am very grateful for this healing, as it encouraged me to study Christian Science more than I had ever done before.

I am also very thankful to Mrs. Eddy for our text-book, Science and Health, which, if we study it diligently, shows us how we can overcome all the errors that present themselves. I am trying to prove the sincerity of my gratitude by living, as nearly as I can, a truly Christian life.

MINNIE LILLJA, Houston, Tex.

Like many others, I came to Christian Science for the physical healing alone. I had been in poor health for many years, much of that time being under the care of our best physicians. I was operated upon by skilful surgeons, both at our home and at a hospital, but all to no avail. I was a devoted church-member, and loved my religion and my church, but for a long time I had wished for a deeper, more lasting religious experience, and often repeated the beatitude, "Blessed are they which do hunger and thirst after righteousness: for they shall be filled;" and I hoped and prayed this experience might come to me. This was my condition when a friend called and recommended Christian Science to relieve the almost constant pain in which I had been for about eight months. This was in February, and I had returned from the beach the September before in worse condition than ever. We had built a cottage there, thinking the change each year might be of benefit. From my return I had been constantly either under a physician's care or taking massage and electric baths, and at this time I was taking medicine every two hours, and growing worse all the time.

At first I rebelled when Christian Science was mentioned,

Digitized by Google

as in my ignorance I feared it might lead me away from my religion, but when urged both by my husband and mother, I consented, provided my friend would accompany me to the practitioner. I was helped in the first treatment so that I slept that night without the usual pain. My healing was slow, for there was much mental work to be done in rooting up and weeding out wrong beliefs and false concepts. In a short time I discovered that the one who gave me treatment possessed the very experience that I had been striving for, and then I was willing to study our text-book for myself. There were many statements I questioned at first, and many were the battles fought, but I never ceased the warfare until I had proven to my satisfaction every statement. This continued for several months, when I found that I was not only healed physically, but I realized also the ever-present sense of God's love in a way that I knew would never leave me. This was nine years ago, and Christian Science has never failed me, and the path has grown brighter all the way.

It would be strange indeed were I not thankful to Christ Jesus, who first helped mankind into the light, and also to the one whose spirituality brought Christian Science to mankind and thus made my healing possible.

MYRTLE CHAPMAN HUNT, Condon, Ore.

As a child I was far from strong, and ill a great deal of the time. My young womanhood was passed in comparative health, but later on I seemed to be besieged with almost every physical ailment; worst of all, I was afflicted with severe stomach and bowel trouble, and suffered more than words could tell. I was apparently growing worse each day, and just when life became such a burden it did not seem worth having, Christian Science came to me. A very dear friend who was visiting us asked me to try it, and when a practitioner called at our home to see her, I decided to avail myself of this opportunity. I began treatment at once, although I was very skeptical about its reaching my particular case, for it seemed almost beyond any help whatever. To my great joy, after a few weeks' treatment the bowel trouble vanished, and later on, one by one, other troubles succumbed. How thankful I am that this wonderful truth was revealed to me, for I feel sure that, aside from physical help, it will uplift and sustain us in every trial which we may have to meet. It seems to me we cannot love and revere Mrs. Eddy too much for searching out this glorious truth for us.

ANNE E. MCWADE, Napa, Cal.

In reading the command to give thanks unto God and make known His deeds, I thought it was time for me to make known to others my blessings. Not long ago I had an experience with the overcoming of illness which helped me very much. I am very thankful for the spiritual baptism, which saves us from a great deal of worry and discontent. I did not come into Christian Science for healing, but I needed it for a quick temper, impatience, hurry, worry, and wrong thoughts. I am also very thankful for the understanding which my little boy, not quite four years old, has of this truth. When anything is wrong he turns at once to Truth, and not only for himself, but for all of us. My one wish is that I may help others to know the healing power of Truth.—MRS. L. E. MELL, Chicago, Ill.

I first came to Christian Science for healing, as nothing else would ever have interested me in it. I was suffering so much from my feet that I could not do a day's work. I thought this trouble came from my standing so much, as my work requires my being on my feet all day, and had concluded to give up my work when I was advised to try Christian Science treatment. I did so to please the one who asked me, for I had no faith in it. I was helped immediately, and am now working ten hours or more each day without any pain or inconvenience whatever. When I applied for treatment the soles of my feet were almost entirely calloused, and were so sore that the least roughness in the pavement would cause intense pain. To-day there is hardly a sign of this condition, and I walk anywhere with comfort and ease.

It is now over two and a half years since I took my first treatment, and I could fill pages with the narration of benefits received in business, in my home, in my education, and most of all from the wonderful explanation of the Bible given in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I shall never be able to express the gratitude I feel to her for giving us this truth, without which I feel that my life could but have been a miserable existence.

ST. CLAIR SCHOOLEY, Indianapolis, Ind.

My heart overflows with gratitude for the blessings which Christian Science daily brings to me. Twelve years ago, when given up by two doctors, I turned to Christian Science and was healed. My health has been good ever since, and this means much for a woman over eighty years old, who has always worked very hard. My family gladly testify that the change which has taken place in me, since I have been studying Science and Health, is wonderful; and it is also a great proof, to any one who has known me, that Christian Science is a sure cure for mental, moral, and physical ills.

I am so grateful to our dear Leader, the messenger to this age, for all she is doing for us in teaching us the way out of darkness and bondage, and I pray to be more worthy to be called one of her followers.

MRS. ELLEN THOMPSON, Toledo, O.

With deep gratitude for all that Christian Science has done for me, I wish to add my testimony to those of the thousands of others who have been helped through the same means. Two years ago I was entirely healed of a painful nervous and internal trouble which had been going on for years, and which for the previous ten months had made me very ill. When I began to take Christian Science treatment, in addition to these troubles my eyes and throat were badly affected,—in fact, I wore glasses most of the time. In less than two weeks I was entirely well and had taken off my glasses. In the two years which have intervened I have been perfectly well, only having had to take treatment occasionally for minor ailments, and have been able to go through both summers without a bilious attack, which had not been the case previously for years.

MISS T. P. COULBOURN, Baltimore, Md.

One extremely cold windy evening in December, 1906, I watched the track for a belated train at the North Station till I was so chilled that it brought on a severe attack of rheumatic trouble. For a week the pain was almost constant day and night. I then called on a Christian Science practitioner, who, after talking with me for a few minutes, gave me a treatment. When I returned home, the pain had entirely left me, and there has never been the slightest return of it since. For this and many other benefits I am deeply grateful to Christian Science.

H. A. WATSON, Boston, Mass.

CORRECTION.

In the Lesson for Nov. 29, subject: "Ancient and Modern Necromancy; or, Mesmerism and Hypnotism," the Bible references in Section III. should be as follows:—

Exodus, 15 : 26 (omit first two words); 2 Chronicles, 16 : 12, 13; Matthew, 12 : 22, 24–26, 28.

FROM OUR EXCHANGES.

[*The Congregationalist and Christian World.*]

Cannot the theater be made as wholesome as the library, when it is admitted to be an influence not second to the library? Has not the time come for the Church to consider whether it may not wisely use and influence the theater as it uses and influences the library? An illustration of what may be done by such an alliance has been given in London this year, which would have seemed incredible a dozen years ago. The London Missionary Society has put on the stage a play, which it called a pageant, that in one season has interested more people in foreign missions and given them more information about the work of these missions than the Congregational churches of England and Wales, who are responsible for that society, have been able to do in a score of years; and all these churches, after the experiment, approve of this use which has been made of the theater. The time is surely ripe for further inquiry into this matter.

[A. William Lewis in the *Christian Work and Evangelist.*]

So many people are largely animal, giving but a paltry remnant to spiritual things. Their immortal nature is atrophied. Their life is in the fleeting possessions that they imagine they have made their own; but a man's life does not consist in the things which he possesses, for he cannot live by bread alone. It is the part of wisdom to foster the imperishable life and the ever-blest life. Then our life is independent of environment; and it is dependent upon the life of Christ in us, one with him through faith and love. So our life partakes of the everlasting life of the everlasting God and Father of our spirit, who is the same "yesterday, to day, and for ever."

[*The Christian Register.*]

We hold that wisdom demands of parents to preserve their children from the influence of hypnotic preachers. We have seen more than one brought under a spell, and then hurried into church membership, and, after a period of perfunctory duties, make a break for liberty. The probabilities are that thereafter the moral nature will be torpid, if not entirely dead to higher aspirations. A crowded church is not the right gauge of a minister's value, but his capacity for minute service for the individuals that come within his influence. The real minister does not convert, he inspires; and this is exactly the office of a wise teacher.

[*The Universalist Leader.*]

Contrary to much of the superficial reasoning, in and out of the pulpit, one is not the better interpreter of life for having gone the pace and then reformed. There is no endowment under heaven like a clean soul, a noble mind, and a tender heart for dealing with and understanding all sorts and conditions of men, even the wretched and outcast. No one ever really better understood another, no matter how sinful that other might have been, by lowering the moral tone and level of his own life.

[*The Examiner.*]

Systematic theology is no doubt a very useful and impressive science. We would by no means depreciate its value or necessity. Nevertheless, most Christians manage to get on very well without it. And we ought to be very grateful to God that an understanding of it is not necessary to salvation—for there are so many kinds and they are so conflicting! The study of the Bible is much more satisfying to the heart of the "average man."

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All correspondence and orders relative to membership and church tenets should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PUBLISHING HOUSE BUILDING FUND.—Contributions to the Publishing House Building Fund should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE.

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

Terms of Sale, Postpaid to any Address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, Mexico, and Cuba, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Secretary Elliott of the American Automobile Association has sent a warning against reckless driving to the officers of the two hundred automobile clubs scattered throughout the United States, to the effect that drastic anti-automobile legislation will surely be enacted in many of the Eastern States if a stop is not put to the reckless driving. There has already been some agitation for the repeal of the Connecticut automobile statute, considered one of the model motor vehicle laws in the country, in that it does not specify a speed limit, but requires only safe driving.

Invitations to the second meeting, on Dec. 8, in Washington of the governors or their representatives have just been sent out by the National Conservation of Resources Commission. The governors of more than half of the States have appointed commissions, and these commissions are now at work taking inventories of State resources along the same lines that the National Commission is following for the whole country. The governors of most of the other States have announced their intention to appoint commissions.

Judge Lindsey of Denver, "the father of the Juvenile Court," who failed of a renomination by either of the old parties, but who ran as an independent, was reelected by a big plurality; in fact, he nearly secured a majority vote. The boys who had been turned by that court from the first steps of wrong doing to upright ways, and the parents who appreciated the workings of the court, rallied splendidly and effectively to the support of the judge and vindicated the unquestioned worth of his labors.

Court of Appeals reversed the trial court in The Government's petition for a rehearing of the case in which the United States Circuit fining the Standard Oil Company of Indiana $29,240,000 for alleged rebating, was denied last week in the Court of Appeals. It is authoritatively stated that the Government will now attempt to bring he whole matter before the Supreme Court on a writ of *certiorari*.

The Secretary of the Navy will shortly make important recommendations, based upon the results of an investigation by a special committee, concerning the improvement of the navy yard at Mare Island, Cal. The recommendations refer to the improvement of the approaches to that island and to the strait itself, at an estimated cost of $1,007,000.

The estimated cost of the new water-supply in the Catskill mountains for New York city is $162,000,000. The estimated daily yield of the watersheds will be six hundred and sixty million gallons. To make way for this reservoir sixty-four miles of public roadway and one hundred and eleven miles of railway will have to be discontinued.

The Government's contention that the American Tobacco Company is a trust operating in restraint of trade in violation of the Sherman anti-trust law was sustained in decisions handed down last week in the United States Circuit Court at New York. This means, barring reversal by the Supreme Court, that the Tobacco Trust must dissolve.

The Gulf Coast Inland Waterways Convention met at Columbus, Ga., last week for a two-days session. River improvement, the supplying of the coast States with electricity produced by water-power, and the broader question of inter-coastal canals were among the subjects discussed.

Representatives of the cotton interests of seven Southern States, in session at Memphis last week, discussed the downward tendency of the spot price of the staple, the operations of "night-riders," and the holding of the crop for better prices, the minimum to be ten cents.

The conference of the New England governors, the presidents of the Senates and speakers of the Legislatures, the attorney-generals and the representatives in Congress, will meet in Boston Monday and Tuesday of Thanksgiving week.

During the second week in December there will be in session at Washington the National Conservation of Resources Commission, the Country Life Commission, the Southern Commercial Congress, and the National Rivers and Harbors Congress.

Elections were held in Cuba on Saturday last for president, vice-president, senators, and representatives. Upon them will fall the responsibilities for the republic when the American control is handed over, Jan. 29, 1909.

According to Professor Bailey, one of its members, President Roosevelt considers the appointment of the Commission on Country Life one of the most important pieces of work he has done.

After the visit of the American fleet in Chinese waters at Amoy, the command of the division fell to Rear Admiral Schroeder, in place of Rear Admiral Emory, retired.

At Newport, R. I., last week sixty experts of the Navy considered recent criticism of battle-ship construction and rejected most of the strictures.

Hearings on the revision of the tariff have already begun at Washington before the Ways and Means Committee.

International.

The work is now actually in hand for the construction of a railway intended to reach the summit of Mont Blanc, the height of which is little short of sixteen thousand feet. Cuts and tunnels will be avoided as much as possible, in order to give an unobstructed outlook to the tourist. The line will follow the southern flanks, where the snow is less. There will be two sections; the first reaches from Le Fayet by way of St. Gervais and the Col de Voza to the Aiguille du Gouter, at an altitude of 12,533 feet, and a distance of eleven miles. On this section are two tunnels of 312 and 2,438 yards respectively. Rack-rails and steam engines will be used, and it will require four hours to cover the first section.

Election of representatives in Constantinople in the new Turkish Parliament took place last week. According to an agreement arrived at between the various sects and nationalities, it had been arranged that of the ten representatives of the capital five should be Mussulmans, two Greeks, two Armenians, and one Jew. The Mussulmans put forward no fewer than twenty-three candidates for their five seats, while the other nationalities put up one candidate for each seat.

The Japanese budget for the year 1909-1910, which has been nearly completed, shows receipts of $272,825,000, that figure including a surplus of $26,120,000; expenditures, $271,815,000, including disbursements made on the special war account of $5,055,000. Expenditures postponed from the previous year amount to $7,300,000.

A wireless message originating in Japan has been received at the Kahuku station in the Hawaiian Islands. This represents a distance of nearly four thousand miles.

The 67th anniversary of the birthday of King Edward was celebrated in England Nov. 9.

Industrial and Commercial.

The Great Western Power Company, a fifty million dollar corporation, and the Pacific Gas and Electric Company, a forty-five million dollar enterprise, have formed a working agreement which provides for a joint marketing of their product. The Pacific Gas and Electric Company is the parent corporation of thirty concerns, and operates in twenty-nine counties in the State, supplies current to twelve electric railroads, and sells power in forty-three different cities and towns in California. It controls all the business about the bay cities and the greater part of the business in the north. Owing to its inability to meet the excessive requirements, it has now entered into a contract to purchase power from the company in northern California.

The number of cotton spindles in the United States Aug. 31, 1908, was 27,964,387, the distribution among the States giving Massachusetts thirty-four per cent, South Carolina thirteen per cent, and North Carolina eleven per cent. Rhode Island ranks fourth in the list. The number of spindles has increased twenty-three per cent in the last eight years and the consumption of cotton twenty-four per cent.

By means of the proposed electrical equipment of trains between New York and Philadelphia, the Pennsylvania road expects to cover the distance between the two cities in one hour. It is expected that two years will be required to install the full equipment, much of which has already been ordered.

An average yield of 26.2 bushels of corn per acre and an indicated total production of 2,642,687,000 bushels of corn are the preliminary estimates announced in the report of the Department of Agriculture.

Railroads of the United States, since election day, have released orders for equipment and supplies aggregating $240,000,000, according to an official of the New York Central and Hudson River Railroad.

The present season's contribution to the cranberry crop by Cape Cod growers is estimated at over one hundred and twenty-five thousand barrels.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE CERTAINTY OF REWARD.

WILLIS F. GROSS.

THE teaching of the Scriptures from Genesis to Revelation is to the effect that men reap as they sow and only as they sow. In spite of the oft-repeated declaration that the day of reaping is as certain as the sowing-time, there is a fear that one may fail to receive the reward of well-doing, and there is also a hope that in some way one may escape the penalty for doing wrong. It is evident that the one error of belief tends in some degree to encourage the sinner in his indulgence of evil, while the other may discourage the one who is striving to do right, because it leaves him in doubt as to what will be the result of his labors. A sense of discouragement does much to hinder his progress. Give a man the assurance that he will finally succeed in the thing he has undertaken, and he will work more faithfully, sacrifice more willingly, and wait more patiently, than if he has a feeling of uncertainty as to what the future has in store for him. The thought that possibly failure will be the only result of all his labor and sacrifice, has a tendency to discourage him, and many times prevents the doing of the little more which is necessary to bring success.

The law of cause and effect attends mortal man at every step in the way. Nothing comes by chance. He may not always know what has produced a certain effect, but his ignorance does not change the fact or its results. As the law of gravitation was in force thousands of years before it was discovered by mortal man and he learned how to turn it to his use, so the unchanging law of divine Mind has governed every advancing step in humanity's spiritual progress, even though the Science of being was not understood. The understanding of Mind and its laws reveals the way to harmony. It shows just what must be done to bring success. Hence the importance that men be guided by the Science of Mind instead of a personal sense of it. Discouragement is largely due to human ignorance of Truth. Error presents the dark side of things, but the understanding of Truth lifts thought above the seeming and inspires with hope and courage.

In the degree that Christian Science is understood, it destroys fear and doubt and inspires the student with the thought that his reward is sure. He does not always know how great a work must be done to bring about a desired result. When he is tempted to become impatient, as he sometimes is because his expectations are not fully realized at once, he is reminded that he cannot reap until the harvest-time comes. Success is attained only by abiding in Truth and patiently taking each step as it is pointed out. The wise student is not discouraged if his reward comes not quickly. He does not expect to see the result when only a part of the steps have been taken. He is willing to do all that is required of him. To human sense it may take time to meet the requirements of Truth, but time has nothing to do with the result. It is obedience which brings the reward.

According to Christian Science God's work was finished from the beginning. If this be true, then the human belief that God is continually creating that which He had not created before, and constantly doing that which He had not done before,—many times doing it because He is importuned by mortals,—is an error which must give place to spiritual understanding. God's work is finished, but mortals "have eyes, and see not." If the student works faithfully and waits patiently, his spiritual understanding will be opened to see God's creation as it has always existed. Mortal thought may misinterpret this appearing, and perhaps call it a new creation, but it is simply the appearing to human consciousness of that which always has been and always will be the eternal reality of being.

Jesus came preaching "the kingdom of heaven is at hand." Christian Science declares that the only way to enter this kingdom is through demonstration. Demonstration does not consist in being converted and then waiting for death to open the door to heaven. Neither does it consist in looking to God as divine Principle, and waiting for harmony to be established according to the present sense of what constitutes harmony. It does consist in rising to that higher, diviner consciousness, where the real harmony is already established. The student does not always know just what errors are to be overcome and what sacrifices must be made in order to reach this condition. As he proceeds with his work he finds there is more to be done than he thought. The doing of one thing shows another to be done. One error is overcome, and another is uncovered to be destroyed; one sacrifice is made, and there is revealed the necessity of making a second. He may sometimes feel like giving up. He did not realize there was so much to do, so many errors to be overcome. He once believed there was much good in self, but he learns that there is none whatever. He sees it does not help matters to become discouraged or to complain because he seems to have so much to contend with. He knows that the only thing for him to do is to continue patiently in his well-doing, knowing that his reward is sure.

The invalid desires health. He has sought in many ways, but failed to find. At last he turns to Christian Science. He knows not how to obtain in this way, and he asks help of one who understands Christian Science and knows how to apply it in the healing of disease. The healer does not always know how much there is to be done; how many evils are to be cast out; how much the patient may have to give up, or how willing he may be to part with the error that holds him; hence he cannot answer the question as to how long it will take to heal the case. The healer can only assure his patient that "with God all things are possible;" that when he has done all that is required of him, he will be restored to health. Christian

Science leaves no room for doubt as to God's will concerning the sick man. In all cases it is man's sacred privilege to look to God for help in overcoming sickness as well as in resisting the temptation to sin. "According to your faith be it unto you," was not the mere saying of a man. It reveals the unerring law of God whereby men are rewarded according to their works.

Jesus said, "He that endureth to the end shall be saved," and in Revelation we read, "He that overcometh shall inherit all things." There is no question as to the result, if the demands of divine Principle are complied with. One must endure until he overcomes; then he receives his reward. One cannot hope to gain the solution of a problem in mathematics until each necessary step has been taken; why then should he hope, or expect, to solve the problems of life in any other way than by working from the basis of divine Principle and taking each step as it is pointed out? If the solution of a mathematical problem is not gained, there is an error somewhere, and that error must be searched out and corrected. In like manner some error of belief, either known or unknown, is the cause of all inharmony, and when that error is corrected by spiritual understanding, it will be seen that harmony is the divinely natural order of things and the only reality of existence.

In Christian Science, as in other things, many fail because they do not endure and are not faithful. Oftentimes the end was nearer than they thought. They might have succeeded if they had gone but a single step farther. How necessary it is to learn to "look not at the things which are seen, but at the things which are not seen: for the things which are seen are temporal; but the things which are not seen are eternal." Looking at the things of sense produces discouragement or gives a false reason for encouragement. Sense testimony can never tell us how much has been accomplished or how near we are to the solution of our problem. The Scriptures tell us that all will be changed "in a moment, in the twinkling of an eye;" but of that moment "knoweth no man, . . . neither the Son, but the Father." The eternal reality of being is here, but our eyes are closed and we see it not.

On the day of Pentecost the disciples were "with one accord in one place," waiting for the baptism of the Holy Ghost. They knew not just when they would receive it, but Jesus had commanded them, saying, "Tarry ye in the city of Jerusalem, until ye be endued with power from on high." They waited patiently, looking only to the truth; "and suddenly, there came a sound from heaven as of a rushing mighty wind, . . . And they were all filled with the Holy Ghost."

Since we know not what moment we shall receive our reward, it behooves us to be faithful. If we have not attained the desired end, does it not show there is something more for us to do, since God's work is already done? That something more must be done, and the doing of it will merit and receive the reward? Is not this enough? Are we so selfish that we ask and expect that which we have not earned through demonstration? Do we demand for ourselves what another has gained, and then complain because we do not receive, meanwhile thinking we are just as deserving as he? Did we but know that our brother can receive only according to his deserving, we would shut out all thoughts of envy and jealousy, while we patiently continue in our own well-doing, resisting temptation, enduring persecution without a murmur, always encouraged and strengthened by the assurance that divine Love rewards every man according to his works. The lesson of patience cannot be learned too quickly nor too well. Says the apostle Paul: "For ye have need of patience, that, after ye have done the will of God, ye might receive the promise. For yet a little while, and he that shall come will come, and will not tarry." And he whose promise is sure saith, "Behold, I come quickly; and my reward is with me."

CHURCH BUILDING IN CHRISTIAN SCIENCE.

ANNA FRIENDLICH.

As a loud-sounding herald of civilization momentarily startles the browsing denizens of the wilds, so the first appearing of a Christian Science church building in a community often proves a source of surprise and astonishment to the outside world, since no appeal to the public and no pulpit chiding have heralded its coming. Inside the Christian Science fold the excitement is not less. A burst of gladness and wonder arises in every heart when the great work is finished and this tabernacle of Truth is with men. To the modest band of workers a great miracle has been wrought, like the manna shower in the wilderness.

Milton describes a wonderful hall of Pandemonium rising like an exhalation out of the soil of the pit. The Christian Science church rises—an exhalation out of the love, gratitude, and inspiration of hearts chastened and lives rescued by the Father in heaven. A study of the "structure of Truth and Love," as defined in our denominational text-book, Science and Health (p. 583), leads us to recognize the fact that in Christian Science building is healing. As the errors and sins, the ignorance and fears in our own consciousness are healed, the structure of Truth and Love stands revealed, the walls of salvation appear within the pure heart where the psalmist saith God is seen. Heaps of rubbish must be excavated from the consciousness,—love of money, improvidence, sloth, self-indulgence, extravagance; old stumps of error must be rooted out,—fear of poverty, orthodoxical saws of finance, business superstitions, rainy-day prudence, unintelligent management, all that makes for lack. Without a transformation in character, improved morals, better health through spiritual power, the Christian Science edifice could not appear; and so the visible structure stands in itself a testimonial of healing. The Christian Scientist knows that if he cannot build, it is because he cannot heal. Our building appears when the purified sense starves for the truth,—when mortals perceive that they must have it; when impersonal love opens its eyes in the awakening heart.

Apathy toward the Vine cannot build the branch church: indifference to the Cause is indifference to the world, stagnating inhumanity. Cant about limitation and supply cannot build this church; self-will and self-seeking will not build it; insincerity and moral cowardice do not want to build it. All these slink away and desert the Christ at the cross. All these satisfy personal needs, but send the Christ-idea away naked and hungering from the door. Love for God is really the building fund of the Christian Science church. No anathemas lurk in its stones. Christian Scientists guard carefully against unwilling dollars; they guard carefully against all begging and unscientific soliciting, knowing that every one who understands what is really taking place when a Christian Science church is being built, seizes the opportunity to have a hand in it. If men knew what a Christian Science church really is, they would rush to invest in it as they now rush to newly opened territory or newly discovered gold-fields. Our church building is our best investment; the task of erecting it our pearl of good fortune.

The ready giving and whole-hearted liberality of Scientists in their church building have been the subject of remark in the world; but it is no puzzle to Scientists. They know the folly of hoarding matter. It means the hoarding of trouble; it is the hoarding of sickness, pain, sin, sorrow. In giving we do not consider that we in self-sacrificing generosity have become poor that God may be made rich. *Per contra:* in giving up our carnal things that we may reap spiritual things, we know that we are getting rid of error to make room for Truth, getting rid of the non-essential to make room for the essential; giving up evil to receive good; giving up trouble to make place for peace, health, holiness; sweeping away ashes to find

Digitized by Google

gold. We increase our sum of substance by subtracting the minus quantity of matter and self. It follows that if we set aside only a little of error, only a little of the non-essential, we leave space for only a little of the essential; if we set aside only a little falsity, we make room for only a little of salvation, only a little of health and harmony. If our investment is small, our returns must be small. Who made the greatest investment? Jesus commended the widow who threw in the mite that was her all.

Christian Science purges the temple, the inner mental building. As right thinking, it turns out of doors the inward money-changers,—worldly aims and fleshly desires. It opens the windows of consciousness, and heavenly lights of purity and spirituality, gleams of eternity, stream in. Then our mental building becomes a house of prayer, of Godward aspiration that heals every sick and sinful occupant of the building. The founding of a true church creates a seismic disturbance in the mental and moral realm. It shakes established beliefs,—faiths, doctrines, traditions, institutions. A new discovery of Truth permeates every factor of existence, metamorphoses every element of experience. It transforms body, mind, heart; it begins to adjust rightly relations of capital and labor, priest and layman, ruler and subject. It stands on trial before the Pilates of multitudinous modern despotisms, demonstrating its mission. Christ, Truth, coming again in Christian Science, has a baptism to be baptized with, and how is it straitened till this be accomplished!

THE FULFILMENT OF JOY.

ADIN E. BALLOU.

EARLY in the Christian centuries what has sometimes been referred to as "the worship of sorrow" began to be given prominence, and the trend was toward teachings concerning death,—the cross and the sufferings of Jesus,—notwithstanding the words of Christ Jesus himself concerning life and joy, his wonderful promises regarding death, and his own overcoming of the grave. This tendency might be attributed to the persecutions which attended the early Christians, but the fact remains that the wonderful way of Life and Truth which Jesus saw and taught, is even to-day generally relegated to another world, for which the present one is considered but as a grievous and oftentimes bitter school of experience. But there was indeed no doubt nor fear, no trace of sorrow or death in the message Jesus gave to the crowds who heard him eagerly in Capernaum and Jerusalem, and he well knew and proved that all sin and sickness could be destroyed and replaced by the health and peace that come with the true understanding of the allness and love of the ever-present Father.

Christianity as Jesus taught, and as Christian Science teaches to-day, was a doctrine of overcoming—of joy because of overcoming, and of knowledge that enables one to overcome. It was the perpetual living with and by divine Love which left no place or power to sin or discord of any kind. It took no account of death, for the only God it knew was "a God of the living"—a God to whom all things were possible, a perfect Father to a perfect Son. It looked to God for all things, and, according to the perfection of the seeking, received from God "every good gift and every perfect gift." Its first warfare was against fear, which Jesus showed plainly to his disciples could have no power when the perfect faith and understanding of the effectual rule of Love had place.

The simplicity of all these teachings, in which lay the secret of their healing and joy, was too simple for those who thought to strengthen them by amalgamation with the philosophical systems of the early centuries; and thus, from the time of Constantine, with the exception of fitful and obscure outbursts in minor persecuted sects, the great and simple truth of the all-power and presence of a perfect God, reflected in a perfect creation, has been lost to the world. To-day, thanks to the discovery by Mrs. Eddy of the great truth she has called Christian Science, the teaching of Love, and Life, and Truth can be again heard as no one who has deeply studied the New Testament can doubt that Jesus meant it should be. The impetus of joy which should have place in all worship of a God who is Love, is again present. The "water of life," so freely offered by Jesus, is again offered to the world, and thousands are rising up to call her blessed who by her great discovery has shown them how to escape from the evil of their own creation into the recognition of a creation which knows no evil.

It is a wonderful and uplifting hope which Mrs. Eddy holds out to us when she says, "Sooner or later the whole human race will learn that, in proportion as the spotless selfhood of God is understood, human nature will be renovated, and man will receive a higher selfhood, derived from God, and the redemption of mortals from sin, sickness, and death be established on everlasting foundations" (Unity of Good, p. 7).

"THE COMFORTER."

CAROLINE B. GETTY.

THE Master said to his disciples, "And I will pray the Father, and he shall give you another Comforter, that he may abide with you for ever; even the Spirit of truth." In the original Greek the word for "comforter" is *parakletos*, meaning either "comforter" or "advocate," and this word "advocate" throws a wonderful light upon the passage above quoted. The generally accepted theory is that man needs an advocate with God, and we find here that Jesus did promise an advocate to us,—one that should come to mankind to plead for God, to reveal to humanity the truth about God and man. In this passage from the first epistle of John, "If any man sin, we have an advocate with the Father, Jesus Christ the righteous," the word *paraklctos* is rendered as "advocate," and the elucidation of the word is given, "one called alongside (to help)."

Divine Science, which our Leader tells us plainly she understands to be the "Comforter" (Science and Health, p. 55), enables us each to find out how Christ Jesus demonstrated the truth about God and man; and we thus realize more and more that the way to the kingdom of heaven has indeed been made both possible and plain.

TRUE LIVING.

FRANK P. EBERMAN.

THE modern commonwealth of Israel is a pure democracy, and its policy and career must rest upon the purity and integrity of the individual ballot. The only attraction is that of Love, and in proportion as each individual heart registers its response to the great heart divine, will it be possible to establish that "unity of Principle and spiritual power which constitute divine Science" (Science and Health, p. 470). Any deflection from this ideal must invite defeat. The needle must point to the pole or the course "o'er earth's troubled, angry sea" (Miscellaneous Writings, p. 397) will be fraught with danger both to ourselves and the precious freight entrusted to us. Hence the necessity of frequent self-examination. This is the Christian Scientist's diagnosis, and while dealing to some extent with the thoughts of others, its main province is

Digitized by Google

"to probe the self-inflicted wounds of selfishness, malice, envy, and hate" (Science and Health, p. 462).

Hence the necessity of a very frequent examination of the "courses and distances" we ourselves are running, and the demand for their absolute coincidence with the "pattern shewed to thee in the mount." The Christian Scientist who does this will be like oil on the troubled waters. He will be a serene, soothing, healing, impelling, and welcome presence. His nobility and kingship will appear in the grace and naturalness with which he wears the thousand and one little amenities of daily life. His business will be prosperous, but not aggressive. He will be diligent to every duty, but "in honor preferring one another." His politics will be ambitious only for the welfare of the race, his prayers will be practice, his morals clean, his religion good. He will be "subject to principalities . . . ready to every good work;" and the sick and the sinning will seek his gates, confident in the hospitality of a great heart whose rebuke to a common foe is tempered with the mercy of his God.

TRUSTING FOR GOOD ALONE.

HON. CLARENCE A. BUSKIRK.

WITH too many persons, the consciousness of present blessings is ever overcast with clouds of fear respecting what the future may have in store for them. They seem never to be satisfied in the sunlight, but to be content only when adventuring into shadow-lands. They use their utmost ingenuity in coining phrases, or repeating those coined by others, about the perilous fingers of fate, the restless shuttles of chance, the relentless shears of destiny, and the like. They may not have read, but they are often muttering in effect, the words of Macbeth,—

> By the pricking of my thumbs,
> Something wicked this way comes.

Such people often talk about their presentiments of coming evil, and they need to learn, as we are taught in Christian Science, that evil has no law behind it, giving it any action or power whatever, except as false belief begets such seeming law. Such beliefs are kaleidoscopic in their presentiments; they never reach the certainties of truth, but are accepted with the false concepts of superstition and ignorance. Any presentiment which does not have its origin in Truth and Love, cannot belong to the kingdom of the good and true. It is born and bred in the darkness of the untrue, and hence it is both unscientific and unwise to entertain any anticipations of evil whatever. We should bar the door of consciousness against the invasion of such lying visitors. Their voices are full of deception and they cannot be from good. Mrs. Eddy has lovingly counseled all Christian Scientists to "trust in Truth, and have no other trusts" (*Sentinel*, July 4, 1903). Let us hold our consciousness of God's loving care as immanent and ever-present, free from all fogs and darkness. As a man "thinketh in his heart, so is he."

[Written for the *Sentinel*.]

IDEALITY.

GERTRUDE RING HOMANS.

WHEN harmony rules with unchallenged might,
Then merges perfect day in peaceful night
Wherein there is no bitterness, no fear
Or sorrow that shall start the stinging tear.
No vain regrets for happier hours now gone,
But glad anticipation of the dawn
Which heralds yet another Love-crowned day
Ere time's brief concepts pass away.

SELECTED ARTICLES.

[Frederick Dixon in the *English Churchman*, London, England.]

The writer of the letter on "The New Theology" went out of his way quite unnecessarily to explain that Christian Science is "neither Christianity nor science." The word "Christian" is defined in the Oxford Dictionary, the greatest of all dictionaries, as follows: "Of persons or communities: Believing, professing, or belonging to the religion of Christ," and in this broad sense, absolutely irrespective of creeds, it is undoubtedly commonly understood. If any one wishes to circumscribe it with a dogma, he will very soon discover that he has embarked, not on a definition of Christianity, but of orthodoxy. This should be sufficient to make people careful, for the fact is that the orthodoxy of Christendom has altered from century to century, so that, as Mr. Froude writes, "the Christianity of the first century was, and yet was not, the Christianity of the fourth century. The Christianity of the fourth century was, and yet was not, the Christianity of feudal Europe. The Christianity of feudal Europe died at the Reformation, and was born again in Protestant Christianity." The idea only, he says, "is immortal and never fades;" and he goes on to wonder, if the men who piled St. Andrew's Cathedral stone upon stone by the sands of the Northern Sea were to meet the men who shattered their work to ruins, or the presbyter who walks the aisles to-day, how much they would understand the one the other.

Now, a Christian is at least one who believes in Jesus the Christ, and in the last chapter of the Gospel of Mark there occurs a definition of a believer in the words of Jesus himself: "And these signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." It is true that an attempt has been made to prove that these verses are an epilogue by a later writer, but the effort is scarcely worth the trouble for it leaves untouched the infinitely stronger saying in the fourteenth chapter of John: "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father."

The Christian Science Church has accepted Jesus' test of what constitutes belief, and it is a little curious that it should be singled out for a charge of heresy. The term "heresy" is at all times a very ridiculous one. There is not a sect that has not been, and would not in different circumstances be, heretical. This is so manifest that a great English churchman once remarked that "orthodoxy is my doxy, and heterodoxy any one else's doxy."

[Margaret Beecher White in the *New York American*.]

Christian Scientists are known to be a happy and contented people. Of course, the main reason is that they have found the truth which has made them free from sickness and suffering—but it seems to me that the greatest change is in the freedom from mental attributes which have only warped and narrowed the character until there was little left but self—and a false sense of self at that. The Christlike knowledge that we find in Christian Science is to know and understand that there is but one Mind, and as we enter the portals of this "new-old truth" we strive to have that Mind in us "which was also in Christ Jesus." . . .

Christian Science is pointing the way for unnumbered thousands who, through its teachings, are acquainting

Digitized by Google

themselves with God, whom they have found to be of "purer eyes than to behold evil," and are finding the peace that truly does pass all understanding. You ask, What of the mortal mind wherein lie all the thoughts that cause sickness and misery—what of it? It is a counterfeit—a false state of consciousness. Suppose you possess a diamond pin which you prize and wear constantly. One day you meet a friend who is an expert in the diamond trade; he tells you that your so-called jewel is no jewel,—it is paste, an imitation of the real gem. What is your estimation of the pin you were so proud of once? Do you prize it still? No. Why not? Because you have found it to be unreal. Now how did your friend the expert know that your once-admired diamond was a counterfeit? By making a study of the spurious gems? No, indeed; but by becoming familiar with the quality and nature of real diamonds.

A musician does not work to understand discord in its various phases. He devotes his time to the study of harmony, and is so attuned to the beauty and richness of tones and chords that, if a jarring note is struck, instantly he recognizes it as not true—not real. He doesn't stop to reason out its origin, but hastens to remove its effects by striking the harmonious note that should have been struck in the first place. So also, if we keep ourselves constantly in tune with the one Mind, the Mind of Christ, by thinking right thoughts, God's thoughts, we shall not bring out jarring discords in our lives. And is it not necessary, in order to keep in tune with God, to study the Science of spiritual harmony?

The reason that Jesus was so great among men, and had such wonderful dominion over earthly or material things, such as sin, sickness, death, wave, and storm, was his sublime and unequaled understanding of the infinite, divine Mind as the only real cause and creator. And to the extent that we gain a fuller and higher understanding of his teachings shall we manifest that same dominion.

[Charles K. Skinner in the *Daily News*, Grand Rapids, Mich.]

With the unlimited opportunities to know exactly what Christian Science teaches, statements which are at utter variance to the facts can but place the speaker in an embarrassing position before an intelligent public. . . . While ever willing and cheerful helpers in such ways as seem wise and safe for the protection of society, the Christian Scientists go farther and aim at the root or cause of sin and disease. Everything is mental before it is manifested materially, and it is not necessary for one to be a Christian Scientist to admit this. The Christian Scientist is striving to educate the individual mind to thoughts of health, purity, and honesty, good in every way, and to a corresponding trust in a loving God to protect and care for His children who look to Him. Is it less Christian that the Scientist's department of sympathetic endeavor lies in the line of the prevention of sickness and sorrow, both for this and for future generations, and that he chooses to appeal to God for relief for these dire effects of sin rather than to a drug? Does it render one unsympathetic to assure the sick that God heals diseases, and the sorrowing, that God is an ever-present help, and to give all his time and energy, forgetful of personal pleasure, in helping the needy to gain that understanding? One of the strongest requirements of Mrs. Eddy's teachings is that of pity and tender care for the sick and suffering, and the testimonies of numerous physicians who have been brought in contact with the patients of Christian Scientists corroborate this statement.

Mrs. Eddy's gifts to various causes have been very large. It can be shown that when the call came to help sufferers from the San Francisco disaster, Galveston flood, etc., the gifts from the Christian Science church, with a much smaller membership, exceeded that of any other church in your city. In the distribution of supplies to sufferers from the local flood of that city one who had to do with such work said, "The best clothing and food came from the Christian Scientists." The record of Kidder, Peabody & Co. of Boston, treasurers of the Macedonian fund in 1903, shows that the Christian Scientists contributed one seventh of the total amount. In the San Francisco disaster The Mother Church in Boston contributed to the general fund about $2,600, this in addition to help given the Christian Scientists of that city. Mrs. Eddy also sent $1,000 on this occasion. To the Russian relief fund, 1907, the Christian Scientists of Boston sent $1,090, being one fourth of the total amount sent by the city. In the city of Detroit the chairman of the Jewish relief fund said the Christian Scientists were the first to go into their treasury and give liberally to aid their cause, and in the recent case of the Alpena sufferers from fire, their offering was larger than that of any other church.

The Christian Scientists' understanding of the unreality of sickness, etc., is well defined in the writings of Mrs. Eddy, and the various publications from the publishing house in Boston, and these can be found in every Reading Room in the land free of expense to the inquirer. . . . Christian Scientists would not deny that when a man has neuralgia he is in misery; the Scientist does not, however, admit that God is the author of the misery, and if He is not, such a condition has no real entity, no right to exist, and can be overcome by the understanding of God as the only power. According to Scripture, "God saw every thing that he had made, and, behold, it was very good." Either sin and sickness are good, or God did not make them, hence they are unreal to Him and to the spiritual man.

[W. E. Brown in the *Los Angeles* (Cal.) *Herald*.]

As to the Christian Science interpretation of the Scripture with which our critic finds fault, we reply with something better than argument, viz., ample proof in healing the sick and sinful. Jesus said, "He that believeth on me, the works that I do shall he do also;" and again, "These signs shall follow them that believe." If true belief is to be followed by the ability to heal the sick as well as reform the sinner, what is to be said concerning a belief that does not confer this ability? It would seem more modest, as well as Christian, for those who are unable to heal the sick according to Christ's command, to refrain from criticising those who are in a large measure fulfilling this command. While it is true that Christian Scientists are not yet able to do all the works performed by the Master, they are very grateful for present accomplishments, which have proved Christian Science to be the most potent healing method on earth to-day, and they further rejoice that when they attain a greater degree of spirituality they will perform greater works.

Our critic's remarks regarding the denial of matter further emphasizes the fact that he is not acquainted with even the fundamentals of this Science, and therefore not in a position to criticize. Christian Science does not ignore sin and disease, but recognizes the importance of overcoming and destroying them, with the result that under treatment a patient is improved, not only physically, but morally and spiritually as well.

THE PUBLISHING HOUSE BUILDING FUND.

Contributions to the Publishing House Building Fund should be sent to Stephen A. Chase, Treasurer, P. O. Box 56, Fall River, Mass. These contributions will be thankfully received and promptly acknowledged.

THE LECTURES.

EVANSTON, ILL.

"Christian Science: or Deliverance from Evil," was the subject of an interesting lecture which was delivered at First Church of Christ, Scientist, Tuesday evening [Sept. 29], by Rev. William P. McKenzie of Cambridge, Mass. He was introduced by John W. Thompson, former president of the Evanston public library, who said in part,—

Not since the first centuries of the Christian era have Christ's life and teachings exerted so great an influence on individual life and thought, and never before have they been the source of such wide-spread power for the promotion of human welfare. His gospel is the perennial message of "good news," the evangel of health, peace, and happiness to hundreds of thousands of people all over this earth, and the number is steadily and rapidly increasing. Christianity is spiritual, not material. It works through the spiritual understanding, bringing to human consciousness a realization of the allness of God, the all-intelligence of Mind, the oneness of Life, the unlimited power of Truth, the all-pervading Principle, Love, the fatherhood of God and the universal brotherhood of man. The attainment of this spiritual understanding restores man to his God-given dominion, destroys fear, stimulates confidence, illumines life's pathway, reveals the source of unlimited supply, and destroys every form of error, including sin, sickness, and death. "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free."

Rightly (spiritually) understood, Christianity is the Christ Science, or the divine law of being as taught and demonstrated by Christ Jesus; and has been aptly named Christian Science by Mrs. Eddy, the Founder and Leader of Christian Science.—*The Evanston Press.*

KEARNEY, NEB.

On Sunday afternoon, Oct. 4, Francis J. Fluno, M.D., of Oakland, Cal., lectured on Christian Science at the Opera House. At the hour appointed the speaker was presented by W. L. Hand, who said,—

Pessimism, or the disposition to look on the dark side of life, is a sentiment of the human heart that ought to be destroyed. Pessimism is an evil sentiment, one that brings much misery to men and women, and it stands as an obstacle to the progress and happiness of the race. The Holy Bible is an enemy of pessimism when rightly understood. To you who do not believe in Christian Science let me say, Let us not be intolerant. I do not come here to-day to introduce the speaker because I accept all the teachings of Mrs. Eddy, for I have never been able to agree with her in her understanding of the nature of God or the nature and mission of the Saviour, but I believe we should gather the good, the truth, wherever we find it. We should adopt it and make it our own and try to realize it in our lives. The Christian Scientists are helping to make the world happier. They are destroying pessimism and always looking on the bright side and striving to banish sickness and discouragement.—*New Era-Standard.*

LEAVENWORTH, KAN.

Frank H. Leonard lectured on Christian Science Oct. 4. He was introduced by Congressman Daniel R. Anthony, who said in part,—

When I was asked by some of the ladies having to-night's lecture in charge if I would introduce the cultured gentleman who is to address you, I told them that from the standpoint of possessing a knowledge and an understanding of Christian Science I would hardly be able to fill the requirements, but nothing gives me more pleasure in prefacing this introduction than to bear testimony to the marvelous power for good which has been brought into this world of ours by this new religion. Not a new religion perhaps, or in reality a new power, but a resurrection of truths known at the time of the Christian era, when Jesus sent his disciples abroad in the land to spread the truth and the power of the new gospel and to heal the sick and afflicted and minister unto the poor.

The practical side of Christian Science appears to me to be the triumph of the human mind over matter and conditions which should not exist. How natural the argument that from the perfect Mind, and from high thoughts, should come the best things; and there has been no greater moral influence in this world's history to make men and women better than the Christian religion. 'Tis but a few years ago that the spark of truth emanated from that little New England village, and that it has made the world better—human life sweeter, and their bodies healthier—for thousands and thousands, nowadays goes without dispute.

Correspondence.

ZANESVILLE, O.

An audience of about three hundred persons gathered at Gold Hall last night [Oct. 6] to listen to a lecture on Christian Science delivered by Judge Septimus J. Hanna of Colorado Springs, Col. The speaker was introduced by E. E. Lorimer, who spoke in part as follows:—

Friends, I greet you in the name of a Christianity whose very foundation is one God, and that God supreme and infinite; a Christianity based upon the teaching and practice of Jesus, and striving to obey the Scriptural command, "Let this mind be in you, which was also in Christ Jesus;" whose highest aim and purpose is to lift humanity to the consciousness of God's ideal, the divine sonship, to behold and know one Christ—an all-sufficient and an ever-present Saviour—and thus to dispel the human illusions of sin and suffering, want and woe, wretchedness and despair, and to supplant them with man's true heritage as the child of God—the spiritual sense of freedom, dominion, and harmony. This is the religion of Christian Science—this is its mission—this is its high purpose—this it has been doing and is doing for mankind, until to-day thousands attest its benefits and blessings.—*The Times Recorder.*

BELFAST, IRELAND.

On Sunday evening, Oct. 11, the annual lecture on Christian Science was held at the Ulster Minor Hall. The proceedings passed off quite harmoniously, in pleasant contrast to the disturbed meetings at the last two lectures. The police were not asked by us to attend, nor did we need to call for their services. The lecturer, Clarence C. Eaton, was introduced by Charles E. Allan, who said in part,—

When Christian Science is better understood the prejudice against it will cease, and the unworthy charges so often brought against it will be seen to be untrue. And surely the charge so commonly made, that it is too good to be true, is one every man and woman should rejoice to see refuted. Nothing is too good to be true. In the universe created by a good God only the good can be true. All good, therefore, must be true, and all truth good. We need not hesitate to study Christian Science from any fear that its teachings may play us false or prove to be too good to be true. We hope that some of its truth and beauty may reach our hearts to-night.—*Correspondence.*

NEW YORK, N. Y.

A lecture was given in Second Church of Christ, Scientist, New York city, on Friday evening, Oct. 9, by Bliss Knapp, to an audience that completely filled the church, a number standing throughout the lecture. J. V. Dittemore, Committee on Publication for the State of New York, introduced the lecturer, saying in part,—

Christian Science is too well known in this community to need an introduction. It comes to this age and announces itself as a beneficent messenger, bringing to mankind a greater measure of hope, of joy, and of health. It affirms that it comes in fulfilment of both law and prophecy. It declares its Principle, its method of practice, and its promise, and rests its case in the knowledge that future ages will realize the beneficence of its mission.

Correspondence.

PASSAIC, N. J.

Rev. William P. McKenzie of Cambridge, Mass., lectured on Christian Science, Sunday afternoon, Oct. 11, at the Passaic Club House, before a large audience. The lecture was delivered under the auspices of First Church of Christ, Scientist, in Passaic, and the speaker was introduced by George Montgomery Hartt, editor of the *Passaic News*, who said in part,—

I am not a Christian Scientist, but I have read Mrs. Eddy's book with a great deal of interest and find it contains some very excellent things. Perhaps I cannot accept all of it because I do not understand it. We know that Christian Science has done a great deal of good and that the world is beginning to laugh at medicine.

Correspondence.

HORNELL, N. Y.

The lecture by Mrs. Mims of Atlanta, Ga., in the Universalist Church last evening [Oct. 15], was largely attended. The speaker was introduced by Capt. W. S. Charles, who said in part,—

I congratulate you upon the treat in store for you this evening. I can state that I feel complimented upon being selected to introduce the distinguished visitor to such a representative gathering, and why not? We should be willing to render in any good cause the little help we can. Our Science friends have asked very little of me; they have never asked me to try a chance on a raffle, buy a ticket for a show, or to buy a fowl and then pay to eat it. It is refreshing to find that our Science friends have nothing to conceal, that their meetings are open and free, and that they go so far as to provide the best talent in their organization that those who desire may hear a statement of this belief. These lectures I am informed are not given for the purpose of proselyting from other religious bodies, but primarily to bring a message for the large number who do not know but who must know before they will believe. The Scientist believes that he knows the way, and that he has the truth.—*Tribune.*

AUBURN, N. Y.

An unusually attentive audience listened to the lecture on Christian Science delivered at Music Hall last evening [Oct. 20] by Bicknell Young of Chicago. The lecturer was introduced by Napoleon Ross, who said in part,—

Have we not the same God as in the time of Abraham? Have we not the same God who restored Job, who led the Israelites through the Red Sea, who sustained David, who rescued the three Hebrew boys from the fiery furnace, and enabled Jesus to overcome all manner of sin and disease, to raise the dead, and finally to overcome death and the grave? What can be the trouble? The answer is a simple one: Sectarian strife, ritual, creed, and dogma have parted the seamless robe of the Christ-truth and appropriated it to denominational whims and fancies. The result has been and is, that the Christian Church gropes in darkness, more or less blinded to the glorious healing truth which is ever present and which is just as demonstrable to-day in the overcoming of sin and disease as it was two thousand years ago when Jesus taught it. Christian Scientists claim no monopoly of the truth, however, but they do take the unqualified stand that if Jesus' command to heal sin was true, then his command to heal disease must be true and cannot be ignored.—*The Auburn Citizen.*

LA CROSSE, WIS.

A lecture on Christian Science was given at the La Crosse Theater last night [Oct. 23] by Hon. Clarence A. Buskirk. C. H. Schweizer in his introduction said in part,—

It is nearly two thousand years since the great Master, who spoke as one with authority, bade his disciples "preach the kingdom of God, and to heal the sick." No command ever spoken was of greater moment to mankind, suffering in soul and body—none had greater sanction or was inspired by greater love. Yet as the centuries rolled by, this great injunction was misinterpreted if not wholly misunderstood—in any event only partially heeded. At length in our day one to whom was given a clearer vision to see what others could not see, and a deeper understanding to perceive what others could not perceive, like the prophets of old, searched the Scriptures and interpreted anew this old command, and preached again the kingdom of God, healing the sick and giving unto suffering humanity a new message of hope. I need not tell you how that message was received. It will suffice to say that despite adverse criticism, in the face of untoward opposition and scoffing intolerance, it has found its way into the homes and hearts of thousands, bringing peace and comfort and health of body and mind.—*La Crosse Leader-Press.*

LECTURES AT OTHER PLACES.

Dayton, O.—Bliss Knapp, Sept. 27.
Elkhart, Ind.—Rev. William P. McKenzie, Sept. 27.
Freeport, Ill.—Bliss Knapp, Oct. 1.
St. John, N. B.—Hon. Clarence A. Buskirk, Oct. 2.
Pueblo, Col.—Frank H. Leonard, Oct. 2.
Hutchinson, Kan.—Frank H. Leonard, Oct. 3.
Frankfort, Ky.—Mrs. Sue Harper Mims, Oct. 4.
Sedalia, Mo.—Frank H. Leonard, Oct. 6.
Beatrice, Neb.—Francis J. Fluno, M.D., Oct. 6.

THE CHRISTIAN SCIENCE MONITOR.

The sale price of *The Christian Science Monitor* will be two cents each copy, and the subscription price in the United States (except where delivery is made by carrier), Canada, and Mexico will be five dollars for one year, or three dollars for six months; in all other countries eight dollars and four dollars and fifty cents respectively. Subscriptions may be sent to The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Mass., or through local Reading Rooms.

A stenographer with a good German and English education, and able to take dictation in either language, is wanted. Address, stating education and experience, the Trustees of The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book does not consult nor read letters on disease. Writing to Mrs. Eddy upon proper subjects *is not* prohibited. Take no notice of startling reports about Mrs. Eddy. Our Committee on Publication will be reliable on this subject. *Beware of counterfeit letters.*

MRS. EDDY'S THANKS.

Box G, Brookline, Mass., Nov. 16, 1908.

Beloved Christian Scientists:—Accept my thanks for your successful plans for the first issue of *The Christian Science Monitor*. My desire is that every Christian Scientist, and as many others as possible, subscribe for and read our daily newspaper.

MARY BAKER G. EDDY.

NEW BY-LAWS.

ARTICLE VIII.

CHRISTIAN SCIENCE NURSE.—SECT. 31. A member of The Mother Church who represents himself or herself as a Christian Science nurse, shall be one who has a demonstrable knowledge of Christian Science practice, who thoroughly understands the practical wisdom necessary in a sick-room, and who can take proper care of the sick.

The cards of such persons may be inserted in *The Christian Science Journal* under rules established by the publishers.

ARTICLE XXII.

CLOSED TO VISITORS.—SECT. 14. The room in The Mother Church formerly known as "Mother's Room," shall hereafter be closed to visitors.

[There is nothing in this room now of any special interest. "Let the dead bury their dead," and the spiritual have all place and power.—MARY B. G. EDDY.]

"THE IDEAL NEWSPAPER."

ONE of the most pleasing signs of the times is the way in which many newspaper workers have taken occasion to express themselves in relation to *The Christian Science Monitor*, since the announcement of its early issue was made in these columns but little more than a month ago. Although some seem to doubt the possibility of a daily newspaper attaining to the high ideals that have been set for the *Monitor*, nevertheless there has been a very general and sincere indorsement of these ideals. The accompanying clipping from the *Independent*, of Santa Barbara, Cal., gives, we think, in a few words the sentiments of newspaper workers in general. It says,—

> The venture will be watched with interest by newspaper makers and newspaper readers throughout the land. Should it succeed, it will be the ideal newspaper, a realization of the dream of editors. . . . If the Christian Science daily newspaper points a way to better things in journalism, no men will rejoice more than those who are engaged in newspaper work.

The *Waverley Magazine* of Boston also has a good word to say for what the *Monitor* stands for, and we are glad to quote its editorial comment as follows:—

> Boston is soon to be the home of a new daily newspaper, under Christian Science management. Although published in Boston, the *Monitor*, as the new publication will be known, will have more than local interest and will aim to interest Christian Scientists all over the world. "It will be the mission of the *Monitor*," says an editorial in the *Christian Science Sentinel*, "to publish the real news of the world in a clean, wholesome manner, devoid of the sensational methods employed by so many newspapers. There will be no exploitation or illustration of vice and crime, but the aim of the editors will be to issue a paper which will be welcomed in every home where purity and refinement are cherished ideals."
>
> Notwithstanding the fact that the *Monitor* will be owned by a religious body whose policy will undoubtedly be its own, and to whose desires and opinions it will at all times be subservient, we must commend the sentiments expressed in this editorial. We know too much of the selfishness, the social impurity, the political corruption, and the gross injustice in the world about us, and too little of the great good being done by an enormous army of God-fearing, uncomplaining, patient men and women, who are ever toiling for the welfare of their fellow-men. Let us have less sensationalism and more decency in our newspaper methods. Let us continue, by all means, to expose and condemn existing evil, but not to the exclusion of legitimate recognition of existing good.
>
> But enough of this. Honesty is what we have a right to expect from our newspapers; plain, unblemished honesty. Let the new Christian Science daily give us at least that, and it will do much. Let it live up to its expressed ideals, and it will be a relief to the eyes and minds of a reading public, tired of the insignificance and impropriety of things too often placed before them. What the public desires to find in its newspapers is the truth,—the truth that is wholesome, the truth that is beneficial, but the truth above all things.

That the *Monitor* will be welcomed by the reading public is evidenced in the many letters of congratulation and approval which have reached this office, not alone from Christian Scientists, but from that large class of readers who it was believed would support such a paper "on its merits."

ARCHIBALD MCLELLAN.

FOR VALUE RECEIVED.

IT happens that some who are becoming interested in Christian Science, as well as those who are opposed to it, with strange inconsistency ask why Christian Science practitioners accept fees for their services in healing the sick. The usual argument against such remuneration is that Jesus did not charge for his healing works, and that professed Christians should follow his example in everything—a conclusion with which Christian Scientists heartily agree. At this point we may remind the critics that the majority of the Master's professed followers neither attempt to follow his example, nor obey his explicit commands at all, with respect to healing, and that the question of remuneration is surely a secondary one, though still important. While we are not told that Jesus demanded a return for his services, the Gospel accounts make it very clear that he accepted it, and that a number of those who had been healed by him "ministered unto him of their substance." The fair inference is that Jesus and his disciples were entirely supported by the beneficiaries of their healing work.

Matthew, Mark, and Luke are agreed as to the sending out of the disciples on their healing mission (see Matthew, 10 : 1–20; Mark, 6 : 7–13; Luke, 9 : 6; also Luke, 10 : 1–20). In these narratives we not only find the commission given to the disciples, but also the instructions as to method. They were told that they should *not* take money, food, or clothing with them, but should depend upon the returns from their healing work. It is noteworthy that these definite orders were given to the seventy as well as to the twelve, and they would have been guilty of gross disobedience had they disregarded them. That Jesus' instructions along this line were heeded in the early Church is evident, for the healing work went on, and Paul says, "If we have sown unto you spiritual things, is it a great thing if we shall reap your carnal things?"

A fair-minded man who was a lawyer once said to a Christian Scientist that he thought the taking of fees by Scientists lessened the sacredness of their work. He was then asked if his own profession was not sacred to him, and if he felt that the efforts of lawyers to establish justice

Digitized by Google

between men would be more equitable if no fees were charged. He did not attempt to evade this logic, but said he had not thought of it in this way before, and he agreed that for all work faithfully performed an adequate return should be made. The representatives of law, theology, and medicine have never hesitated to accept this return, but have cheerfully assented to the justice of the great Teacher's words, "The laborer is worthy of his hire," except as it applies to work done in Christian Science, and yet this work reaches farther than anything that has been undertaken since the days of Christ Jesus. Not only are the sick healed in Christian Science, but their dispositions are changed, and many legal tangles are adjusted in this way.

Is it not just possible that in this very commercial age we may have a wrong estimate of values? What is to be compared to health, especially when this includes the whole nature, physical, moral, and spiritual? When Naaman the Syrian started on his quest for health he took with him as an offering "ten talents of silver, and six thousand pieces of gold, and ten changes of raiment,"—a goodly fee indeed! Mary of Bethany poured out an almost priceless perfume upon the feet of Jesus a few days after he had called her brother Lazarus from the tomb, but Judas found fault! If the price of wisdom is "above rubies," we should surely be willing to give up much of the material to gain the wisdom which brings us near to God, for thus are the sick healed in Christian Science.

ANNIE M. KNOTT.

THANKSGIVING.

IF one were to look simply at the fact and make no investigation as to the how and wherefore of another's possessions, his conclusion would likely be that he who has abundant creature comforts, opportunities for travel and for the gratification of his educated tastes, has multiplied occasions for thanksgiving. The moment one begins to think about the matter, however, he realizes that more than the mere legal possession of things is demanded as a ground for gratitude on the part of the possessor.

First of all, he must have come by his holdings honestly, without having infringed upon the rights of others. The man whose possessions record the cruelty and rapacity of his ancestors, or the unscrupulous and unjust advantage which he or his agents have taken of other men, surely has no occasion to thank God for his gains, since divine law has not been honored, but rather dishonored, in their accumulation; and no man need envy those who have secured their riches or "legal rights" by such means. One has but to look about him to discover that the division of the products of labor among men has not been entirely equitable, and that if moral desert had determined the returns, some would have much less, and many much more.

Moreover, one's gains must not only be fairly acquired, he must possess them rather than they him, if they are to prove a blessing. One of the most pitiful facts pertaining to our wondrous recent strides in the mastery of natural forces and the accumulation of wealth is this, that in the process men have so generally come under the domination of money. When men go "money mad," and simply abdicate in favor of the things "of the earth, earthy," then the creature rules the asserted creator, and we have a type of bondage in comparison with which chattel slavery is an inoffensive trifle. Whether it be in political or commercial life, in philosophical or religious faith, whenever and with whomsoever belief in and love of the material has come to rule, it is certainly a time for grief rather than gladness. He who, in subjection to the glamor of gold, thinks he has the greater advantage, is chiefly to be commiserated, and his friends may well pray, "God save him from himself and the things he calls his."

It is true that with the saints of old men may be thankful that they are out of the hell of their own ill desert, but the true thanksgiving is possible for him only whose heart's desire is fixed upon real good, the gifts of God, and who in seeking first "the kingdom of God, and his righteousness," has found his every earthly need supplied. He is a true Christian Scientist, and in giving thanks he will think of that "grace for to-day" (Science and Health, p. 17) which compasses the supply of "every human need" (*Ibid.*, p. 494). This sense of the nature and source of all real good leads one to remember with loving gratitude the unnumbered and unknown who by their devotion to the truth as they understood it, in their time and place, hastened the day which has dawned in such effulgence for us. The memory of the self-sacrifice of Christ Jesus and his true followers, in all ages, including her whose name will forever be associated with Christian Science, bespeaks the tender and undying gratitude of all mankind.

The aspiration of the truly thankful explains the gladdening fact that the expression of their gratitude, in love's practical ways, increases their capacity for and enjoyment of heaven's unfailing bounty. It illustrates that blessed law of reaction which is expressed in Jesus' words, "With the same measure that ye mete withal it shall be measured to you again;" and this gracious promise is surely theirs to-day who in their devotion to Christian Science are giving their all to the ministry of healing the sick and binding up the broken-hearted.

JOHN B. WILLIS.

NOTICE.

The first number of *The Christian Science Monitor* will be issued Wednesday, Nov. 25, the day before Thanksgiving. All our friends who are planning to send in a subscription will no doubt wish to begin with the first issue of the paper, and in order that they may be assured of this, names and addresses should be sent to the Publishing Society without delay, as papers cannot be kept on file to fill orders for back numbers.

LETTERS TO OUR LEADER.

Boston, Mass., Nov. 16, 1908.

Beloved Leader:—I feel you will be interested to know that to-day over fifteen hundred subscriptions to *The Christian Science Monitor* have been received at the Publishing House, the largest number in one day since the announcement of the paper; and the expressions of deep interest and gratitude which accompany many of these subscriptions indicate that a general welcome awaits the *Monitor*. The following letter tells of the kind of faith one of our correspondents out in Nebraska has in the *Monitor*:—

"*Dear Publishing Society:*—In a recent issue of the *Sentinel* I noticed an announcement of the fact that we are to have a Christian Science daily called the *Monitor*. This glad news filled my thought with joy, because I have prayed for years that God would send us a good clean daily newspaper. Oh, what a comfort it will be to sit down with our children or friends and read a newspaper that is not filled with flourishing headlines, depicting vice, crime, disaster, and death, magnifying evil and minimizing good. God bless the *Monitor*,—long may it live, and flourish, and 'wax strong in spirit,' helping to minimize evil and magnify the good. What a blessing it will be to humanity! It is a great need long felt, and now at the threshold of being filled

Digitized by Google

"As an expression of my appreciation, I herewith enclose fifty-five dollars for a ten-years subscription to the *Monitor* and five dollars' worth of its first issue. With very best wishes for your success."

With much love, dear Leader, from the workers in the Publishing House,

Yours sincerely,
DAVID B. OGDEN.

Guthrie, Okla., Nov. 3, 1908.

Mrs. Mary Baker G. Eddy, Chestnut Hill, Mass.

Dear Leader:—May two overflowing hearts tell you that your writings are daily teaching and showing them the wonderful, "deep things of God"? Eighteen years ago (when she was but a girl) your writings brought to my wife God's message of peace to man, and almost twelve years ago I was thoroughly healed by reading your book "Science and Health with Key to the Scriptures." We can only prove our gratitude by being channels for quick and thorough healing, as required in The Mother Church Manual. We are hourly working to know God better and to be pure in thought, so that we too may walk with God and understand His law. We rejoice to see the sinning freed and the sick healed through Christian Science; those who are deaf, physically, hear God speaking and are healed, and they are giving God thanks for Christian Science. We are trying meekly to follow your footsteps in the path God has shown you.

Yours gratefully and lovingly,
DANIEL M. MYERS,
MRS. BERTHA TRABAND MYERS.

Sydney, N. S. W., Australia.

Dear and Beloved Leader:—I have often wished to write to you, but have not liked to intrude upon your time given so lovingly and unselfishly for the spiritual uplifting of the whole world. I am more thankful than I can express for our text-book, "Science and Health with Key to the Scriptures." You have indeed given us the "Key" that opens the treasure-house of God, through which I now understand, as I never have before, "the life and the love of our Lord." Our daily Bible Lessons, with your spiritual interpretation, which is the manna that falls day by day, your inspiring hymns and verses,—how I love them all, especially your beautiful prayer in verse, "Shepherd, show me how to go." I have known of Christian Science only about three years, and have been a member one year next January. I am striving to live in daily obedience to the tenets of our Church, and praying for more of the Mind of Christ, that I may not only overcome sickness and sin in myself, but be enabled in some small way to help and comfort others.

Again I thank you, beloved Leader, for all the happiness and peace I now enjoy through the little understanding I have of the Science of my true being,—my at-one-ment with God. We know you are dwelling "beneath the shadow of His mighty wing." With heartfelt love, in which my daughter wishes to join me,

I am your humble follower,
MRS. M. A. HOWELL.

St. Louis, Mo., Oct. 28, 1908.

Dear Leader:—Many times I have wished to tell you how much your life-work means to me, but the call to action at my post of duty has helped me to feel that I was best loving and obeying by helping the needy to learn of the beautiful Christ-healing through your teachings. The recent broadening of the lines of activity in the Publishing Society awakens a new thought of gratitude. All the early years of my life were spent in the closest relations with the work of journalism. My father was one of the early editors of New York State, when, as it seems to me, the purpose to set forth the better, purer interests of the day was earnestly considered. In my early study of Christian Science I found it difficult to set aside the bias of early education in my fondness for the current periodicals and newspapers, until in my reading I became more aware of the disappointments occasioned by the horrors so constantly portrayed. This caused me to cling more closely to the study of your teachings and the splendid publications of the Publishing Society.

When the *Sentinel* began to give us the page, "Items of Interest," I was glad to keep again in touch with news items so concisely set forth. Now we are to have the *Monitor*, a paper which can be welcomed in our homes and given to our children as a channel for the best current topics that form an essential part of our educational work. Through your loving foresight we shall be able to view the arena of changing human events without feeling that we are losing our hold on the glories of spiritual things. We should indeed be grateful that we are keeping abreast of the times, while praying earnestly, "Thy kingdom come." With a heartfelt desire to prove trustworthy,

Yours in loving obedience,
CAROLYN L. MCARTHUR.

Livonia, N. Y., Oct. 17, 1908.

Mrs. Mary Baker G. Eddy:—My heart goes out to you with love for your teachings, and I wish to tell you how grateful I am. I have a daughter, now thirteen years old, who has been very delicate and lame from birth. A few months ago a neighbor told me that she could be healed. I sent her to a Christian Science practitioner, who has worked for her, and by reading "Science and Health with Key to the Scriptures" she has been made strong, and is growing so fast that very many people remark what a change there is in her.

Lovingly yours,
MRS. A. A. SLINGERLAND.

Livonia, N. Y., Oct. 17, 1908.

Mrs. Mary Baker G. Eddy:—I am a girl thirteen years old. Through the kindness of a Christian Science practitioner, I have become strong and straight, also through your teachings in Science and Health. I am so grateful. My papa has also been benefited so very much that we feel to praise God for His goodness to us, and you for showing us the way. Yours sincerely,
GRACE L. SLINGERLAND.

A HINT TO OUR FRIENDS.

THE following letter, received by our Business Manager from a friend, gives a hint as to how the usefulness of the *Monitor* may be largely extended:—

Box G, Brookline, Mass., Nov. 16, 1908.

Dear Mr. Ogden:—What progress our Cause is making under the faithful guidance of our beloved Leader! We are all rejoicing over the establishing of the *Monitor*, and looking forward to its first issue on the 25th.

I am enclosing a check for two subscriptions, one copy of the paper to be sent to the Boston Public Library, and the other to my address. With every good wish for your success, I am Sincerely yours,
LAURA E. SARGENT.

AMONG THE CHURCHES.

DOVER AND FOXCROFT, ME.

Ideal location, beautiful and unique construction, convenient and comfortable appointments, fittingly describes the salient features of the new church home of the Christian Scientists on Lincoln Street, Foxcroft. The doors of this building were thrown open to the public Sunday morning [Oct. 25] and a large number of townspeople were present at the initial service in the new church.

For some time the accommodations of the Christian Scientists of these towns have not been adequate to their needs, and early in the spring it was unanimously voted at a meeting of the church to take definite steps for the erection of a church home. After consideration of various plans, the specifications submitted by a local architect were approved by the building committee and contracts made with the several trades for the erection of a church building. The Christian Scientists were most fortunate in securing for their building a plot of land on one of the main thoroughfares, centrally located and possessing all of the natural advantages of an ideal church lot. The Christian Science church is distinctly Grecian in its architecture.

The auditorium at the present time has a maximum seating capacity of one hundred and sixty, but it is so arranged that the large folding doors at the rear which give access to the Reading Room and foyer can be thrown open, thus offering accommodations for two hundred or more persons.—*The Piscataquis Observer.*

LA PORTE, IND.

The members of First Church of Christ, Scientist, of this city will informally open their new church home at 1008 Michigan Ave. on Sunday, Nov. 1. A month ago First Church of Christ, Scientist, purchased of the First Unitarian Society the property until recently known as the Episcopal parish house, since which time the building has been restored and remodeled after the fashion of an English chapel, with a latticed entrance porch and corresponding lattices over the small-paned Gothic windows, the whole to be overgrown with vines and surrounded by shrubs as soon as careful planting and the season will permit. The interior contains an audience room with a seating capacity of one hundred and twenty-five. There is an attractive Reading Room in the rear.

The organization, since opening public services in 1900, has twice had to seek more commodious quarters. On moving into the Odd Fellows Building in 1904, an organized church was formed which received its charter from the State in April, 1905, and since that time the church has continued to prosper, through its earnest and persevering efforts, until the new church home became a necessity.

The La Porte Herald.

PASADENA, CAL.

Work on the massive new Christian Science church, which, as far as is known, will be the only purely classical structure in southern California, will begin early in November. The edifice, which is to be located on the east side of Oakland Avenue, will be one of the most unique in the country from many points of view, and will be a decided addition to Pasadena's architectural display. A purely Grecian Ionic style of architecture is used throughout.

Built entirely of reinforced concrete, it will be purely a monolithic structure; that is, it will be one solid piece when finished. To avoid putting on a veneer surface of stone or something else, it has been decided to use pure white La Farge French cement for the surfacing. This will be mixed with crushed granite in the right proportions to give a pure dull white finish. With this finish the building will be a landmark for the entire country, and it is expected that its great dome, sixty feet in diameter, can readily be seen from Redlands. As the building is a model of architectural beauty without, so it is a model of convenient arrangement within.—*The Pasadena News.*

[Written for the *Sentinel.*]

"ETERNITY."

BEN. HAWORTH-BOOTH.

THERE is one Life—eternal, all-inclusive,
Upholding all things: and this Life is thine.
There is no life beside, and void, elusive
The vaporous hours of men. This Life divine
Folds thee forever in the fair sunshine
Of Love's sweet presence: every beast and flower
Sustains He, and outpours the crystal wine
Of Life on His creation every hour,
That all may learn to love the Donor through His dower.

There is one holy selfhood—His ideal—
After the likeness seen upon the height,
Unknown to wrath, unknowing aught unreal,
Wearing a raiment ever glistening white—
As none can white them here. Thy wakeful sight
Long time for this, athwart the lowering sea,
Has looked and longed—the visions of the night
Provide no angel visitor for thee!
Thou art thyself His son—the Son hath set thee free!

Then we are sons indeed! our faith new-born
Is Paradise new-found, a cloudless clime
Above the weltering waste of creeds outworn.
Each word of Truth in sermon, song, or rhyme
Is ours forever, till the end of time.
What thou hast made thine own to love, to learn,
Is part of thee, and part of the sublime.
This is the gift of God—so we discern
Eternity contains no dust-fed funeral urn!

Then live forever in the Truth thou knowest:
It knows no death, for it is one with Life.
And thou art one with Love, if thou bestowest
On Him thine heart. Above the surging strife,
The tears and fears, the loves of maid or wife,
The torch of Truth is burning fair and far
And lights thy lamp: the times are ripe and rife!
Where raved the storm, celestial roses are.
In Love's white heaven, beneath the bright and morning star.

THE MONITOR IN NEW ENGLAND.

To ensure prompt receipt of *The Christian Science Monitor* by residents in Greater Boston and other cities and towns in the New England afternoon newspaper field, subscriptions already received by The Christian Science Publishing Society from these districts will be delivered by carrier, unless the Society is otherwise instructed. Prospective subscribers for carrier service in these districts may order the *Monitor* directly through their local newsdealer, at the usual rate of 12 cents a week, payable to the news-dealer, or if they prefer, they may send name and address without remittance to the Publishing Society in Boston.

TESTIMONIES OF HEALING.

My neighbors sometimes say, "Well, the reason you and your family are not so subject to sickness is that you are naturally healthy." I am constrained to reply that this is true now,—since Christian Science has taught us that it is perfectly natural for man to be healthy,—and that we used to be sick unnaturally. We have lived here almost four years, and it has not been the experience of a single neighbor to find us seriously ailing. (I will gladly furnish the addresses of neighbors who are not Christian Scientists, but who are willing to answer any who may wish to investigate.) We are a family of six, and have two children in school who have there been exposed to various contagions without any bad results.

More than ten years ago a *Christian Science Journal* came to my hand, the perusal of which so convinced me of the practical availability of this present-day healing, that for three months I longed for the text-book, Science and Health, which I finally obtained, against the judgment of my husband, as being a very expensive book considering our circumstances. During the first three months' reading of the book I was healed of a catarrhal condition of the head and throat, which had destroyed my voice so that I could not sing; a pleasure hard to part with. My baby, then fifteen months old, was healed of a rupture dating from birth. My little girl of four years was healed of an intestinal trouble. My baby and myself were healed of a dreaded fever. Had I paid too much for the book?

To say that we are grateful for Christian Science, and that we love and revere Mrs. Eddy, is to put it very mildly. Language does not afford a satisfactory means of expressing our gratitude, but we shall endeavor so to live that others may see our good works, and believe.

MRS. MAY H. BUSH, Greenfield, Ind.

As I had always enjoyed health, it required some time to convince me that Christian Science was a practical religion and that it would be of any benefit to me; but after prejudice had been overcome sufficiently, I secured a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and began reading. Almost immediately I experienced a change in thought and ambition, and after about two weeks of study I was surprised to learn that it had been a week or more since I had indulged in either smoking or drinking, habits to which I had been in bondage for a number of years. This was seven years ago, and I have never had the slightest desire for tobacco or liquor since.

Three years ago this winter I had an opportunity to experience physical healing from the effects of an accident. One morning, after a light snow had covered the icy walk, making it very slippery, I started for the office, but had gone only a short distance when I fell. With some difficulty I managed to get up, and found that my back was injured. After hesitating a moment I started for the train, and on arriving at the office I shut myself up and began to read Science and Health. The pain seemed almost unbearable, but after a couple of hours it had quieted down so that I took up my work; but while I continued to go to the office regularly every day, and was comparatively free from pain, it was very evident that the healing was not complete. In about six weeks a serious condition had developed; and remembering that my father had passed on under the same experience, excepting that his injury was caused in a different way, I went immediately to a Christian Science practitioner and had treatment occasionally for about two months. By that time I had realized sufficient improvement to continue the work myself, and in about one year from the time of the accident the discharge had ceased and the wound was perfectly healed, and I have never been conscious of it since. This may be considered a slow healing, but as I continued to work and study, this gave me a clearer idea of the practical application of Christian Science than I would have gained otherwise; and considering that I never lost a single day from business, I am perfectly satisfied.

E. D. YATES, Chicago, Ill.

[Translated from the German.]

In November, 1905, I was suddenly taken ill with a dreaded disease. About six months before this time I had been overcome with a similar attack. I was then under medical treatment for three weeks, and since then had lived in constant fear on account of the physician's opinion that such an attack is likely to repeat itself and in a more violent form. At the time of the second attack I spent one whole day in agony, before sending for a doctor, and when he finally came I was so exhausted that I could hardly speak. The physician at once administered a narcotic, which seemed to ease the pain temporarily. Thus three days passed; then the physician said that he must call in a specialist, who declared that an operation was necessary, though it must be postponed for a time on account of my weakened condition. For about five weeks I was in the care of both physicians; then all medicine was stopped and I was allowed a little food, as both physicians considered it absolutely necessary for me to have an operation as soon as I had gained the needed strength. My condition improved somewhat, and after about six weeks I was able to be out of bed for a little while at a time. The pain diminished but did not leave me.

Meanwhile my sister had informed a relative in Hannover of my illness and the impending operation. This relative had been completely healed of an ailment of many years' standing through Christian Science, and she thought the time had come in which to call my attention to its blessings. She urged me to come to Hannover and take treatment before consenting to an operation. This was toward the end of January, 1906. I rejoiced at the thought of being spared the dreaded ordeal, and I improved so rapidly that by the middle of March I could travel to Hannover. After the first explanation of Christian Science I felt myself awakening. The thought which had long been slumbering in me needed but a touch to arouse it. I grew in the understanding of Truth from day to day, and came to see the nothingness of the disease. I began to place my confidence in God, good, in whom "we live, and move, and have our being." The firm faith in the Almighty, who creates good only and is our only help, has kept me well.

Since my return to Berlin, in April, 1906, I have constantly improved. No operation was necessary. I am stronger than ever, and feel happy and contented. I thank God every day that He led me to Christian Science; and my happiest hours are those when I am engaged in the study of that truth through which I have found God, health, and peace.—FRAU MARIE RUEFFER, Berlin, Germany.

"What shall I render unto the Lord for all his benefits toward me?" Mrs. Eddy tells us in Science and Health, p. 372, that "a just acknowledgment of Truth and of what it has done for us is an effectual help." Christian Science has done and is doing everything for me. Thirteen years ago I was suffering untold mental agony, brought on by a severe attack of nervous illness with all its attendant miseries. There seemed nothing before me but death or insanity. In my extremity I prayed as I had never prayed before, for divine help. I had been blessed with a devout

Digitized by Google

Christian mother, and many a time, when a child, she would tell me of her faith in prayer, a faith so pure and simple that oftentimes there would come marvelous answers. Remembering how often this dear mother had been helped in time of trouble, I turned with all my heart and soul to that "unknown God," whom I was blindly trying to petition for aid. During the whole of one long night I poured out my soul in prayer, and towards dawn there came to my yearning consciousness these words, "Try Christian Science." It was as though an audible voice had spoken the words, and immediately there fell upon my storm-tossed sense a sweet calm, as though an angel had touched me. Summoning my husband and nurse to the bedside, I told them I must have help from Christian Science, that I felt there was nothing else that could save me. They listened in smiling incredulity, but I persisted in my request to have a practitioner called in as soon as possible. Yielding to my entreaties, although against his inclination, my husband sent for a Christian Scientist.

Towards evening the practitioner came, and I waited with expectant longing for what would follow, for I felt intuitively that this was to be the answer to my prayer. One verse of Scripture was given me to meditate upon while the treatment took place: "In him [God] we live, and move, and have our being." Then the sweet hush that had come to me in the early morning again stole over my consciousness, and with it a beautiful sense of rest and peace unutterable. My weary eyes, which had not been closed in natural sleep for many a long day and night, became so heavy I could not keep them open, and when the half hour's treatment was over I sank into a profound sleep which lasted until nine o'clock the following day. During this sleep I dreamed that I was standing upon a very narrow plank of wood which bridged a muddy river torrent. On one side of me was a light so intensely brilliant that I could not look at it; on the other side was inky darkness, peopled with innumerable demons which were struggling to get at me. If I turned to the light, it seemed as though I would be blinded; but the darkness appalled me with its hideousness. Surely this was a foretaste of the mental conflict between the human sense of truth and error, of light and darkness. When I awakened I found myself a well woman, able to get up and have breakfast at the table, much to every one's amazement. My own joy and gratitude were unbounded. I must know this great truth for myself, and a copy of "Science and Health with Key to the Scriptures" was purchased and eagerly devoured.

As I look back over those thirteen years since my healing, it seems as though my progress has been very slow. Mountains of selfishness have obstructed my pathway, and valleys of suffering had to be crossed, and I have surely learned that "it is easier to desire Truth than to rid one's self of error" (Science and Health, p. 322). Mrs. Eddy's grand example of steadfast courage and unwavering obedience to divine Principle is as a beacon-light in this steep ascent upwards. My one prayer is that I may be found worthy the name of Christian Scientist.

MRS. A. M. JONES, Denver, Col.

I wish to express my gratitude for the teachings of Christian Science and the many helps and blessings received therefrom. My first experience was the healing of a severe attack of rheumatic trouble, from which I was suffering when Christian Science was presented to me. A lady told me of the Science, and offered to help me if I was willing to have treatments. I gladly accepted, for at that time I was unable to straighten my hands or fingers; also my limbs were badly swollen and very painful. I had tried every remedy that I heard of, and three doctors of St. Joseph, Mo., put forth their best efforts to help me out of my suffering; but to no avail.

Two weeks' treatment in Christian Science healed me completely. This was about fifteen years ago, and I have never had a return of the disease since. I have also had since that time many proofs of God's love and care. I am deeply grateful to God for my healing, and for the better understanding I have gained of God and His relation to man. I truly thank and love our dear Leader for making it possible for us to have Science and Health and her other writings. I am also grateful to the Publishing Society for our *Sentinel* and *Journal*, and to all those who contribute thereto, as these periodicals are such a help to me and to all who read them.—MRS. ROSE SMITH, Beloit, Kan.

When I first had help from Christian Science I was almost a wreck, physically and mentally. For seventeen years I had been an invalid, having almost all the ills that flesh is heir to. I tried any number of doctors and all kinds of medicines I could find, but received no help. For a long time the doctors said that nothing but a surgical operation would help me, and they were not sure that would do me any good. As neither my husband nor I was willing to have the operation performed, I dragged on. A few months before I came to Christian Science my spine began to cause me great suffering. The doctor we called said I would have to be put into a plaster cast, and then wear all sorts of accessory appliances in the way of braces, etc.; but having been through all this once before, I declined to do so again.

In the house where we were boarding at the time was a Christian Scientist. My husband had been a great sufferer from stomach trouble for a number of years, and one night at the table he said that he was discouraged, that he had tried everything he knew and that nothing seemed to relieve him. Our little girl, then about ten years old, said, "Papa, why do you not try Christian Science? I have been watching the people who come to see Mrs. —— [the Christian Scientist practitioner in the house where we boarded],—people who are sick, and blind, and lame when they first come, and they go away well." That night he took his first Christian Science treatment, and continued it for two weeks, when he was healed. Then he wanted me to try Christian Science; which I did, and in two weeks was so much improved that I quit taking treatment and went to studying for myself. After about nine months we went into the work ourselves. I have seen a great many wonders wrought by the truth,—the healing of both sickness and sin,—and am learning more and more that Truth is all-powerful if we only hold fast to God and let nothing else into our consciousness. I am truly thankful to God, for all His goodness to us; and to our dear Leader for Christian Science, which helped us out of our trouble.

MRS. ELIZABETH BLACKLER, Pasadena, Cal.

Christian Science has done so much for me physically that, for the sake of those who are searching for relief from bondage to material beliefs, I feel it a privilege as well as a duty to testify to the all-power and presence of God, as revealed in Christian Science. This truth has brought me out of a well-developed case of a dreaded fever. All the phases attendant on that disease were manifested to an alarming degree, but these manifestations and our fears were met with the assurance that "God fills all space," which if rightly demonstrated is all sufficient. Truly, "man's extremity is God's opportunity," for in my seeming extremity a sense of spiritual reality, which I had never before gained, was revealed, and this resulted in my uniting with our church here, thereby helping to destroy another and long-cherished error, that of believing it necessary to wait until all material beliefs were overcome

Digitized by Google

before taking the responsibilities of a member. I am very grateful to God, and also to Mrs. Eddy for my healing.

GEORGIE E. WILSON, Chanute, Kan.

The numberless blessings which have come to me through Christian Science make me wish to share my joy with others, and to express my gratitude for this truth, the light of which has banished the gloom of ignorance, doubt, and fear. It is truly the "peace of God, which passeth all understanding," that comes to us when we learn to trust God to supply our every need; when we come to know that He is "not a God afar off," but is ever present and available at any time and under every circumstance. Through the healing power of Christian Science I have been relieved of a number of physical troubles,—colds, frequent attacks of throat trouble, etc.,—which, though they were not considered serious, caused me much discomfort and many interruptions in my work. I have also been enabled to leave off my glasses, which I had worn for ten years. No particular thought was given to discarding them; I simply felt that I no longer needed them, just as one would drop a heavy burden when it was no longer necessary to carry it.

The one thing for which I am most thankful to Christian Science is that I am learning to love my neighbor, to love him because I know that man is God's perfect child; and in proportion as I strive to see this truth I gain a clearer realization that God is Love, and that "Love is reflected in love" (Science and Health, p. 17).

MISS LILLIAN B. YOUNG, Glen Ellyn, Ill.

I have long felt a desire to express my gratitude for and my appreciation of Christian Science. Two years ago I suffered most terribly with blood-poisoning. Physicians attended me without any benefit, the last one saying there was no hope at all for me, that neither he nor any other doctor could help me. My hand had been terribly injured, and the physician said I must have it amputated in order to save my life, but I would not let this be done. I then turned to Christian Science for help, knowing it was all there was left that might cure me. At the first treatment all pain left me. I had only four treatments and was healed. I had been wearing a rubber supporter on my knee for two years, but I removed it as soon as I began to have treatment for my hand. I am now in the best of health, and have the full use of my hand.

I can never be thankful enough to God for what Christian Science has done for me. It has made me a better woman, physically, morally, and spiritually.

MRS. ANNIE HOLDEN, Abilene, Kan.

After suffering over thirty years with stomach and bowel trouble, besides various other ills, and taking all kinds of material remedies, which gave me no relief, I decided to try Christian Science, a decision for which I feel more than thankful. Christian Science has been such a wonderful help to me, not only physically, but mentally and spiritually, and since reading "Science and Health with Key to the Scriptures" I can read the Bible with a better understanding. I feel very grateful to our dear Leader for this wonderful truth. She has not only helped me but the whole world by her writings. I am a member of First Church of Christ, Scientist, and every day it is my earnest desire that I may learn more and more of divine Truth and Love.

MRS. ANNIE E. PATTERSON, Ashland, Ore.

I wish to express my gratitude for all that Christian Science has done for me. For seven years I suffered from a complication of diseases supposed to have been caused by a fall in the spring of 1889. I was under medical treatment all of the time, had several doctors, but none of them gave me permanent relief. The last year I grew gradually worse, until I lost all hope of ever being any better. I was unable to do even the lightest kind of work and could sit up only a very little of the time.

When all other hope had fled, I heard of Christian Science and at once called on a practitioner to learn what it was, as I had never heard of it before. I shall never forget that first day, and the beautiful things he told me about God. As I listened the clouds lifted, and the mental suffering which had at times seemed unendurable vanished, and has never returned. The physical healing was slow, but I knew I had found the way to health and holiness, and that some time I would come into the realization of perfect health. I took eleven treatments, studied Science and Health faithfully, and was completely healed. During a period of over eleven years Christian Science has been my only remedy for all ills.

While I am truly thankful to God for the physical healing, I am most grateful for the joy and peace that have come into my life through the better understanding of Him taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy, to whom also I am very grateful, for I know that only through her teachings am I here to-day to give this testimony. My prayer is that I may grow in grace and in the knowledge of God.—LIZZIE M. LIBBY, Bangor, Me.

It is now about a year since I first went to a Christian Science practitioner. Mrs. Eddy has said that "Mind measures time according to the good that is unfolded" (Science and Health, p. 584), and from that standpoint this year has been a taste of eternity. I had read Science and Health the year before, in connection with some reading on psychical phenomena, but I had been strangely repelled by it. A good many months passed before I thought of Christian Science again, when a friend, whose truth and sincerity I entirely trusted, told me of a remarkable cure, through Christian Science, in her own family. I was wretchedly ill myself at the time, rather more so than usual. My physical troubles were many and varied. I had a structural difficulty of the eyes, a throat trouble which two specialists had failed to relieve, and a serious organic disorder which had caused me to undergo two operations and many different forms of treatment. Occasionally I was helped for a time, but always the painful conditions returned, and with them endless suffering. My last doctor told me he feared I could never be really well, and he advised still another operation. I had decided definitely, after my last hospital experience, never to take ether again; it had twice revealed to me depths of horror and fear which no merely physical pain could equal. It was useless for me to go to doctors, since I did not intend to follow the only advice they thought it right to give, yet I needed help badly, and if there was any way out of the circle of pain, in which it seemed my very life was being absorbed, I wanted to find it.

I went to a Christian Science practitioner because I longed to be freed from the bondage of suffering, the sense of physical burden and misery, but I promised myself I would not yield to any influence which interfered with that search for the truth to which I hoped to keep steadfast. I shall never forget the exquisite courtesy and tact with which the practitioner received me. Later I realized the great privilege of that close contact with a character rich in purity and truth. I went every day for treatment during the following week, and it was not long before I received definite proof of the ability of Christian Science to overcome pain, and almost at once I was filled with a vital sense of life and power. First one form of trouble, then another, was met and destroyed during the week that

Digitized by Google

followed. Now I am conscious of that scientific "sense of health" (Science and Health, p. 69) which Mrs. Eddy promises to those who earnestly seek the truth.

All life, I think, consciously or unconsciously is a quest for the truth. I used to believe that if I kept my desire for it pure and strong, somewhere I should find the answer. I have found it in Christian Science, and with it has come an absolute freedom and an expansion of thought undreamed of on that other plane. Mrs. Eddy has brought her vision down, has expressed the living truth so that any quickened spiritual sense can perceive it. It was a task so great that we tremble to think of it, a victory so entire that her followers are filled with ever-deepening gratitude and love. I have found Christian Science a religion at once practical and ideal, and for the health and happiness and peace it has brought into my life, I give my testimony with all my heart.

PERLEY BRYANT DAVIS, New York, N. Y.

In the more than two years that I have been reading the *Sentinel* and *Journal* I have received very great spiritual help from them, and I hope my testimony may be a help to some one. At the time I became interested in Christian Science I had been a church-member over thirty years, and had tried to live consistently with its teachings, being all that time actively engaged in church work. I always felt, however, that there were deeper truths, and that the healing power which the disciples had should be ours. I had talked with ministers and other Christians about my spiritual unrest, but no one could help me.

My husband and mother having received help in Christian Science from physical conditions which medicine had failed to reach, I was led to investigate the subject for myself, not for physical relief but for spiritual understanding. I became a subscriber to the *Sentinel* and *Journal*, and purchased a copy of Science and Health. I began to read the text-book, having asked God's help to be able to know if it was the truth. My first demonstration was after reading a short article in the *Sentinel*, "Instant in Prayer." I had burned my hand severely, and the pain seemed intense, but almost instantly, remembering the above article, also Mrs. Eddy's advice to prove the truth by putting into use what we could understand, I commenced to declare God's allness and unchangeableness, and man's relation as His child. The Bible narrative of the man with the withered hand also came to my thought and strengthened my faith, and even while I was looking at it my hand was restored from a seared condition to a natural one. This was absolute proof to me of the truth of Christian Science.

Some weeks later, my horse ran away and I received what seemed to be severe injuries, but I desired no other treatment than Christian Science. This was my test, and I rejoiced that I was able to rely on God for healing; nor was I disappointed. The accident occurred near the home of one whose understanding of Truth is beautiful, and with the charity of the good Samaritan she had me taken into her house, my wounds were washed and dressed, and I was put to bed comfortable. This was Thursday noon, and by Friday evening I was able to be dressed and taken home. Saturday I could move around the house; on Sunday I walked to a Christian Science service, and on Monday resumed my teaching of music, climbing a steep hill to do so. In exactly two weeks every trace of the injury was gone, although I am fully satisfied that to mortal sense the injury to the spine was of a serious nature.

I united with the Christian Science society here at its organization two years ago, and have been studying and working to become worthy of the sacred trust I feel it to be in being called a Christian Scientist. I have had many other demonstrations of the truth, and spiritual upliftings, and for all of these I am truly thankful to God, and also to Mrs. Eddy.—CARRIE L. SCOFIELD, Du Bois, Pa.

I wish to express my gratitude for what Christian Science has done for me. A little over a year ago I was in a hospital, where I underwent two operations for abdominal trouble. I did not fully recover, and the latter part of the year found me in a very miserable condition. About the first of this year, a lady who had heard that they were talking of taking me to the hospital again, called to see me and asked me why I did not try Christian Science. On explaining that I knew nothing about it, she stayed and talked with me and left me some literature to read. I secured a copy of "Science and Health with Key to the Scriptures," and with the help of a practitioner in a month I was entirely healed of three different diseases, also of a rupture, which was healed in the remarkably short time of three days.

Since that time, a woman who works for me fell on the ice, injuring herself severely. For four days she suffered intense pain and could not sleep. I spoke to her about Christian Science, and she had the same practitioner to help her that I did. She received immediate relief, so that she did not miss another day from her work, and slept like a baby at night. She has also been helped of rheumatic trouble, from which she had suffered for years. I am very grateful for these demonstrations of the power of divine Love, and thankful to Mrs. Eddy, who has shown us the way.—MRS. FLORENCE YOUNG, Toledo, O.

I feel it my duty to tell others what Christian Science has done for me. Nearly four years ago I left my home in Atchison, Kan., to go to New Mexico, hoping to regain my health. From there I went to Colorado, and thence to California. I had a cough for nearly ten years; the doctors said I was on the verge of a dreaded disease, and could not live in the East another winter. One day I was taken with an acute pain in my lung, and I was advised by a kind friend to try Christian Science. I at once went to a practitioner, and was healed in a few treatments. Severe headaches, to which I was subject about every two weeks, have disappeared. I was also helped in my business, and have proved that God is the source of supply. For all of these, and many other blessings, I am very grateful to God, and to our Leader, Mrs. Eddy.

MISS S. J. MC QUEEN, Los Angeles, Cal.

I have too long neglected to express my gratitude for what Christian Science has done for me. When first this truth was brought to my attention, by a friend whose life I always deemed beautiful, I was a physical as well as a mental wreck. Shortly after reading "Science and Health with Key to the Scriptures" by Mrs. Eddy, and applying the truth therein stated, I was rescued from the sorrowing, worrying, and grieving condition, and placed in a calm mental attitude wherein I soon realized that my body was responding to the action of the truth, and health was won. Since then I have devoted my time to the healing work of Christian Science. Numerous and various were the diseases that came under my observation, and all yielded where the effectual touch of the gospel of Truth was applied.

I am deeply grateful to God, and to Mrs. Eddy for the manifold blessings I have received through Christian Science. My earnest desire is to be steadfast, and worthy to be called a follower of that great Cause, Christian Science.—MRS. MINNIE BLEVINS, Seguin, Tex.

FROM OUR EXCHANGES.

[*The Congregationalist and Christian World.*]

Instruction in the principles, history, and usage of any particular denomination is only a small part of the training which fits a man to preach the gospel of Christ and lead men into the kingdom of God. Why then is it necessary for each denomination to continue to maintain several small isolated schools of the prophets? Are not much greater advantages assured by bringing them together, at least so that they can share in the best things which each has to offer? Is it not likely that, as one and another of these institutions come from their exclusion and affiliate themselves with some university, a reorganization of theological training will do away with the denominational theological school and bring forth preachers better fitted to deal with people interested in matters of religion which are common to all the Christian world?

[*The Outlook.*]

The trouble with those who advocate this holding-off process for young minds is that, whether they call themselves Christians or not, religion to them is a hypothesis, and not a daily, vital fact. No one with a deep personal love for Christ ever yet hesitated a moment to teach his infant children to love the Saviour of the world. No parent whose daily prayer is actual communion with God ever failed to teach prayer to the youngest of baby lips. If religion is life, it belongs to the children. If it is only theory, it is of little use to teach it to them, whether in their teens or in their twenties. "The life of God in the soul of man" is the most fundamental heritage of the race, and it was the great teacher of the wisest who said, "Suffer little children to come unto me."

[*The Christian Register.*]

So far as we know the opinions of Jesus at all, he taught conformity to established custom and law. But we know very little of his social views, except what may be found in or drawn from the Golden Rule. His principal thought was individual unselfishness, leading to social unselfishness. But his peculiar power did not lie in his aggressive formulations. He taught very little theology and was disinclined to use the customary forms of worship. The burden of his teachings was truth, purity, and love. To his own age he was a deliverer, but not from Roman rule so much as from the rule of false principles and selfish creeds.

[*Pacific Christian Advocate.*]

One of the things which greatly hinders the servants of Jesus Christ, and which finds wide manifestation, is the conceit that mental preparation or intellectual attainment can be substituted for love, genuine, unpretentious, transparent love—love for God and love for man. Nothing can ever be substituted for this. Men may perform their tasks with all of the precision and skill of a machine, but it will still be mechanical, cold, and undesirable except we have love.

[*The Universalist Leader.*]

The spirit of sectarianism is dying out, and there is no more hopeful sign of the religious times. When we shall see all the Christian forces working together instead of against each other; when the only competition is that of service, which one is really doing the most good, we can feel that the kingdom of heaven is well on its way to a welcoming world.

[*The Examiner.*]

Prayer has not lost its power. It is we who have lost the power of prayer.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—The Mother Church,—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All correspondence and orders relative to membership and church tenets should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PUBLISHING HOUSE BUILDING FUND.—Contributions to the Publishing House Building Fund should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

Quarterly covers in black seal leather for sale at the following prices:—

Regular size, 5¼ x 7¾, $1.25 each or $12.50 per dozen.
Pocket size, 4½ x 6½, $1.15 each or $11.00 per dozen.

Leather cases for the pocket editions of the Bible and Science and Health are now made slightly wider in order to provide space also for the trimmed *Quarterly* with or without cover. Price, $1.25 each.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

Terms of Sale, Postpaid to any Address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, Mexico, and Cuba, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE. June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

The Seneca, specially built and equipped for its service, has just been commissioned as a destroyer of derelict vessels which lie in or near lanes of ocean travel. In previous years the Vesuvius and the Mohawk have been used for such work. So successful has been the important work done by these vessels that the November hydrographic chart shows no derelict reported more than once, or earlier than Sept. 30. On the old charts it was not unusual to find several reports of the same derelict ranging over a period sometimes of more than a year. Wireless telegraphy is also being utilized in informing vessels, properly equipped to receive such messages, of the presence of derelicts. Three times a day at eight-hour intervals, beginning at 6 A.M., wireless messages regarding obstructions to navigation are sent broadcast from the Government wireless stations along the coasts. A vessel at other times may call up these stations and obtain information.

Of the $24,400,000 which was awarded the United States to satisfy the claims of American citizens for damages incurred at the time of the Boxer rebellion in China, Congress has voted to remit $11,000,000. In view of this returned indemnity, China will send to the United States Chinese students, one hundred each year for the first four years, and thereafter a minimum of fifty. A deputation of Chinese officials is already on its way to Washington to thank personally the Government for its generosity.

A regulation became effective Nov. 15 that no parcel the value of which exceeds fifty dollars shall be admitted to the parcel-post mails exchanged between the United States and France, Italy, and Germany. This limitation also applies to parcels from the United Kingdom of Great Britain and Ireland for the United States, but does not, however, apply to parcels from the United States for Great Britain and Ireland, which will be accepted without regard to the value thereof.

Count Johann Heinrich von Bernstorff, who has recently represented the German government in Egypt, has been selected by Emperor William to succeed the late Baron Speck von Sternburg as ambassador to the United States. He has served in official capacities at Constantinople, Berlin, Belgrade, Dresden, St. Petersburg, Munich, and London.

One hundred and fifty chemists and food experts, representing every State, were in attendance last week in Washington at the annual convention of the Association of Official Agricultural Chemists. The session was occupied with a discussion of reports dealing with the adulteration of food products.

Secretary of the Navy Victor H. Metcalf has tendered his resignation to the President, to take effect Dec. 1. Assistant Secretary of the Navy Truman H. Newberry will be named as his successor.

International.

To put an end to the injustice that has for centuries characterized the civil courts of Korea, Japan has inaugurated a modern system of law courts for that country, based upon the practice obtaining in Japan, itself based practically upon that prevailing in the chief countries of Europe. The officials are of a high character and invested with ample authority, and highest expectations are entertained for a sweeping reform in judicial procedure.

John Henniker Heaton, the father of the imperial penny postage idea, advocates the transmission of cablegrams at one penny a word. He declares that an immediate end ought to be put to the present cable monopoly at any cost, and that the cable companies should be bought out at the market price by the civilized governments of the world.

The National Lines system of Mexico, commonly known as the Government Railroad Merger, has given an order for seventy-five thousand tons of eighty-five pound steel rails to the Monterey Iron and Steel Company. In obtaining this order, the Monterey concern is said to have outbid all foreign competitors.

A conference has taken place between the German chancellor of state and the Kaiser, with the result that the latter agrees, and allows the statement to be published, that in the future he will deal with state affairs only through existing constitutional channels; that is, through the chancellor.

As a result of recent disclosures made before Judge Cassels at Quebec, in his investigation of alleged graft in Canada's marine department, twenty-eight minor officials and employes have been suspended.

Industrial and Commercial.

The great oil and salt water geyser, situated near the San Geronimo River, seventy-five miles southwest of Tampico, Mexico, has passed entirely beyond control, and all efforts to store or care for the oil that is flowing from the well with the water have been abandoned. It is estimated that the flow now amounts to about twenty million gallons daily. The hole is too big to be called a well. More than five acres of ground have already been swallowed up in the depths of the seething caldron. The oil and water are flowing off in a big stream into San Geronimo River, and thence into Lake Tamiahua, a body of water seventy-five miles long and about twelve miles wide. This geyser is a puzzle to scientists, and it is a mystery where the tremendous pressure comes from. A peculiar feature is that the liquid is boiling hot when first thrown out.

With the shipment by an American concern of a complete new switchboard for the Central Paris Telephone Exchange on the steamship La Provence, Oct. 29, there was completed what is said to be the largest and speediest order ever handled by a manufacturing company. On the morning of Sept. 21 the great Central Telephone Exchange of Paris was burned out, leaving the city as regards telephone service quite helpless. The switchboard is one hundred and eighty feet long, requires ninety operators, and will accommodate more than ten thousand subscribers. This switchboard contains about one million solder connections and three thousand miles of wire.

The inter-lake commerce through the St. Mary's ship-canals shows a heavy falling off from last season. The movement for the season will approximate only 42,000,000 tons, against 51,751,080 tons in 1906 and 58,217,214 tons last year.

The total number of persons employed at mines and at the quarries of the United Kingdom during 1907 was 1,000,034. Of the 972,220 persons employed at mines, 770,456 worked underground and 195,764 above ground.

On a stretch of one hundred and fifteen miles of new railroad built by the Chicago, Milwaukee and St. Paul along the course of the Musselshell river in Montana there are one hundred and seventeen bridges.

A company for the manufacture of celluloid, with a capital of $500,000, will erect a factory upon the banks of the Yamato River, near Sakai. It will be the largest concern of the kind in Japan.

Orville B. Wright, the aviator, will construct an aeroplane factory in Detroit. The first order to be executed will be the aeroplanes ordered by the United States Government.

General.

The biggest farm in the world is said to be that owned by Don Luis Terrazas, in the State of Chihuahua, Mexico, which measures from north to south one hundred and fifty miles and from east to west two hundred miles. On the great prairies and mountains of this Mexican farm are one million head of cattle, seven hundred thousand sheep, and one hundred thousand horses. The "farm-house" is said to have cost over $1,500,000 to build, and is more richly furnished than many a royal palace.

The noted collection of butterflies and moths, comprising between seventy-five and one hundred thousand specimens, of the late Dr. Herman Strecker, the lepidopterist of Reading, Pa., has been sold to the Field Museum of Natural History, of Chicago, for $20,000. It is said to be the greatest collection in the world.

As a means for abating the tramp nuisance the suggestion has been made to establish near every large city a compulsory farm colony where the tramp could be fed, housed, and made to work, and later, if he reforms, graduated to voluntary colonies, where he could become self-supporting.

Changes in land levels are in progress in the basin of the Mediterranean. The level of the Mediterranean is said to have been nearly twelve feet lower in the eighth century B.C., than it is now. Since that epoch the level has been continually rising.

There is a lighthouse to every fourteen miles of coast in England, to every thirty-four miles in Ireland, and to every thirty-nine miles in Scotland.

The new Washington Street tunnel of Boston is expected to be opened to the public Thanksgiving day. From portal to portal the tunnel is 5,676 feet long.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

WORDS UNFITLY SPOKEN.

SAMUEL GREENWOOD.

HE is wise indeed who knows not only what to say, but when to speak, and when to keep silent though opportunity would seem to call for speech. This is especially true of Christian Scientists, hence they need this discerning wisdom, lest the unguarded tongue betray the kindlier purpose of the heart. One may be able to talk fluently and even brilliantly of the teaching of Christian Science, and be strictly correct in the letter, yet be far afield as to its proper and timely presentation. It is not what we say nor what we believe, but what we do, that determines how much we know of Christian Science; therefore to keep more in mind the measure of our own attainment in the line of its demonstration, would largely lessen the danger of saying the wrong thing, or of saying the right thing at the wrong time. One's speech is more apt to be impressive for its quietness and modesty than for its profusion of fervid words and unproved statements. Effusiveness is not always earnestness, nor does knowledge always go hand in hand with zeal; indeed, the deeper one goes into the practical study of Christian Science the less prone he is to voice indiscriminately his impressions or to intrude his beliefs upon others.

A noted evangelist, who has frequently spoken against Christian Science in his services, recently confessed to the writer that his prejudice was largely due to the extravagant statements he had heard from Christian Scientists themselves. These Scientists were doubtless influenced by the best intentions, and were honestly desirous of presenting their views in the best possible light, but by overimpulsive tactics and an injudicious choice of words they had produced an antagonistic impression that has taken years to modify. We should know that we cannot bring in the kingdom of heaven "by violence," neither can we storm the citadel of another's belief through the ardor of our own contrary convictions. Efforts which are prompted by intemperate zeal, and which lack consideration for our hearer's standpoint, are more apt to repel than to attract those whom we wish to interest.

In discussing Christian Science with an inquirer, or in introducing the subject to a friend, we should bear in mind that this teaching differs radically from popular belief, with respect to both theology and therapeutics, and while it appears simple and convincing to us, it may not appear so to them. It often requires a personal experience of healing to awaken one's interest in the teaching itself, and it is never wise to attempt to force this interest even in our nearest friends. Our mode of expression in speaking of Christian Science, or in relating personal experiences, often influences and even decides the effect produced; hence we cannot be too careful that our language is adapted to the understanding of our hearers. There is no occasion to use a technical terminology when other words are available that would make the subject more intelligible to one unacquainted with Christian Science. The writer recalls his own mystification over the use, by the Scientists with whom he conversed, of such words as "claim," "error," "belief," as synonyms of disease, and of "demonstration" as a synonym of healing.

Our past experience should be sufficient to teach us that much of the phraseology of Christian Science is a "new tongue" in many ears, because the spiritual truths therein defined are new and strange to the general thought. Christian Scientists have become accustomed to their use, but they can hardly expect others to attach at once to these phrases the same significance that they do. For instance, what conception of Christian Science would a stranger get from such expressions as: "demonstrating over a belief," "I denied the claim and declared the truth," "I treated the error," etc.? To the average person such phrases are often as mere jargon, and under ordinary circumstances would be more apt to furnish occasion for ridicule than food for reflection. To describe our experience in such terms tends to rob Christian Science of that inherent dignity which it should be our care to preserve in conversation and testimony.

Science and Health is a scientific text-book, and many of its expressions are used in a more or less technical sense, which, while in place in a class-room, are not always appropriate for general speech. In reading a book one has the advantage of the context and corresponding passages to elucidate its statements, but in conversation and testimony there are only the speaker's words, and unless these are carefully chosen a misconception of the subject is liable to follow. In talking to others we should so appreciate their position as gently to lead their thought to a higher plane, instead of confusing it with unusual phrases or abstruse abstractions.

Christian Scientists sometimes seem to have the mistaken notion that they must narrate some marvelous experience in the most emphatic way in order to impress favorably an inquirer, yet this straining to bring out the most wonderful phases of what Christian Science has accomplished, often has the opposite effect to that anticipated; whereas a more modest recital, without the obvious attempt to exploit the marvelous, will generally produce a better impression and one more likely to result in personal investigation. We may well take example from the Gospel narratives, wherein the most marvelous healing on record is related with the utmost simplicity, with no effort at embellishment and almost devoid of detail. A recital of this nature, given with an air of quiet assurance, is the most effective that can be used in support of Christian Science.

Another unwise habit in which some unfortunately indulge is audible denial before those who are not of the Christian Science faith; as, for instance, when a friend or member of the family complains of suffering, to say, "That is a lie," or "That is only a belief; you haven't really got it," etc. Under such circumstances, more

unfit words could scarcely be spoken. Just what is expected to be gained thereby is not evident, but such a practice is not likely to inspire respect for one's position. The understanding of the allness of God, and the unreality of all unlike Him, is the priceless pearl for which all need to strive, and there is no other basis upon which mortals can work out their salvation; but to deny inconsiderately before others the conditions which they may conscientiously hold to be true and real, promotes neither one's own welfare nor the progress of the Cause.

Jesus' warning to his disciples not to cast their pearls before swine is particularly applicable to Christian Scientists. There is nothing in pearls which appeals to swine; they do not appreciate their beauty or worth or rarity, and naturally enough trample them in the mire. In like manner the truths that appear priceless to our awakening thought may present no attractiveness to those we desire to help, and to force them upon their attention may only serve to arouse antagonism. Spiritual truths do not attract the sensuous mind, or that state of thought which is satisfied with material sense; and wisdom would counsel us not to offer them where they are not welcome, but rather to minister to those "unprejudiced minds—simple seekers for Truth, weary wanderers, athirst in the desert" (Science and Health, p. 570)—who are waiting and longing for spiritual refreshment.

There are some experiences in the lives of most Christian Scientists which, as a rule, should be sacredly preserved in their own consciousness. The public are not prepared for their recital, and to tell them to unappreciative ears may only expose us to rebuff and disappointment. We cannot be too grateful for what we have been enabled to prove of the Science of being, and for what Christian Science has unfolded to us of God's infinite goodness, but all occasions are not fitted for the presentation of our views or the narration of our experience. There is nothing to be gained through needless encounter with unfriendly thoughts, and we should beware of placing our pearls of thought and experience at their mercy. The "carnal mind" is always "enmity against God," is always at war with spirituality, and there can be no affinity or friendliness between them. Our only safe course is to abide by our Leader's counsel in Science and Health (p. 238): "It is well to wait till those whom you would benefit are ready for the blessing."

THE DIVINE IDEA AND THE SABBATH.

REV. CHARLES D. REYNOLDS.

JESUS' saying recorded in Mark, that the Sabbath was made for man, not man for the Sabbath, suggests the divine purpose infolded in the command to keep holy one day out of every seven. The influence for the ongoing and upgoing of mankind due to this one command alone is incalculable. It is a serious question what would have become of the spiritual idea in human history, as presented in the Scriptures and illustrated by Christ Jesus, —what would have become of the unseen verities declared by the prophets and reaffirmed in Christianity,—without the institution of the Sabbath day.

Jesus' saying indicates that it is not the day itself, but the purpose for which it was set apart and the use which is to be made of it that is of essential value. The Sabbath stands for spirituality as opposed to materiality. The declaration reads thus, "The seventh day is the sabbath of the Lord thy God." The concept that God labored six days materially and then needed one day—the seventh—in which to rest from His labors, and therefore commanded the man whom He had made also to observe that day as a rest-day, is an anthropomorphic picture in which the writer draws an otherwise deeply spiritual lesson. God is Spirit, and the Sabbath pertains to the things of the Spirit,—the things which must be spiritually discerned.

It is a question if the darkened material senses would not have lost all consciousness of the divine idea, or spiritual facts of creation, and man in God's image and likeness, but for the observance of every seventh day, devoted to the perpetuation and clarifying of the truth respecting the true origin and nature of all things, man included. The command is that this day should be kept holy, devoted solely to spiritual ends, for "in it thou shalt not do any [material] work." That which is substantial, eternal, and real, alone should receive consideration on that day, that the thought of these things may be more effectually carried into all the days.

Christian Scientists should be models in the right use of the Sabbath day, for who more than they have enlisted in the service of things spiritual? They are constantly striving to bring out greater spirituality in their own lives and in the lives of others, and by so doing lay off the grosser fleshly traits or carnal mind,—selfishness, worldly ambition, and worldly pleasures. A Scientist is glad for a day set apart in which to hasten the coming of the kingdom of heaven on earth; a day especially devoted to the service of God, and made doubly significant by the fact that material labor is to be provided for against this day and set aside; a day of communion with the source of man's true being, and for the enjoyment of and better acquaintance with our spiritual birthright; that spiritual unity with the Father which in our highest moments of aspiration and exaltation appeals to us as the only worthy aim and goal in life.

Because the Sabbath day has not always been kept with proper motive, its observance being often entirely formal and mechanical, is no argument in favor of abolishing it; rather should it be a call to every sincere student of spiritual things for its restoration and proper observance. Instead of lightly regarding the day and holding that in Science every day is to be kept holy, a Sabbath day, would it not be wiser to use this one day to hasten the oncoming of that unending and true Sabbath which clearly is a state of mind or spiritual consciousness, the enjoyment of our inheritance from God, in God, and through God, wholly apart from matter and mortality? Does it not seem clear that the Sabbath day, as a day extending through twenty-four hours, in which it is commanded, "Thou shalt not do any work," but typifies, and is intended to hasten, the coming of that eternal Sabbath in which there is no material work to do, for materiality will have been done away with; that Sabbath of which it is written, "There shall be no night there." "And there shall in no wise enter into it any thing that defileth, neither whatsoever worketh abomination, or maketh a lie."

DIVINE PROTECTION.

WILLIAM CAPELL.

THE Bible contains numerous accounts which furnish proof of the availability of God's protecting power. One familiar with the Scriptures need only recall the names of the truly great Biblical characters, and he will find that he has associated with many of them wonderful deliverances from seemingly unescapable dangers. The following will serve to illustrate this statement: Moses at the Red Sea; Elisha at Dothan, surrounded by the Syrians; Daniel, safe in the lions' den; Shadrach, Meshach, and Abednego, unharmed in the fiery furnace; Peter, rescued from the prison; Paul, unhurt by the viper.

Jesus more than once frustrated the sinister designs of his enemies by availing himself of protection which was

SELECTED ARTICLES.

[J. V. Dittemore in the *Record of Christian Work.*]

In the August number of the *Record of Christian Work* I find an article entitled "Fruits of Christian Science in India" by Pundita Ramabai. The writer states that on her arrival in the United States she was told of the growth of Christian Science here, and that after hearing a statement of its teachings she recognized it as an ancient philosophy of India. It is fortunate that the Pundita has supplemented this assertion by a lengthy statement of the doctrines of the philosophy of her native land, for she has thereby given the most convincing proof that Christian Science and Hindu philosophy have not a shadow of similarity, and that her informant was evidently not at all familiar with the teachings of Christian Science. The charge that Christian Science denies the existence of the universe is unfortunately as persistent as it is incorrect. Christian Science denies the existence of nothing that is any part of the creation of God, who made all things that were made and pronounced them "very good." It affirms, however, that God's creation is spiritual and perfect like Himself, and that the so-called material universe, the "heaven and earth" of our mortal experience, which "shall pass away," is but a mutable, destructible (and in that sense unreal) conception of the true universe of Spirit. It affirms that sin, disease, suffering, and death are the illegitimate abnormities of mortal existence, the penalties for our failure to know God aright; that they are unreal in that they are no part of His "very good" creation, and that they will disappear in proportion as mankind understand and demonstrate their dominion over their environment in the way demanded and proven by Christ Jesus, the great Way-shower.

Instead of forsaking the Bible, as your writer states, Christian Scientists study its inspired pages daily, and depend upon its teachings so absolutely that they are willing to trust their health, happiness, and very life to its teachings. Surely no more practical proof could be given of one's belief in it. Christian Science affirms that mankind are in dire need of a present salvation. It affirms that a correct interpretation of the mission of the great Nazarene proves unmistakably that true religion must give mortals an adequate and lawful means of overcoming disease and suffering as well as sin, and its operation being based on a fixed Principle, it must be always available and operative when correctly perceived and understood. Christian Science refuses to believe that there is any mystery to godliness. It refuses to assume that Jesus Christ performed his mighty works contrary to God's laws, or that his mission was for any other purpose than to teach mankind that the "works" that he did we must do also if, as he said, we are his true followers.

Christian Scientists honor the motives and endeavors of all honest Christians, and with tolerance and brotherly love they ask only that the judgment of their fellow-men be according to the standard of the Master, "By their fruits ye shall know them."

[Alfred Farlow in the *Fairbanks* (Alaska) *News.*]

The mission of Christian Science is first to reform—regenerate—its beneficiaries mentally and morally. Thus we note that the healing of the sick is a consequence of Christian Science practice and not its prime object. The practice of Christian Science is not a business, but a ministry, not a profession, but a rule of life. It is, primarily, the practice of religious tenets, which improves the patient spiritually. In consequence of this spiritual regeneration, abnormal bodily conditions are relieved, and the patient is well. Bodily healing is the result of regeneration. From this fact it follows also that every man, woman, and child, with even a small understanding of Christian Science, becomes in a degree a practitioner, for his religion is practical, and he is not a consistent believer unless he practises what he preaches. Though not especially set apart for the ministry, he is able to heal in the ratio of his understanding, for the practice of Christian Science means no more and no less than to put into practice one's understanding of the truth and right. To practise Christian Science is to think rightly on all subjects.

Since the practice of Christian Science is the practice of religious tenets, a law restricting Christian Science practice would affect every member of the Christian Science Church. Every consistent Christian Scientist is in duty bound to help his neighbor in time of trouble, and must be ready to cure bodily ills when called upon to do so. Therefore any stipulations which prevent him from doing this freely and effectually are interferences with his religious faith and duty, and, as such, are unconstitutional.

[Frederick Dixon in the *Newcastle* (Eng.) *Chronicle.*]

Mrs. Eddy has never claimed that Christian Science is anything more than a rediscovery of the great truth preached by Jesus. Whatever originality she has therefore claimed for it, she has claimed for the Founder of Christianity. The teaching of Jesus was, however, something quite distinct from the cosmogony of the ancient world. The teachers of the eastern world had described matter as "a world of illusions and deceptive forms which the vulgar take for reality," and this doctrine was the basis of the idealism of Rome and Athens; it was, in a measure, during the medieval period, the teaching of Abelard; it was expressed in the eighteenth century by Berkeley in the declaration that there was "no substance of matter but only a substance of mind;" and it has found its latest development in the statement of Professor Ostwald, in our own day, that "matter is only a thing imagined, which we have constructed for ourselves, very imperfectly, to represent the constant element in the changing series of phenomena."

Now, all this was theorizing of the most abstract kind. Berkeley himself reduced it to a *reductio ad absurdum* by recommending tar-water as a panacea for the ills of phenomena produced mentally. Jesus of Nazareth alone put aside physical causation, as Mrs. Eddy has written, on page 286 of Science and Health, "plunged beneath the material surface of things, and found the spiritual cause." The consequence was that he was able to prove the actual nothingness of physical causation by not only healing the sick and raising the dead, but by walking upon the water, feeding the multitude, and stilling the tempest. When he was asked for proof of the truth of his teaching he referred his questioners to his works, and he declared that those who believed on him, that is to say, understood his teaching, would be able to demonstrate this teaching; that is, to do the works he did. "Heaven and earth," he said, "shall pass away, but my words shall not pass away." The result is that just in proportion as a man to-day grasps the fundamental truth the Master taught, he is able to demonstrate the truth which makes him free from the law of sorrow and sickness and sin.

The modern idealist has substituted the word energy for what the earlier thinkers termed mind or Deity. Mrs. Eddy, pushing idealism home to its logical and inevitable conclusion, has discarded the reality of material energy as completely as the reality of matter. "The apostle Paul," she has written on page 534 of Science and Health, "explains this warfare between the idea of divine power, which Jesus presented, and mythological material intelligence called energy and opposed to Spirit." This shows how completely Christian Science treatment is by this separated from every form of hypnotism and mental suggestion.

[Charles B. Jamieson in *The News*, Derry, N. H.]

In a sermon, a synopsis of which recently appeared in the *News*, the clergyman is reported as deploring the fact that a young boy and his parents sought God, rather than the medical doctor, in his affliction. The question is: Shall the plain, simple spirituality, taught and practised without resort to material means by Jesus, his disciples, Paul, and the early Christians, with unparalleled success in healing, be practised in our time, or shall it be regarded merely as an impracticable theory, as the reverend gentleman suggests?

Does it not mean anything to professing Christians that thousands of cases of healing by radical reliance on God's power are recorded in the Bible, and that other thousands are being healed to-day by the same spiritual means? Is the theoretical religion of the rabbis or the practical religion of Christ Jesus "of a sane and thoughtful type"? If it is "fanaticism" to rely practically on the love, care, power, and presence of God (Spirit, Mind), what shall be said of the minister or other person who preaches this in theory and denies it in practice? There may be among Christian Scientists an occasional failure to heal, and no one regrets it more than do they, but the percentage of cures is greatly in their favor. . . . No one is compelled to have Christian Science treatment or is denied a medical doctor if wanted, neither should he be compelled to have medical treatment and denied Christian Science treatment if wanted. This rule applies equally with adults and children and is in conformity with the Golden Rule and the Christian spirit.

Contrary to the clergyman's conception, Christian Science teaches that pain and sickness are solid convictions and experiences of mortals—the fleshly man, born of the flesh—but do not belong to the spiritual man, the image and likeness of God; they are mortality, to be laid off for immortality,—spirituality. Let not a child or other person be limited to drugs—materiality—for a "fighting chance" for his life, but let him have free access to omnipotent Spirit, God. It is granted that adults should have the right to rely upon God for bodily healing, but that this privilege should be denied to children. If it is right and legitimate for the adult, it is also right and legitimate for the child. The parent who has found God an ever-present help in time of trouble, naturally wants the child to have recourse to the same help. Will the minister of Christ be the one to deny them this unrestricted right and privilege? If after four thousand years of experimentation the material "weapons shaped to fight disease with" have proved ineffectual, why not throw them away and turn wholly to spiritual means? Is the "wisdom gained by study and experience" in drugs and materiality the spiritual wisdom of Christ that healed the sick and diseased? "The wisdom of this world is foolishness with God."

If, instead of opposing Christian Science, ministers and others would support it, the healing work would be much more easily accomplished. Even Christ Jesus did not many mighty works in some localities because of the people's unbelief in the spirituality which he taught. Why should a professing minister of Christ step aside from preaching Christ's gospel to fan the flames of bigotry, prejudice, and ignorance, against a people and practice that are reinstating primitive Christianity? Was it not the rabbis who started the fires of prejudice and hate against Christ's teaching and urged the crucifixion of Jesus? The common people heard Jesus gladly. Not so the rabbis. The good judgment of the common people may always be relied upon to adjust itself on the right side of a question when the facts are known, and it will do so regarding Christian Science teaching and practice, which stands for the consistent spirituality of Christ and the Bible as against the pharisaism and materialism of the ages.

[Frank C. Barrett in the *Portland* (Me.) *Advertiser*.]

Truth, to be of practical value, must be understood. Truth cannot be demonstrated by those who are "unthinking and credulous," who simply "believe it to be all true." Christian Science is a truth to be lived, not merely believed. It is the religion of Christ Jesus, and, as of old, includes naturally the healing of sickness as well as of sin. It is not a "new school of medicine," nor "a treatment without medicine." It teaches us to turn to God as a "very present help in trouble." . . .

Our critic asks the question, "If 'with God all things are possible,' then why is it not possible for Him to restore to health, and prolong life, and relieve seeming pain; indeed, to abolish all evidences of disease and pain, if He be asked in the proper frame of mind and with abundant faith?" I can only reply that there is no reason why it is not possible, and we shall have to know that all things are possible with Him, before the "greater works" spoken of in the Scripture can be accomplished.

[Frank W. Gale in *The Examiner*, San Francisco, Cal.]

The symposium in a recent issue of *The Examiner*, in which Christian Science is frequently referred to, is interesting as an evidence of the fact that after forty years of Christian Science practice in this country, during which time practically every kind of functional and organic disease has been healed through divine power alone, the ministers of some of the churches are admitting that the healing of the body as well as the saving of the soul is included in the Christian ministry, and should be practised to-day if the teachings and example of Christ Jesus and his early disciples are to be followed. The reasons usually given why Christian healing is no longer practised, as taught and demonstrated by our Master, are that it was intended only for his time, and that the age of miracles is past. But Christian Science has proved conclusively that the same divine power which Jesus used in healing the sick and the sinful is available to-day. In 1895 Mrs. Eddy wrote (Pulpit and Press, p. 31): "If the lives of Christian Scientists attest their fidelity to Truth, I predict that in the twentieth century every Christian church in our land, and a few in far-off lands, will approximate the understanding of Christian Science sufficiently to heal in His name."

When Christ Jesus healed one who was blind and dumb, the Pharisees said it was done "by Beelzebub the prince of the devils;" but Jesus declared it was "by the Spirit of God" that the healing was effected. He also said: "The words that I speak unto you I speak not of myself: but the Father that dwelleth in me, he doeth the works. Believe me that I am in the Father, and the Father in me: or else believe me for the very works' sake. Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." This shows plainly that Christ Jesus did his healing works through the power of God, the one infinite Spirit, and he said that those who believed should do the same work. When Jesus sent the disciples forth on their mission, "he sent them to preach the kingdom of God, and to heal the sick," and it is recorded that "they departed, and went through the towns, preaching the gospel, and healing every where." But one case is referred to that they could not heal, that of the epileptic boy. Jesus at once healed him, and when the disciples asked why they had failed, he replied, "Because of your unbelief." He did not consider the case incurable because the disciples could not cure it, nor did he recommend drugs, suggestion, or any material means for healing, but applied a higher understanding and faith in God than the disciples possessed at that time, and so healed the

Digitized by Google

boy in accordance with his own saying, "Ye shall know the truth, and the truth shall make you free."

Christian Science follows this method of the Master and depends upon the power of God, rightly understood, for healing every kind of sickness and disease, both functional and organic. Those who still cling to material methods think that Christian Science is very extreme in its position, and the Rev. Henry R. Rose, D.D., who believes in the "Emmanuel movement," asks, "What is the use of going to the extremes of Christian Science when you have all you need in the Emmanuel movement?" I would ask what has the "Emmanuel movement" to offer one whom skilful physicians have pronounced incurable with an organic disease? Yet Christian Science has healed multitudes of such cases.

[W. E. Brown in the *Santa Ana* (Cal.) *Register.*]

While advanced thinkers in all ages have held fragmentary ideas akin to those of Mrs. Eddy, and employed similar modes of expression, the discovery of Christian Science belongs to her exclusively, and the Christian Science healing made possible by her discovery has not been practised since the days of Jesus Christ. It was she who discovered the Principle underlying the practice of Jesus and his disciples, and from this Principle evolved a scientific system of healing and redemption susceptible of proof.

Christian Science has absolutely nothing in common with mesmerism, auto-suggestion, or mental science. On the contrary, it is based exclusively upon the teachings of Jesus and is therefore pure Christianity. Our critic does not seem satisfied with the proof established by Jesus, *i.e.*, "By their fruits ye shall know them." He thinks that the fruits of Christian Science are also accomplished by mental science, hypnotic suggestion, etc. This conclusion is based upon a lack of knowledge of the difference between the fruits of Christian Science and those of hypnotism, etc. The fruits of the former not only include physical healing, but also moral and spiritual healing, causing men and women to be every whit whole and transforming them into consecrated followers of Jesus Christ, while the fruits of the latter are temporary physical results with the spiritual nature unchanged.

[William Royle in the *Liverpool* (Eng.) *Courier.*]

Hypnotism is as opposite to Christian Science as any two things can be. It is simply the exercise of human will-power, and when used with the consent of a patient for the purpose of healing—even if effectual for the time—is no more permanent than would result from any other remedy that is material; and if hypnotism is used without the consent of the person operated on, it is an undue interference with the liberty of the subject, and is little less than criminal. On the other hand, "the medicine of Science is divine Mind" (Science and Health, p. 104), in which no element of human will-power or suggestion is allowed to enter the healing, and as Christian Science healing is the destruction of the belief in sickness held by the patient, when this belief has been destroyed the healing is permanent, as there is no longer any effect from the belief. Christian Science heals organic diseases just as effectually as functional, since all things are possible to God, "who healeth all thy diseases."

Common sense is the ability to judge values. To know a great thing from a small one. I would rather possess common sense than to have six degrees from Trinity College.—ELBERT HUBBARD.

AMONG THE CHURCHES.

FRANKFURT, GERMANY.

We are informed that the Christian Scientists of Frankfurt have removed their Reading Rooms to Börsenstrasse 15, the late premises of the National Bank of Nassau. The impressiveness of the first service was heightened by the admirable rendering of the solo, "Consolation" (Nikolai), by the concert singer, Harriet Meyjes. At the close of the regular readings from the Bible and the text-book of Christian Science, the First Reader gave a short address, which is briefly summarized below.

1. Christian Science is not "*Gesundbeten*" (faith-healing). It is not founded on belief, nor on ecstasy, but on Science—provable knowledge. It is in fact that knowledge of the truth which makes men free. 2. Christian Science has nothing in common with hypnotism, spiritualism, occultism, auto-suggestion, nor with any of the so-called "mind-cures" now in vogue. Christian Science recognizes only one Mind as curative—the divine Mind. 3. Christian Science is not in conflict with doctors of any school. It respects all humanitarian effort, and it is but fair to say that as a rule the sick resort to Christian Science only when their regular medical practitioners have failed to bring them relief. 4. Christian Science makes no propaganda; thrusts its services upon no one; and has no quarrel with any church. It honors all the churches that honor God. Christian Scientists desire to live in peace with all their neighbors—Protestant, Catholic, and Jewish—and to be left in peace by them. 5. Christian Science is not a new sect founded in America by a woman whom her followers worship. It is a revival of the religion founded by Jesus Christ, and it is exemplified by the same sort of "good works." Mrs. Eddy, the Discoverer and Founder of Christian Science and the author of its text-book, "Science and Health with Key to the Scriptures," lives like a private lady in her quiet home near Boston, beloved and revered by every Christian Scientist, but worshiped by none. 6. Finally, Christian Science is not the special property of any nation, language, church, nor class of mankind. It is as free as the sunshine and as universal as the air.—Translated from the *General Anzeiger.*

[Written for the *Sentinel.*]

CONVICTION.

JOSEPHINE W. HEERMANS.

OUR bark of life full oft seems tossed about
By undercurrent and by raging wind;
By billows lashed, frail sense succumbs to doubt,
Then whispers Love, Protection seek in Mind.
Mind turns to naught commotion wild without,
Mind stills the fierce, scarce-hid unrest within,
Mind puts the murmurings of sense to rout,
Mind shows the nothingness of fear and sin.

Awakened, holy peace descends like brooding dove,
No more alone, adrift, dismayed, o'erwhelmed, we seem;
No more in bondage to belief's mesmeric dream;
But ministered unto by angels from above.

Though dregs of trembling to our lips are pressed, and sense assails,
From seeming power of these to Mind's omnipotence we turn.
For Spirit's senses apprehend the Love that never fails,
The promise, I am with you, even to the end, discern.

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

THE CALL FOR CLEAR THOUGHT.

MRS. EDDY'S words: "The time for thinkers has come" (Science and Health, Pref., p. vii.), are both a declaration and an appeal, and the need of this call of Christian Science for clear Christian thought is frequently made painfully apparent.

As an illustration we may cite the recent utterances of a clergyman who is said to have prepared in part for his ministry by studying the psychological clinics of noted doctors in Paris and London, and who feels called upon to say that people should be educated in psychotherapy "to save them from the exaggerations and errors of a well-known 'healing cult,'" and that the nature of one's religious faith need have nothing whatever to do with his healing efficiency! In a similar vein the editor of a prominent religious weekly has recently said—

> In Europe people regard the question [of healing] with calm and judicial mind. . . . There the public has been led by thoroughly trained psychologists and physicians. The pathos is in the fact that our people do not know that what they accomplish by particular religious dogma, is being accomplished more satisfactorily in the quiet and unostentatious ways of science.

These statements reveal a confused sense, both of the nature of the healing wrought by Christ Jesus, and of the means of that healing. As understood in Christian Science the healing which Christ Jesus inaugurated is not an endeavor to remedy physical conditions. It is rather a removal of the cause of inharmonious conditions, and the "psychological erudition" with which our critics are so greatly enamored has absolutely nothing to do with it.

In explanation of his healing power, Jesus denied the value of human sense by saying frankly, "I can of mine own self do nothing:" "the Father that dwelleth in me, he doeth the works." If a knowledge of anatomy and psychology, and of the confused and inexplicable phenomena of mortal mind, to the study of which many ministers are now devoting their attention,—if this knowledge had entered into Christ Jesus' system, he would surely have given some injunction, said some word regarding it to those whom he commissioned and tried to equip to do his work. The absence of any hint in this direction, coupled with his constant emphasis of the necessity of knowing God, and of having faith in Him, leaves no ground whatever for question regarding his position.

When one understands that so-called physical and psychological science has to do not with ultimates, with spiritual being, but only with phenomena, respecting the final cause and explanation of which physicists unhesitatingly avow their ignorance, he will concede that the works of our Lord and his disciples must have been wrought by the command of a Science which is not physical but metaphysical, not material but spiritual, not psychological but Christian. It has been Mrs. Eddy's contention from the beginning, that all true healing is of God, that it results from the activity of divine Principle, the Christ in human consciousness, and that the profoundest knowledge of material and mental phenomena is not redemptive.

The study and classification of physical and mental phenomena, together with deductions therefrom, have had and will continue to have great significance to human advance. Indeed, in its patient investigation of the facts, its consistent adherence thereto and its logical conclusions therefrom, regardless of superstitions and beliefs, physical science has pursued that order of proof or demonstration which is commended in Christian Science as of great value at the present stage of human thought; nevertheless, it remains eternally true that humanity is to be healed by that absolute Science which has to do with real being, with Spirit and its manifestations alone, and which is centered in and proceeds from divine Mind. Said Jesus, "This is life eternal, that they might know thee the only **true God.**"

JOHN B. WILLIS.

THE MISSIONARY SPIRIT.

A VERY significant gathering has recently been held in Boston under the auspices of the "Laymen's Missionary Movement," and representing five of the religious denominations of this city. A motto which was displayed on a banner at their gatherings read, "The world for Christ in this generation," and one of the speakers expressed the hope that the brotherhood of all mankind would as quickly become an established fact. Much emphasis was laid upon the efforts of laymen in the great work of evangelizing the world, and one of the speakers remarked, "The real problem of Christian missions is not in China or India, but here, in your heart and mine;" while another said, "I have come to regard the American and the Eastern heathen as one and the same, except that the one is heathen from choice, and the other can't help it."

This gathering may well remind us of the dawn of Christianity, when the most active workers were laymen, holding no priestly office, and despised and condemned by those who did hold such offices, because of their departure from ecclesiasticism, which was wrongly held to be the faith of their fathers. These early workers did not represent the authority of either church or state, but they did express the authority of divine Truth in overcoming both sin and sickness, and Peter's great missionary address before the Sanhedrim, defending with boldness and eloquence the right to heal the sick as commanded by the great Teacher, a right denied by that august and learned body, is one of the great utterances of history. He even raised Dorcas from the dead, and it thus came about that the healing truth spread from city to city, then from land to land, for the word was spoken, as the Master had said it should be, "with signs following." In the course of time it came to pass that these "unlearned and ignorant men" had emperors for their auditors, for they were epistles of Christ, "known and read of all men."

In no other church are the efforts of laymen called forth as in the Christian Science church, for it has no ordained priesthood, all its members being privileged and expected to "preach the gospel," as did the Galilean fishermen, by healing the sick and by living Christly lives. No one can deny that if all the professing Christians who have gone to foreign lands for commercial purposes had proved their religion as did Paul when shipwrecked on the island of Melita, these lands would long since have been won for Christ.

One of the most significant utterances at the recent gathering was this: "The deepest needs of the world are spiritual. The only permanent values in this world are spiritual values,"—statements which all Christian Scientists will heartily endorse, their whole contention being that the spiritual should be trusted at every point, whatever the material evidence.

Our revered Leader says: "The cement of a higher humanity will unite all interests in the one divinity;" and she adds, "With his spiritual strength, he [the Revelator] has

Digitized by Google

opened wide the gates of glory, and illumined the night of paganism with the sublime grandeur of divine Science, . . . He takes away miter and scepter. He enthrones pure and undefiled religion, and lifts on high only those who have washed their robes white in obedience and suffering" (Science and Health, p. 571). Can aught less than true spirituality save the world from sin, disease, and death, and bring in the universal reign of righteousness,—the reign of God and His Christ?

ANNIE M. KNOTT.

THE MONITOR IN NEW ENGLAND.

To ensure prompt receipt of *The Christian Science Monitor* by residents in Greater Boston and other cities and towns in the New England afternoon newspaper field, subscriptions already received by The Christian Science Publishing Society from these districts will be delivered by carrier, unless the Society is otherwise instructed. Prospective subscribers for carrier service in these districts may order the *Monitor* directly through their local news-dealer, at the usual rate of 12 cents a week, payable to the news-dealer, or if they prefer, they may send name and address without remittance to the Publishing Society in Boston.

LETTERS TO OUR LEADER.

Milton, Mass., Oct. 20, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

I wish any words of mine could express to you my deep gratitude for the great message you have brought to sick and suffering humanity. The light of Truth which came to me through Christian Science has been as a well-spring of joy, since first it dawned upon my consciousness and like a mighty lever lifted me out of invalidism and bondage to health and freedom. For eighteen years I was seemingly bound by a physical affliction which medical skill failed to cure. Christian Science set me free. The unfolding of the light of this truth has been and is a transforming power in my life, which is now replete with praise and thanksgiving to God, and to His Christ, and to you His messenger, who have made plain to us the healing Christ.

With tenderest love and gratitude,

Yours, in the love and service of Truth,

SARAH F. TUCKER.

New Rochelle, N. Y., Oct. 24, 1908.

Dear Leader:—We know your interest in the growth of Christian Science, therefore it was voted at our quarterly meeting, Oct. 13, to send you an expression of loving gratitude for making it possible for us to rejoice over a step just taken. We have had a gradual growth, holding Sunday services first, and then the Wednesday evening meeting. We have held our services in a hall, where we saw the room gradually fill. Divine Love led us to our new church home, and a few days ago we bought a house in a fine location, which we shall remodel, until such time as we can build our church on this lot. When this place was brought to our notice, and we felt that it was the right place, it was beautiful to see with what a willing spirit the money came in a very short time, each one doing his part through loving sacrifice. The children of the Sunday School love you dearly, and their loving thoughts and sacrifices have helped to bring out this new church home.

We feel, dear Leader, that when we were ready to rise as a body, and look away from personality to God, that divine Love led us to our rightful place. We owe love and gratitude to you for this, and for our health and happiness, as it is your untiring and faithful work for mankind which has shown us how to rise above materiality.

With loving gratitude,

Members of First Church of Christ, Scientist, of New Rochelle.

MRS. KATE CLARK, MRS. M. D. CALDWELL,
MR. J. B. LAMPE, *Committee.*

Des Moines, Ia., Nov. 12, 1908.

Revered Leader:—The advent of *The Christian Science Monitor* is an indication of progress in our journey to the Father's house (the ever-present spiritual consciousness),—the bringing of heaven down to earth, and the dawning realization of the omnipresence of divine Mind. "For the earth shall be full of the knowledge of the Lord, as the waters cover the sea." At first we had messages once a month in the *Journal*, then later once a week in the *Sentinel*, and now every day in the *Monitor*. We do not have to wait for the appearance of the first issue to judge of its worth and good to the world, for we may judge from its premise, namely, perfect God, perfect man, and a perfect universe.

I want the Publishing House to be equipped with every convenience, and it is my sweet privilege to contribute to this end until no more funds are needed. My heart is expressed in these words of your poem to "The Oak" (Miscellaneous Writings, p. 392):—

Faithful and patient be my life as thine;
As strong to wrestle with the storms of time;
As deeply rooted in a soil of love;
As grandly rising to the heavens above.

Lovingly and tenderly,

VALERIA J. CAMPBELL.

Ottawa, Can., Nov. 9, 1908.

Beloved Leader:—To-day is our Thanksgiving day in Canada, and I thought you would like to know that the service this morning was a burst of praise to God for the blessings which are ours through your teachings in "Science and Health with Key to the Scriptures," and in your other writings. They are showing us how to be thankful, and how to prove, daily, hourly, that "God is our refuge and strength, a very present help in trouble."

Yours sincerely,

E. Y. STEELE.

Aldershot, England, Oct. 28, 1908.

Dear Mrs. Eddy:—It is not yet quite three years since the first little service—the worshipers being five in number—was held in Aldershot. To-day, at our Thanksgiving service, as many as two hundred must have been present to share in our joy, among them being members of the three London churches with some from the neighboring fields, while several were strangers eager to hear the "good news." Words can do no more than outline our gratitude to God for all that He has done, not only for this society but for His Church universal. Above all do we thank Him for the gift of Love to His children, and for the blessings of health and happiness which flow therefrom.

On this occasion of the opening of our own hall, situated upon the highest point in the best part of Aldershot, and upon a busy thoroughfare, I am desired by the Aldershot Christian Science Society to express to you something of our love and of the gratitude we feel for the benefits of Christian Science which have come to us through you. To give accommodation for Reading Rooms, practitioners' room, and offices, this society lately acquired the freehold of 10 Grosvenor Road, Aldershot, and now the hall is added as an extension of these premises, having also a separate entrance in Queens Road. Thus in the center of

Digitized by Google

this town the "bread of life" is daily broken to the poor and needy; the truth is demonstrated by healing, and many there are who with good cause rise up and call you blessed.

Thankful for the light which has come into our lives, and working on the lines which you have pointed out, we humbly endeavor to press forward in the right path.

Yours, dear Leader, lovingly,

MARY R. BURTON, *Clerk.*

AGATHA H. SCOTT, WALTER CARR,
ADA CARTER, FAITHFUL CUMBERLEGE,
ERNEST SULIVAN, *Board of Directors.*

Winnipeg, Manitoba, Can., Nov. 6, 1908.

Mrs. Mary Baker G. Eddy, Chestnut Hill, Mass.

Dear Leader:—I am sending you a copy of the leading paper published in northwestern Canada, containing a brief sketch of your life and work. It is especially gratifying that this opportunity to place before the public a more favorable presentation of your work came unsolicited. It is another evidence that you are being gradually accorded your rightful place as a benefactor of mankind. You will be pleased to learn that copies of "Science and Health with Key to the Scriptures" are being sent out all through this vast country, and that little groups of people are meeting for the study of the Lesson-Sermon. It is our privilege to appreciate your wisdom and foresight in establishing the present order of service, which enables the rancher in his home on the lone prairie to enjoy sermons expressing the same beauty and truth as those given in the largest metropolitan churches. It was pleasing to note that the attendance at the Wednesday evening meeting following the publication of the article mentioned and a sermon preached against Christian Science, was about one third larger than the attendance at any previous Wednesday meeting.

I desire to express to you my gratitude for the spiritual and physical help which has come to me through the reading of your works. My first evening's reading benefited me more than eleven years of other kinds of treatment. More especially do I feel grateful to you because by example and precept you are teaching all mankind how to love, and awakening them to see the great blessings there are in store for those who humbly strive to learn this lesson.

Yours very sincerely,

A. W. MAINLAND.

Markham, Tex., Nov. 9, 1908.

Dear Mrs. Eddy:—I feel that I can no longer keep silent, though I cannot find words to express fittingly my love and gratitude to you for your dear book, "Science and Health with Key to the Scriptures," and for the Lesson-Sermons. My heart is filled to overflowing with love to you, dear Leader, the one so brave and true, who stood alone, bearing the heat and burden of the day, and who has led a host out of darkness into the light of Christian Science.

There are no Christian Scientists in our little town except my family, but we have had many demonstrations of the power of Truth, in the healing of ills, which have all been overcome through the study of the Bible and your text-book. We feel that you have given us so much, and we can only give you our love.

MRS. NANNIE BROWN.

THE PUBLISHING HOUSE BUILDING FUND.

Contributions to the Publishing House Building Fund should be sent to Stephen A. Chase, Treasurer, P. O. Box 56, Fall River, Mass. These contributions will be thankfully received and promptly acknowledged.

A WELCOME TO THE MONITOR.

[Editorial in *Pasadena* (Cal.) *News.*]

AN up-to-date daily newspaper is to be published in Boston under the auspices of the Christian Scientists of this country. The announcement states that all the news of the day that should be published will find a place in its columns, and its up-to-date news service will cover the daily activities of the entire world. The key-note of this publication, as indicated by the well-known attitude of Christian Scientists, will be to eliminate from the columns of the daily press the unwholesome surfeit of disease-suggestion and crime-suggestion, and to carry into the homes of the people an efficient news service conducive to wholesome and optimistic thinking. Its mission will be the lessening of tragedy, crime, impurity, and bad citizenship by developing a taste for and an interest in the best rather than the worst that the world is thinking and doing.

We shall watch for this new star in the journalistic firmament with something more than idle curiosity. All advocates of clean and responsible journalism will greet this stranger in the field with expectancy and a sympathetic hope for full success in its worthy mission. The journal which carries no intellectual swill to its readers and feeds no demand for impure suggestion will have its critics. Its early downfall will be predicted and its practicability be impeached in advance. If it can be demonstrated that there are enough American firesides where the clean, uplifting, hopeful happenings of the world are in demand, to make such a venture a journalistic and financial success, it will prove a most substantial aid in lessening the burden of sorrow and of crime by improving the quality of the daily ration on which men and women, and particularly American youth, have been accustomed to feed intellectually.

The tendency has been quite too much in the opposite direction. So burdened with the details of the world's worst happenings have the columns of the press come to be, that into every home the metropolitan daily has dragged its load of poison, to bear its crop of evil thinking and evil doing. The effort to stem the tide of the popular demand for sensationalism and degrading filth by founding a metropolitan daily on faith in the development of a wholesome appetite, is one of the most encouraging signs of the times, and it deserves success. The world is old enough, and its Christianizing and civilizing influences have been at work long enough, to have prepared the way for just such a publication as is contemplated.

The promoters of this proposed exponent of optimism apparently decline to concede what has been so frequently claimed, namely, that malodorous journalism is a just measure of the moral status of the public. It is commonly admitted that the exploiting of crime in the columns of the daily press begets crime, and the detailing of immorality is a culture of immorality. Poverty, hatred, despair, tragedy are being propagated in sensational journalism: there is no denying this fact.

We extend a cordial welcome in advance to this courageous representative of an advancing journalism.

THE CHRISTIAN SCIENCE MONITOR.

The sale price of *The Christian Science Monitor* will be two cents each copy, and the subscription price in the United States (except where delivery is made by carrier), Canada, and Mexico will be five dollars for one year, or three dollars for six months; in all other countries eight dollars and four dollars and fifty cents respectively. Subscriptions may be sent to The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Mass., or through local Reading Rooms.

THE LECTURES.

CHICAGO, ILL.

The Rev. William P. McKenzie lectured on Christian Science at Second Church of Christ, Scientist, on Oct. 1 and 2. He was introduced the first evening by Walter H. Vanzwoll, who said in part,—

Christian Science teaches mortals to look up and not down, to pause before the deceptive images of false mortal belief; and, instead of plunging into the shallows of human folly and material self-seeking, to lift thought heavenward above the material to the spiritual, above earthliness to God, out of fear into spiritual understanding, out of sin and disease into moral and physical health.

Thus we may seize the victory which Truth always wins over error. Christian Science is the word of Truth, —"the word of God,"—which is "the sword of the Spirit," an all-powerful weapon with which each one may for himself slay the dragon of sin and suffering which tries to rob mankind of health and happiness.

The introduction the second evening, by James A. Hemingway, was in part as follows:—

If history is to be relied upon, it can be truthfully said that mortal man has ever been prone to stand in his own light, and that in nearly every instance he has not only rejected but opposed that which meant his salvation. As a rule he has been prejudiced against both the messenger and the message of Truth, and this prejudice has blinded his eyes to angel visitants and deprived him of the blessings of infinite good that have always been within his reach. The advent of Christian Science did not prove an exception to the rule. But, owing to the influence of Christian Science on the thoughts and lives of men, owing to its fulfilment of the prophecies and promises of the Bible, and its efficacy in healing the sick and reclaiming the sinner, we can rejoice in the dawn of a new day in which men are beginning to listen to the "still, small voice" of Truth and to realize that there is hope and health, that there is a saving Principle, that salvation is not a thing of the future but a present possibility, and that heaven, the reign of harmony, can be attained here and now.

In the preface to the Christian Science text-book Mrs. Eddy says that "the time for thinkers has come." It has come, and it is no longer considered sacrilege if a man fails to follow in the footsteps of his forefathers, but endeavors, instead, to work out his own salvation and reach the stature of perfect manhood through right thinking. Christian Science teaches us how to think correctly on every subject. It is bringing to its adherents a sense of peace and happiness they have never before experienced. It is elevating mankind above the constant contemplation of matter and the belief that man is doomed to die, and is giving him an understanding of God, "whom to know aright is life eternal."—*Correspondence.*

WICHITA, KAN.

A lecture on Christian Science was delivered at the Crawford Theater, Monday [Oct. 12], by Frank H. Leonard. The remarks of W. R. Nessly, who introduced the lecturer, were in part as follows:—

Almost twenty centuries ago there appeared among men the great Messiah or messenger from God to man, the humble Nazarene, Christ Jesus. He proved, practised, demonstrated, and established, for that age and for this and for all time to come, that an exact knowledge of God and His law is an exterminator of error and limitation. The sick were healed; the sorrowing were comforted; the sinner was practically and thoroughly reformed; and to the poor, the meek in heart, the gospel was preached. Now in this age, in our very midst, Christian Science is proving beyond a possible doubt that a correct understanding of God and His law causes the wicked to forsake his way and the unrighteous man his thought; that it heals the sick and reforms the sinner thoroughly and permanently.

The Wichita Beacon.

GRAND ISLAND, NEB.

An attendance of fully four hundred people greeted Francis J. Fluno, M.D., Christian Science lecturer, at the Opera House, Oct. 12. In introducing the speaker, Judge T. O. C. Harrison said in part,—

If I possessed more knowledge of Christian Science I might venture to make a few introductory remarks regarding it. I will say, however, that I have observed persons who are accredited with practising it, and they appear to do right thinking, and right thinking produces right acting. The person who thinks right and acts right is certainly morally right. If Christian Science produces these things, it is what we are seeking, or should be seeking.—*Correspondence.*

READING, PA.

In the Auditorium last evening [Oct. 13] a lecture of more than ordinary interest was delivered before an audience that about half filled the immense hall. It was by Judge Septimus J. Hanna of Colorado Springs, Col. John D. Mishler, in calling the meeting to order, spoke in part as follows:—

The great problem of a contented life is the happy medium in all that pertains to humanity. Strange as it may seem, two of the most serious contentions in life are either too much education or too much religion, and in some individuals there is a combination of both. I am not a regular attendant at church, nor thoroughly conversant with the Bible, yet I make the assertion that I do not believe God intended people to go through this world with a sour face and a disagreeable disposition, casting gloom and discouragement wherever they go. Some people walk so straight through life that they lean backwards. The well-being and happiness of people is a most important question, and should be liberally and carefully considered by the various sects, all of which are striving to reach, in different ways, the "golden gate."

All of us are sinners, all of us have our faults and we frequently differ in opinion, yet if we cannot accept ideas contrary to our own convictions, we should at least show respect. Christian Scientists are tolerant with honest doubters, aiming to bring better ideas into life, and it is truly great to be simple, frank, open, true. Give me happy, hopeful people as my associates through life, for I believe that Christianity means hope, sunshine, optimism, and cheerfulness, that it aims to make life fresh and inspiring.—*Reading Times.*

TESTIMONIES OF HEALING.

For many years I suffered from heart trouble, and never dared to go out without taking my little bottle of heart medicine along. The attacks grew more frequent, and harder to overcome, my physician saying each time, "You cannot live through many more," or, "You will pass out in one of these attacks." Besides this, I was subject to severe headache, suffering intense pain, usually for twenty-four hours; besides many other troubles. I was often urged to take Christian Science treatment, but refused, thinking that Christian Science could not help me if *materia medica* could not.

Early in 1897 I took up the study of Christian Science, for one of my family, and read constantly for a few days. When the light of Truth dawned upon me, I saw that it was for me, for everybody, and that God is Love and Truth; that if I would only believe in Him and His works I would be healed of all my troubles. I determined then and there to trust in God. I threw away all my medicine, and from that time to this I have been a free woman. My healing was immediate and perfect. Where at that time I could not walk at all, I now can and do walk miles without fatigue. When I consider that this light came to me through reading Science and Health by Mrs. Eddy, I feel the deepest gratitude and love to our dear Leader, whose spirituality enabled her to voice again the teaching and practice of our beloved Master in such a practical form that every one willing to think right, act right, and live right, can apply with "signs following" this blessed truth.

In the years that have passed since I first was made whole, Christian Science has enabled me to meet every need. And I have been led in the right path when sometimes I have at first doubted the wisdom of the step. I am truly thankful to God, who has sent His clear message to this age.—LAURA J. ROBINSON, Santa Cruz, Cal.

[Translated from the German.]

I feel it my duty to express our heartfelt gratitude for all the good which has come to us in Christian Science, but which seemed unattainable until its advent. Our hearts are overflowing with gratitude to God, and to our Leader, Mrs. Eddy, for the wonderful healing of our nephew, and of my wife. My nephew complained of his neck and spine, and after a short time the muscles became contracted so that he could no longer turn his head. We went to a specialist, who said that the boy would always be deformed; that this was the result of a dreaded disease of childhood, and also of an unfortunate fall, and that as he was now sixteen, he could not grow taller, but would become more deformed, and probably would have a goiter. Christian Science treatment was then given, and after eight months he was perfectly healed, and his growth in height was indeed wonderful.

My wife was also healed of a severe bladder trouble of eight years' standing. She was in a hospital for six months without finding relief. When she was dismissed from the hospital, she was told that a sea voyage might be beneficial, but it did not help her. She kept on with medical treatment, until at length we asked the last physician if there was any possibility of a cure. He said that he doubted it. This seemed hard, as my wife was a young woman, who had a child, a husband, and a home. At that time we received the glad tidings of Christian Science healing. After the first treatment she felt relief, and in about a year she was perfectly healed. We have now two strong, healthy boys, and every one says that my wife is looking better than ever.

We are sending this testimony that our German fellow-countrymen may be assured that there is a God who does answer prayer. May God bless our Leader, Mrs. Eddy.
ALEXANDER IFFLAND, Hartford, Conn.

With the hope that some other may thereby be led to seek this glorious truth, and receive like blessings, I wish to tell what Christian Science has done for me. All my life I had suffered from very severe colds in my head and throat, also from bowel trouble. I had bronchial trouble almost every month, and had been told by two physicians that I would better not remain in this climate another winter. In the spring of 1905 we changed our place of residence to a different part of this city, and we soon discovered that several of our new friends were Christian Scientists. In the following fall I turned to Christian Science for relief from my suffering, because I could not help but see what it had done and was doing for those about me. When I asked for my first treatment I had been sick in bed for three days with a severe attack of throat and stomach trouble. I received wonderful relief the first day, and by the end of the second day all pain and discomfort were gone. Inside of a week I felt well, and during the two and a half years which have passed since, not one of these ailments has returned.

Immediately after this healing I began to study the Bible and our text-book, "Science and Health with Key to the Scriptures," and some time during the first six months I left off my glasses, which I had worn for all work for eight years. I made no effort to do this, and was unconscious of it until a friend called my attention to the fact. Very severe headaches have gradually yielded, and I am healed of all desire for the drug with which I used to deaden pain and induce sleep.

I am indeed more grateful than I can tell for Christian Science. It has healed me of sickness and sin, and now it is teaching me to understand God aright. I am sincerely thankful to be freed from constant ills, and to be brought into perfect health, but I am much more thankful for the great sweetness which has come into my life, with a truer sense of Life and Love. Christian Science is teaching me to put aside prejudice, suspicion, criticism, anxiety, and selfishness. It is making me more loving, more thoughtful of others. Love is teaching me to put a kind thought in the place of an unkind one, to love my neighbor as myself, to know that God alone guides and governs all, that He is all there is or can be, and that He supplies our every need. My heart goes out in humble gratitude for having been so kindly led into this truth. I want to live my gratitude to God, and to our dear Leader, Mrs. Eddy.—BELLE M. VAILL, Evanston, Ill.

For many years I was a sufferer, the pain at times being so intense as to be almost unbearable. Afraid of opiates, my only relief was from stimulants administered in generous quantities. This relief was but temporary, and my condition grew steadily worse. With no knowledge of Christian Science, but with a hope that I might be healed, I commenced treatment. Ovarian trouble was overcome in the first treatment, but my complete physical healing did not come for over six years. During that time I was a constant student of Science and Health, and occasionally received help from a practitioner. (Many times it seemed as if doubt and discouragement would turn me aside, but there was nothing else to which I could turn.) Climate and *materia medica* had been tried and had given me nothing, while in Science I had found a steady, though slight improvement. I had for three years been actively engaged in the practice of Christian Science when a lady called and asked for treatment. Her case was a repetition of my own. Treatment was given her for two weeks, and at the expiration of that time we were both healed.

Digitized by Google

often wished for something that would heal me. Now I have found it, this inspiring truth that makes us free from sin and pain! I have no words to express my gratitude for what Christian Science has done for me. It has been everything to me,—health and happiness; it has made me more contented, more loving and forgiving,—it has done everything good for me. We have had some remarkable demonstrations in our home. My son was wonderfully healed here in Pasadena, after undergoing nearly thirty operations on his head for catarrhal growths. It certainly was distressing, what he seemed to suffer. He also had a terrible stomach trouble, but since he was healed in Christian Science he has never had a return of any of the old ailments, nor have I. We are grateful indeed for our healing. I had a demonstration on last Thanksgiving morning which filled my heart to overflowing. I rejoiced all that day and am still rejoicing. Then, as I listened to the beautiful Thanksgiving service, which was the most inspiring that I had ever heard, it moved the very depths of my being.

God has indeed been good to give us our dear Leader, who has shown us this light and truth. I also wish to express my thanks for the good I have received from reading the *Sentinel* and *Journal*. I truly hope this may help some poor sufferer to seek and find the truth as I did.

MRS. L. C. VAN HOOK, Pasadena, Cal.

I know we can all help others by telling of our own healing, and since I became interested in Christian Science, nearly five years ago, the *Sentinel* and *Journal* have given me constant encouragement. At that time I had been reading of Christian Science, and as I had always been fond of study and inquiry, it came to me that I had waited too long to know something definite of a religion which taught the healing of sickness and sin through an intimate knowledge of God. Ever since I was a little child I had thought how wonderful and beautiful it would be to pray to God and have one's prayers answered, but to my sense God was very far away until I learned to love the Bible as explained by the comforting teachings of Christian Science. I then found that Jesus' words are practical; although in striving to follow them I have had a hard fight with my own disposition, in endeavoring to overcome hate, impatience, selfishness, and extreme sensitiveness. I was healed of an annoying throat trouble and of severe headache very quickly, and I have laid aside glasses. I have not had to spend one day in bed since I began to study Christian Science, while formerly I was often sick and always tired.

I wish I might help many others to know what a support the daily study of the Lesson-Sermon is, also the Sunday and Wednesday services. I feel that the mental healing and spiritual quickening have been even more than the constant physical help I have received. It has been my privilege to give help to my family and to some others. In my home we have been greatly helped in financial problems, and we grow more certain that perfect healing of all troubles will follow the understanding of God and obedience to His law.

I would like to mention one thing which has always impressed me, and that is the mathematical precision with which we may work out our problems when relying upon God as divine Principle. I have several times read of healing which had only come after continued work, and in my own case I have not yet realized freedom from some ills; but this proves to me conclusively that all the healing which has come to me has brought a clearer understanding of God, and that as we cast out evil we perceive the greater light which makes us "whole" entirely.

I feel a deep sense of gratitude to Mrs. Eddy for her revelation to mankind, by which we have been helped not only to bear our burdens but to get rid of them. I should like to be one of those who work in that field which is "white already to harvest," for we reap so much good in making the path of others easier.

LUELLA MAY TREAT, Janesville, Wis.

I am very grateful for the healing I have received through Christian Science. I had been troubled with my back for some time; in fact I never felt free from pain. I also suffered terribly from headaches, which I had all my life, and would be ill for two and three days at a time. One evening, in the winter of 1906, the conversation turned to Christian Science and I said to my husband that I thought I would try it. To my great surprise he said he wished I would do so. I went at once to the telephone and called up a practitioner who was also a friend of mine, and asked her to treat me. At the time I had several plasters on my back and round my heart, for that also troubled me. The next morning it did not hurt me to rise, whereas every movement did so before. I could not understand it at all, for I had no idea what a Christian Science treatment was. The second day I went to the practitioner, and she told me I must take off the plasters. That night I did so, and I have not used any material remedies since. I bought the text-book, Science and Health, and by reading it my headaches disappeared—I have not had one since, and my body is free from aches and pains.

In January, 1907, I joined First Church of Christ, Scientist, Memphis, Tenn., and I am striving to live up to its teachings, which bring only peace and happiness. I am also very thankful that I can help others through this saving truth. For all the help Christian Science has been to me words are insufficient to express my gratitude to God, the giver of all good, and to our dear Leader, Mrs. Eddy. My problems are not yet all worked out, but I I am on the right road. Joy and peace are mine, and the other fruits will come in due season.

MRS. ANNIE WESLEY, Memphis, Tenn.

I wish to express my gratitude for what Christian Science has done for me. It found me a complete wreck, physically and mentally, and by reading "Science and Health with Key to the Scriptures" by Mrs. Eddy I have been healed of lung trouble and severe headaches of long standing, for which physicians told me there was no permanent relief. My little son has been healed of extreme nervous trouble. Christian Science has also taught me how to help him, and to teach him the right way. I am very grateful for these healings, and for the benefits which I am receiving each day.

CAROLINE JOHANIGMAN, Chicago, Ill.

FROM OUR EXCHANGES.

[*The Outlook.*]

Now, if religion is life, fundamental and essential, it can no more be left out in childhood than the alphabet. There is no Christian doctrine so abstract as the arbitrary symbols A, B, and C. There is no more difficulty in learning the Ten Commandments and the Beatitudes than in the study of seven times eight. A child is bound to accept many, many things without understanding much about them. His business is to learn, and the application will follow in time. It is not to be expected that a child of seven will have definite religious convictions, any more than that he will have a definite grasp of the science of numbers. But he is laying foundations, and necessary foundations, for his whole life. True religion is more important than arithmetic, if the parent really believes in immortality. First things must be put first, is a sound axiom.

[*The Congregationalist and Christian World.*]

Churches to-day need nothing so much as a clearer view of what they are in the world for. Is it simply to sustain an institution, even at a poor dying rate, to keep the bills paid if possible, to get along, on the whole, as well as the church on the opposite corner? Or is it to be a channel through which the love and grace of God as revealed in Christ shall flow into many lives? We have only to state the alternative to be sure of the answer which hearts, touched to any degree with Christ's thought for men, will give. And yet, is a passing missionary to blame, or is the average outsider to blame, if he gets the impression that many a church is more absorbed in considering what it shall do to be saved than what it can do to save others?

[*Pacific Christian Advocate.*]

Suppose we were to tarry with the Master alone until we did in truth love people without dissemblance,—honestly, really love them; would it be difficult for us to go out and show our love by our deeds? How often we are greatly interested in having people accept our theories and believe our preaching and try to overawe them to believe as we do by our strong arguments and vehement exhortation, when it would be vastly more effective if we would simply transparently love them; bless them with our love and show it in our deeds. Men tire of the service of the lips and the proclamation of the tongue, but they never weary of loving deeds.

[*The Christian Work and Evangelist.*]

The old gospel will continue to be preached in all evangelical pulpits, and the Book of books will remain the inspired Word which [illegible]

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1; six copies to one address, $5; twelve copies to one address, $9.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church.—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

The Publishing Society announces that the supply of the List of Members of The Mother Church has been exhausted, and that no additional copies will be printed for the present.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

Terms of Sale, Postpaid to any Address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, Mexico, and Cuba, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

According to a decision by the Commissioner of Patents, any label bearing the inscription, "Guaranteed under the pure food and drug acts, June 30, 1906," where such inscription is intended to imply that the Government is responsible for the purity of the goods, will be refused registration. It is held by the officials that the Government simply accepts the assertion of the manufacturer that the goods are pure, and then investigates.

Vermont has contributed $25,000 and New York $50,000 for the celebration, July 4-9 next, of the tercentennial of the discovery of Lake Champlain. The events will center on successive days at Crown Point, Ticonderoga, Plattsburg, Burlington, and Isle La Motte, the first day, Sunday, being marked by religious services in the various towns.

At a recent dinner at the White House, at which representatives were present from the cabinet and from labor organizations, there was an after-dinner discussion of labor in its various phases and desires, and especially in regard to legislation. It is thought that some of its fruits may be embodied in the next message of the President.

The Government has brought six suits against the American Sugar Refining Company to recover forfeitures and customs duties amounting to $3,624,121 on sugar delivered at the Havemeyer and Elder refineries in Brooklyn during the last six years, on charges of alleged fraud in weighing the shipments.

The State of Ohio, through its ouster case brought at Lima, O., against the subsidiary companies of the Standard Oil Company, is seeking to annul the charters of the Ohio Oil Company, the Solar Refining Company, and the Buckeye Pipe Line Company, on the ground that they constitute a trust.

Receivers have been appointed for the Municipal Traction Company, the holding company of the Cleveland Railway Company. A court decision held that the holding company was insolvent and that its franchise had been revoked by the referendum in the recent election.

The senior vice-president of the New York Central Railroad lines says that the railroads, after a careful review of their tariff sheets and a comparison of figures, have agreed to accept a three per cent increase in freight rates instead of the ten per cent as at first announced.

The approval of the Navy Department has been given for the construction at Pearl Harbor, Hawaii, of the largest dry dock in the world. It will be eleven hundred feet in length and will form a basis for the maintenance of naval efficiency in the Pacific.

As the imposition of a tax on imported works of art has not netted the revenue expected, it is likely that the tax, which was not intended for protection, will be removed.

The 26th annual meeting of the American Ornithologists' Union has just been held in Cambridge, Mass., with an attendance of about two hundred delegates.

The question of a nine-o'clock curfew law is being agitated in Chicago by a citizens' committee and by the pulpit.

International.

The International Institute of Agriculture, which has the hearty sanction of King Victor Emmanuel of Italy, inaugurated its labors at Rome in a meeting attended by delegates from forty-six of the countries that have signified their intention to participate. The aim of the institute is the creation of an international and authoritative bureau of information as to all statistics which affect the supply and demand of raw material. While some countries are already provided with systems for obtaining such statistics, it is contended that no separate national system can attain either the thoroughness or the authority of a great international center of information supplied officially by all the great producing nations. It is hoped that the great fluctuations in the supply and cost of raw materials can be regulated.

Mr. Fisher, one of the radical labor leaders of Australia, will form the new Australian cabinet. The House defeated the premier, Alfred Deakin, on the division. The Laborites withdrew their support because the government has not pushed labor measures radical enough to suit them. This will be the second time the Labor party has been in power in the Australian Federal Parliament. J. C. Watson, another of the labor leaders, was premier for a short time in 1904.

Winston Spencer Churchill, president of the London Board of Trade, is making a supreme effort to prevent future disputes in the cotton trade. To this end he has invited the representatives of every interest concerned to meet him in conference at the Board of Trade and discuss the question, on the understanding that the government will bear the expenses of any necessary inquiry, and that any resultant agreement should in a way be binding to all parties.

In a book just published by Prof. Luigi Righetti of Italy, a closely reasoned argument is presented which declares that Canto XI. of Dante's "Divine Comedy" is an interpolation. This would leave thirty-three cantos for the whole poem, and the argument finds much support in the fact of the great poet's well-known liking for the number three and its multiples. This view, if tenable, will greatly interest Dante scholars.

The Shah of Persia, it is reported, has notified the British and Russian ministers that he can convoke Parliament only on condition that the two ministers guarantee the safety of his life and the throne. The ministers were unable to accept the proposal, and the Shah definitely refused to revive the constitution. Moral suasion has been exerted from the outside and the Shah is changing his mind on the matter.

Simplified phonetic spelling is to be introduced in the public schools by M. Dougmergue, the minister of public instruction of France. This reform received the approval of the French Academy, the arbiter in all matters pertaining to the orthography and construction of the French language, so long ago as 1893, but has not heretofore received government sanction.

The installation on the throne of the new emperor, Pu Yi, and the naming of the era will take place, it is expected, on the Chinese new year, Jan. 21. The Emperor of China and the notable Empress Dowager have just passed away.

In New South Wales, during the past seven years, out of a total number of passengers carried on her railways of 258,620,836, only one person was killed in a railway accident.

Manila's new water system, constructed during a period of three years at an outlay of $2,000,000, has just been completed and put into operation.

King Haakon of Norway has headed the public subscription for Captain Amundsen's polar expedition with a donation of $5,000.

July 4 has been set aside as American day at the Danish Exhibition to be held at Aarhuus, Denmark, in 1909.

Industrial and Commercial.

The plant of the United States Steel Corporation at Gary, Ind., will begin the manufacture of steel on Jan. 1. At that time two of the gigantic furnaces will be blown in. The opening of the works will be gradual, one department at a time beginning operations.

About ten million dollars a year will be added to the freight revenues of railroads by the increase in westbound transcontinental freight rates, which become effective Jan. 1.

Since the beginning of its fiscal year, July 1, contracts have been made by the Boston and Maine Railroad for more than $3,000,000 worth of new equipment.

The attempts to reorganize the four pig-iron syndicates of Germany and weld them into one national body have finally failed.

The idle cars in the United States Oct. 30 were 110,912, a decrease of about five thousand within the fortnight.

General.

The workings of a telescope with possibilities of greater power than any now in use, were explained by the inventor, a Johns Hopkins professor, at a recent session of the Academy of Sciences at Baltimore. The fundamental principle of the new telescope is that a liquid surface, such as mercury, when set in rotation becomes concave, assuming the form of a perfect paraboloid, the form of surface best adapted to telescope mirrors. The mirror already constructed has a diameter of twenty inches, and consists of a shallow circular basin filled with mercury and mounted on a vertical shaft and set in rotation by an electric motor.

A substitute for marble, which answers many of its purposes satisfactorily, is made of a mixture of waste slag from blast furnaces and lime, pulverized, compressed, and then treated with carbonic acid.

In 1905 the production of olive oil in Italy reached a total of 90,134,800 gallons, while in 1899 it amounted to only one fourth that amount, so great are the fluctuations from various causes.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

GOOD CITIZENSHIP.

REV. WILLIAM P. MC KENZIE.

GOOD citizenship is fundamentally simple. The training for it is in the home, where fellowship in service may be ideally learned. The teaching regarding it which is most satisfactory may be found in the words of Jesus, "Whosoever will be great among you, let him be your minister." The ideal for life which makes most trouble is the common reversal of this which Jesus reprehended. "The princes of the Gentiles exercise dominion over them," he said. To-day men seek to boss or master others, but for whose benefit? Always for the advantage of the man who has control. So the motto of the undesirable citizen, or of the selfish one in the home, is something like this, "Don't do good, but get good from others." This reverses the Christian ideal for life explained by the Master, who said of himself, "The Son of man came not to be ministered unto, but to minister." In the ideal home, or the ideal State, every member thereof has some unique capacity for service, some ability to be useful and minister to the welfare of all. If each one proffers his unique service, it means that the whole work necessary for the well-being of the community is easily completed; each man bears his own burden, and is rewarded by "the joy of the working."

There is a passage in that modern morality play, "The Servant in the House," which always thrills the observer. A working man whose life has been embittered by his resentment against injustice, whose hatred of other men is vitriolic, whose religion is a form of socialism, which he defines as the grouping of some men in antagonism to the rest of mankind, meets for the first time in his life a man who is an actual Christian. As the true ideal of fellowship in service is unfolded in the conversation, the simple truth comes as a revelation to the poor man who had been living in the hell of hatred. His face lights up as the glory of comradeship dawns upon his thought. He sees that his despised work has a place in the great whole of human good, and the innate dignity and value of the individual man becomes clear to him. Immediately he is inspired with good will. He sees how the labor of others is building as it were a temple, and if some are working in high places fashioning what is beautiful, for love's sake, then he, too, must be at work for love's sake, even though all he can do is to dig sewers. Some one must do this service for the common welfare, and he sees how service brings him into the brotherhood of man. From that moment he is a citizen to be desired in any community. When this teaching, the teaching of Christian Science, is universally understood, then good citizenship will be universal, because the love that "thinketh no evil" will everywhere prevail, and men will "love as brethren, . . . not rendering evil for evil, . . . but contrariwise blessing."

But in what practical way is this movement able to assist those who at the present time are trying to better human conditions? It may be said in reply that all the practical results of Christian Science demonstration, as for instance the restoration of the insane, the reform of the intemperate, or the recovery of the sick, may be measured in terms of good citizenship. When individuals are incompetent for usefulness through illness or error, it generally means that others must be withdrawn from service to care for them; and that the efficiency of a circle of friends is limited to some degree by their anxiety or grief. When therefore the distressed individual is liberated from disease, vice, intemperance, drug-intoxication, insanity, or whatever his defect may be, it is easy to see that the efficiency of many is increased. They can be more serviceable in working for the welfare of the whole body-politic.

If we were to examine the conditions in a home where there is an invalid mother, we might see that the communal welfare was affected to an appreciable degree by the necessary maternal neglect of the children. If it were in a home of wealth, they would be under the care of the many strangers employed for service, without the compensation of the mother's tenderness; if it were in the home of a working man, then upon the children themselves would be laid the burden of premature responsibility. In either case the rounded development of the growing citizens would be impossible; there would be a certain incompleteness of opportunity, and as a consequence deep-lying defects of character. Consider, then, the practical result of the ministry of Christian Science in the many cases where healing has been brought to those secluded from their proper work in life by long-continued invalidism. The healing itself is merely the sign of a change from despair and sorrow to the joy of living, and the acceptance of God's love as law is the basis of the change for the better. How much better fitted, then, is the restored invalid for the duties of motherhood, from the fact that she can govern her children from the standpoint of divine law and teach them that intelligent obedience to the universal divine Principle which can make them citizens of the world,—not cosmopolitan merely, but brotherly-minded to all.

Then there is a common error which at times separates men from use in a community as well as from service in the home. Some unspoken bitterness, some latent unhappiness, some sense of loneliness or despair, or it may be mere recklessness, induces men to put themselves under the influence of stimulants, strong liquors and stupefying drugs. The toxic effects of these preparations become gradually manifest. The user of them becomes less efficient, then unreliable, unreasonable, even brutal. If he has a home, he wrecks it. If he has a service to do for others, he fails in it and has to be superseded. His condition is sad, but not for himself alone; there is the circle of friends to whom his case is a problem. The efforts expended in helping him are enough to start ten good men in the way of usefulness. In many cases of intemperance,

Copyright, 1908, by Mary Baker G. Eddy.

Digitized by Google

when friends are in despair, Christian Science has been honestly appealed to by the sufferer, and complete redemption has been wrought out. The man becomes once more a positive influence for good in the community as he does his work. Formerly he was an influence negative, for as the proverb says, "one sinner destroyeth much good." He not only left his own task unperformed, but interfered with the welfare and the happiness as well as the usefulness of others. We can see, then, that the redemption of even one man ministers to good citizenship.

The problem which has been touched upon is a social question as well as an individual problem, and in the interests of good citizenship many efforts are being made to correct the error. At one extreme is the destructive method of warfare, at the other is the redemptive method of healing, and there are all grades of effort between. Time will decide as to the best method, as results appear; and no doubt men who now believe in war, who think that they should hurt, injure, and distress the wrong-doer, may accept the redemptive method.

A single case may be cited of Christian Science work. A man who kept a saloon—it might by some have been termed a gambling den—found his heart wrung with distress over the sickness of his child and the invalidism of his wife. No promise of relief was given him by his doctor, and finally he made his despairing appeal to a Christian Scientist. He declared that he knew he was not worthy to ask for himself "the prayer of faith," but he asked it for the innocent child, and for the woman who he said had always been good. The practitioner responded to his appeal lovingly, and explained that God is "no respecter of persons" and therefore excludes none who honestly seek for betterment. It is enough to report that healing came to the home, and to the man, and that a new ideal of life was accepted by him. He ended at once the occupation harmful to others, and found work which was positively useful, thus becoming a citizen helpful to others.

In one community, in one year, four saloons were closed by Christian Science healing. Throughout the land there are cases many, not only of the healing of victims of the unwholesome traffic, but of those who believed that their living depended upon catering to the appetites for intoxicating liquors induced in other men. When the change is wrought by healing, there is no bitterness engendered, there is no disaster involved. The better ideal dawns as the light comes, and life is renewed by love as by the power of God.

The Leader of the Christian Science movement has taught by example so many of the offices of the good citizen that it was no wonder the community in which she lately lived bore testimony to the reversal of that old saying quoted by Jesus, "A prophet is not without honor save in his own country, and among his own kin." In her case there was honor given, and there was poignant regret at her removal. She had interested herself in all that made for the common welfare, from the making of good roads to the building of a church; she planned that the little children should have shoes, as well as that the sick should have healing. We may quote her own words, taken from "Miscellaneous Writings" (p. 110), "What grander ambition is there than to maintain in yourselves what Jesus loved, and to know that your example, more than words, makes morals for mankind!"

The duty of Christian Scientists as to "taking part in national, state, and municipal elections," has recently been editorially discussed in the *Sentinel*. The propriety of exercising the right of suffrage so as to have some share in the government of the country in this way, seems self-evident. The right act of one man is of importance to all men. John Stuart Mill, writing "On Liberty," said: "The initiation of all wise or noble things comes, and must come, from individuals, generally at first from some one individual. The honor and glory of the average man is, that he is capable of following that initiation; that he can respond internally to wise and noble things, and be led to them with his eyes open." To say that political conditions are so impure that the Christian workers should keep aloof, is like saying that a man may be so sick that none should go near to help him. The Christian Scientist would feel immediate compassion for a man helpless and sick, and would initiate better conditions for him, beginning with healing. Likewise he may in his community be the initiator of better local conditions. When some one shows the right way, many are ready to walk in it.

THE HEALING OF A DEMONIAC.

ETHELYN ANN GILL.

THE scientific sense of the healing recorded in the fifth chapter of Mark which has come to me in the measure of my present understanding of Christian Science, I trust may prove as valuable to some one else in the healing of mental disease as it has been to me. The man whom Jesus healed was evidently suffering from the belief in insanity, which is often the result of unsound or unspiritual reasoning. He "had his dwelling among the tombs,"—in a material sense of life: and we are told that "no man could bind him, no, not with chains." It seemed that no material agency could heal him, not even the most powerful. The record goes on to say: "And always, night and day, he was in the mountains, and in the tombs, crying, and cutting himself with stones." This discontented and unhappy mortal refused to leave his self-righteousness, and continued in the false sense of life typified by the tombs, all the while wounding himself by his selfishness and stubbornness, or belief in matter as substance.

But we are told that "when he saw Jesus afar off, he ran and worshiped him." Although he discerned but faintly the Christ-consciousness which Jesus represented, he was attracted to it and loved it, and then began a struggle which ended in the triumph of Truth. Mortal sense "cried with a loud voice, and said, What have I to do with thee, Jesus, thou Son of the most high God? I adjure thee by God, that thou torment me not." This vehement demand to be let alone was made as the healing power of the Christ began to be felt; for mortal sense was stirred to its depths, and enraged almost beyond endurance by the knowledge of its own nothingness. Christ Jesus had said, "Come out of the man, thou unclean spirit. And he asked him, What is thy name? And he answered, saying, My name is Legion: for we are many. And he besought him much that he would not send them away out of the country." It would appear that Jesus gave no heed to the demand or evidence of evil, but continued his work of healing the man, though false sense seemed tenaciously persistent.

The story goes on: "Now there was there nigh unto the mountains a great herd of swine feeding. And all the devils besought him, saying, Send us into the swine, that we may enter into them. And forthwith Jesus gave them leave. And the unclean spirits went out, and entered into the swine: and the herd ran violently down a steep place into the sea, (they were about two thousand;) and were choked in the sea." As spiritual discernment awakened in the man's consciousness, he saw that the multitude of selfish and sensual thoughts proceeding from self-righteousness and the false sense of life were as the "great herd of swine feeding;" and as this discernment increased, it was made plain that the "unclean spirits" and "devils" were one and the same with those selfish and sensual thoughts, or swine, which when detected and cast off by reformation are destroyed; and thus the man was healed. These "devils," or evils, were detected and cast out by the Christ-

Digitized by Google

consciousness, but the man was not healed until he himself saw the old self, or mortal mind, externalized in all its swinish nature, and was willing to cast it off, by denial and repudiation, into the sea of nothingness. Mrs. Eddy says, referring to this particular case of healing, "The Scripture seems to import that Jesus caused the evil to be self-seen and so destroyed;" and elsewhere she says that "the way to extract error from mortal mind is to pour in truth through flood-tides of Love" (Science and Health, pp. 411, 201). Much helpful thought along the same line may be found through the study of "Miscellaneous Writings" (pp. 107, 112), in which it is made clear that error is no part of man's true consciousness.

The record goes on to say that after the man was healed "they [Matthew says "the whole city"] come to Jesus, and see him that was possessed with the devil, and had the legion, sitting, and clothed, and in his right mind." Those who had seen his previous condition, and had believed in its reality, saw that same man reflecting peace, good thoughts, and sound reasoning. To complete this beautiful incident in Jesus' ministry, it is said that the man besought the Master that he might go with him; but Jesus directed his thought to God, and told him to return to old and possibly neglected duties and relationships, there to express his thankfulness and to use his newfound sense of Spirit's supremacy.

NEW WINE IN OLD BOTTLES.

CHARLES T. ROOT.

MEN usually admire qualities in others which contrast with their own. In illustration of this rule we may admire the courtesy and restraint with which many voice their dissent from those who hold that Christian Science has succeeded where its philosophical predecessors, from Zeno down, have failed, and that the "ancient antinomies" are actually solved or dissolved. When the writer was in this attitude toward the postulates and deductions of Christian Science, he stayed there with little visible change for long years, and it seemed quite impossible for him to exclude acidity and ridicule from his remarks on the subject. To a person in this condition of thought it is often very difficult to convey any adequate or satisfying concept of the teaching of Christian Science. Did one ever see or try to see the really beautiful woman-profile in the full moon? Once discerned, it is a marvel to the percipient that all observers do not instantly recognize it as the most salient object in the lunar picture; yet the writer has known one to spend most of an evening describing and locating it to a lady who seemed very desirous to see it, and who endeavored to follow his every direction, but who at the end of the lesson regretfully declared that, to her vision, there was no sign of a definite outline in the lights and shadows of the unclouded disc.

The only point of this digression is the illustration of the fact that perception cannot be forced. To one the recognition of this revolutionary truth of Christian Science comes suddenly, to another very gradually, to others not at all, on this plane of consciousness; but, whether soon or late, it has to be "spiritually discerned" if discerned at all. Therefore any requirement that Christian Science shall recognize "the data of experience" (by which people mean, presumably, the impressions of our apparent commerce with an environment in which we appear to be immersed and which is characterized by suffering, pleasure, strife, beauty, squalor, fear, accident, lack, sin, decay, and death) faces the inquirer directly away from Science and effectually prevents his approximating its standpoint. Before any data can be safely laid down as a foundation for a structure of reasoning, their validity must be fully established, and by evidence other than that of the material senses, which constantly betray their own fallibility.

If we want to use the "data of experience" as a basis for inductive reasoning, we must first satisfy ourselves of their genuineness by deductive reasoning. Have we, now, any immovable hook on which to hang our deductive chain? Yes, surely; one, and but one, viz., God. The great majority of intelligent people are in agreement upon the statement that God is Spirit, Mind, Life, Truth, Love, eternal, infinite, omnipotent good, the only cause and creator. If that is so, it furnishes all a common and sufficient premise (and some of us have to go back to it for a fresh start a dozen times a day); and they have only to make sure that each successive deduction therefrom is correctly drawn, to be able to go as far as they like, without fear of finding some grisly giant of an antinomy disputing their path.

If God is infinite, He is not in the universe: the universe is in Him, or expresses Him; and there is nothing anywhere else, for infinity has no outside, and there is no such thing as finity or limitation. If God is the only cause and creator, "there can be no effect from any other cause" (Science and Health, p. 207), and without Him nothing exists. If God is Spirit, His creation must be purely spiritual, for every effect must correspond to its cause, and matter must be an erroneous concept. If God is Life, infinite and eternal, His negation, death, is inexorably excluded from the category of reality. If God is Truth, He knows and can know no untruth or falsity, and all that is of God is eternally true. If God is Love, He is ever-loving, and the envy, hatred, jealousy, wrath, etc., of human sense is forever removed from His consciousness and manifestation. If God is omnipotent, He is not merely the strongest among a plurality of powers, there can be absolutely no other power, either allied or opposed. If God is good, then nothing in His creation—the universe, including man—can be otherwise than good, and everything that *is*, not *seems* to be, is now and always good.

Now, if there is no fatal flaw in these deductions, we are ready to test in their light the "data of experience," these being largely experience of evil, limitation, sickness, decay, death, and all inseparably interwoven with matter. Are these latter, or any of them, the result or effect of Spirit? of Life? of Truth? of Love? of good? Can they or any of them really be, in the infinite presence in which the real man lives, moves, and has his being, and into which can enter nothing which defileth or worketh abomination or maketh a lie? If not, is there any place—necessarily outside of infinity—where they can really be? If not, again, does he talk "platitude" or "nonsense" who predicates their nonentity or unreality, and avers that they therefore can be obliterated, as all mistakes can be when detected and when the truth about the points involved is known? If those who thus aver find that, by holding steadfastly in thought the original proposition and its corollaries, they can, by this means alone, in the measure of their understanding, destroy discord and bring out harmony, objective and subjective, for themselves and for others, can they doubt the soundness of the Principle and rule by the conscious application of which they get their results?

All mankind groan and travail under a seeming ten-thousand-ton weight of race beliefs, which appear to make it very hard to reach up to spiritual perception. That old apple, recommended to our earliest grandparents, has been constantly served up to all the generations, till men hardly know the taste of any other food. It was, and is, forbidden fruit. It is the knowledge of (belief in) good and evil, a false dualism which breeds antinomies. Its sponsor is described by a high and accurate authority as "a liar, and the father of it;" and again, as a liar in whom the truth is not. To get rid of the incubus of race beliefs one must sooner or later utterly renounce this diet of falsity, and rely for nourishment upon "every word that proceedeth out of the mouth of God." Then, and then

Digitized by Google

only, will one be prepared to begin the accumulation of "data of experience" which, being of the nature of the headstone of the corner, can be trusted as the foundation upon which one may build as high as heaven, without danger that a phalanx of antinomies may intervene to confuse the builders and topple over the work.

All these elementary truths of Christian Science may perhaps only suggest a lot of questions, of the nature of those respecting which Emerson once said, "I am too young by some centuries to answer," and every truth-seeker is counseled to read thoughtfully and persistently the text-book of Christian Science, Science and Health by Mrs. Eddy, for that exposition and explication of Christian truth which is to-day proving its value by bringing health and happiness to unnumbered people all over the world. Meanwhile it is well to remember that when Mrs. Eddy made her stupendous find and then wanted to tell people about it, she had a difficult task to perform. She had a new spiritual story to tell, and nothing to tell it with but a language built up by erroneous thought for erroneous use. She had a lot of new wine of the very highest quality, and not a thing but old bottles to put it in. The writer used to laugh at her efforts before he found out the quality of the wine; but now, whenever he tries to do a little decanting himself, he marvels at the amount she was able to pour into those narrow-necked vessels without spilling. Now, this wine has stretched and straightened these old bottles quite a lot, and they look very queer to the pomologist, as they bulge with their new contents; all of which the average reader will come to understand more fully when perchance at no distant day he tries to phrase accurately for himself some of these facts of being.

"KEEP MY COMMANDMENTS."

EDITH BULLARD DUDLEY.

IT is sometimes said in criticism of Christian Science, that those who follow its teachings have no authority from the Bible to heal the sick. Furthermore, that the command of the Master to heal the sick was addressed to the disciples only, although Paul and Barnabas, also the seventy, healed the sick, in the way of Christ's appointing. If Christians are not to accept all the teachings which were given to the twelve disciples, are we not then to take for our guidance and for our comfort other lessons which were given to the twelve alone?

We have often heard faithful pastors comforting their flock with these encouraging words of Christ Jesus: "Are not two sparrows sold for a farthing? and one of them shall not fall on the ground without your Father. . . . Fear ye not therefore, ye are of more value than many sparrows;" and yet these loving admonitions were spoken to the twelve as he sent them forth to herald the glad tidings to the "lost sheep of the house of Israel." Evangelists urge sinners to repentance by quoting these words of Jesus: "Verily I say unto you, Except ye be converted, and become as little children, ye shall not enter into the kingdom of heaven." These, however, were spoken to the twelve as the Master called them about him in the house at Capernaum after the transfiguration.

Upon a mountain of Galilee, when alone with the eleven, Jesus commanded them: "Go ye therefore, and teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost." Was the "new commandment" given to the eleven, after they had partaken of the passover (Judas having already gone to make his compact with the enemies of the Master), "That ye love one another; as I have loved you, that ye also love one another;" and also the promise, "He shall give you another Comforter," for that little company of faithful followers only? Are we to understand that the "many mansions" spoken of in this same 14th chapter of John, were promised to the eleven only?

Christians at this day would hardly be satisfied to select only general teachings of Jesus, and believe that the consoling and blessed promises which have comforted them in many trials were only for the twelve. Through the teachings of our faithful and beloved Leader, as set forth in our text-book, "Science and Health with Key to the Scriptures," and by endeavoring not to "hide the talent of spiritual healing under the napkin of its form, nor bury the *morale* of Christian Science in the grave-clothes of its letter" (p. 367), and by following all the commands of Jesus, Christian Scientists have proved the forever-abiding of the Comforter, showing that all the teachings of Christ Jesus were for all of his followers as surely as was the command: "Go ye into all the world, and preach the gospel to every creature."

"THE GENIUS OF CHRISTIAN SCIENCE."

GEORGE C. DUFF.

WEBSTER defines humility as lowliness of mind. To the general mortal sense it is associated with poverty and other threadbare inexcusable weaknesses much in need of a great sustaining hope. It is, however, a note, deep and full, that rings with no uncertain sound throughout the Scriptures, from Genesis to Revelation. Every noteworthy character described therein is clothed in humility and obedience, the handmaids of wisdom. Although the word is seldom used by our Leader, all her works breathe forth the very spirit of true humility, and in "Miscellaneous Writings" (p. 356) she refers to it as "the genius of Christian Science."

Moses was the meekest of men, but likewise the greatest of prophets. His exhortations to the children of Israel are couched in every vein from the pleading to the emphatic command, "Hear, O Israel." Humble obedience ever brought happiness, peace, and prosperity, while rebellion as surely brought defeat, poverty, suffering, captivity, and death. In the 8th Psalm, that scientific gem of purest water, the psalmist strikes the note true and clear. "What is man, that thou art mindful of him? and the son of man, that thou visitest him?" In another place he sings of its rewards: "For the Lord taketh pleasure in his people: he will beautify the meek with salvation." Solomon says, "When pride cometh, then cometh shame: but with the lowly is wisdom." Daniel worshiped God with true humility, and was accounted "a man greatly beloved." Nebuchadnezzar, king unto all people, nations, and languages that dwelt in all the earth, mentally decked himself in tin and tinsel and said, "Is not this great Babylon, that I have built for the house of the kingdom by the might of my power, and for the honor of my majesty?" In the same hour that he uttered this pompous boast, the chronicle reads, "he was driven from men, and did eat grass as oxen, and his body was wet with the dew of heaven, till his hairs were grown like eagles' feathers, and his nails like birds' claws." When, however, like the prodigal son, he came to himself, and learned humility, the glory of his kingdom was returned to him and excellent majesty was added. Briefly but sincerely he expresses his gratitude for the bitter lesson learned, when he says, "Now I Nebuchadnezzar praise and extol and honor the King of heaven, all whose works are truth, and his ways judgment: and those that walk in pride he is able to abase."

Said Christ Jesus: "Come unto me, all ye that labor and are heavy laden, and I will give you rest. Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls." Jesus had

Digitized by Google

just prayed, "I thank thee, O Father, Lord of heaven and earth, because thou hast hid these things from the wise and prudent, and revealed them unto babes,"—unto the humble of heart, the trustful, the innocent and pure. Christ Jesus lived truth because it was his own, and taught that if we would know truth, we must also make it our own by living it. He was humble, because he possessed the fulness of the consciousness of the ever-presence of God his Father. He was infinite good expressed, and he not only reflected continually this goodness, but he saw the perfect reflection of God in all creation around him; as Mrs. Eddy says, "Jesus beheld in Science the perfect man, who appeared to him where sinning mortal man appears to mortals" (Science and Health, p. 476). Jesus was humble; no material mist separated him from his heavenly Father, but to the full he possessed the seeing eye, the hearing ear, and the understanding heart. Said he, "The Son can do nothing of himself, but what he seeth the Father do: for what things soever he doeth, these also doeth the Son likewise."

He who is meek and lowly in heart is not despised or contemned, rejected or spurned, but is ever comforted and blessed by "the Father of lights, with whom is no variableness, neither shadow of turning." 'Tis they that watch and wait; that have nothing of their own; that ever listen for the loving voice which directs and guides; that keep their mentality pure and true, susceptible to every perfect note which, winged with love, blends with its affinity in sweet harmonious oneness—'tis they who know the peace, the joy, the wondrous bliss that comes to the truly humble, the heart that knows the ever-presence of divine Love.

[Written for the *Sentinel*.]

THE VISITANT.

MARY J. ELMENDORF.

MANTLED in might, Love knocks at your gate—
Love urgent of voice and tender of eye.
Think not it is night and He comes too late;
'Tis always morning when Love draws nigh.

Though bleak is the blast on the lonely wold
And the fickle sky has forgotten the sun,
Lone watcher, nor gray is the hour nor cold;
Love and the glory of summer are one.

Though the fangs of fear and smothery woe
You feel, though wounds and memories smart,
Throw open your gate that you may know
Content and the voice of a harp in your heart.

Loosen the latch and lower the bar
Which shut in gloom and the ghosts of sin;
Love waits to lay the light of a star
And the visioned joy of wisdom within.

From the pleasance of peace at the call of your need
Love comes on swift and exultant wings;
Throw open your gate and His message heed,
For heaven is ever the gift Love brings.

THE CHRISTIAN SCIENCE MONITOR.

The sale price of *The Christian Science Monitor* will be two cents each copy, and the subscription price in the United States (except where delivery is made by carrier), Canada, and Mexico will be five dollars for one year, or three dollars for six months; in all other countries eight dollars and four dollars and fifty cents respectively. On lots of one hundred or more, one dollar and twenty-five cents a hundred. Subscriptions and orders may be sent to The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Mass., or through local Reading Rooms.

SELECTED ARTICLES.

[Rev. G. A. Kratzer in the *Fitchburg* (Mass.) *Sentinel*.]

One of the main stumbling-blocks to our critic is the fact that Christian Science holds to the unreality of sickness, sin, matter, mortal mind and mortal bodies. To the world, all these things are realities; but St. Paul tells us, "God chose what the world calls foolish to put its wise men to shame, and God chose what the world calls weak to put its 'strength' to shame, and God chose those whom the world calls low-born and beneath regard—mere nobodies—to put down its 'somebodies'" (Twentieth Century New Testament). Christian Science, though counted by the world "foolish," "weak," and "beneath regard," is daily "bringing to nothing" the supposed realities of sin and disease by absolutely destroying them; and, in time to come, the advancing understanding of Christian Science will fully demonstrate the unreality and nothingness of matter. St. John foresaw that time when he wrote: "I saw a new heaven and a new earth: for the first heaven and the first earth were passed away." God spake through the prophet Isaiah: "I create new heavens and a new earth: and the former shall not be remembered, nor come into mind."

Our critic objects to Christian Science because it does not believe in the reality of the devil. Jesus himself said, concerning the devil: "He . . . abode not in the truth, because there is no truth in him, . . . he is a liar." It is to the credit of Christian Science that it does not believe in a lie or a liar. If there is no truth in the devil, there certainly is no reality in him; for only the true is real. Falsehood is untrue and unreal, and can be proven so, sooner or later. In using the phrase, "science falsely so-called," St. Paul did not refer to Christian Science, but to that so-called science which is based on a mortal sense of things that are seen. The things that are seen, St. Paul informs us, are temporal. So, accordingly, must be the knowledge, or so-called science, based on them. Knowledge which is only temporary is not real or true, according to well-considered definitions of truth and reality. True Science has to do with the things which are eternal; and this is Christian Science, which the so-called science, based on sense testimony, always has opposed, and now opposes, as it must from its nature, "because the carnal mind [the mind based on sense testimony] is enmity against God."

[Royal D. Stearns in *The Granger*, Auburn, Neb.]

Christian Science is based solely upon the Bible and the teachings and works of Jesus. Jesus established no form of religion, no church organization. He did say, "The hour cometh, when ye shall neither in this mountain, nor yet at Jerusalem, worship the Father. . . . But the hour cometh, and now is, when the true worshipers shall worship the Father in spirit and in truth: for the Father seeketh such to worship him." Christian Science points out that the mission of Jesus was to make plain the relation of man to his creator. He not only explained to mankind the fundamental truths of being, but he exemplified them as well, in his life. He abundantly demonstrated his power by causing the lame to walk and the blind to see; the lepers were cleansed, the dead were raised, and hosts of the people whom he taught believed and gave God the glory. Christian Science teaches that we must obey the injunction of the great apostle, "Prove all things; hold fast that which is good." Progress in Christian Science is based solely upon demonstrable experience.

Christian Scientists believe in God, in the divinity of Christ, in the inspiration of the Scriptures, in unceasing prayer, in the highest morality of thought and conduct, and in the practical possibility of a present overcoming of

Digitized by Google

sin and all its effects through spiritual apprehension of the Christ-teaching. There is doubtless a great misapprehension touching the correct application of the Christian Science Principle and rules, and for that reason many inaccurate statements are made concerning its teaching, but its unqualified demand is that mankind go back in Christian experience to the simple Christ-teaching, wherein the command is given: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy strength, and with all thy mind; and thy neighbor as thyself."

[Frederick Dixon in *Richmond and Twickenham Times*, Richmond England.]

To the Christian Scientist the healing of physical disease is only an incident in a struggle with everything that is unlike God. Christian Science is the attempt to give back to the world to-day that supreme consciousness of God —that is, of truth—which made the first century of the Christian era the age of miracles. Jesus said, "Ye shall know the truth, and the truth shall make you free." It is the persistent effort to realize this truth, and to abide in the full consciousness of its power to free the world from the fetters of sorrow, and sickness, and sin, that constitutes praying without ceasing. "The prayer," writes Mrs. Eddy, in the opening words of Science and Health, "that reforms the sinner and heals the sick is an absolute faith that all things are possible to God,—a spiritual understanding of Him, an unselfed love." As man succeeds in praying this prayer he is enabled to do the works which Jesus said could be done by all those who believed in him; and there comes to him "the peace of God, which passeth all understanding."

The exact position occupied by healing in the teaching of Christian Science may be seen from this, and it will be found to be the exact position given to it in the teaching of Jesus. When, however, our critic went on to declare that as a result of this teaching people "were dying all around," she committed herself to a statement which she made no attempt to prove, and which is absolutely untrue; in a word, she assumed the entire premises, and naturally ended by begging the entire question. If a patient dies under Christian Science treatment, there is no person legally authorized to give a certificate, an inquest follows, and the principal witness is a medical man, who is *ipso facto* a disbeliever in Christian Science treatment. This method was pursued quite recently with regard to homeopathy, and with results very similar to those which to-day take place when Christian Science treatment is called in question. As the practice of homeopathy spread, however, the process of baiting grew less and less popular. To-day thousands of homeopathic practitioners are giving certificates instead of being hounded through the police courts.

Again, by what process of logic does the critic arrive at the conclusion that the death of a patient under Christian Science treatment is a disaster due to the failure to call in an ordinary medical practitioner? To prove her statement more than the merest *obiter dictum* she would have to show the percentage of deaths under Christian Science treatment in comparison with those under ordinary medical practice, and even this would leave out of sight the important fact that a very large percentage of the cases treated in Christian Science have previously been reported as incurable or hopeless by the physicians in attendance, and have been brought to Christian Science only for that reason. The medical profession contains many hundreds of brilliant and devoted workers, but certain members would give proof of greater generosity and wisdom if they displayed less alacrity to go into the witness-box and affirm their ability to have succeeded in a few instances where Christian Science treatment has failed, seeing that people are dying by hundreds under ordinary medical treatment in precisely similar conditions.

[Editorial in the *Calumet Index*, Chicago, Ill.]

If the pastor of any one of the thirty-five churches in this vicinity should take the position in his pulpit that the healing of the body would one day be one of the distinct departments of church work, his position would be regarded as little short of revolutionary. Many of them would not be allowed to retain their pulpits, others would soon feel themselves out of tune with their parishioners. And yet we are convinced that many of them, in the depths of their own being, feel that this work is coming. We make bold to say that as soon as that ultra-conservatism, characterized in the early days of Christianity as bigotry and prejudice, and which has always been the greatest enemy of any forward movement in church work,—as soon as this can be broken down so that the churches are led to look this question in the face, there will come a quickening among church people on the subject of saving the body to last its allotted time, as well as saving the soul for all time.

All that should be necessary to convince any reasoning person of the possibility of healing a bodily ailment without the intervention of medicine, is one clear and convincing example of such healing. And yet who does not believe that one such example has not been found? One single message transmitted over a wire settles the question as to an unlimited number of messages. One word flashed through space by wireless settles the question as to numberless thousands of words.

It is not necessary to argue the question as to whether God does the healing. So long as we may be convinced that God does not stand in the way of healing, it becomes a very fitting work for the church to do, once the church is convinced that it can be done. It is not even necessary to prove that all disease can be cured by this means in order to warrant the effort to cure those diseases which can be made to yield. If a missing lung cannot be restored, but the red blood can be made to course again in a palsied limb, has not a great work been accomplished, which may lead to a still greater work?

[Rev. Robert J. Burdette, D.D., as reported in *Los Angeles* (Cal.) *Times*.]

I do not decry, nor do I in the lightest way oppose, the gifts of healing; but I do say they are very meager, and poor, small, starving gifts, as we see them and use them to-day. I do not forget, and I want none of you to forget, that Jesus promised his disciples that they should perform wonderful works. But we must not forget that the power to do these mighty works is predicted upon our absolute, soul-absorbing, unquestioning belief in Jesus Christ as the Son of the living God and the Saviour of men.

We cannot do mighty works in his name, so long as we deny the lightest of his claims about himself. I do believe —more than that—I know that the day will come when the tabernacle of God will be with men, and He will dwell with them, and they will be His people, and He will be their God. "And God shall wipe away all tears from their eyes, and there shall be no more death, neither sorrow, nor crying; neither shall there be any more pain." O golden day of God! But that will be when all the world has been drawn to Christ; has learned to believe in Christ as we believe in God. I tell you, my children, when we begin to work miracles of healing in the name and power of the exalted Christ, we won't differentiate between functional and organic diseases, any more than the apostles did. We'll open the eyes of the blind; we'll restore the withered arm; we'll cure the incurable leprosy; we'll make the lips of the dumb vocal

[Lindley Fogg in the *Sandusky* (O.) *Register*.]

With reference to the editorial comments as to the cure of locomotor ataxia through Christian Science, it should be stated that Christian Scientists do not claim that a cure is effected through their treatment in every case, for they have not yet learned how to apply the Principle of this Science with such certainty as to avoid an occasional failure: but they have satisfied themselves through investigation and their own personal experiences that there have been many cases of permanent cures of such diseases through their system of healing, and they have abundant confidence that similar results can be secured in other cases through the same method of treatment.

Christian Science does not teach that disease "is only an imagination." It teaches that sickness is a solid conviction in the consciousness of the patient, and that it should be grappled with and cast out in the most effectual manner. Christian Scientists recognize sickness as a condition apparent to the physical senses, an emanation of the carnal mind which, according to St. Paul, "is enmity against God: for it is not subject to the law of God, neither indeed can be;" hence their denial that sickness is a creation of God, the divine Mind, whose works are good and endure forever.

[Edward H. Carman in the *Savannah* (Ga.) *Press*.]

Christian Scientists do not deny that Jesus Christ was the Son of God, but they accept the Master's own statements: "I and my Father are one;" "My Father is greater than I;" "My Father worketh hitherto, and I work." In explaining this oneness, Mrs. Eddy says (Science and Health, p. 361), "One in quality, not in quantity." This being true, Christ is the Son of God, the idea or expression of infinite Mind, manifesting God or good in deeds of love; and Christian Scientists so understand Christ Jesus to be the Son of God.

Our critic says that "Christian Scientists deny that there is any such thing as pain and sickness, but they cannot wave them away with such a magical wand." The apostle James said, "Resist the devil [or evil], and he will flee from you." Again, the beloved disciple, John, tells us that the mission of Christ "was to destroy the works of the devil." The four Gospels give abundant record of the works of the Master in destroying sin, sickness, and death, thus overthrowing evil (or the work of the devil) with good, through the divine law of Love. He thus proved that sin, sickness, and death were not creations of a good God, but were suggestions of the carnal mind, evil (or devil); that they were to be denied and cast out because they were not of God, therefore unreal to God or good, just as a mistake or error is no part of the principle of mathematics; the error corrected disappears, and thus is denied or made unreal.

This good minister is daily admonishing sinners to make sin unreal by turning to God,—turning away from sin, denying it a place in their consciousness, thus eliminating it from their lives; casting it out, resisting it, making it unreal. Christian Science says pain and disease are the effects of sin or ignorance of God's law of Love, and can be, must be, denied, resisted, and cast out—made unreal through an understanding of God's law of Love, of that Mind of Christ which heals all our diseases. Holding to Jesus' command, "Be ye therefore perfect, even as your Father which is in heaven is perfect," is holding in thought the perfect concept or divine ideal, which in itself is denying that there is or can be anything but the divine All, God and His perfect idea.

Christian Scientists make no boasts that they do not get sick or that they do not die. There are thousands, however, living to-day who testify that years ago their days had been numbered by their physicians and friends, but that under the loving ministrations of Christian Science they were restored to health and friends, and daily and hourly they are thankful to God and to Mrs. Eddy for her revelation of Immanuel or "God with us."

[*The Outlook*.]

In nothing are men more misled than in the deference they pay to what is called the wisdom of age based on knowledge of life. To age belongs the reverence due to those who have gone through the strain and stress and upon whom the hand of time rests heavily, but age of itself has no authority; it often means mere piling up of insignificant years. The value of a year depends on the uses to which it is put; and a man may count a century as his own, but gather nothing from his life except a memory of prolonged insignificance. Nor is experience clothed with authority by reason of its antiquity; its authority rests on its breadth and sanity.

The so-called man of the world often assumes a wisdom which his whole life has denied; after refusing for long decades to sit at the feet of life as a pupil, he declares himself a prophet because his hair is gray. No judgment of life has authority unless it rests on the broad observation of a sane man. Mass of experience is of no importance; the man who repeats each day the history of the day before, though he live to be a hundred, is a mere child in knowledge. Quality of experience is the only thing that counts; that is to say, clear knowledge of a large area of life. The so-called man of the world is really a child in knowledge; he knows only a narrow strip of earth, and he is an uneducated observer even in the little acre on which he has lived. Nor does the long experience of races count unless it is broad and sane; for races, like individuals, sometimes depart for a generation from the highway of health and sanity and lose their power of vision. What they learn in these periods of disease is not the order of life, but the disorder in themselves; not universal truth from fundamental facts, but the phenomena of pathology.

The so-called experience of life to which we bow as to the wisdom of age is largely a diseased experience reflecting a distorted image of realities. A thousand years' observation by sick or half-sick observers adds nothing to our knowledge of the order of things, however much it may add to our knowledge of disease. The fact that men and women who have made living a mere chance to build and accumulate and organize pleasure into a profession are agreed that the faith of those who live in and by the spirit is a delusion, has as little importance as the opinion of the preacher that the sun goes round the earth. It is not enough to challenge every man who sits in judgment on life with the question, "What do you know?" He must answer a more searching question: "How have you lived?"

[Written for the *Sentinel*.]

LIMITATION.

MARION COOK.

WHAT argues that we find dire limits set
To strength and sense and sight and all man hath—
To comprehension of the one true path
God's love marked for His image? What is let
Into our hearts as law, and perforce met
With stupid acquiescence, so that death—
That direst falsehood—pleads an aftermath,
Awaits man's joys and hopes and intellect?

We only seem to see a tiny space
Before our thought, and deeds and time and place
Are all so cramped, dear Father! Yet right here,
Where these confining sense-stones breed the fear
That heaven is lost to us, we know full well
That Truth does free us from this finite cell!

CHRISTIAN SCIENCE SENTINEL

EDITORIAL

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, and reads no letters on disease, distress, or error of any kind. Reliable news concerning Mrs. Eddy will be found in the Christian Science publications.

CONSISTENCY.

Is matter real?

No; there is no matter. God is All, and God is Spirit: therefore they that worship Him, worship Him in spirit and in truth.

Is God Spirit?

He is.

Then, do you make God, who is real, supreme in your affections, or are you making matter, which you admit is not real, supreme?

Are you striving, in Christian Science, to be the best Christian on earth, or are you striving to have the most costly edifice on the earth?

Are you striving to make the most possible of matter, which you admit is unreal, or are you striving to make most of Spirit, which you admit is All, and that there is none beside Spirit?

Let every Christian Scientist answer honestly to his God the above questions, then obey the command, "Choose you this day whom ye will serve." If it be Spirit, let it be Spirit; and if it be matter, let him acknowledge it, and remove his name from the list of Christian Scientists. This he must do, and will do if he is honest.

The more modest and less imposing material superstructures indicate a spiritual state of thought; and *vice versa*.

The house Mrs. Eddy now occupies is larger than she needs, because she could not find exactly what she wanted; but it is a plain house, and its furnishings are not extravagant. Mrs. Eddy has continued to declare against the display of material things, and has said that the less we have of them the better. Since God has taught her that matter is unreal and Spirit is the only reality, any other position would be unscientific.

ARCHIBALD MCLELLAN.

ONE MOTHER CHURCH IN CHRISTIAN SCIENCE.

A NEWSPAPER of Nov. 30 announces, on information said to have been received from First Church of Christ, Scientist, of New York city, that: "It is proposed to have a church edifice, rivaling in beauty of architecture any other religious structure in America. . . . Mrs. Eddy is known to be profoundly pleased at this new evidence of growth and prosperity in the faith of which she is Founder. . . . It was learned last night that Christian Scientists here have aspired to build another and more splendid edifice, ever since the Boston Christian Scientists erected the $2,000,000 Mother Church."

Concerning these news items, it is to be said that Mrs. Eddy was not "known to be profoundly pleased" with what purports to be the plans of First Church of Christ, Scientist, of New York city, for she learned of this proposed rival to The Mother Church, for the first time, from the daily press.

Three leading facts remain immortal in the history of Christian Science, namely:

1. This Science is already established, and it has the support of all true Christian Scientists throughout the world.

2. Any competition or any rivalry in Christian Science is abnormal, and will expose and explode itself.

3. Any attempt at rivalry or superiority in Christian Science is unchristian; therefore it is unscientific. The great Teacher said: "As ye would that men should do to you, do ye."

Thoughtful Christian Scientists are profoundly grateful to their beloved Leader, Mrs. Eddy, because in her far-seeing wisdom she has ordained The First Church of Christ, Scientist, in Boston, Mass., already famous for originating reforms, as The Mother Church of Christian Science, and all other churches in the denomination as branches of the parent Vine. Says the Church Manual: "In its relation to other Christian Science churches, in its By-laws and self-government, The Mother Church stands alone; it occupies a position that no other church can fill" (Article XXIII., Sect. 3). It is a fact of general observation that in proportion as branch churches adhere loyally to The Mother Church, and obey implicitly its By-laws, they bear abundant fruit in healing the sick and sinful.

In many of our large cities, when a congregation has outgrown its church building, then other branch churches are organized and new edifices erected to accommodate the increasing numbers; but each new branch at once becomes an individual church, and has immediate connection with The Mother Church, so that the later organizations are as directly attached to the parent Vine as are any of the earlier branches. The members of each new organization are in no wise connected or affiliated with their former church, except in the bonds of that Christian fellowship which should characterize all true followers of the Master.

The Christian Science movement is in accord with Jesus' words: "The branch cannot bear fruit of itself, except it abide in the vine." Were one branch church to depend upon a neighboring branch for training and support, this action would tend to sever its connection with The Mother Church. The essential condition for fruit-bearing is undivided attachment to the parent Vine. On the other hand, no branch church, however large, is privileged to oversee or supervise another branch. Such action would violate a fundamental rule in Christian Science. The Church Manual declares: "The branch churches shall be individual" (Article XXIII., Sect. 6). Thus far the larger churches have resisted the temptation to organize or foster branches of their own, and any failure to adhere strictly to this rule would be a serious departure from the universal practice of the denomination and a flagrant violation of the By-laws of The Mother Church Manual.

The Master said: "I am the vine, ye are the branches: He that abideth in me, and I in him, the same bringeth forth much fruit: for without me ye can do nothing."

ARCHIBALD MCLELLAN.

HOW TO BECOME RICH.

IN many of the testimonies given by Christian Scientists we find expressions of thankfulness for the overcoming of the sense of limitation and the incoming of a sense of supply from the infinite source of good. Oftentimes sickness is closely associated with the fear of poverty, even where actual want does not exist, and as Christian Science always deals with causation, the effects of fear and all false beliefs vanish before the truth of being. While it is true that the fear of poverty tends to induce poverty as well as sickness, there are other errors which must be recognized, and scientifically overcome by the action of Truth. A vital lesson on this point is to be

Digitized by Google

found in our revered Leader's words: "In the figurative transmission from the divine thought to the human, diligence, promptness, and perseverance are likened to 'the cattle upon a thousand hills.' They carry the baggage of stern resolve, and keep pace with highest purpose" (Science and Health, p. 514).

These words from our text-book are ofttimes a needed rebuke when one is tempted to be indolent or careless in his activity, whether this activity be mental, physical, or spiritual. Of course, when we attain to real spiritual activity there can be no imperfection in it; but at present we have only begun to ascend from the low plane of material sense, and nothing less than constant watchfulness can save us from carrying along with us the errors which should be left behind when we begin to understand and reflect divine intelligence. If "order is heaven's first law," this should govern our thinking and doing, for without order we can have no real success in anything which we attempt. There should be "a place for everything, and everything in its place," not merely in our homes and workshops, but also in our mentality.

If our work is not what it should be, let us do what the psalmist did,—look up to the starry heavens which ever tell of law and order,—and let us ponder his words: "What is man, that thou art mindful of him? . . . Thou madest him to have dominion over the works of thy hands; thou hast put all things under his feet." If we are not expressing this dominion, is it not because we are not working as divine Mind works, in accord with law and order? Many are the foes (mortal beliefs) which would hinder our advance, and among them are pride and self-pity, errors which impoverish all who entertain them. These errors must be cast out before we can truly advance, and instead of envying others their possessions, we should strive each day to deserve better things than we at present have. It is always safe to exercise self-denial rather than self-indulgence on the material side, for this surely leads to expansion on the spiritual side, and thus are true riches gained.

No one who expresses "diligence, promptness, and perseverance" can be poor, or his services unsought. In Proverbs we read, "Seest thou a man diligent in his business? he shall stand before kings." It is not enough to desire good, to desire abundance; we must labor for it, and get rid of the errors which would hinder our progress. If God works in us "to will and to do of his good pleasure," we must with diligence "work out" the divine purpose, namely, to bestow all good upon us when we are ready to receive it. This is indeed a glorious task, and one which brings a sure reward.

ANNIE M. KNOTT.

Will our readers kindly bear in mind that the work at headquarters is necessarily divided into departments, also that by referring to the advertising pages of the *Journal* and *Sentinel* they will be able to ascertain the person or persons to whom their correspondence should be addressed in order to avoid delay.

The Christian Science Publishing Society publishes and sells *The Christian Science Journal*, the *Christian Science Sentinel*, *The Christian Science Quarterly*, *Der Herold der Christian Science*, *The Christian Science Monitor*, besides Bibles, pamphlets, reprints, also other miscellaneous publications fully listed in our advertising pages. All correspondence in regard to these, except that relating to articles and testimonies for publication, should be addressed to The Christian Science Publishing Society, Falmouth and St. Paul Streets, Boston, Mass. The remittances should be similarly addressed and checks, drafts, etc., should be made payable to the Society.

LETTERS TO OUR LEADER.

[Telegram.]

Chicago, Ill., Nov. 28, 1908.

Rev. Mary Baker G. Eddy, Chestnut Hill, Mass.

The nine Christian Science churches here thank you for *The Christian Science Monitor*. We are grateful that your wisdom has been sufficient to see that the world is ready for a daily paper whose purpose is "to injure no man, but to bless all mankind." We congratulate humanity upon the advent of the *Monitor*, because we believe that its establishment will mean a revolution in journalism as great as your teaching has brought about in religion and medicine.

COMMITTEE.

[After reading this telegram, Mrs. Eddy said, "Mrs. Eddy and her true followers have faith in their prayers because they know they are all calculated to heal the sick and to bless mankind."—EDITOR.]

Neodesha, Kan., Nov. 16, 1908.

Dearly Beloved Leader:—Since my return home I have been trying to find words to express my love and gratitude to you, but words are inadequate to express what it meant to me to talk with you. Your talk was so strong and loving. The beautiful language you used and the intelligence you manifested proved to me more than ever before that "no human pen nor tongue taught" you the Science contained in "Science and Health with Key to the Scriptures." When I saw how well and strong you looked, these words came to me, "He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty. . . . There shall no evil befall thee, neither shall any plague come nigh thy dwelling."

This letter may seem cold, but my heart is so full of love and tenderness, of loyalty to you and to the Cause, that I do not know how to express it. I can never tell you what help it was to me to have you see me, nor can I ever tell you how much I learned of you. I know that I shall be more successful after this in my work, and shall prove my loyalty to you by healing the sick. God bless you and keep you, is my daily prayer.

With abiding love,

CORNELIUS B. RATZLAFF.

St. Joseph, Mo., Nov. 13, 1908.

Mrs. Mary Baker G. Eddy, Brookline, Mass.

Beloved Leader:—To-day our hearts are filled with love and gratitude to God, and to you, for all good and for the recent manifestation of progress for the Cause. Our needs are being supplied so adequately and so wonderfully, and we feel certain that *The Christian Science Monitor* will be found, like our Church, "elevating the race, rousing the dormant understanding from material beliefs to the apprehension of spiritual ideas" (Science and Health, p. 583). Our own branch is manifesting increased activity and growth, and we could not refrain from sending you an expression of our deep gratitude for our many blessings.

Lovingly and devotedly yours,

BOARDS OF DIRECTORS AND TRUSTEES,
Second Church of Christ, Scientist.

Concord, N. H., Thanksgiving Day, 1908.

Dearly Beloved Leader:—Many were the expressions of gratitude rising from the hearts of Christian Scientists to-day, of devout thankfulness to the Giver of all good, and deep and heartfelt appreciation of your wonderful work for mankind which has brought to suffering humanity the Science of salvation! At our impressive service

Digitized by Google

this morning we had thirty grateful testimonies, and a larger attendance than usual, despite the inclement weather.

The new *Christian Science Monitor* was most cordially welcomed here, and met with general approval. What a blessing to have the important news of the world presented in a clear, clean, concise, and intelligent manner, freed from evil and objectionable accompaniments! The *Monitor*, so ably edited, covering so wide a range of subjects, showing such fine discrimination in selection, with its scholarly editorials, excellent presswork, and artistic "make-up" and typography, worthily meets the need of the hour in the field of journalism. You evidently have a most efficient and capable corps of workers connected with this paper, and they have done their work well to get the first issue out so promptly and in such good shape. I appreciate practically and metaphysically what it meant to do this, and it was a wonderful demonstration of the power of Truth and Love. The world's indebtedness to you is again greatly increased, especially among your followers, for this latest blessing, and it behooves us to strive more earnestly than ever to live and to spread your healing gospel.

We have recently received a set of the new library edition of your works, and we are delighted with them. I wish such a set could be placed in every public library in the land. Again we must thank you for untiring and unceasing labors for your blessed Cause and for those who are privileged to be your followers. May we also say how much we appreciate your able and progressive publisher.

With assurances of the deepest love, in which Mrs. Hering joins me, Your devoted student,

HERMANN S. HERING.

New York, N. Y., Nov. 15, 1908.

Dear Mrs. Eddy:—You have again blessed us with a gift; a gift for the purification of our homes, in the form of a clean newspaper. As the mother of a little son, I take up my pen to express to you my gratitude. The help which this paper will be to thousands of mothers all over the world cannot be estimated in words, but we know that the thoughts of these little men will be newly governed, and that Christian Science will give us better sons, better husbands, happier homes, and this result will be a constant reminder of your thoughtful care for us all. May my works attest my gratitude for all your self-sacrifice, patience, and love.

Lovingly yours,

ELSIE H. DE FESTETICS.

Boston, Mass., Nov. 26, 1908.

Mrs. Mary Baker Eddy.

Beloved Leader and Teacher:—Our Thanksgiving service to-day was so uplifting that I cannot refrain from telling you of it. The spirit of the service was indeed wonderful—God with us—and the testimonies so spontaneous and forceful that it seemed as if all the world must have felt their influence and shared in the great joy of being healed of sin and sickness by divine Love. We are all rejoicing over the *Monitor*, and thank you for the long years of faithful work which have made it possible. More and more do we appreciate your work—and *you*.

With tender affection,

ANNIE M. KNOTT.

Rock Island, Ill., Nov. 17, 1908.

Beloved Leader:—One morning, as I went about my work, there was a joy and peace in my heart such as I had not known before, and with it came the desire to express my gratitude to you for your life and writings, because through them I am learning how to love. These words from your pen, in the *Journal* of February, 1905, have been with me some part of each day for over a year, and are making me more honest, kind, loving, and true to those around me: "Dare to be faithful to God and man, let the creature become one with his creator, and mysticism departs, heaven opens, right reigns, and you have begun to be a Christian Scientist." I had always thought it right to be faithful to God, but had not thought so much about being faithful to man.

Your words gave a new meaning to the passage in John, 4 : 20: "If a man say, I love God, and hateth his brother, he is a liar: for he that loveth not his brother whom he hath seen, how can he love God whom he hath not seen?" All my life I had been trying to love God, but did not love my brother. Now, through your teachings and the light thrown on the Bible by the study of Science and Health, I am learning to love man by seeing him as God's image and likeness, a reflection, inseparable from Him. As I gain more of the spiritual consciousness and manifest more love toward my brother, my love to God grows stronger, and also my love to you, His faithful messenger.

Sincerely yours,

MOLLIE E. SHAFFER.

St. Joseph, Mo., Nov. 24, 1908.

Mrs. Mary B. G. Eddy, Brookline, Mass.

Dear Leader and Teacher:—It is a long time since I have written you, refraining therefrom as I knew that you were besieged with communications; but as never before I wish to express my gratitude for your grand and noble work that is blessing us all. Truly the leaven is working rapidly when it has become possible to take such a grand step as to publish *The Christian Science Monitor*, thereby setting an example in journalism for the whole world. We are to place a year's subscription for it in each of the libraries here.

Our beloved Cause is prospering here, and we are all rejoicing in a clearer perception that the kingdom of heaven is at hand. May God bless you, and give you that abiding peace which you so richly deserve.

Lovingly and faithfully yours,

CHARLES M. HOWE.

Warren, R. I., Thanksgiving Eve, 1908.

Dear Leader:—If ever there was a proud moment in my life, it was after a reading of the *Monitor*, which has been eagerly and most interestingly perused this evening. The clean bearing of the paper throughout, including the neat display of the advertising matter, appealed to me and led me to show some manifestation of appreciation to one who has demonstrated the great possibilities in Christian Science. Step by step have you led your followers, with a wisdom that has helped them to see the way clearly above the seeming obstacles in daily life. Your love for mankind has been expressed by leading, not doing the work for them. The advent of the *Monitor* speaks to the world the result of faithful stewardship, and comes at this time as a thank-offering to one who has won her laurels by loving mankind. Faithfully yours,

EUGENE A. VAUGHAN.

THE LECTURES.

CAMBRIDGE, MASS.

Thursday evening [Oct. 15] at Brattle Hall, Bliss Knapp delivered a lecture on Christian Science. The lecture was repeated the following evening at the same place, and there were large audiences on both occasions. In introducing the lecturer, John Ellis Sedman, First Reader of the church, spoke in part as follows:—

Christian Scientists are convinced that God does not send afflictions upon His people, and they have learned, furthermore, that God so loves the world that He has provided a way of escape from disease, sin, grief, and fear, which is available now just as it was in the time of Moses or Elijah, Jesus or Paul. Jesus once said, "If ye then, being evil, know how to give good gifts unto your children, how much more shall your Father which is in heaven give good things to them that ask him?" David sang, "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases." Solomon said, "The blessing of the Lord, it maketh rich, and he addeth no sorrow with it." And Paul wrote to Timothy: "God hath not given us the spirit of fear; but of power, and of love, and of a sound mind."

Christian Scientists are finding the fulfilment of these grand promises in their own lives. They know that you can lay hold on them and see them fulfilled in your lives. They rest assured of the fulfilment of all the promises, some day, somewhere, somehow, in the full redemption of the whole world. Is it not natural, then, that Christian Scientists should enjoy a large measure of hope and peace and joy?—*Cambridge Chronicle.*

KANSAS CITY, MO.

Frank H. Leonard lectured on Christian Science for First, Second, and Third Churches in Convention Hall on Sunday afternoon, Oct. 4, before eight thousand people, —one of the most attentive audiences we have ever had. He was introduced by B. F. Deatherage, a prominent lawyer of Kansas City, who said in part,—

Although I am not a member of the Christian Science Church, I am deeply interested in the subject, which demands the attention of all thinking people. I believe "Science and Health with Key to the Scriptures" to be a good book. I consider it to be one of the greatest books ever written by any one. It has indeed been a key which has unlocked the Scriptures to hundreds and thousands, who have been able, by reason of the light which they found in it, to heal thousands of persons of disease. I know personally that some of the best thinkers, and the best, most intelligent people, men and women, have been able to realize the truth of this Science, and heal themselves of their false beliefs in disease.

Christian Science teaches, if I understand it, what is Truth,—that Truth is Life, is Love, is Mind, is intelligence, is good, is God; that God is Spirit; that man, made in God's image, is therefore spiritual, and that by a realization of these truths, by a true conception of them, we are able to understand and realize the unreality of evil, of sickness, and of disease. If this be true, it is one of the greatest discoveries of all the ages. That it is true is attested by all Christian Scientists, and is emphasized by the great growth of Christian Science, which, starting only forty years ago with one, has now reached unnumbered thousands, and is increasing every day. Many of those who believe in this doctrine give us absolute proof of their beliefs. They prove the truth of their faith by their works, by the actual healing of thousands of persons.

One of the strongest proofs to me of this new faith is the fact—a fact as well authenticated as any other fact of history—that the early Christians, for three hundred years after the days of Christ, healed the sick in Christ's name, without any material remedy. If they were able to do it, why not others? Was it given only to them, and to one generation, and for no more? Was it of man, or of God? That it was of God is shown by the fact that the Christian religion took root, and lived among those people who were so material and believed that only might made right, and that it has gathered strength from that day to this. If it be of God, is it reasonable to suppose that God would have given the power to demonstrate His teachings to only one, two, or three generations, and left all the other generations to find Him, through a blind faith, without such power?

It does not seem so to me, and this fact appears to me to be one of the proofs of the truth of Christian Science. It seems to me that Christian Science is right; that its logic is faultless, and the proof and the evidence of the truth of its teaching cannot be doubted. If there are some things about it that we do not understand, we cannot reject it for that reason; because there are many things which we believe to be true, and yet we do not understand them.—*Correspondence.*

JAMESTOWN, N. Y.

A presentation of the teachings of Christian Science was given Friday evening [Oct. 16] in the Unitarian church by Hon. Clarence A. Buskirk of St. Louis. He was introduced to the large audience by Willard W. Rooks of Salamanca, who said,—

The wise man hath said that "the thing that hath been, it is that which shall be; and that which is done is that which shall be done: and there is no new thing under the sun." In other words, that which will be true to-morrow is true to-day, and that which is true to-day was true yesterday; and that all good comes by way of a discovery of facts that exist now. Moses might have had his automobile, Cæsar might have had a telephone, and Cleopatra might have had a steam launch had they only known enough, for the fundamental truths were in existence then as to-day. Just so, in the coming years, many inventions will be made, but the laws upon which they are to be constructed are in existence to-day, only awaiting perception and application. Just so, Christian Science is calling our attention to the fact that the great laws of being, the great spiritual forces that have been used in times past for the healing of disease and for the overcoming of all evil, are in existence here and now, only awaiting our human perception and application. In this light, Christian Science may be properly termed a rediscovery and a restatement of the Principle by which the prophets, Jesus, and the apostles healed the sick and redeemed the sinner.

Mr. Rooks then gave an account of his own healing from blindness in one eye and hereditary lung trouble through Christian Science.—*The Jamestown Journal.*

TESTIMONIES OF HEALING.

It is over two years since I first became interested in Christian Science. I did not then call myself ill, but I was a slave to drugs and had been for a long time. Science and Health was brought into our home by my son, and I availed myself of the opportunity to read it. In a short time I stopped taking medicine and began to eat whatever the rest of the family had. I soon found that the food did me no harm and that I was better without the medicine. I next obtained a *Quarterly*, and began to study daily the Lessons from the Bible and Science and Health. These appealed to me strongly, as I had been a church-member since the age of fourteen, and for many years a Sunday School student and teacher. The familiar passages from the Bible had never seemed so comforting before, and many that had formerly been obscure in meaning were made clear through their study in connection with the Christian Science text-book.

Soon after this I went to California to visit a married daughter, who had also become interested in Christian Science, and while there I became ill with some kind of a fever. After three or four days, as I seemed to be getting worse, my daughter advised sending for a Christian Science practitioner. She came, a kind woman, full of love. She told me that the fever did not have to run a certain number of days, and said other comforting things, which dispelled my fear. As some members of my daughter's family did not believe in Christian Science and wished to know the nature of the sickness, a physician was called in to diagnose the case. The doctor came, and although I was not told the nature of the illness until after my recovery, he pronounced it a dreaded fever, the same disease from which my husband and a son had died, and from which another son had been dangerously ill for weeks. I refused to take medical treatment, relying solely on Christian Science. The result was that within three weeks the bowels, the apparent seat of the disease, were in a healthy condition and I was well, sitting at the table with the family and partaking of the same food as the others. This I considered wonderful, after learning what the medical opinion had been. Had I then been familiar with the teaching on pages 392 and 393 of our text-book, I do not think the fever would have developed.

Since this experience I have had many demonstrations of Truth's power, and I thank God for being brought to the knowledge of this new-old way, for which I am thankful to dear Mrs. Eddy. I trust that I may be faithful in practising her teachings. I am thankful for the *Sentinel* and our other Christian Science literature, which is so uplifting and helpful.

ESTHER A. TAYLOR, Rochester, N. Y.

I do not know where I should be to-day, if I had not heard of Christian Science. Those who knew me three years ago and who know me now, do not wonder that I feel thankful to God for leading me to the truth, also grateful to Mrs. Eddy for revealing it to mankind. To the many others, I can only relate the simplest facts of what has been to me a great and lasting blessing. Until I went to a Christian Science practitioner for help, three years ago last April, I had never known what it meant to be really well. All through my early years I was out of school for days and weeks at a time. It was the same during the years at college, and when I first began to teach I was subject to frequent and severe headaches, and finally found myself ill, for the third time, with nervous exhaustion. When the doctors told me to resign my position at once, they said I had inherited marked tendencies toward nervous diseases and would never be able to teach. Not knowing where else to turn, I went to a Christian Science practitioner, and after three weeks' treatment I was in perfect health and able to take off the glasses which I had been wearing for eye trouble.

I am thankful that I now have a religion which meets my need every moment. It has given me a different idea of God and His creation. I am glad that I am able, in a measure at least, to look beyond the plain exterior of those with whom I come in daily contact and am able to see instead God's children, governed by perfect Mind and intelligence. My earnest hope is that the dross may be consumed and that I may become indeed a channel through which divine Love may flow, to teach others the way to the attainment, now and here, of all that is man's by right.—LAURA ETHEL SMITH, Belmont, Mass.

Four years ago I seemed to be passing through "the valley of the shadow of death." A Christian Science practitioner was telegraphed to for treatment, a letter following to tell somewhat of the circumstances. I was having alarming hemorrhagic attacks, one following another at close intervals, but these were stopped before the letter reached the practitioner. Premature childbirth had come on, and under the law of mortal belief blood-poisoning was manifest. The physician called to do the surgical work said on leaving, "She may pull through, but is apt to go any minute."

No material means were used; we relied wholly upon God for the healing. I was healed of the lung trouble, the blood-poisoning, and many complications connected with this case. I can never be grateful enough for the truth that overcame this discord and disease. My treatment was entirely absent. I am very grateful for a better understanding of Christian Science, and in the application of it have had many proofs of God's care and protection, in the prevention of sickness, the overcoming of sickness, also discord and worry in business. I wish to give this testimony in appreciation of the blessings received through the teaching of Christian Science, through loyalty to the truth as set forth in Mrs. Eddy's book, "Science and Health with Key to the Scriptures." I thank our dear Leader for this revelation of Truth, and feel that in striving to live Christian Science I am benefited in many ways.—SARAH E. FERBRACHE, Grand Junction, Col.

Many times have I felt impelled to write of the demonstration of divine Love in my behalf, but have been withheld from so doing by reasons which I now see were wrong. Never strong, ambition led me repeatedly beyond my endurance into nervous trouble. When partially recovered from the third attack, and able to take a few pupils, our family circle was broken by death, and within four years five of the dear ones passed away. When the mother was gone and financial disaster added its burden, I tried to bear bravely the sorrow and anxieties which seemed heaped upon me; but my faith in a God of justice and love had been sadly shaken. For two years I lived a busy life with household and financial cares, music teaching, and church work.

From the age of twelve years I had been a church organist; and when because of ill health I was forced for a time to give up my beloved instrument, it was a great grief to me. Later, when asked to play for a Christian Science church, which at that time held but one Sunday service, I accepted. Although I can now see that Love was leading me, yet in six months I broke down completely. A serious spinal trouble, with total inaction of liver and kidneys, accompanied by heart complications, brought me seemingly to death's door. While listening to the reading of the Lesson-Sermon, as presented from Sunday to Sunday, I had become somewhat interested in Christian Science, and I now turned to it for help. After the critical condi-

Digitized by Google

tions were overcome my healing was slow. It was like a gradual awaking from death, but I have ever been grateful for this slow healing, for had I come quickly into the possession of health and strength I would undoubtedly have gone back to my old church, because of my love for the little ones with whom I had worked for so many years as a primary superintendent. And, going back, my life would have been filled with the old unsatisfied longings for a spiritual light, for a God whom I could love and trust. In the gradual awakening from a sense of death to the true sense of Life, and to the knowledge of a God who is Love, and in the understanding of man's at-one-ment with the Father, the "peace of God, which passeth all understanding," is growing to be mine. I have for some years been a member of First Church of Christ, Scientist, of Rochester, N. Y., and never for a moment have I doubted the absolute truth of Christian Science as taught in our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy.

My gratitude to our Leader is unbounded. As I see the bondage of mortal mind to the sense of sickness, sin, and death, in contrast to the freedom and joy of those who have proven God's allness through "signs following," I praise God that the Christ-healing has come to this age, that the people of this twentieth century are being led from darkness into God's "marvelous light."

E. THEO. MANNING, Cumberland Gap, Tenn.

The psalmist's words, "In thy light shall we see light," came to me one night recently with a more important and helpful meaning than ever before. I had been passing through a day of seeming discord and darkness. As night came on the mental shadows seemed to deepen, and hour after hour passed without bringing me sleep or relief. Deciding finally to call a practitioner to help me, I was obliged to pass through several rooms which were in utter darkness, in order to reach the telephone. After feeling about in a blind way for the electric light switch, I suddenly touched the button, and instantaneously the darkness which had seemed so real vanished and a brilliant light flooded the room. It was then that the thought came to me, "In thy light shall we see light." I seemed to realize so clearly that by the turning of God's light full into our consciousness, all the mental and physical darkness of material belief must necessarily vanish, just as quickly and absolutely as the darkness of my surroundings had vanished. I immediately felt enlightened, and all the burden of fears and discomforts disappeared, leaving in its stead a great sense of peace and harmony and thanksgiving. I did not have to call for help, but went to sleep entirely free mentally and physically.

This lesson seemed to teach me in such a simple yet wonderful way how quickly an untrue, abnormal condition of any kind can disappear when we acknowledge and realize God's allness. By keeping our thoughts always filled with light and love we are enabled to shut out every darkened sense, for "God is light, and in him is no darkness at all." Mrs. Eddy says in Science and Health (p. 255), "'Let there be light,' is the perpetual demand of Truth and Love, changing chaos into order and discord into the music of the spheres." My heart is constantly filled with loyal love and gratitude to Mrs. Eddy, who through the spiritual illumination of her teachings has shown us the pathway out of the darkness of human sin and suffering into the glorious light of health, harmony, and holier living.—AUGUSTA M. CRAWFORD, Evanston, Ill.

I am indeed deeply grateful for what Christian Science has done for me. I had always been very delicate, having to be absent from school for weeks at a time because of severe coughs and colds, a condition supposed to be hereditary, as my father had passed on from throat and lung trouble. When Christian Science found me, about six years ago, I was a physical wreck, with a terrible cough and suffering from extreme nervousness. I had been troubled with this cough for weeks, and could obtain no relief. I was able to get but very little sleep, and this was so wearing upon me that I was obliged to go to a hospital, the doctors having assured me that they could cure me in two weeks; but at the end of that time I was very little better and still had the cough.

It was through the kindness of a dear friend that a copy of Science and Health was placed in my hands. I began to read it, and received so much benefit that I at once threw away all medicine and gave up wearing glasses. From that time to this I have never had any desire to use the glasses or to return to *materia medica*. I continued to read and study the text-book, so as to gain a better understanding of this truth, and six weeks later, with the aid of a practitioner, my cough had entirely disappeared. I soon became strong and well, and was able to take up my duties.

I have had many trials since coming into Christian Science, but have found its teaching an ever-present help in these times of need. It has also enabled me to have a kind and loving disposition. The most severe trial that I have had was about three years ago, when I seemed to have some obstruction in my throat which for three weeks made it difficult for me to take solid food; but with the aid of a practitioner, who worked faithfully for me for nine weeks, the error was overcome. All this time I went right on with my duties, declaring the truth and knowing that God is All-in-all and that He fills all space, and at length I was able to say I had fought a "good fight" and had conquered the error. I am thankful that I am now able to eat whatever I like without any discomfort, and I have had no return of the trouble.

I am very thankful to God for the spiritual understanding I have gained, as I never before understood the Bible as I do now. Words cannot express my gratitude to Mrs. Eddy for becoming, through faith and obedience, a channel for the revelation of this wonderful truth which shows us the way and is indeed "the pearl of great price."

MISS MAY CARTMELL, Goshen, Ind.

I am very glad to have the opportunity of expressing my appreciation of the healing gained in my own case through Christian Science. I am especially grateful for a demonstration of the truth in the case of a decayed tooth. I had one of my teeth filled by a dentist, but the filling came out, leaving a large cavity. The tooth began to ache, and I had a treatment in Christian Science for this, but did not discover for several days that the tooth had been filled without the help of a dentist. This more than any other physical demonstration has kept my faith unwavering.

I am deeply grateful for relief from sleeplessness, from which I had suffered for years. I also wish to express my gratitude for instant relief from two malarial attacks, when I applied for absent treatment. Besides this I am greatly indebted for the increased knowledge of Truth which has come to me in Christian Science, and for a spiritual uplift which has resulted in totally different views of life. I shall always realize that I am a happier and better woman for the help thus gained.

JEAN BELSHER, Lake Charles, La.

[Translated from the German.]

It is with a heart full of joy and gratitude that I tell of the wonderful help which I have received through Christian Science. A short time ago a horse kicked me, striking me on the breast. I was carried into the house, suffering greatly, and quite unable to speak. As many in our family had been healed by divine Truth, we telephoned

Digitized by Google

immediately to a Christian Science practitioner in Chicago, and I was soon restored. I am glad to know that there is but one healer, the divine Mind,—the source of all good. The wonderful result of these absent treatments taught me that there is neither separation nor distance to the infinite Mind, in whom the real man has his being.

Words fail me to express my gratitude to our dear Leader, Mrs. Eddy, for bringing to us this living truth which raised me from the shadow of death into the glorious light of Life.—ADELE KERNTOPF, Paw Paw, Mich.

I have been interested in Christian Science for about five years, and have had many demonstrations of the power of Truth in my home during this time. A short time ago I was taken with a dropsical trouble which was believed to be hereditary. One limb was the size of three, and very badly discolored. I could not put my foot to the floor without great suffering, and was compelled to keep it on a chair and pillow. I called in a Christian Science practitioner, and the case was perfectly met in a week's treatment. I am indeed grateful to God for giving to us this truth through Mrs. Eddy.

MRS. EMMA LEONARD, Atchison, Kan.

I know from my own experience, and in my family, that Christian Science is all that Mrs. Eddy claims for it. Two years ago I believed that Christian Scientists were a lot of cranks, who were following a fad that would end as all fads do. Two years ago my wife was thrown from her surrey, and received very severe injuries, both external and internal. She was under the care of two physicians a part of the time, and also had the services of a masseur. Serious rheumatic trouble then set in, and I took her to the beach, where she remained three months, and improved somewhat. On going back to our home in Los Angeles, however, her suffering returned, and although we tried all kinds of medicine, she kept growing worse, and one evening when I returned from my business I found her with intense agony depicted on her face. I saw at once that something must be done, and asked her what I should do. I wanted to send for a physician, but she motioned for me to be seated. She at first said that no physician could help her, but after trying external applications, she could not stand the pain any longer, and asked me to call a physician to give her some narcotic to relieve the pain; which I did. The physician said the trouble was not rheumatic and diagnosed it as a result of her injuries. One limb was in a distressing condition, and the doctor said there was no known remedy for the disease. He added the information that to bring about a change in her condition might take six days, six weeks, or six months, and also that the disease might leave her a cripple for life. Our feelings may be imagined, but after the doctor left, my wife asked me if I had any objections to trying Christian Science, as a friend of hers had recommended it, and it seemed to be the last resort. I was willing to try anything, so we called a practitioner, and three days later my wife walked down-stairs and opened the door for the practitioner when she came. It took, however, about two months to effect a complete cure. That was about eighteen months ago, and she is a strong and healthy woman to-day.

One morning our little boy four years old went across the street where workmen were rebuilding a cottage, and climbed to the top of the house unknown to the workmen. He got over an iron railing which protected a skylight, and seeing something on the opposite side of the glass, started to crawl over for it. He crashed through the glass and fell across some heavy beams, striking on his stomach. A workman heard the crash and rushed up the stairs, took the child in his arms and brought him home. He seemed to be badly injured, and was suffering severely. His mother immediately declared the truth, and she also telephoned for a practitioner. In a short time this lady was at the bedside treating him. He seemed to suffer intensely, but finally relief came. When I returned in the evening and was told that our baby had been badly injured, I at once declared the truth. I made what demonstration I could when I reached the bedside and saw that he certainly had had a narrow escape. My wife remained with him all that night, and when I awoke next morning I thought I heard him outside. I, however, considered that to be impossible, but ran to the window and looked out. He was with a lot of other boys, and I called to him and asked him how he was. He replied, "I'se all right! I'm going to show the boys where I falled through the skylight." He was all right! Christian Science made him so, and it will make any one right who faithfully follows its teachings.

J. T. SHEWARD, Los Angeles, Cal.

About three years ago, after being under a doctor's care for six weeks with carbuncles, and suffering so that I could not sleep at all, a friend advised me to try Christian Science. I called on a practitioner, and after the first treatment the pain was all gone. In a short time the carbuncles disappeared and I have never had one since. A short time after this, I came in contact with a live electric wire, burning my hand and arm very badly. I was taken to a Christian Science practitioner, and in a very short time the pain was gone, and I went to my work next day as usual. In three days I was using my fingers, and in one month there was not even a scar to tell that I had been burned. For this and many other healings I am grateful to God, and to Mrs. Eddy.

DAVID MANSON, Atchison, Kan.

I have the greatest faith in Christian Science, as I have proved its power to heal disease. My little girl had a serious eye trouble, supposed to be caused by inherited disease. Under the treatment of a skilful oculist the ulcers were healed, only to reappear again and again. I was nearly discouraged, as he could give me very little encouragement that she would ever be completely cured, or that the next attack might not ruin her sight entirely. When I took her to a Christian Scientist for treatment there was a bad ulcer on her right eye, also a white scar from one previously healed, which I had been informed would probably always remain. In a short time the eye was completely healed.

I have received much benefit from the treatment myself. Christian Science appears to me to be the surest and most reasonable method of treating disease, and I feel grateful to God for His goodness in helping me to prove His healing power.—MRS. L. M. HUNTRESS, Auburn, Me.

In the spring of 1899 in stepping upon a chair I fell and sustained painful injuries, which the doctor who attended me was unable to diagnose. I was lifted up and put in bed, where I remained for three weeks. I suffered severe pain at times, then I got somewhat better and was able to be up and walk about with the use of a cane. I was, however, unable to do much, and did not seem to improve. At this time I heard of a neighbor who was having Christian Science treatment and who was getting well. A member of my family urged me to try the same treatment, which I decided to do; and after the first treatment the pain stopped. I began the study of Science and Health, and as I gained in the understanding of Christian Science I found myself recovering. My healing was slow, and I took treatment for about two months, but during this time other physical ailments of many years' standing left me. I have received many physical benefits,

Digitized by Google

for which I am very grateful, but greater far is my debt of gratitude for the change this truth has brought in my temperament and my attitude towards life.

Through the daily study of Christian Science has come freedom from worry; more harmony in the home; a larger measure of happiness; and a feeling that life is worth living. For all of these benefits I am truly thankful to God. I also wish to express my gratitude to Mrs. Eddy, our Leader in the way of this new-old religion.

MRS. MARION C. HOLMES, Duluth, Minn.

While I realize more clearly every day that the best way to prove one's gratitude for Christian Science is to live and demonstrate this Science, at the same time I would like to express my gratitude for the continuous help and comfort which it has been to me for many years. I have never had any other than Christian Science treatment since I was a child of four years, but did not study it for myself to any extent until I was sixteen years of age. Then for several years I faithfully studied Science and Health, reading some every day, but it seemed as though I could not grasp its teachings. While I thoroughly believed them, I seemingly could not demonstrate them. My physical health was good, but mentally I had a sense of always being under a cloud. I felt depressed, and wondered why I was living; I seemed to hate every one, and myself worst of all; I was restless and could not be content to stay long in any one place. Many a time I feared I would lose my reason.

At last, after wandering around for two years or more, I returned to my home in Chanute, Kan., and shortly afterward took a week's treatment from a Christian Science practitioner there. When I commenced the treatments I was attending Christian Science services at that place, but would invariably go to sleep, or become so dazed that I could not hear the Lesson-Sermon. I would struggle with all my might to keep awake, but it seemed impossible; I could not grasp the meaning of anything that was read. After that one week's treatment I was enabled to read and understand more clearly than ever before, and was actually able to enjoy the Sunday services. No one can ever know how grateful I was and am for that help. From that time I have grown steadily and surely in the knowledge of Truth. I have never again felt that sense of cloudiness and helplessness, and my consciousness steadily grows clearer and brighter.

A year later this same kind practitioner brought me out of an attack of fever in less than two weeks. To the friends with whom I was staying I seemed a very sick girl, and they took me to the home of this Scientist, where I was cared for as though I were a child of the family. In less than three weeks from the time I was taken ill, I was able to be around, and my friends could not have told that I had been sick, except for a slight loss of flesh. For these and for very many other proofs of the truth of the teachings of Christian Science I am truly grateful, and my daily desire (prayer) is that I may be of service in helping others to understand and demonstrate this truth.—MRS. ALICE H. DYKE, Olympia, Wash.

It is now over ten years since I became interested in Christian Science. I was healed of a long-standing disease through reading the Christian Science text-book, and the Bible became a new book to me after reading "Science and Health with Key to the Scriptures" by Mrs. Eddy. I have had many proofs of the power of Truth over error. One case of healing, though it may seem small, was another proof of the power of God to heal. A few years ago a disagreeable eruption appeared on my wrist, and continued to grow larger, until it became quite noticeable. It seemed best that I should have some help, so I wrote for treatment to a Christian Science practitioner at a distance. In a few days the trouble disappeared entirely and has never returned. Many times I have occasion to say, Thank God for Christian Science, and for our Leader, Mrs. Eddy, who has shown us the way.

We have no services here, and there are only three Scientists that I know of in this town, but my brother and I read the Lesson-Sermon together every Sunday.

MRS. MARION E. LEDBETTER, New Glasgow, N. S.

I feel that it would be ungrateful to withhold my testimony any longer, as I was prompted to try Christian Science by reading the testimonies of others. I grew up under the belief that I was a very delicate child; it was supposed that I would not live very long, and one physician informed me that not an organ of my body was performing its proper function. My main trouble, however, was a rheumatic affection of the heart which had supposedly become organic. I was taken to one of our large cities for treatment, and for a time seemed to improve, but after my return I grew worse and became very ill. I was visited for weeks by a physician who did all that he could for my relief. He finally said that I might possibly derive some benefit from a change of climate. At this time I could not walk half a block, and was taking medicine every hour. While debating what was best to do, a friend loaned me some Christian Science literature, which I read. A little later I called on a practitioner for help, and in a short time I was healed.

My mother was also healed of a difficulty of twenty-five years' standing. It is now five years since my healing, and my health is good, Christian Science having been my only physician during this time for any minor ailments which appeared. Through the earnest solicitation of near relatives I recently submitted to a rigid physical examination by a physician, who pronounced me well; that not a vestige of the old complaint remained. My heart indeed goes out in thankfulness to our Leader, and to all who have helped me on the way.

MISS FLORENCE E. RASMUSSEN, Aberdeen, S. D.

I am glad to give my testimony to the Field, for the testimonies in our periodicals have helped me so much that I hope mine may be of help to some one else. About eleven years ago I was suffering from a very serious organic trouble, and after taking medical treatment for some time I was told that the only help for me was to have an operation performed; but I was in such a nervous, worn-out condition at the time, that the doctor said I should go to the mountains first to regain my strength. I was utterly discouraged at this verdict, and felt that life was hardly worth the living. While in this state Christian Science was recommended to me, and I consented to try it, thinking it could not hurt me anyway. In five treatments I was entirely healed, and I have never had a return of the old trouble in these eleven years, nor have I taken a drop of medicine during that time. I have enjoyed almost perfect health; only a few times have I needed any help, and then the ailments were easily and quickly overcome.

Not a day goes by but that Christian Science is a help to me, and while I feel so thankful for the physical healing, it is the spiritual uplifting, the peace of mind, for which I feel most grateful. Words cannot express my gratitude for what Christian Science has done and is doing for me.

MRS. ETHEL KENNEDY, Los Angeles, Cal.

Cheerfulness is a small virtue, it is true, but it sheds such a brightness around us in this life that neither dark clouds nor rain can dispel its happy influence.

E. V. B. ALEXANDER.

FROM OUR EXCHANGES.

[*The Universalist Leader.*]

The world forgets that in order to have a religion of character and conduct we must have something else. Righteousness is not a passive virtue. If one is to deny himself, take up his cross of sacrifice, become the servant of truth, the apostle of love, the minister of mercy, the prophet of things to come, he must have meat to eat of which the world knows nothing. He must believe that these things have an eternal worth, are something more than shadows cast by passing man against the background of eternal nothingness. What is it that makes Abraham the father of the faithful, the perpetual prophet of the unseen? Is it not that in us there is something that answers the call of Abraham, and sends us also forth in search of the city of God? The hand of truth that marks off the moral hours upon the face of the centuries has not moved between Abraham's time and ours, measured by soul experiences. It points us to the unseen and the eternal. It sets our feet keeping time to the music of undiscovered harmonies of life. We, too, are searching for the city of God, for the land and the people where righteousness is the law and love the power which move all the wheels of society. We, too, believe in the unseen, and go forth as those who are seekers after the invisible.

[Rev. Percy C. Ainsworth in *The Methodist Times.*]

All knowledge of Christian truth has a relation to experience, and most of all to the experience of love. There are mysteries of the faith that our minds fail to penetrate. There are the things that reason finds unfathomable, and logic finds bewildering. But, more often than we suspect it, our heart foils us in the quest for truth. There are standards of conduct we have not the courage to behold, splendors of law and judgment unto which only a greater love than we possess can lift up its eyes. Jesus, drawing his disciples nearer to his side, that they might thereby become able to go farther into the awesome places of knowledge, reveals to us a law of revelation. God draws us nearer the heart of His love that we may be able to look with unconfused vision upon the dread and weighty wonders of His truth.

[*The Congregationalist and Christian World.*]

Men do not attend church in these days unless they find there something which they want. Worship, fellowship, instruction in their relations with God, the revelation of the divine ideal, inspiration to realize it—these are things which men in normal conditions want. The church which provides these things liberally need not fear that it will be deserted. But many churches are offering what people generally do not want, or proposing to offer what they cannot really give when it is wanted.

[*The Examiner.*]

If God could inspire men to write His messages to the world, why should it be thought incredible that He should inspire other men to select out of many books the few containing His messages for transmission to coming generations? To those who cavil at such a suggestion as this, may we not say, in the words of our Lord, "Do ye not therefore err, because ye know not . . . the power of God?"

[*The Churchman.*]

It is plain that people at the present time are either indifferent or openly opposed to sectarian Christianity. Religious organizations which imply divided effort are not in harmony with the social forces of to-day.

SPECIAL ANNOUNCEMENTS.

FROM THE PUBLISHER.

THE CHRISTIAN SCIENCE TEXT-BOOK, "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES."—This work contains many important changes and additions by the author, and also contains a photogravure portrait of Mrs. Eddy, together with a facsimile of her signature.

NEW CONCORDANCE TO SCIENCE AND HEALTH.—The new Concordance to Science and Health, revised and brought up to date to give the students of Christian Science every facility for the careful study of the text-book, contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural quotations in SCIENCE AND HEALTH. 607 pages, 10 x 7, bound in cloth, marbled edges. Price, prepaid, single copy, $5. Twelve or more to one address, $4.50 each.

THE CHURCH MANUAL.—Containing all the By-laws of The Mother Church, The First Church of Christ, Scientist, in Boston, Mass. Each new edition of the Manual will have special notice in the *Sentinel*. Price, single copy, prepaid, $1; six copies to one address, $5; twelve copies to one address, $9.

Address all orders for books named above to ALLISON V. STEWART, Falmouth and St. Paul Streets, Boston, Mass.

FROM THE CLERK OF THE MOTHER CHURCH.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist.—The Mother Church.—printed on folded sheet for the use of Branch Churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at seventy-five cents per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

MEMBERSHIP.—Correspondence relating to membership with The Mother Church, and requests for blank applications for membership, should be addressed to the Clerk.

All correspondence and orders relative to the above should be sent to WILLIAM B. JOHNSON, Clerk, The First Church of Christ, Scientist, Falmouth, Norway, and St. Paul Streets, Boston, Mass.

FROM THE CHURCH TREASURER.

PER CAPITA TAXES.—Per Capita Taxes and Contributions to The Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to the Treasurer. Please do not send currency.

Remittances for the above should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass.

FROM THE SOCIETY.

The Publishing Society announces that the supply of the List of Members of The Mother Church has been exhausted, and that no additional copies will be printed for the present.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Single copy, one year, $2.00. Quantities TO ONE ADDRESS: ten or more, each, $1.90; twenty-five or more, each, $1.80; fifty or more, each, $1.60. These rates apply in the United States, Canada, Mexico, and Cuba. In all other countries add forty cents for postage on each subscription. Six months' subscriptions received at half the above rates. No subscriptions received for less than six months.

Terms of Sale, Postpaid to any Address: Per copy, twenty cents. Quantities TO ONE ADDRESS: ten copies, $1.70; twenty-five copies, $4.00; fifty copies, $7.00; in the United States, Canada, Mexico, or Cuba. To all other countries, per copy, twenty-five cents. Quantities TO ONE ADDRESS: ten copies, $2.10; twenty-five copies, $5.00; fifty copies, $9.00.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science churches. These Lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each 12 1-2 cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading-matter, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches, and is valuable as an authorized representative of the movement.

Subscription Price: For the United States, Canada, Mexico, and Cuba, $1.00 in advance; all other countries, $1.25. Single copies, 10 cents, postpaid.

PAMPHLETS AND REPRINTS

CHRISTIAN SCIENCE: A REASONABLE AND RATIONAL VIEW OF ALL THINGS. A Lecture. By FRANCIS J. FLUNO, M.D., 30 pages.

CHRISTIAN SCIENCE: HUMANITY'S HELPER. A Lecture. By PROF. HERMANN S. HERING. This pamphlet is also printed in German. 29 pages.

CHRISTIAN SCIENCE: ITS NATURE AND PURPOSE. A Lecture. By BLISS KNAPP. 25 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture By Rev. ARTHUR R. VOSBURGH. 28 pages.

CHRISTIAN SCIENCE: ITS ADVANTAGE TO MANKIND. A Lecture delivered in London. By EDWARD A. KIMBALL. 46 pages.

CHRISTIAN SCIENCE: MAN'S DOMINION OVER EVIL. A Lecture delivered at Harvard University. By EDWARD A. KIMBALL. 28 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE MINISTRY OF TRUTH. Five articles reprinted from the *Journal*. This pamphlet is also printed in German. 50 pages.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 38 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. This pamphlet is also printed in German. 40 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German only. 31 pages.

Price: One copy, six cents; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . 3.75
Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . 4.75

Orders for Miscellaneous Writings, in lots of twelve or more to one address, may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.

Single book, prepaid $3.00
Twelve or more books to one address, each, prepaid . 2.50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at The Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.90 half dozen; $9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in The Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of Mary Baker G. Eddy to The Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to The Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per dozen.

CHURCH MANUAL. Containing the By-laws of The Mother Church. Prices, prepaid, one copy, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

ALLISON V. STEWART, FALMOUTH AND ST. PAUL STS., BOSTON, MASS.

All orders for periodicals, or literature other than the above works, should be sent with remittance directly to The Christian Science Publishing Society.

To all other countries, six cents per copy, postpaid to any address. In quantities to one address: twenty-five copies, $1.25; fifty copies, $2.30; one hundred copies, $4.00.

Entered at the Boston, Mass., post-office as second-class mail matter.

ITEMS OF INTEREST.

National.

Following the collapse of the Quebec bridge across the St. Lawrence, the safety of the $24,000,000 Blackwell's Island bridge, now building over the East River, New York, was questioned. An investigation was set afoot, and it was found that if the bridge were opened and subjected to the loads which it was designed to carry, the strains, in some of the members, would enormously exceed those for which the bridge was designed, the excess in the case of one member rising to forty-seven per cent above the safety point.

With the certainty of soon having in hand the report on the physical valuation of the New England Telephone and Telegraph Company, the Massachusetts Highway Commission will be in a position to make further regulations concerning the telephone service in Massachusetts, and it may be that important reductions in tolls and in rentals will be ordered.

Construction work on the Panama Canal is now costing the Government about $3,000,000 a month. The Spooner act of 1902 authorized the issue of bonds up to $130,000,000 on account of the Isthmian waterway. The $30,000,000 issue made on Dec. 5 will make a total bonded indebtedness on account of the canal of about $84,000,000.

Secretary of the Navy Newberry, who succeeded Victor Metcalf, Dec. 1, has already taken steps looking to the reorganization of the navy. It will probably follow the plan of the general staff, which was introduced by Secretary Root in the War Department when he was its head.

A committee appointed by the New York Legislature to inquire into the finances of New York city has already found that the arrearage of collectable taxes from 1898 to 1907 is over one hundred and two million dollars, an amount equal to the city tax levy for 1907.

The President has signed proclamations creating the Ocala National Forest in Marion County, Fla., having an area of 201,480 acres, and the Dakota National Forest in Billings County, N. D., with an area of 14,080 acres.

Secretary of State Root, on behalf of the United States, and Kogoro Takahira, ambassador, on behalf of Japan, exchanged diplomatic notes Nov. 30, defining the policy of the two governments in the Far East.

The "big sixteen" Pacific fleet on Dec. 1 left Manila Bay without any formal ceremonies and began its trip homeward. Colombo, Ceylon, will be its next stop, a trip of about twenty-nine hundred miles.

In addition to the one already in use, Boston in the near future is likely to have two additional harbor tunnels, giving direct connection by two lines of travel to the nearer and the remoter North Shore resorts.

A corporation having in view the control of all the timber on the western hemisphere is said to be forming. It proposes to handle the timber question in a conservative manner on principles of scientific forestry.

The United States Supreme Court, on an appeal from the Circuit Court, has held as constitutional the order of the Railroad Commissioner of Virginia which fixed a two-cent passenger rate on State business.

The Interstate Commerce Commission is preparing to investigate the Pullman Palace Car Company, inquiring into rates, relations to railroads, and relevant questions.

International.

At a recent meeting of the League of German Naval Architects Dr. Anschuetzkæmpfe of Kiel exhibited a compass without a magnetic needle, which has just been invented. It is in the form of a gyroscope, which when suspended in a certain way always adjusts itself parallel to the earth's axis. The invention is regarded as one of great importance to ironclads, where the compass needle frequently is deflected by adjacent metal.

The results of the elections for members to the Turkish Parliament seem to show that the proclaimed ideal of the Young Turk party—the union of peoples of all races and creeds within the empire—is in a fair way to being realized. Christians voted for Mussulman candidates and Mussulmans for Christian candidates.

The president of Bolivia has signed the law permitting arrangements to be carried into effect between the Bolivian Railways Company concession and the Antofagasta Railway of Chili and Bolivia, which will probably result in the future unification of the Bolivian railways.

The memorandum prepared by the Labor Department of the Board of Trade on the state of the English labor market for October shows that in the 257 trades unions, with a net membership of 591,053, making returns, 56,200 were reported as unemployed at the end of October, 1908.

The Victorian Legislative Assembly of Australia has repeatedly passed, and the Legislative Council has as often rejected, Bills granting women the suffrage. The Council, however, has now passed a bill which will enable women henceforth to vote at state elections.

The postmaster-general at London announces that the weight of mail matter from the United Kingdom to the United States during the month of October increased twenty-seven per cent under the penny post, as compared with that in September.

The unrest among the nations of India, and their protest against foreign rule, have not been so marked in years as at present. The English authorities are taking measures to quell the disaffection.

The timber trade of New Zealand has been so seriously affected by the increasing importations of Oregon pine that the merchants have petitioned the premier to impose a duty on the Oregon product.

The Appeal Court at London has handed down a decision to the effect that a trades union cannot levy compulsorily upon its members to maintain the labor representatives in Parliament.

The British prime minister and the postmaster-general are in complete accord with Mr. Henniker Heaton's proposal for penny-a-word cablegrams between all parts of the empire.

The municipal indebtedness of England and Wales at the end of October amounted to over £501,700,000, an increase in five years of £139,507,347.

Germany and the United States have agreed on a two-cent postage rate between the two countries to go into effect Jan. 1.

The three-year-old Emperor of China, Pu Yi, has ascended the throne under the name of Hsuan-Tung.

Industrial and Commercial.

The Niger Company is pressing forward the development of the Northern Nigeria Railway, Africa. Nearly twenty-three thousand tons of railway material have now been delivered up the river. The railway base at Baro, four hundred and seven miles up country, has received eighteen thousand tons. The rest has been delivered at Lokoja. A large amount of similar material has been forwarded by the company to Jebba, a distance of five hundred and thirty-seven miles from the sea, for the use of the Southern Nigerian Railway.

The completion of the Florida East Coast Railway from Miami to Key West is promised within a year. The line is already in operation from Miami to Knight's Key and is completed for a distance of forty miles northward from Key West. There remains a distance of eleven miles of difficult railroad engineering, the track resting on a roadbed laid on concrete arches.

The United States Steel Corporation has decided to erect a great plant at Universal, near Braddock, Pa., on the Bessemer Railroad, for the manufacture of forged car wheels. The new plant will cost about $1,500,000 and will be the most complete car wheel plant in the world.

The New York, New Haven, and Hartford Railroad has applied to the Public Service Commission of New York for permission to electrify its suburban division from 126th Street and the Harlem River to New Rochelle, the old Harlem River and Portchester line.

The ginger grown in Jamaica commands more than double the price of any other. Under favorable conditions an acre will produce as much as four thousand pounds. During the last fiscal year about 1,400,000 pounds were exported from that island.

A process for retanning leather has been patented, which, it is claimed, not only makes it more flexible, but adds to its strength, elasticity, and wearing qualities, and also renders it permanently waterproof.

A consolidation of independent fertilizer concerns of the South is projected, and it is understood that the new corporation will have a capital stock of $50,000,000.

Many Maine manufacturing plants dependent upon water-power are greatly handicapped by the severe and unusual drought.

CHRISTIAN SCIENCE SENTINEL

"WHAT I SAY UNTO YOU, I SAY UNTO ALL — WATCH" JESUS

THE NEED OF MENTAL ACTIVITY.

CLARENCE W. CHADWICK.

THE need of greater mental and spiritual activity along all lines of Christian endeavor is one that should appeal to all thinking persons. The advancing religious thought of the twentieth century is penetrating the secret chambers of evil, thereby arousing the carnal or sensual thought that would declare itself good and demand human recognition and obedience. The result is an unusual activity on the part of evil in its futile attempt to hold its own. To meet these subtle arguments of evil and to blot them out of individual consciousness is the problem confronting every one who names the name of Christ in Christian Science, even while the would-be critics of this Science are declaring that Christian Science advocates the covering up and ignoring of evil.

If evil could be ignored, there would be nothing left for mortals to do in this present world. The only possible way to reach the kingdom of heaven here or hereafter is for us to overcome all belief in evil, and this cannot be done by sitting still and ignoring error's false claims or arguments that are continually being encountered in the mental realm. The true disciple knows only too well that there is a cross to be carried, and that this means greater mental activity on his part. It never means mental stagnation, apathy, or indifference. It means alertness, watchfulness, and earnest striving to express the Mind of Christ and to put off the so-called mind of mortals, which ever argues for the reality of all that is unlike God. Simply saying that one is not afraid of it, is not sufficient. It requires spiritual discernment and understanding to reduce error to its native nothingness. It requires the declaration and application of right thought to clear the mental vision and to reveal the supremacy and allness of good. Clinging to the belief of two contending powers, good and evil, will not do the work; but knowing the truth about God, that omnipotent good is all power, will destroy any and all suggestions of a suppositional opposite power.

To know good is to unknow evil, hence the need of spiritual activity to cleanse and purify the mesmeric environment of false belief. The human mind is constantly active in the interest of error or of Truth: but not until spiritual existence is acknowledged and understood to be the only real existence, can the mortal approximate scientific or accurate thinking. Referring to this, Science and Health says (p. 492), "For right reasoning there should be but one fact before the thought, namely, spiritual existence." The Christian world, in failing to correct sense testimony, has fallen far short of the perfect standard of right thinking. Christian Science has come to point out this error of a false theology and to usher in the reign and activity of spirituality here and now, instead of preaching about the good time to come while accepting a lie in the present. It is here, as Mrs. Eddy tells us, "to stir the human mind to a change of base, on which it may yield to the harmony of the divine Mind" (*Ibid.*, p. 162).

This stir is one of the greatest possible boons that could come to human consciousness. It means humanity's redemption and salvation from the inanity of mesmeric belief in intelligent matter, the opposite of spiritual existence. The human mind has a positive need of being aroused to a higher order of thinking before it can escape from the bondage of false belief, which denies the all-power and presence of Spirit. In the realm of spiritual sense and activity there is no laziness, no idleness, no dreaming, no guessing. It requires very little if any mental effort to believe in the supposed reality of evil, while to overcome sense testimony and to prove the power and reality of good requires more spiritual activity than most people are aware of. He who loves good most is he who soonest detects and disposes of the arguments of evil. Spiritual activity distinguishes between the worker and the drone.

Jesus' great work for humanity was wholly mental. He was always on guard to sift the chaff from the wheat and to declare silently and audibly for the omnipotence and omnipresence of good. His mental attitude was a constant corrective of sense testimony. He was here to fulfil a divine commission. The "prince of this world" came and found nothing in Jesus to appeal to. His mentality was purged of all mad ambition, of all desire for a personal power, of all worldly pride and fame. He exercised no personal control over friend or foe. His one aim was to glorify his Father in heaven, the divine Principle whom he constantly obeyed. His mental attitude is the world's example for all correct thinking. What he thought, we must learn to think. What he did, we must learn to pattern. He demonstrated the power of self-sacrificing love. We must go and do likewise, and only through the right mental activity can we do it. The insane desire for place, power, and prestige does not evidence the Christ-activity, nor does it evidence that healing consciousness which uplifts human thought to distinguish between human will-power and the divine. That mentality through which the healing power of divine Love finds expression is the one characterized by meekness, humility, honesty, and unselfishness, ever ready to be led and to mind its own business. If every person were sufficiently on the alert to overcome the temptation to meddle with other people's affairs, the kingdom of heaven would sooner be realized. Greater mental activity will save us from this temptation, correct all false arguments, and awaken every latent capacity to reflect the goodness of God.

One of the surest safeguards against mental apathy and stagnation is for the student of Christian Science to stick close to our Leader's writings and to the authorized publications of The Christian Science Publishing Society. Nearly every day records the publication of some book, pamphlet, or periodical purporting to be "of special interest to Christian Scientists," and if they were to take time to read all such publications they would have little or no time left for systematic study of the Bible and Science and Health. The partial presentation of Chris-

tian Science in the form of a pleasing story may fill some human need, but the wise student of Christian Science, who knows the importance of keeping his eye single to the healing Christ-idea, will go to the fountain-head for reliable information and scientific instruction. He will not get caught in the mistake of thinking that some other author's work is a "key" to the understanding of Science and Health. The only way for the student to explain its spiritual meaning is for him to reduce to daily practice what he already knows of its teaching, so as to come under the control of the divine law of progress. The human mind needs instruction and correction more than it does amusement, and only a greater degree of true mental activity can bring about this much-needed increase in spirituality.

A safe rule of conduct for the Christian Scientist is for him to adhere closely to that which he knows to be the genuine teaching of Christian Science. This is not an argument against honest literary effort, but simply a note of warning to the student of a demonstrable Science, lest he depart from the safe side of theory as well as practice. Jesus once said to his disciples: "The kingdom of heaven is like unto a merchant man, seeking goodly pearls: who, when he had found one pearl of great price, went and sold all that he had, and bought it." A word to the wise is sufficient.

A SERMON IN A SAWMILL.

CAROLINE E. LINNELL.

WHEN I first began to read Science and Health, and attempted to think along Christian Science lines, there seemed to be a sharp conflict between all that I had previously been taught and believed, and the teachings of Christian Science. Every page of Science and Health bristled with statements which I could not understand and did not believe. So sharp was the clash between the new and the old way of thinking that it amounted to physical distress whenever I read the book; but I had promised my practitioner that I would read it, and I wanted to know for myself what had healed me, so I read faithfully, almost defiantly, challenging every statement with which I could not agree, and the result was a state of upheaval which was very trying to experience. One day I told a Christian Science friend of these conditions, and she said, "There are some statements which you do understand and believe, are there not?" I admitted that there were. "Then why do you not read and think about them, and try to live them, and stop worrying about what you do not understand? If you will do that, your understanding will grow and widen continually."

This appealed to me as very good advice, so I followed it to the best of my ability, and the result was peace. I did think about what I could understand, and I was surprised to find how much and how beautiful it was. I did try to live the teachings of the book and prove its statements, and results did follow. When I came to something I could not understand, I passed it by, put it upon a high shelf mentally, until the understanding came. As I read and tried to live what I did know, each day more and more of the truth became clear to me; each day I added to my store of understood statements. Sometimes this understanding would dawn upon me slowly; sometimes quickly, like an illumination. These flashes of understanding would often come to me at very unexpected times and places. One of the most unexpected of these came to me in a sawmill. It was my privilege to visit one of the great mills in one of our western cities. I was very much impressed with what I saw—the size of the plant, the variety and perfection of the machinery, and the rapidity with which the immense logs were transformed into boards. It was most interesting to watch the process, from the time the logs were brought in all dripping from the river, until the finished product was ready for shipment. And it was here, in the midst of all the clatter and roar of the machinery, that two valuable lessons in Christian Science came to me.
